The READER'S DIGEST

An article a day of enduring significance, in condensed permanent booklet form

-- January 1945

The only foundation for national greatness uicken the Spirit Within You

Condensed from an address by

The Rev Dr Peter Marshall

Pastor of the New York Avenue Presbyterian Church, Washington D C

nation obedient to the laws of God would lead the world America's future depends upon her accepting and demonstrating God's government. We have the genius and the skill, the political forms, the wealth, the natural resources, and the ability to lead the whole world into a bright new tomorrow in which the hopes of the human heart may be achieved, and our desires and prayers all realized. There can be life, liberty and the pursuit of happiness available to all men, regardless of their race or their color.

But we as individuals must learn to 'et God guide and control our hearts He can guide and control the heart of every individual — in government, in business, in labor, in management, and in the home In every situation,

PFTER MARSHALL was born in Scotland and educated in Technical College After working in a tube mill he came in 1927, to the United States, where he studied for the ministry A gifted speaker, he served a passurate in Atlanta and last summer preached in the Fifth Ayenue Presbyterian Church in New York City

men can know the will of God, know exactly what they should do and be God's guidance and God's power are always available. When men listen, God speaks But America cannot follow God's plan until we — you and I — as individuals follow it.

There are evil forces within the nation Love of self, love of power and authority have enslaved the hearts of many Americans Our moral standards have been lowered—and no nation makes progress in a downward direction

The old-time evangelists used to stress hell People no longer believe in hell — although they still mention it frequently in their conversation. But today we are living in a time when enough individuals choosing to go to hell will pull the nation down to hell with them The choices you make determine the way America will go We must decide between God and material ism. We must decide quickly who is Chief — whom we will serve!

Millions of people in America live in moral fogs, in spiritual twilight Modified immorality, on the basis of cleverness, guides millions of people Modified dishonesty, within the letter of the law, is the practice of millions more. Yet our country is filled with people who are satiated with the materialistic philosophies that fill our stomachs and starve our souls, that supply gadgets while we forget God. The time has come, because the hour is late, when we must decide, and the choice before us is plain. Christ—or chaos, conviction—or compromise, discipline—or disintegration!

The average church member has forsaken the old disciplines. He attends service when it is convenient. His contribution of time, effort and money is seldom such as to involve real sacrifice. The Church, the Bible and the Sacraments seem to have no compulsion over his life. The church has failed to challenge his faith and his vision. The remedy for this sad state of affairs will he, I believe, in the seeking of God's will for the individual church, and the adopting of the daring program to which He are challenging. His church.

strength is limited only by our faith in asking God's help

Let us be honest about it If w have thrown away our national heritage, if we no longer believe that this nation was founded under Cod, if, contrary to what is stamped upon our coins, our trust is not in God but in something else, let us say so Let us at least not be hypocrites

The challenge of these critical day is that we begin to be truly Christian in all our relationships—or sto pretending We are fighting for total victory, but we shall never achieve total victory unless we fight for total Christianity

'Choose ye this day whom ye will serve "For it is in imperishable verity 'No man can serve two masters Ye cannot serve God and mammon" That is the choice America must make, we must choose God—or go to hell!

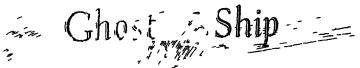

For certain ideas in this address the author wishes to acknowledge his indebtedness to Our Lighting Laith by Dr Blanton Bolk (John Knox Press Richmond, Va)

Now Is the Time for All Good Men -

Don't think that you're either too young or too old to de great things Jefferson was 33 when he drafted the Declaration of Independence Benjamin Franklin was 26 when he wrote Poor Richard's Almanac Charles Dickens was 24 when he began his Pukuuk Papers and 25 when he wrote Oliver Twist McCormick was 23 when he invented the reaper and Newton 24 when he formulated the law of gravitation

The weird story of a mystery plane

Condensed from the book "Damned to Glory"

Colonel Robert L Scott, Jr
Author of God Is My Co Pilot

VER THE tiny an field of Kienow, it in hour before dark, rain was falling The eight P-40's on the runways showed their shark-noses through the haze

Flight-leader Johnny Hampshire peered out from the operations cave, looking for a break in the veather His squadron of the China Air Task Force had come from Kunming to this field in eastern China ready for quick action — and now they had lived through a week of stinking weather with nothing to do but gripe

At that instant the alert came Then telephones began to ring "What the hell is this, Captain Chow?"

The Chinese officer stuck a red flag on the map "Don't know R-15 reports one unidentified plane, coming this way, flying very low"

Japs never came this far inland in this kind of weather And a single ship! They didn't do that, either, because they had learned long ago that they'd never return

Still, it might be a trick So Johnny said, "Get the alert shack Tell Costello to get on my wing and stay close Keep the other six planes on the ground unless I call"

Two planes nosed down the run-

way, red mud splashing back into the slip stream, then wet, gray clouds seemed to engulf them

In the radio cave they could hear Johnny asking for the position of the unknown plane Now it was reported only 20 miles to the east

Johnny explained later what happened He was about ten miles from the field, he said, when he saw the plane 200 feet below He maneuvered to attack This was an unidentified aircraft, coming from enemy territory Orders were to shoot it down

Johnny and Costello both fired at once The attack brought them so close that they could see the plane's marking Costello screamed over the radio, "That's the American insigne—it's a P-40!" But they still suspected a trick It was the old American insigne—blue background with white star and red center The United States hadn't used it for nearly a year, because the red center looked too much like the Rising Sun

Johnny said he and Costello must have put a hundred rounds into the ship before they realized there was no use firing The P-40 had been literally shot to pieces before they ever saw it the cockpit had been nearly shot away, the fuselage was a sieve Then as he moved closer he saw that the deep wells into which the wheels fit when retracted were empty Bullets

couldn't have done that It had never had wheels

Now Johnny and Costello, flying close beside the P-40, could make out the pilot behind the jagged glass of the windshield, his head slumped forward on his chest They could see the long, dark hair and the bloody face Costello said later he was sure the man had been dead for some time

Seconds afterward they saw the ghost plane hit the ground and explode They marked the spot in their minds

Later, taking along the doctor, they navigated a truck around the rice paddies to the wrecked plane

The P-40 had been really shot to hell It was riddled with bullets which had come from below and above, from behind and in front proving that enemy planes as well as ground fire had destroyed the ship None of the men could understand how the pilot had lived to fly the plane as far as it must have come. There wasn't much left to identify him But in his leather jacket were letters, parts of which were legible, and a notebook diary partially destroyed.

PEOPLE who knew him called him "Corn" Sherrill * They said it was because he liked corn likker so much back in South Carolina He went to Manila in 1937 — first assigned to a pursuit squadron, later becoming officer in charge of constructing a chain of auxiliary airfields

Corn could really fly He could

navigate to any point in the Islands, he could tell by the color of the water whether he had let down through the clouds to the Sulu Sea or the Sea of Visayan. He built airfields up and down the Islands, and he knew where they were. In time his fields were completed, and Corn became a Deputy Squadron Commander.

After the fateful December 8, 1941, Corn flew reconnaissance and strafing missions with the dwindling air forces, retreating step by embattled step to the little emergency fields that he himself had built in the jungles

On May 5 he found himself part of an outfit at Miramag on Mindanao, isolated from the rest of the world Bitain had surrendered So far is he knew, the entire American might in the Islands consisted of 11 mechanics who had escaped to the southern island by devious routes and one cracked up P 40

They figured that their one plane, rebuilt with odds and ends from wiecks in the vicinity, would keep them in the war for a while Except for a bent prop and a buckled fuselage, it was in pretty fair shape. For the next two weeks they scouted every wreck in the neighborhood Finally, four miles from the base, they found a P-40 with a salvageable fuselage Forty Moios helped them carry it, using ropes and poles, inch by inch, yard by yard, to Miramag — a ton or more of hull Whenever an enemy plane appeared overhead, they hastily covered their load with palm leaves

By August they had the good wing from the old ship attached to the fuselage Then they rigged a tripod and swung the engine into place One wing tank was leaking, so they

^{*}The name is fictitious, as are place names wherever necessary for the sake of military security — The author

SHORTLY after Pearl Harbor, Pilot Robert Lee Scott's application for combat duty was rejected — he was too old, at 34 he was informed to fly a fighter plane Assigned to transport service in the Far Fast he talked General Chennault into letting him have a P 40 In 1942 Colonel Scott, famous as the 'One Man Air Force was given command of the American Army s first pursuit planes in China Besides many medals and citations, he held the Army record for enemy planes downed

His book God Is My Co Pilot was called by the New York Itmes the most fascinating personal story of the war Damned to Glory is a collection of little known stories, brought together as a tribute to his courageous fellow fighter pilots

and their long suffering planes. The title is taken from a line in a poom Mr. Scott wrote about the P 10 s. Damned by words but flown to glory

replaced it They removed the radio and dynamotor, and mounted a 50 gallon tank in the baggage compart ment. In the tanks of a smashed B-17 nearby they found gas. They straightened the prop by hammering it with a heavy mallet on the stump of a hardwood tree.

The problem of a retractable landing gear stumped them. One of the screeants stud jokingly, "If it would only snow, we could use skis," and everybody laughed. But suddenly Sherrill remembered that once he had taken off and landed a P 6 with skis on wet grass.

The more they thought of it, the more they wanted to try it

They figured out how to attach the skis, made of bamboo, and also how to "ietract" them — which was simply to drop the skis by jerking a control wife after the plane had taken off Once that ship got off the ground there would be no return And only one of them could go

So they got out the maps to see where their plane could do the Japs the most damage They decided on Formosa It was 1000 miles to the great Jap naval station at Taihoku On the China Coast, 250 miles far-

ther, was the airfield of Kienow. With careful nuising of his gas the pilot might be able to reach it

By December 6 the 5000-foot grass runway had been cut with knives and everything was ready for the take off The P-40 looked weird on skis But she was complete, with four 300 pound bombs and six 50 caliber machine guns

Sherrill said, "How about making it an anniversary party of the day those bastards struck us? I'll leave here on the morning of December 8'

At nine o'clock on December 8 the men hustled the fighter out of her cover to the top of the runwry. Her nose pointed downhill to the place where the cut swither in the cogon grass ended at the edge of a cliff

Corn shook hands with each of the men. As he climbed into the cockpit he saw tears in their eyes. He knew he was looking at them for the last time. Over the din of the engine he shouted that he would put the bombs where they'd hurt the Jap most.

The men saw the fighter bounce along the runway, teetering like a sandpiper on the unstable bamboo skids But with every bounce she gathered speed Then with a higher whine and a bigger bounce the queer-looking ship was in the air and out over the cliff

At 1000 feet, Corn leveled the plane and dropped the guy wires of the landing gear. He brought her back once over the field, so that the cheering men could see the success of their months of labor. Then he headed for Formosa.

CORN SHERRILL reached the Japanese island five hours after his takeoff — the enemy affirmed that later.
The Jap had boasted that no Occidental had looked upon Formosa
for 40 years Well, one was looking
down this day — and the airfield he
saw must have made Lieutenant
Sherrill lick his lips — with its neat
rows of parked fighters and bombers

He strafed them row on row, and he cut the Jap flag from the head-quarters building with his wingtip He laid his first wingbomb right in the enemy offices. Enemy ships began to smoke, build and explode

Now the P 40 was rocking with

ack-ack bursts All Corn could do was keep low, where the gunners could not spot him too long at a time. He continued strafing every plane he could force his sights on

Then the Zeros caught him Dropping his last bomb into a hangar, he fired into the attacking fighters in a desperate effort to blast his way out And between them, in some unknown way, Corn Sherrill's heart and the P-40's sturdy body pulled away into the clouds on the correct course for China — without benefit of instiuments Straight as a die from The hoku, to Foochow, to Kienow — the waining net of the Chinese showed that

Out of the mist there came a plane, and then two others A sharp clatter of machine guns, and a ship and a pilot already mortally wounded were hit again. Sherrill's bloody face turned to peer through the shattered canopy at the shark-nosed American fighter, flying so close to him in formation. This was the life, all right Coming home! Mission complete. Corn Sherrill's work was done.

Unconventional Ending

Ar A DINNER concluding a long and botting convention in Chicago a particle of reluctant speakers had been pried from their chairs to 'say a few words' 'As the 16th orator took his seat, a sight of expectation filled the 100m Deliverance was in sight. But no! The chairman was on his feet again. I'm sure this meeting does not want to break up without hearing from our good friend. Ken Roe'.

Mr Roe stood up Gentlemen' he said, "I am reminded of the story of the two skeletons I or days they had been imprisoned in the musticst closet imaginable I inally, one skeleton said to the other, 'What are we doing here anyhow? Whitereupon, the other skeleton replied I'll be darned if I know But if we had any guts, we'd get the hell but of here." "

— Matt Rol tis in Ih Saturday I wring I out

DE GAULLE

Condensed from Life

Noel F Busch

the Prophet

A key to underst inding the leader of France the secret of his power and influence

the Prince in Snow White, de Gaulle has been reported as comparing him self with Clemenceau, Na poleon and Joan of Arc In fact, of course, if he

indulges in such analogies, de Gaulle is doing himself a mild injustice since, unlike any of the above, he occupies a place which is entirely unique in the history of France

History redounds with the names of homemade national heroes and also includes the names of many exiles who, ignored at home, have done well for themselves elsewhere De Gaulle, however, left his native land as an ordinary citizen and returned as chief of state

Before de Gaulle came back to France last June there was consid erable doubt as to how enthusiastically he would be received. In the months that have elapsed since then his personal prestige has shown great durability There is much civil ten sion in France, but no rival leader has appeared, and it is probable that if a plebiscite were held tomorrow de Gaulle would get an overwhelm ing majority of votes for head man But no plebiscite will be held, since the General's policy is to postpone national elections as long as 2,600,000 voters are absent in Germany

ENERAL Charles de Gaulle, President of the Provisional Government of the Irench Republic, is, among other things, an occasional movie-goer In Algiers last August, when he stopped off after his visit in the United States to get ready to move to Paus de Gaulle's aide arranged for a showing of Snow White and the Seven Dwarfs, chiefly to please de Gaulle s youngest daughter, who is 16 All the de Gaulles enjoyed the film, but one incident pleased the General especially — the moment when Snow White, suffering from the effects of enchantment, is revived by a kiss from the Prince At this point de Gaulle turned to one of his aides and made a characteristic comment "Excellent," said the General "I like people who can rise again"

Almost Plutarchian in its aptness, this story would be less plausible if told about someone who lacks de Gaulle's capacity for identifying himself with history or legend. In addition to perceiving his allegorical resemblance to the heroine or perhaps

At cabinet meetings de Gaulle, a man who has few close friends, takes a rather distant attitude even to his closest political associates. He usually allows his ministers to talk themselves out and then proposes his own solution in short, carefully balanced sentences

Any display of verbosity or hesitation irritates de Gaulle One day last spring one of his aides was explaining that morale in France was slipping De Gaulle listened thoughtfully and remarked, "We must end the war quickly" Another member of the group, eager to agree with his chief, nodded and added, "Yes, it s neces sary that it shouldn't drag along" De Gaulle gave the speaker a dis gusted look and said, 'How right you are! If it is to end quickly it cei tainly shouldn't drag along'

His tolerance for indecision is especially short. When the lice lichth were fighting Vichy troops in Syill a captured Vichy colonel wis brought to de Gaulle and began explaining his attitude. He had seen no news apapers, he said, could scattely rely on the radio, and therefore had found it impossible to tell what was hap pening. De Gaulle walked over to the colonel, leaned down and whis pered bitterly, "Listen! I can tell you on reliable authority that the Germans are in Paris."

De Gaulle's sarcastic tongue and his readiness to deliver sharp moral judgments are only two of a good many things about him that make him puzzling to his contemporaries

U S recognition of de Gaulle involved the question of whether to recognize him as soldier or politician Basically he is neither. He is pri-

marily a prophet in the Old Testa ment sense of a grand-scale philosopher-in-action As such, de Gaulle has been a practicing prophet almost since infancy

His original attribute was his last name, which he acquired 54 years ago from his father, a professor in the Jesuit college in Paris The Gaulle portion, which is popularly considered to mean France, is obviously a happy coincidence for a man who was to become a national symbol De in most French names connotes membership in the aristocracy, but in the north of France de has no social implication whatever and the de Gaulle family belonged not to the aristocracy but to the intellectual branch of the white-collar class. In preaching redistribution of wealth he is behaving in line with his background and up bringing

The elder de Gaull, was an austere but understanding parent Adopting his father as a pattern, young Ch it les absorbed from him a sober and re sponsible air which, because it suited his abnormal size (six feet four), remained a settled part of his character and later aided him in the practice of serious prophecy From his father he also absorbed an unquestioning, Puritan type of Catholicism which is perhaps the salient and certainly the most widely undervalued part of his general motivation With that deep-rooted and disciplined faith he combines the cold logic of a French ıntcllectual

Serious, introverted and o rergrown, young de Gaulle devoted more time to books than to play His good marks in school helped him into the Γrench West Point, St. Cyr, where his nick-

name was 'the long asparagus' Immediately after graduation the young prophet met the man who replaced his father as a model. This was the colonel of his regiment, a solemn, self contained little officer named. Henri Philippe Petain. For nearly two years de Gaulle served at the front under Petain. Then the association was interrupted when de Gaulle, already wounded twice, was wounded so severely as to enable the Germans to capture him.

In prison camp de Gaulle concentrated on efforts to get out, but he also had ample periods for meditation. These in part he devoted to committing vast sections of French classic authors to a memory so well stocked that he could write out for his fellow minutes whole books of Homer, Cae six and Ovid which he had read in school

Another important formative ex perience there was an acquaint ince with a young Russian captiin De Gaulle had a serious, methodical mind The Russian had a speculitive, uninhibited one. The two men struck sparks from each other Talking to the Russian about warfare, Lurope in politics and their own futures, de Gaulle begin to formulate his own notions more specifically. When the war ended he and his fellow prisoner parted company and met only once again This was in Paris in 1936 when the young Russian captain, Iukha chevsky, had become a marshal of the Soviet Union Himself a prophet of sorts, Marshal Tukhachevsky was purged a year later for his failings as such

After the war de Gaulle expounded his ideas about the future of warfare as a professor at St Cyr His lectures were published in 1932 as a book With the Maginot Line under construction, all French military theory was based on defense. and defense in turn was based on drawing the enemy into a "compartment of terrain" which had been selected as most suitable for his annihilation Given a chance to prove his contrary theories in the war college maneuvers, de Gulle ignored the compartment selected by his adversary and won a resounding victory • He was reprimanded by his in mediate superiors but praised by Petain

In 19,4 de Gaulle predicted the forthcoming war in a volume called The 1rmy of the Future He accurately diagnosed the weakness of the Maginot system, pointed out that motorized transport had revolutionized warfarc and argued that armics should be built around mobile coaps of highly trained specialists. Decided in France this book was hailed in Germany as a masterpiece This ena bled de Gaulle to meet the prophetic test of being without honor in his own country Its chilly reception by the French General Staff also caused him to lose faith in his preceptor, Pet iin For the next half dozen years de Grulle's diligent dissemination of his theories bored innumerable Paris dinner parties and innumerable government officials from cabinet rank down Practically no one paid any attention to his theories except an ci ritic young politician, Paul Rey naud

The maps which de Gaulle drew for Reynaud on restaurant table cloths were almost identical with those the German General Staff used for its breakthrough in the spring of 1940 That year de Gaulle commanded the hastily assembled Fourth Armored Division, and in brilliant tank counterattacks at Laon and Abbeville won two of the few actions the French Army fought A few days later Reynaud, by then Premier, made him Under Secretary of State for War

De Gaulle the prophet was challenged by events which, to every other soul in France, seemed to mean complete catastrophe Indeed, the total wreck of France was exactly what was needed to set a match to his fiery conviction that he had a mission to save her

De Gaulle tried to get Reynaud to fight on, he then conferred with Churchill at Tours, and later from England issued amous proclamation that "Trance has lost a battle, but France has not lost the war" In London he set himself up, with somewhat grudging British consent, as leader of the I ree Trench

De Gaulle made it clear that he thought of himself not as representing merely France's war effort but France as a whole, and behaved accordingly This procedure naturally discon certed first Churchill and then Roosevelt who, both brilliant politicians, had had few previous experiences with prophets Roosevelt, after meeting de Gaulle at Casablanca, is said to have remarked that he could understand how a man might regard himself as Clemenceau or as Joan of Arc, but not how he could think of himself as both at the same time Churchill is said to have remarked more recently that of all the crosses he has had to bear the Cross of Loiraine was heaviest

Dreary as de Gaulle's squabbles with Giraud, Churchill, Roosevelt and everyone else seemed at the time, his method helped nationalize French resistance to the advantage both of the invasion and of liberated France Furthermore, once they got used to de Gaulle's oracular behavior, both Churchill and Roosevelt came to like him

In London the General's manner, always aloof and taciturn, was often noticeably nervous Since getting home he has seemed calmer and more amiable He is now in a position not unlike that of Moses when, all his convictions strengthened by the crossing of the Red Sea, nearing at last the dear hills and cities of his promised land, he brought forth his tablets

In common with most prophets de Gaulle has a sense of personal destiny which appears to render him immune to the fear of death. The day after he arrived in Paris last August, he walked unguarded down the Champs Elysees between massed crowds and knelt calmly at Notre Dame despite a spatter of snipers' bullets from the organ loft

De Gaulle conferred with resistance leaders on the problems of restarting the wheels of government and by the end of a fortnight had outlined a program Most of the items in the de Gaulle New Deal—like votes for women, state control of heavy industry and trial of leading collaborationists—had been agreed upon by clandestine communications with interior resistance leaders before the liberation. The collaborationist trials will help gratify the insatiable French appetite for prolonged and noisy legal proceedings.

de Gaulle program has been held in abeyance by the continuation of the war and the exigencies of Supreme Headquarters, Allied Expeditionary Force As long as most of the availa ble transport in France is used in hauling supplies to the front, the Provisional Government cannot do much about its immediate civilian problem of reviving industry, repairing wir dimite or even resettling evacuees The divisions in France certainly compose a design for social disorder, it not civil will That, except for a few sporadic Maguis rebel lions in the south of France, nothing of the sort has yet developed is due in part to de Grulle's presence and in part to this good handling of the problem

When it became clear that the war might last through the winter and that his program of socialization and reconstruction would have to await its end the General started on tours throughout the country. These help him maintain contact with regional authorities and enable him to deliver to assemblies of rural citizens brief homilies on good behavior, for which he gets tremendous ovations.

In small gatherings de Giulle, who has a rigid bearing, severe expression and a monotonous deep voice, as an unimpressive speaker. But, equipped with a market place full of people and a good amplifying system, he gives a much better account of himself. A new timbre of conviction and authority resounds in his voice. He has only one gesture, a rigid pumping

of one or both arms from the elbow, but this lack of oratorical finesse goes with his restrained, classic vo cabulary and ramrod carriage

The future of Europe depends to a considerable extent on whether France will be able to resurrect or even surpass its former grandeur What Frince can do in this direction depends at least temporarily on de Gaulle Nothing in his present be havior suggests that he is either unconscious of or abashed by this opportunity

In governing Figure under present conditions, de Gaulle has cert un ad vantages. One is that the country, despite its immediate spiritual and practical liabilities, is relatively sound on a long term basis. The French economy is based on farming Tiench farmers have been going about their business so long, under so many regimes, that they can be counted on to continue doing so. Another advantage is that France's complex system of local government remained intact through the German occupation and still functions.

On the other hand, while sound for the long term, I rince is in a mess for the short term — with several million people bombed or shelled out of their homes, no transportation, very few communications in working order, industry at a standstill and a major war going on If de Gaulle can solve these immediate problems, he will deserve not merely recognition from the United States but the thanks of a troubled planet

The Smatra phenomenon for anything comparable in masshysteria wou need to go back to the medie val dance madness and the Children's Crusade?

Condensed from I he New Republic

Bruce Bliven

New York's Paramount

Theater is full and already
the line outside, waiting to buy tick
ets, goes around the corner But this
is nothing, you should have been
here last Thursday, which was a
holiday There were 10,000 trying to
get in, and 150 extra policemen totally failed to keep order Shop win
dows were smashed people were huit
and critical off in ambulances

Because the average fan stayed for two or three performances, the trouble outside went on all day. Out of ,500 who were in their seats for the first show, only 250 came out when the second show started. Some people were in line before midnight of the previous day. One man said he had tried to buy an early place in line for his daughter for \$8, but had been refused. A woman in line with her daughter long before the doors opened said the girl threatened to kill herself if kept home.

This as you have guessed, is the magic spell of The Voice a phenomenon of mass hysteria that is seen only two or three times in a century You need to go back not merely to Lindbeigh and Valentino to understand it, but to the dance madness

The VOICE and the Kids

that overtook some German villages in the Middle Ages, or

to the Children's Crusade

The Voice needs a hollow square of policemen to protect him anywhere he goes, his telephone calls swamp any switchboard, his mail runs into the thousands per day. So does his income he averages more than \$20-000 a week the year around. His admirers send him all sorts of presents, and when he advises them to put their money into war bonds, they try to give the war bonds to him, or one of his children.

One girl wore a bandage for thice weeks on her aim at the spot where 'I make touched me' Another went to 56 consecutive performances in a theater where he was playing Merely to see him cross the sidewalk from an automobile to a broadcasting station, young idolators lined up five hours in advance Iwo girls picked up by police in Pittsburgh had spent their whole savings and run away from their home in Brooklyn because The Voice was appearing in the Pennsylvania city The Voice's home is invaded by young guls who make a pretext of asking for a drink of water, or to use the bathroom nurses have to be on the premises in

any theater where he appears, to soothe the hysterical (Some who faint have gone ten of 12 hours with out food to see successive perform ances) It is something to think about

At a 10 1 m, in ide the theater, the over ornate red and gold decorations are almost submerged under a sea of youthful femininity Almost all those present belong to the bobby-socks brig ide, age perl ips 12 to 16 Hundreds of them are we aring the polk to dotted blue how the popularized by their idol. Although his appearance is still in hour away, they are in a mood to sque il and squeal they do The movie which grinds its way across the sciecii is a routine affair, but the bobby socksers take it big, with wild buists of applicase in unexpected places

The electric contagion of excitement steadily mounts as the film ends and the stage show begins. Then, at a I imiliar bar of music recognized by the devout, the crowd goes completely crazy It is the entrance cue for the Voice the shricks rise to a crashing crescendo such as one hears but rarely in a lifetime. Through the posticres at the side of the stage comes a pleasant-appearing young man in an expensive brown tweed coat and brown doeskin trousers With gawky long steps he moves awkwardly to the center of the stage, while the shrieking continues The bobby-socksers are on their feet now, applauding frantically A few of them slump into their seats, either fainting or convincing themselves that they are doing so Some of them rush down the aisle to get as close as possible to their hero

Standing at the microphone, he

looks, under the spotlight, like a young Walter Huston He has a head of tousled black curls and holds it awkwardly to one side as he gestures clumsily and bashfully with his long arms, trying to keep the crowd quiet enough for him to sing Embraceable You Contrary to expectation, he appears in excellent health, with a face that seems tanned, not made up A gul sitting by me says, 'I ook he his broad shoulders," and her boy friend replies scornfully, "Aw, nuts! Pads!" Obviously he is right

Now, having with difficulty created a partial state of order The Voice performs Diffidently, almost bashfully, yet with sure showmanship and magnificent timing, he sings five or six songs, with intervals of patter between them His voice seems a pleasant, untirined light baritone -a weak one, were it not boosted in power by the microphone. When he sings sadly "I'll walk alone," the child sitting next to me shouts in seemingly genuine anguish, "I ll walk wid ya, Frankie," and so in various words, do several hundred others When the song says that nobody loves him, a faithful protagonist on my right groans, "Are you kiddin, Frankie'" Then the whole audience fills into an antiphony with him, Frankie shouting "No!" and the au dience "Yes!' five or six times

Presently he is singing I verything Happens to Me—a song which seems to be a running diary of his recent life. He breaks all rules for romnition heroes by talking about his wife and two children and mentions the fact that another child is on the way Tar from being repelled by this evidence of domestic bliss, his audience seems

enraptured They shriek, even during his songs, until he is forced to take steps "Shut up!" he cries, with mock ferocity The kids see through him, they understand perfectly that he doesn't mean it

Another song, and he has vanished, amid a hailstorm of those astonishing high-pitched shrieks Instantly the orchestra swings into The Star-Spangled Banner, and twin spotlights center on American flags whipping in the breeze created by electric fans—obviously the only way to avoid a riot

What is the cause of it all? It is reasonable to suppose that it began as a publicity stunt, with the first swooters and screamers hired by a press agent But today it is a genuine mass phenomenon. Thousands of cirls profess to be spellbound just from hearing. The Voice over the radio, never having seen him in the flesh.

Doubtless the phenomenon has several sources. Partly, it has become a fid now, with girls of a certain age to join in the hysterics. You go expecting to be overpowered, and if you weren't, you'd feel you hadn thid your money's worth. Just plain sex may have a great deal to do with it. But it runs deeper than that Although I am told that devotion to. The Voice is found in all classes of society, nearly all of the bobby.

socksers I saw gave every appearance of being children of the poor Oddly enough, there is a solidity and sureness about this young singer that is out of all proportion to his physical frailness I would guess that he represents to these children a dream of what they themselves might conceiv ably do or become He earns a million a year, and yet he talks their language, he is just a kid from Hoboken who got the breaks He aligns himself with the youngsters and against the adult world It is always 'we' and never "you"

But my strongest impression was not that Frankie means so much to the bobby-socksers as that everything clse means so little Our civilization has produced an impressive multiplic ity of material things, and yet, if I read the bobby-socksers aright, we have left them with a hunger still unfulfilled a hunger for heroes, for ideal things that do not appear, or at least not in adequate quantities in a civilization that is so busy miking and selling gadgets as ours Whatever else you may say of the adoration of The Voice, it is a strictly noncommer cial enterprise, a selfless idolatry which pays its 75 cents at the box office and asks in return only the privilege of being allowed to ruin its vocal cords Perhaps Frankie is more important as a symbol than most of us are iware

URING his campaign for governor of New Jersey in 1940, Charles Edison, son of the inventor, introduced himself by explaining "People will inevitably associate me with my father, but I would not have anyone believe that I am trading on the name Edison I would rather have you know me merely as the result of one of my father's earlier experiments"

Let's Stop "Plowing Under" in Our Factories

Condensed from Fortune

Edward T Cheyfitz

many years had an unwritten liw that after a member had finished a bottle of beer it was his duty to break it in order to provide employment for bottle blowers. Later they asked all labor to avoid beer in cans and drink only beer in bottles, without regard for the brother unionists who made cans.

Some locals of the United Automobile Workers asked all labor to buy only motorcars with running boards. They made running boards, and they hoped to stay the progress of streamlined design.

Such attitudes were characteristic of some of the prewar thinking of American labor. Now the war has made everybody think of the quickest way to produce the most. But what about postwar? Will American

EDWARD T CHI VIITZ IS national chairman of the Casting Division of CIO's Mine, Mill and Smelter Workers He is also a member of the CIO's Reconversion Committee and labor consultant to the War Production Board A graduate of the University of Michigan, 1934, his major studies were mathematics and economics He went to work for the Doehler Die Casting Company of Toledo, making his way up through the CIO's local in that company, and soon became national head of his union

A progressive labor leader speaks out on the one way to raise America's and the world's — living standard

labor return to demanding bottles and running boards without regard to economy, efficiency and progress.

The answer may decide the success or tailure of the ideas of our numerous postwar planning committees. Plans alone, government alone, cannot solve the problem of full employ ment and a better life.

The test of progress is whether or not management and labor can find a common ground. They can find that ground, I contend, in jointly pursuing the high road of production Labor should take a positive stand for "No Shackles on Production"

Labor in the past has accused inonopolistic capital and farm groups and sometimes even government it self of following an "economy of scarcity" But labor itself has also been guilty "Pegging production"—icquiring two men to do the work of one—is equivalent to "plowing under" The holding back of labor suggestions for improved production is the same thing as monopolistic capitalistic holding back of new inventions and methods

For this attitude, often both sides can be blamed I know of numerous prewar cases, where workers deliber ately held down production because of management's policies. In a large Detroit plant a workman was set the task of stamping out 100 pieces of sheet metal an hour, 800 a day. He discovered it was possible to stamp two sheets of steel with one stroke of the press, without injuring the press or the die. He proceeded to do it Soon, by working slowly, he managed to keep at work six hours a day. The other two hours he spent windering around the plant.

His foreman grew suspicious but before he could fathom the explanation the union steward then suggested to the worker that he stop feeding two sheets into the press and go back to the old one-sheet method. Why? Because the steward was afruid the foreman might discover the rew method and institute it on all the presses resulting in more work for the same pay.

In many factories working have every reason for thus holding back on output Yet, if something is wrong in dumping coffee into the sea and slaughtering little pigs, so something is wrong in restricting industrial production. To right the situation will require leadership by both management and labor. I should like to see labor take the initiative.

Union members must be educated to accept the principle that it is good unionism as well as good Americanism to practice high productivity. While we insist on a more equitable distribution of income, we cannot withhold an endorsement of high productivity until that end is achieved. Labor cannot increase its own share of goods by producing less.

But what about management?
First Management itself must be-

lieve in "America, Unlimited" and in an economy of abundance. It must also realize that American enterprise can expand only as America's buying power expands

Industry can use its advances in efficiency three ways increased profits, increased wages, decreased prices

No one who has studied America's development can doubt that profits may benefit society. To do so, however, they must be reinvested in new plants, new machines, putting new men to work

Admitting the rele of profits, labor would like to see management's advances in efficiency also go into higher wages or lower prices Both, in the long run, come to the same thing. If motor car prices go down, then the worker can more quickly buy a car If wages go up in line with efficiency. then more cars can be sold I oo often this basic American philosophy has been violated by monopoly action and price rigging. In the years ahead we want to see the philosophy of high volume and high uage and low prue really work. If it does, there is no conflict among profits, prices and wages All can contribute to a better standard of living

Second Management should accept certain 'public techniques' for infinitioning the national income—such devices as the use of the federal budget to ward off the worst features of boom (as in 1929) and of bust (as in 1933) It should also en dorse a broader social-security program to protect workers who are shifting jobs or who are laid up through no fault of their own The American worker will not be interested in increased efficiency if it

In ans working himself out of a job Third Management must further, not fight, union cooperation in efficiency advances If labor is to practice high productivity, it must have some measure of responsibility within the plant Industrial engineering firms devoted to the increasing of production are today known as 'management consultants' They ought to become "production consultants," used by both management and labor

Finally, labor should welcome "incentives" "Incentive" plans today are not accepted by the large in ijority of workers, because they have been very much abused by management

In a plant in Cleveland Ohio, a new job was introduced for a gun part with a rate of \$1 05 a hundred parts. In a month another part, with only small differences, was introduced at a lower rate. Then several other similar parts were introduced at a still lower rate. In a few months the rate was down to 70 cents a hundred parts. The rate was gradually being cut because labor was extending itself.

No incentive plan can work in such circumstances. The worker will not let himself be made into a horse who has a bag of oats in front of him and who keeps moving faster but never reaches the oats. Management, if it wants labor is all-out efficiency, must agree to union collaboration in fact finding, so that time-study and incentive payments can be put on an honest and scientific basis.

The Packard Motor Car Company of Detroit employs some 39,000 people It was besieged each day with hundreds of grievances — workers claiming that too much work was

being assigned to them, foremen claiming that workers were loafing and were spreading six hours work over eight President Christopher of the company and President Mathews of the union local decided that something should be done

They called in a firm of industrial engineers. A class was established, with 13 people from management and 13 from the union, to study the basic elements of time study, so that they could then go out into the plant and, after a scientific determination of the facts by both sides, climinate the charges of speeding-up on the one hand and of loafing on the other Good results are already evident. Mr. Mathews says this kind of joint activity is the only way to sound management labor relations, with resulting production efficiency.

To get such a result takes courage on both sides — and humor. A joint time study program was instituted in a Detroit plant. The union, being skeptical chose its fightingest steward to be a time study representative. The training was completed, a worker in the plant had a time-study complaint, he naturally sent for the tough steward. The steward, now a time-study representative, spent the better part of a day observing the worker space and motions. Then the worker turned eagerly to him and said.

'The company is cheating me Right?"

"No," said the steward 'You've been given a fair time study and a fair rate on this job"

The worker looked at the steward and bitterly exclaimed "You were better when you were ignorant!

Such things happen in the carly

days of joint time study programs In the long run both workers and their representatives will argue their cause only when they decide it is just, and they can decide when it is just only if they have the facts Labor participation in production controls gives labor access to the facts

This is particularly necessary when basic wage rates are being set for each job. One worker considers himself worth as much as the man next to him, inequalities in pay are headaches to both company and union unless reasons for differentials are based on well understood facts At the Doehler Die Casting Company management and union tackled this problem jointly In each of the company's plants two company representatives and two union representatives worked with a neutral engineer Every job was 'evaluated " A common vardstick was established to measure the relation of one job to another I or the first time in the company's history it got a scientific wage structure. The result has been high morale and an outstanding war production record

Labor's acceptance of high productivity will bring out numerous suggestions from workers. Nobody knows a job better than the man working on it. Management should encourage suggestions, not in the old suggestion box way, but in a new way through joint management labor administration. The worker must feel that his ideas are protected and recognized. A worker in a plant in Pennsylvania had the job of filing four

projections from a flange It took four strokes. He got the idea of welding two files together and of thus completing the job in two strokes. The foreman said "Impractical" A few weeks later the company introduced the double file and said it was due to a foreman's brainstorm. This is a common experience in industry.

Thus far I have argued that the philosophy of abundance, governmental measures for smoothing the flow of the national income, and union-management cooperation for efficiency lead together toward high productivity and full employment However, the case cannot be stated only in terms of our own domestic economy The economic health of other countries affects ours. For com plete full employment we need an increasing volume of world trade World trade is no one-way street We must buy from the world and sell to the world How much we sell depends on how efficiently we produce

Our market abroad can be unlimited if we follow the policy of selling 'more for less' more value for
less money But if we go in for low
productivity and high prices, the
great two-way market between America and the world will dry up and die
— and with it the best hope for in
ternational cooperation

Now is the time for courageous labor leaders to revise their attitudes both nationally and internationally

And now is the time for courageous leaders of management themselves to adopt new attitudes if labor is to follow the path of progress

Three out of four couple contemplating matrimony are advised by this mar riage clinic to go slow

Condensed from The American Magazine

Clifford R Adams, Ph D

Director, Marriage Counseling Service Pennsylvania State College

young people will find happiness through marriage are slim, indeed The rise of our divorce rate is frightening. One marriage in five or six landed on the rocks in 1940. By 1946 it is expected to be one in four And it long range trends continue, the rate will be one in two in 50 Media.

There are deeper reasons than the war for the rising trend of divorce (wilization, in becoming more complex puts a greater strain on maringe.

Pennsylvinia State College has tackled this problem at its roots by founding a marriage counseling service which the students call 'The Compatibility Clinic' It is available to students, faculty and townsfolk like Some of our cases are married couples who are about ready to call it quits. We test them, talk to them, tell them the problems they are up against, and unless they are hopessly incompatible try to find a solution. About 80 percent of these cases are patched up successfully.

Our main concern, however, is to work with young people before they marry and before the damage is done. We encourage both boys and gills to start thinking toward the day they will marry. And when they get down

to specific cases we take the fellow and girl probe their backgrounds, plot their personalities side by side on charts and give them an over-all picture of their prospects for a happy marriage

About one fourth of such couples get our unqualified green light A middle 40 percent are advised to proceed with caution because of certain important differences or short comings which we help them to correct The remainder tre flutly warned to "go very slowly" We urge couples in the list two groups to hold off at least six months. During that time the obviously incompatible unions collapse from the weight of differences.

Many hundreds of the couples we tested are married now and we have the satisfaction of knowing that every prediction we made about them has proved to be substantially correct. Of the couples we encouraged not one is divorced or separated.

A great many of the young people who come to our clinic me either agitated or misty-cycl. They tell me that it was love at first sight. That always makes me wary because "love at first sight," is either sheer sexual at traction or a matching of one s phan tasy ideal. For example, a boy has in his mind a Dream Girl with blond

hair, blue eyes, dimples, a turned-up nose, and a 24-inch waist He falls in love with the first girl he meets who coincides with this description. It's a poor way to pick a life mate

At the clinic our greatest attention is devoted to finding whether the personalities of a couple harmonize. We test both of them for 11 different traits. The traits are scored between 11 sets of poles.

octable — aloof easily suayed — stubborn stritable — settled timed — bold passionate — cold idealistic — expedient changeable — rigid worrisome — carefree contentional — unionventional undependable — dependable well adjusted

Congenial couples score fairly close on most of these and for the most part stay in the broad middle zone between these poles

A person's scoring on these traits adds up to an accurate picture of his emotional maturity. Marriage experts agree that this is the most important factor in any successful marriage. People possessing it are free of complexes, neuroses and phobras. In the same breath I will say that marriage happiness depends almost 50 percent on sexual harmony of the married couple. Sexual harmony is attainable only if the couple are sexually mature. And such maturity is present only with emotionally mature people.

Moralists have long contended that a vital requirement of any marriage is that neither partner have a record of physical intimacy beforehand Frankly, I don't know Of the engaged couples contemplating early marriage I would estimate that 75 percent have had intimate relations with each other. Such relations do

not seem to be an important factor in determining whether their eventual marriage will be happy or not

Promiscuity, however, is another matter I took at random 25 charts of girls who — according to our tests — were generally unstable emotionally Later, 21 of the 25 confided to us that they had been intimate with three or more boys during the preceding year I would hesitate to recommend any one of them for mainage, not only because of their low moral standards but because they lack emotional maturity

There is a lot more, of course, to mairiage happiness than matching up it personality traits. Here are some other things we take into consideration First, the family background of the boy and girl It is profoundly important to know whether the bride and groom had a happy childhood, whether they got along well with their parents, and whether the parents were well mated *Happi*ness in marriage runs in families. If you were reared in a happy home free of discord and conflict, you are much more likely to be emotionally mature than if brought up imid bickering and tension

Paients who were frank in talking to their children about the magic and mystery of sex contributed greatly to the emotional maturity and, therefore, to the eventual marrial happiness of their children

Another thing we are anyous to know is how the boy hopes to support his future wife. Occupations that are under the scrutiny of the community and involve regular hours and little out of-town traveling are the safest marriage risks. These include doc

tors, bankers, teachers, ministers The traveling salesman is rightly considered to be one of the worst bets in marriage

Third, we like to know whether their religions are the same. If the couple are of widely different religions they may be liable to constant friction unless they reach a tolerant understanding beforehand as to how

their children will be reared

Differences of age are not as important as many people imagine, so long as both man and woman are over 20, under 40, and not more than ten years apart

Three other things that we consider important to marriage success are a courtship of it least a year, a

sense of humor, which helps couples over many rough spots, and a desire on the part of both parties for children (Ninety-two percent of the couples at Penn State say they want children)

Now we come to some specific kinds of would-be spouses that should be treated with extreme clution. First are the neurotics. One type is the habitual heavy drinker. The girl who mairies such a man on the assumption that she can reform him is due for a bitter awakening. Marriage rarely cures dipsomania or any other mania.

Any person who is a victim of a chronic disease is not normally a good risk

Are You Really in Love?

DR ADAMS uses this test to indicate quickly whether a person is actually in love or just infatuated by good looks and sex appeal

1 Do you have a great number of things that you like to do to

cthere

- 2 Do you have a feeling of pride when you compare your fixend with anyone else you know?
- 3 Do you suffer from a feeling of unrest when away from $l_{\mbox{\scriptsize mm}}$ on her?

4 Even when you quarrel do you still enjoy being together?

5 Have you a strong desire to please him, or her and are you quite glad to give way on your own preferences?

6 Do you actually want to marry this person?

- 7 Does he or she, have the qualities you would like to have in your children?
- 8 Do your friends and associates admire this person and think it would be a good match for you?

9 Do your parents think you are in love? (They re very discerning about such things)

10 Have you started planning, at least in your own mind, what kind of wedding children and home you will have?

If you can truthfully answer *Yes* to at least 7 of the above, then Dr Adams s diagnosis would be that you are in love

Impotency and sterility have long been causes for heartaches among newlyweds Now, however, such encouraging progress is being in ide by science that cures seem to be possible

Another type we are wary of is the divorce All evidence indicates that divorced persons in subsequent marriage have less chance for happiness than a person who has never married

Finally, the je flous or suspicious person is a frequent marriage wrecker In 40 percent of broken engagements or marriages je alousy has been a big factor

In making these warnings about poor mates I ve left out one tremendously import int guilification No matter how bid the odds seem hippiness can be achieved by most of these couples if they face their dangers with open eyes and thresh out their mutual fears, problems, frustrations, and strive to achieve a sensible solution We call this by the high sounding term of "mutual psychotherapy" It can do wonders in even the most

despairing situations

With the ending of the war we face the prospect of a vast number of "g ingplank" weddings You can't blame a couple who have been separated by the war to want to marry at the first possible moment However, if they're wise they will take warning from the flood of divorces being sought at the same time. A waiting period of four to six months would give them a chance to note changes in each other, to make sure they are still in love to give the man a chance to adjust himself economically to civili in life and to give them time to make plans for that future

If they convince themselves that a life partnership would still be a good ide then you can bet that they will

be married for keeps

The Soldiers and the Kitty

ONE Stand is afternoon while waring to a friend in front of a Toledo theater, next to a USO center, I heard two soldiers plotting Dropping a nicket on the sidewalk one said, "When someone stops to pick up the nickel, we'll call

out Naughty naughty' and watch him squirm

Finally a pedestrian noticed the coin then looked at the two soldiers standing there feigning indifference. He smiled, and dropping a quarter beside the rickel, walked on. The soldiers were dumbfounded, and before they could do anything the stampede was on A woman who had seen the main drop has coin also dropped a coin. Others walking by did the saine and the he p of coins grew quickly in front of the popeyed soldiers. My friend arrived and we entered the theater

Emerging some three hours later, we encountered a crowd around the heap of money upon which people were depositing bills as well as coins. After five hours the demonstration had to be stopped because the crowd was obstructing traffic. The soldiers then gathered up the money and counted it. The surprising total was \$712, which they donated to the Red Cross

- (ntribute I by Mrs Victor Jaworski

Condensed from Tricolor + Frederic Sondern, fr

They knew they were somewhere in central France, in the heart of German-held territory Suddenly the pilot pointed "Am I seeing things," he yelled, "or is that really an Englishman"

A jeep bristling with machine guns and driven by an officer in British battlediess was bearing down on them

"Hello, chaps," said the appaintion as the jeep came to a halt "If you've any wounded, we'd best get them to hospital It isn't fai "

The fliers goggled with open mouths "Oh, everything's all right," the Englishman assured them "We're the Special Air Service — behind the German lines, you know Glad to have you"

That was their introduction to Britain's phantom aimy and its most irregular regulars From El Alamein through North Africa, Sicily, Italy and France to the German border, these men have written one of military history's most fantastic chapters In Africa their parachutists and jeep borne commandos struck Nazi

airfields 500 miles behind Rommel's front line, destroying more German planes on the ground than the RAF did in the air. They kept Axis supply lines in an almost continuous state of disorganization. In the battle of France, they did the same thing again, on a much larger scale.

The designers of the invasion knew that its success depended in great measure on preventing the Germans from getting heavy reinforcements to the beachheads before our armies were securely planted there The Tactical Air Force was to do a major part of the job by bombing key transportation points But even under the best circumstances they could not be expected to hit as many targets as the Allied tacticians wanted knocked ousimultaneously The various French underground units were very officient, but they lacked the unification necessary to guarantee execution of the intricate schedule of destruction and panic which must synchronize precisely with the Allied landing and advance The hardened, experienced super-commandos of the Special Air Service — each man a veteran, expert in close combat, scouting and demolition work - were the only outfit for the job They were brought up from Italy to tackle their toughest assignment

The first SAS parachutists began landing on French soil at night in groups of two or three long before D Day With the help of Frenchmen these "reception committees" reconnoitered their areas to find fields where men and supplies could land, and woods and houses where they could be hidden When ready they reported to SAS headquarters over small portable radio transmitters, and the main forces of the secret invasion began arriving

In a few cases the SAS landing parties chanced on German patrols and had to fight for their lives. In general, however, they got down safely with their equipment, also dropped by chute, which included peps, folding motorcycles much a guns and other types of light orduing

Each party moved frequently, to avoid betrayal by the sympathetic but incautious population. The men rarely used tents but slept in bags on the ground around well dispersed jeeps, encurised by outposts on guard Everyone had a toming gun within reach day and night.

According to plan, D Day found the mun S AS forces astude the German communications lines from the Cherbourg peninsula to the east and south Each pulty—ranging in size from five or six to 20 or 30—had been exhaustively busefed on railroad, power and telephone key points and the other installations it was to destroy

One operations report, typical of hundreds which flowed into SAS headquarters and were transmitted to SHAEF, told the Allied generals what Germin resistance they might expect "Made reconnaissance on

—— line between kilometers go and g2 At 22 hours neutralized guards at kilometers go and placed bombs on both tracks At 2212 hours westbound troop train derailed by explosion Cut telephone and signal wires At 2225 hours eastbound train derailed Withdrew."

Besides demolitions, SAS did other jobs One was guiding the Tactical Air Force After IAF bombers hit at a railroad bottleneck one day, an underground scout working for SAS went to assess the damage "How long will it take you to fix that?" he asked a workman The burly Frenchman looked long and carefully at the questioner 'Not very long," he replied finally "But half a mile farther up, where the signal box and switches arc, the bombs could have made a ical mess? Shortly thereifter the TAF dropped a stick of bombs in the right place

The German Paris command, in a desperate attempt to stamp out the invisible army, unleashed the Gestapo and the so-called French Militia—auxiliary police recruited from selons and dregs of the population—on a furious reign of terror. Throughout Normandy people remotely suspected of helping were rounded up by hundreds, tortured for information and hot. But despite all nices, the SAS and their helpers continued striking.

One of the exploits of Sergeant Chalky is considered only mi'dly unusual among the regiment's veterans. In the Moivan district of central France a unit of German soldiers had just been drawn up at attention in the village square when around a blind corner tore a jeep containing

two British soldiers. It slithered to a halt and before the Germans knew what happened, one of the men was running straight at them with a Bren gun blazing. The Germans broke for cover, but not before Sergeant Chalky had littered the street with gray-clad bodies. Then he and the jeep disappeared around the corner. He had been instructed to join a larger party in an attack on these Germans, but when the others failed to show up, he had decided to do it himself.

On another occasion a group of 50 encamped in a wood was informed by a Maquis agent that the Gestapo had letined of their hiding place. That night 200 German SS troops were to close in from one side and 300 Trench Militia from the other. The Englishmen should withdraw it once, 'the Maquis said. Not at all!' replied the commanding officer.

The SS and Militia mer attacked it dusk and wilked into a withering hal of bulkets. The undergrowth and ditches were alive with machine oun-In hours the stilking and shooting went or, until a German officer discovered that the pattle was being wiged exclusively by the 55 and Militia The 5 \S had long since withdrawn and were busily raising hell among nearby supply dumps that had been stripped of their guards German prisoners and captured documents have since revealed the extent of the confus on caused by this cumpaign of distuption

lour years of trial by fire have one into SAS operations. At the beginning of 1941 the British position in Africa was so desperate that the Middle East command was willing to listen to the crazy scheme.

of two young Brigade Guard lieu tenants David Stirling and Jock Lewis were obsessed with the idea that small groups of picked men, carefully trained, could live and wreak havoc far behind the enemy's lines They talked their way through all opposition to the commanding general "Stirling's rest camp" was set up in a remote Egyptian waste land Volunteers were gathered from the best Middle East units, and they were taught everything from parachuting to fieldcraft and Arabic

Stirling's results were quick and sensational A German airfield 500 miles behind Romingl's front line was bowled over one night by a squadron of wild men in jeeps who blew up its planes and leveled its in stallations in a half hour flat, and varished into the desert whence they cunce Renote secret German supply dumps in the descrit were located and destroyed. Axis operations along the coastal road were constantly interrupted and convoys waylaid and annihilited The Lufty iffe lost 300 planes in a few months by \$15 for-178, and was weakened just when Rominel needed it most for the push into Egypt

Stirling was finally beta yed by an Arab guide in Lunisia and captured by the Germans Since Jock Lewis had been killed in one of the carly operations, the SAS command went to another natural leader — Paddy Mayne — who is still its colonel

This big, craggy-faced Irishman—a former amateur Rugby and boxing star—with a gentle brogue and shy smile is much more than a commanding officer. He is a legend. A favorite story of the SAS involves the dash-

board of a Messerschmitt 109 which came from the 40th plane the Colonel himself destroyed in a single night's raid on a German airfield. He had planted his last bomb on the 39th When he got to the 40th — by that tune the Germans were really shooting — he climbed into the Messerschmitt, and with the titanic strength he displays in such berserk moods, tore the dashboard out with his bare hands and waved it triumphantly over his head as he retired in a jeep

During the Normandy campaign, Colonel Mayne operated behind the German lines around Le Mans, a key communications point When Cher-

bourg fell, SAS men moved north ward and eastward to help prepare the way for the drives of Montgomery and Patton On the Paris-Amiens line alone — the vitally important main line from Paris to the coast — they wrecked almost trains, blew a dozen bridges and totally disrupted communications

Montgomery, who had thanked them officially in North Africa, thanked them again after the Battle of France even more enthusiastically And they may in the future be thanked yet again For Paddy Mayne's in credibles are still going strong Where and how is a story yet to be told

The Gracious Touch

MI IFR a Town Hall meeting in a midwestern city a woman saw Alex ander Woollcott standing alone in the lobby. Impulsively she went up to tell him of the pleasure his lecture had given her 'And said this lady who has grown grandchildren and freely admits having passed 70 I was encouraged to speak to you because you said you loved old ladies replied Woollcott, 'I do But I also like them your age

Diseases from Air-Borne Germs Condensed from Hygera CHECKED AT LAST

Low Matter Miller

RMY and Navy doctors have won a smashing victory over the respiratory discases, which are caused by air-borne germs severe colds, tonsillitis, measles, scribet fever, meningitis, pneumonia and — most important — the unitie fever. In barracks and on ships, men live in such close association that these discases usually spicial like wildfire. All were common in the named forces in 1942 and 1943.

They are now reduced to a bare minimum. The results achieved are sensitional, even when presented in the sober language of papers read before recent meetings of scientific societies. There has not been time or opportunity to work out the application of the new technique to the civilian population, but obviously the implications to public health are tremendous.

During 1942, in a single Navy camp of 43,000 men, there were 4973 cases of scallet fever, 1375 cases of theumatic fever, 1283 cases of pneumonia, and 50,000 cases of tonsillitis. More than 550,000 min days were lost from active duty. In the Army during 1943, 7 000 000 men lost time in hospitals with sore throats, head colds, sinusitis, flu pneumonia and similar ills. And wherever this high rate of respiratory infections prevailed, doctors noticed a sharp rise in

rheumatic fever, the vicious producer of 'heart cripples'

Rheumatic fever has long been recognized as one of the major public health problems of the United Strics. A common discase of childhood, it also occurs frequently in young adults. It begins insidiously, seeming to be only a bad cold, then cruses fever, pain, swelling of the joints, and finally attacks the hearty alves. It is often fatal.

To stump out these youth-killers, mulit my doctors were ordered to wage iclentless was on hir borne infections The problem was a tricky one. For instance the cause and the cure of theumitic fever are still unknown But Army Air Force doctors working under Colonel W Paul Holbrook, found that more than half the respiratory diseases occurring at AAF bases were associated with the microbe which causes the familiar 'strep throat 'Colonel Holbrook also found that ancumatic fever always reached epidemic proportions following an outbreak of strep infections. One line of attack seemed plain knock out the strep microbe

The doctors turned to the one we ipon that is effective against it one of the newest of the sulfa drugs, sulfadi izine. But they took it up turn orously. While a majority of pitients can take sulfa drugs with little or no all effect when properly administered by an experienced physician some individuals suffer severe reactions—

skin rash, headaches, even mental confusion and delirium

However Colonel Holbrook in the AAF, Commander Alvin F Coburn in the U S Navy, and others knew that extremely small doses of sulfacould be given safely so long as the patient was kept under close observation and submitted to periodic blood tests. Since such close supervision was possible under Army and Navy discipline the doctors decided to go ahe id.

During the winter of 1943-44, surprised gobs and GIs at scores of military establishments were lined up daily and made to swallow their sulfapills under the watchful eyes of non come and petty officers. In each campa control group was purposely left untreated so that the doctors could measure by companison exactly how effective the sulfa drugs were

The results Meningitis was practically eliminated, streptococcal in fections including acute tonsillitis were reduced between 75 and 90 percent, and other respiratory diseases including lob r pneumonia and colds were cut down by more than 50 percent

At one large AAF base where there was a severe outbreak of meningococcus meningitis, immediate doses of sulfadiazine to all men on the base halted the epidemic in its tracks. A flury of scallet fever which occurred simultaneously at the same base disappeared entirely after the drug had been administered.

The Navy sexperience was equilis successful. At a large establishment near Chicago where strep infections had been running rampant, the number of searlet fever cases among those taking sulfa dropped within three

weeks from 171 to none, rheumatic fever scill in sour weeks from 87 cases to six General respiratory diseases were reduced by 80 percent. At the same time, in the group taking no prophylaxis, the incidence of both scarlet sever and rheumatic sever ran the usual epidemic course.

In both the Army and the Navy the number of unfavorable reactions to the sulfa drug was a fraction of one

percent

Final reports on the AAF's frontal assault on theumatic fiver have not yet been disclosed, but it is estimated that the rate of occurrence has been reduced by about 75 percent Colonel Holbrook says 'It is difficult to guard one senthusiusm in the face of such results

But the sulfa drugs have not been the only weapons with which the service doctors have waged successful war against the air borne microbes Under the direction of the Office of Scientific Research and Development, scientists from the University of Chicago and Northwestern University developed a glycol spray which, although harmless and odorless to humans, is probably the most effective microbe trap yet devised by man If floor, walls, bedding and fabrics are sprayed carefully, they not almost like flyp iper, capturing the air-borne microbes, reducing the number of germs in the air by more than 97 percent In scientific tests in Aimy bairacks, the glycol sprix practically eliminated hemolytic streptococci from the air and checked the spread of respiratory infections

The question immediately arises If the sulfa drugs are so successful in preventing respiratory diseases in the

armed forces, why can't they be made available to the civilian public? The answer to that question must await the discovery of some effective civilian substitute for inilitary discipline. The sulfa drugs are too dangerous to be taken at will, like aspirin. They must be administered.

in carefully controlled doses, under strict medical supervision, with frequent blood tests to measure the action of the drug

But some of the lessons from the services' hugely successful control program will certainly be made available to the public before long

It Pays to Increase Your Word Power

Educators have discovered that the size of your vocabulary is a measure of your intelligence. The Army and Navy give knowledge of words a high ranking in judging officer espacity. Personnel directors are using vocabulary tests as one important way of determining the ability of prospective employes.

Here then, is a word test for you based on the contents of a recent issue of The Reader's Digest that will help show whether your vocabulary is good,

average or inadequate

- To the right of each numbered word are four words or phrases lettered 'a" b c and d Underline the lettered words or phrase that you believe to be nearest in meaning to the key word. The answers are on page 103 Whatever your rating, determine, from now on, to accept every new word you meet in the Digest as a direct challenge. I ook it up. Write down its meaning, its pronunciation, and the sentence in chich it appears. Then use it at le ist three times. Lich new word you le irn will increase your mental power. There may be other ways to success, but vocabulary building is the easiest and the quickest one
- (1) spurious a false b angri c talk atne d stubborn
- (2) preclude a embrace b enclose c ad rance d precent
- (3) salient a smooth b round c con spicuous d unimportant
- (4) predutory—a insulting b inherited c addut d to ro ing d adduted to plundering (5) sucro anct—a sacred b profane c uealthy d miserly
- (6) sporadic a epidemic b scattered c dis ased d paralytic
- (7) at ophy a grow old b grow angry c frow withered d first tall
- (8) exotic a erratic b temperamental c rain d strange
- (9) bedin inc a banter b survical dr is in a flower, phrases d article of clothin
- (10) hyperbole a evangeration b ex and ration c a heart affection d tenseness
- (11) minions a u in b servile dependents carn d frices d ama ons

- (12) precusously a safely b eagerly c uncertainly d carefully
- (13) cartographer—a a map mal 1 b one u ho arranges a ballet c a leader of a horus d a handwriting expert
- (14) compensatory a making a lizest b making excuses c maling amends d making a copy
- (15) panegylic a an ancient parehment b a eulogy c a small statue d a hand lettered manuscript
- (16) cmulous a envious b easer to excel another c tremulous d oceranxious
- (17) seculously a lazily b conscient tously c secretly d diligently
- (18) truculent a noisy b powerful c massive d savage
- (19) quixotic a stupid b humorous c overdressed d unpractice!
- (20) assiduously a carefully b sarcastically c still illy d brav ly

The State and War Departments and the I oreign I conomic Administration have definite plans on how Cermany will be administered after its defeat Here they are

What We Will Do with Germany

Condensed from (ollier s + + + George Creel

T is not the thought or the will of the United States that a defeated Germany should be wiped off the map and the Germans scattered to the four corners of earth. On the contrary, there is the abiding hope that a sick people poisoned unto death by centuries of evil teaching, may be restored to health and returned to a place in the community of nations. Until conclusive proofs of such recovery are offered, however, it is the American insistence that stein restraints must be imposed. Anything else would invite a third World War

The form and extent of these restraints have been decided upon The State Department and War Department aided by the Foreign Economic Administration, have reached explicit agreement after months of study and discussion Methods are open to debate but fundamentals are fixed

Thist of all, it is held that a conquered Germany should be permit nently disarmed and demilitarized. The self styled Master Race must be reduced to an impotence so complete that not even the most fanatical can nuise the hope of another adventure in world conquest.

The arrest and arraignment of all war criminal from the highest to the

lowest, is a second demand. Secretary of State Hull had already warned neutral nations that the historic right of asylum for political fugitives may not be made a clock for the protection of nien under indictment for attorities.

A third decision is that the German people should be compelled to aid in the reconstruction and rehabilitation of a world that German fury has laid in ruins. Just as they sweated and sacrificed in preparing for war gladly giving up butter for guns, so must they sweat and sacrifice to repair the devastation wrought by the inhumanties of that war

As explained by high officials here in brief are the reasons that led to agreement on the three fund ament ils

With respect to militury occupition and militury rule where wis any sine alternative? Let the Germans work out their own salvition? If hat with? There are no Reichstag, no opposition party no labor movement, no "intellectuals" vith a record of protest, not even an underground. The civil service, the judiciary and the professions are rotten to the core. The minner of men that will come out of prisons and concentration camps remains to be seen, for Himinler has been at pains to

butcher all with any quality of patriotic leadership

Is faith to be placed in the refugees who have fled the fatherland. The State Department's study of these groups, both in the United States and England, shows plainly that, while all may be anti Nazi, the overwhelming majority are still essentially Germanic. They damn the Fuhrer, but in the same breath they argue against punitive measures of any kind saying that the United Nations should adopt a "strategy of mercy"

'Fxactly 100 percent moonshine," wis Cordell Hull sanswer to the bland suggestion that "an advisory committee of democratic German exiles" be asked to form a new government for the Reich Until sound building material can be found and tested, the Secretary and his aides hold that it would be criminal idiocy to recognize or sponsor any German government Municipal administrations after thorough purging, can and will be permitted to function

What else but military occupation can be a cure for German megalominia? Our High Command utterly rejects the theory that the German people can be restored to sanity by a niere change in textbooks. The Gentral Staff is a unit in believing that the only system of re education that holds any promise of regeneration is to face the Germans with a set of hard, unyielding facts The fact of defeat, the fact that they are not a Master Race, and the fact that their boasted invincibility is a lie Since might is all that they seem capable of understanding, then show them might When Eisenhower announced that American troops entered Germany

as "conquerors," the employment of that word was High Command strategy

The Freaty of Versailles gave Germany the right to maintain an army of 100,000, to keep a certain number of ships and to continue her aviation industry. Before the ink was dry on the Armistice, a million young men were training secretly, a navy began to build, armament plants were in secret operation, factories poured out fleets of commercial planes easily convertible to military use

Sceretary of War Stimson and General Marshall were soldiers who saw these things with their own eyes They know, out of bitter experience, that the one hope of an enduring peace is a Germany completely disarmed and demilitarized. It is not only warships, tanks, planes artillery and stock piles that must be confiscated, but even revolvers and shotguns Dismantle war plants and either destroy the machinery or else send it to safe distances Prohibit commercial aviation, even the operation of private planes, and let Germany s air transport needs be served from the outside Demobilize the army scatter the German General Staff, and take care that no new force is recruited under the guise of wrestling bunds and singing societies. Ban uniforms and veterans organizations, and forbid national celebrations in honor of German victories or the birthdays of Germany's military heroes

There is still another reason for military occupation. Even after capitulation, there will be "pockets of resistance," for Storm Troopers and Gestapo butchers, faced by the certainty of death sentences, will fight to the last Moreover, the intelligence services of the Army have proof that the *Feme*, a terrorist organization, is being revived for the murder of all Germans who attempt any form of collaboration with the Allies

The High Command sees no ground for the fear that military occupation will doom "our boys" to foreign service for an indefinite period. A force of 500,000 is deemed amply sufficient, and this will be recruited from the United Nations as a whole. The call on the United States will be comparatively small, and can be met by professional soldiers. Aside from other considerations, the General Stiff holds that the spectacle of uniformed troops from the occupied countries will be salutary for the Master Race.

Neither the State Department nor the Army likes the proposed division of a defeated Germany into three military zones, with Russia administering the eastern third, Great Britain the northwestern third, and the United States the southwestern third I here was the same divided authority after the last war, and the arrangement resulted inevitably in wrangles and lasts.

What the United States wanted this time was a joint administration, empowered to establish uniform rules and regulations Russia, however, opposed the plan, insisting that each power have a free hand in its own zone. With victory still to be won, our representatives did not dare to risk a rupture. Both the State Department and the Army, however, are still insistent on one unified military command, and there is hope that the Russians will change their attitude.

The decision to stand unchange-

ably for the punishment of war criminals has its base in a deep conviction that only justice, quick and stern, can avert a horror of mass reprisals. We propose military tribunals, for the farcical sedition trials, now entering their eighth month in Washington, have shown the futility of civil procedure.

Here again there is likely to be a sharp difference of opinion, for the Russians want no supreme tribunal to tell them what they may or may not do In their opinion, punishment is the sole concern of the countries that have felt the force of German savagery Moreover the United States is thinking in terms of political and military individuals, while the Soviet also indicts economic groups, holding that "big business and fin incial magnates" are just as guilty as those whose hands drip blood

With respect to a demind on Germany for reparation, there is absolute unanimity. In the State Department there are figures offering plain proof that Germany suffered no loss from the "cruel and extortionate" terms of the Treaty of Versulles, but took a handsome profit. By 1931, when the Reich repudiated all external obligations, four and a half billion dollars had been paid out and six and a half billions taken in "Poor Germany" indeed!

This position does not argue approval of the "Morgenthau plan" for the destruction of German industries, the closing of German mines and the compelled change of Germany to a purely agricultural state. The State Department, the War Department and the I oreign Economic Administration have all pointed out

that this is no more than a policy of liquidation, for the thin and sandy soil of Germany could not possibly support half of the population. And if 70,000,000 Germans are taken suddenly out of the export and import markets, what of the effect on the interlocked economy of Europe?

The occupied countries looked and ravaged, wait to be rebuilt, and their naked, hungry millions cry to be clothed ted and housed Common justice, if nothing else, demands that this staggering cost be borne by the Germans. If they are turned into a nation of small farmers how can they pay either in cash or kind?

It is the American contention that German industries should be thrown into high gear to produce goods for the countries that Germans have laid waste. By no means is it contemplated that Germany is to retain her industrial supremier, dominating the economy and the very existence of her neighbors. The speedy recovery of Linice, Belgium and Holland will be aided, and every effort will be made to industrialize the backward are is of eastern and southeastern Europe by promotion of power projects and of local manufactures.

In the meantine what more sensible than to harness German industry to the European plow? What more just than to make the German people work at reparation even as they worked at the manufacture of armament and munitions?

Whines will go up from the Germans, of course, and an anguished outcry is to be expected from those sentimentalists who cling to the myth of "good Germans" None of it will be heeded, for the records of the

State Department and the Foreign Economic Administration prove conclusively that no unendurable hard ship will be worked Between 1933 and 1939, according to these figures, Germany spent between four and five billion dollars a year preparing for war, and when war came, the annual expenditure for military purposes was upped to 20 billions—all this without any hurtful lowering of living standards There, by their own admission, is what the Germans can do in the way of reparation and what they should be made to do

Official Washington has no doubt that Germany will attempt every kind of deceit and evasion but counts on rigid supervision of German in dustry to guard against cheating For example the Foreign Economic Administration points out that Germany's lack of raw materials greatly simplifies the Allied task of guarding against rearmament while Germany produces for ravaged lands A full bo percent of oil, other than synthetic, comes from the outside, as does 80 percent of the iron ore. The Reich also depends on imports for brusite copper and other materials essential for armament manufacture

An efficient control system there fore, can estimate Germany's require ments for normal peacetime production, plus the goods for devastated countries, and then shut down on the importation of surpluses. As for synthetic oil and rubber plants, if supervision proves ineffective, they can be closed. The control of Germany electric power, bringing it in from outside if necessary, will permit the regulation of Germany's industrial heartbeat, and Allied administration

of German railroads is another means of tightening the watch

Our postwar planners also insist on the necessity of ricing close-herd on German finances Between 1924 and 1930, according to State Department figures, Germany received more than five billion dollar in the form of international and private loans. Every penny of this vast amount was poured into preparedness for war Not again. If the United States has its way, all German borrowing, if and when permitted, will be put under a magnifying glass before authorization, and every precaution taken to guard against improper use

Summing up, these then are the leterininations of the United States with respect to the treatment of a collapsed Reich and its conquered people (1) military occupation to

drive home the fact of defeat and to enforce permanent disarmament, un til such time as the Germans prove a capacity for self government, (2) the punishment of war criminals by military tribunals (3) sweat and sacrifice by the German people until the ruin and ravages of German fury have been made good in full measure, the process safeguarded by Allied control of German industry and finances

The United States, to be sure, is not the sole arbiter of Germany's fate However, high officials feel that our arguments cannot fail to be persuasive, for while the three American fundamentals make sure thar justice will be done, they are uncolored by hate or vengefulness and leave the way open for Germany's ultimate redemption, if redemption is the German will

Challenge to Civilians

An editorial written by Ernie Pyle for the U.S. Treasury Department

THIS I ALL I came home from I rance on a ship that carried 1000 of our wounded American soldiers. About a fourth of them were terribly wounded stretcher cases. The rest were up and about. I have others could wilk, though among the walking were many legs and arms missing many eyes that could not see

One hospitalized soldier was near death on this trip. He was wounded internally and the Army doctors were trying desperately to keep him alive until we got to America. They kept pouring plasma and whole blood into him constantly until they ran out of whole blood.

I happened to be in the head doctor's cabin at noon one day He aid other doctors at that moment were going around the ship typing blood specimens from several of the ship's officers and from unwounded officers aboard. They were doing it almost surreptitiously, for they didn't want it to get out that they needed blood. Why didn't they want it to get out? Because if it had there would have been a stampede to the hospital ward by the other wounded men, offering their blood to this dying comrade. Think of that — a stampede of men themselves badly wounded, wanting to give their blood!

It's Good to Be Home

Condensed from Harper's Magazine

A B G

at first I heard a ladder scrape up the side of the house. Then someone said in an easy Texas twing, "Okay now, I'll be right behind you If you feel yourself getting dizzy or anything sing out We'll be knocking off cally anyway sun's too strong this time of year. Here we go, now and no Zeros either.—'

They staited hammening soon after that and my kids ran out to watch There was a tall blond fellow, a smaller man, and a Mexican

When I got back in the isternoon the big sellow was trying to get my little poy to ride with him on his motorbike. The other two were sitting on the griss by a clump of flowers. The small man sit with his knees driwn up and his irms hanging loosely on them. He was watching, with a bright tentative smile like a stranger's who doesn't know the linguise my brother home on leave, who was trying to get his poincer to retrieve in proper form.

He didn't here me walk up the drive and I came up on him too suddenly, I guess, because he jerked and whiled around

'I m sorry," I said "I didn't mean to startle you"

He looked up at me apologetically But the pupils in his blue Irish eyes were dilated and his jaw muscles twitched

"I m still a little nervous," he said "laps in every bush '

I offered him a cigarette and he took it awkwardly. His fingers shook as he lit it. You couldn't tell how old he might be. Deep lines were plowed around the mouth and nose. His hair had been very black, but now showed streaks and patches of white.

He looked at the panting, grinning pointer licking my brother's hand

"I hat's one thing about dogs," he said "they don't never run out on you Bud there — that's the big fellow — had a cocker near broke his heart to leave on the island Hono lulu Got the sight of one eye gone Game leg too, like me They shot up my kneecap."

He cupped one hand over the end of his eigerette and took a long pull, then very carefully eased back against a tree. The hesitant smile played over the lawn, the roses and oleanders

"It's good to be home," he said, and breathed deep

"Were you out there with him" I asked

'No I was on Guam Was there when the Japs came in '41 Those devils had me ii months and four days"

"I thought the papers said no Americans were left alive on Guam"

"We killed plenty of them Japs," he grinned "We was all seasoned men out there, five to 15 years' experience

There was 368 of us, Marines, Seabees, and some women at the hospital We was building a runway Before Pearl Harbor, that was I'd been called up from the reserves, commissioned lieutenant You see. I'd been in the Maines before I sold the house and inill - took a heck of a loss — and my wife, she took the two boys and the baby and went to Seattle Got a job in the Kaiser yard Good thing, too, because when I was taken prisoner the allotinents stopped She didn't get nothing till they started paying her some insurance, nine months later Japs 16ported inc dead

We could have held Guani if we'd anything to hold it with We was due in good Commanding officer, he kept asking for stuff and reinforcements. But all we hid was short aims, 45 s, and may be about a thous and rounds of antianci ift immunition.

"They come after us December 12, on their way back from Pearl Harbor They shelled us for three days and thice nights. There wasn't a rock nor a pubble this size that didn't get turned over by the time they was through We had to keep letting them land to kill them. Kniled them mostly It's a pretty big is and about 20 miles by 40, and they come in all over it We'd have held them off with even muchine guns maybe. And a few morths We had the emplace ments, but no ammunition What would you call that, anyway? I call it manslaughter

'They come in finally December 21 There was maybe a hundred of us left, and the women They dynamited the hospital None of the women

lived more'n two days after what they done to them The little native village that was there, they didn't leave a living soul Kind of thing they did, one day when we was chained around a tree there was this little girl playing around, about the size of your little boy I guess — about seven or eight thereabouts. She had a ball she was bouncing Two of them came up to her and one grabbed her by the hair and they chopped her head off Then they stuck it up on a pole We was back that way some months later and it was still on that stick. The little skull

"They had us clean up the place, salvaging and loading up the ships. There was some wife there, and they made us build a corial when we was all finished and there was nothing left to do. They headed us in there like a bunch of cattle. No shelter, no nothing Out there in the sun all the time. Dysenicity and all, and the heat I cllows do go plumb crazy. Fights kept breaking out all the time. Had to tie 'ein down, they'd kill

"They'd bring us this here rice nraybe once, twice a week. They was supposed to bring wood to cook with but mostly they didn't bring enough. We ate it the way it was, hilf raw. Some of the officers figured we was getting about 14 ounces a week.

"They wasn't nothing but just to sit around Fellows'd die, they just let 'em lay Ten, 12 days, some of the bones even bleached. If anyone had told me a normal human being could go through all that and stay alive, I'd a said he was crazy. That odor—that's the most terrifying thing, the odor

'When they wanted to have a little fun, they'd pick a couple of guys

and take a bunch of us along to watch I guess maybe you've heard what they do They used this here acid One day they laid a fellow across a block Chopped his leg off They had the most awful laugh They took hold of a man's tongue and stick a knife in his throat and slit the tongue clean in two Turned him loose that way Sometimes they cut the tongue out, let cm bleed to death What they done to me wouldn't be fit for me to say I can thave no more children I guess that senough to tell

"We was captured December 23 Christmas they had Lieuten ant Colo nel Hassell talk over the ridio Said we was doing is well as could be expected and for folks not to worry He had a piece of paper it was written down on Hirdly knowed what he was saying, two of them Japs held him up. He died about a week later. The way they do locaten that man was sound alous whipped him till you thought there wasn't a place left on him. I his here icid was throwed on his chest You could see his rib just is plain as them milk bottles over there You could see his lungs working all the time he was broadcasting

"I sure le uned how little it takes to stay alive Endurance it's a funny thing Bigger and stronger fellows died

"Must have been nine, ten months later, they put us on this here boat There was 26, 28 of us left. They had steel cells in the holds. No light, no air, no sanitary facilities, nothing to lie on. They'd come down sometimes with this dab of ration. They'd tell us they bombed I is Angeles,

Chicago, New York destroyed Way it sounded we figured they had near half the country We had no right not to believe it Look what they'd done to us

"I don t know how long we was at sea I was about two thirds crazy We knew what had happened though, when the torpedo hit These Japs had come down to give us this dab of ration As God would have it they'd left the hatch open, so we got out I he British picked us out of the water Think it was five of us

"My hair was down to my shoul ders like a woman's. They said I weighed go pounds. My teeth were all loose. They had to feed us little bits at a time, and with needles. The sub-transferred us to another ship and they kept passing us along that way till we landed in Dublin. I was in the hospital there six and a half months.

They'd talk to me about my wife and family, about home I didn't even know my name or nothing Clean forgotten my children My wife, she heard it right away when we was picked up, they reported our serial numbers I unny thing the Japs had reported me de ad

'I was in the hospital over here for seven months. They give me this medal and all. I didn't care nothing about that All very fine and nice. But you can't eat medals."

The mild voice, that had gone through the story as if it were telling something that had happened down town yesterday, shook a little He fished for his cigarettes

"Coming over on the boat," he said, "I heard all this talk about rehabilitation and stuff, and about how things was here, and I thought

it won't be no trick at all to get a good job right away. First off they tried to give me this goofy discharge. Mental The little sense I ever had I still have Figured if I got away from that military discipline, and forgot all that, I'd be okay. Nervous, maybe, for a while, stands to reason. I finally got to talk to the Colonel. Told 'em if I didn't do well, they could always sank me back. Don't tag me with no dopey discharge.

'I come on home here and the Veter ins of Foreign Wars had a big doings and presented me with a paid up life membership. They sent me on out to this here plant, said they had a fine job for me But they told me I had to buy bonds Told them I can't afford none Had my share of this war Next place they sent me to they wouldn't have noth ing to do with me till I would see this doctor and that, to get examined liquied the best thing for me to do was forget my discharge, so I stuck it in my trunk and got me this job next day Kept my mouth shut They didn't know for a week I'd been in the war

"I ll get a few dollars together and find myself a partner with a business head Tried to get back some interest in the mill, but the fellow I sold it to wouldn't hear of it. Has him a gravy train out there, with these cost-plus contracts and all Figure I can get them contracts well as the next man In a year maybe I should be sitting pretty, able to take care of my family right."

He stopped talking suddenly Then he inched himself together and got up to go Bud, the blond fellow, saw him rise and sauntered over My brother walked up too, trying to light

his half dead cigai

"Been telling vou what he went through?" asked Bud "He's just about had his share of misfortune, hasn't he?"

The small man clinned almost boyish "They sav you reap what you sow well I guess I must have been reaping in someone clse's territory!"

He handed my brother matches and that strange, desperate smile broke out again "It's good to be home, sii, isn't it?" he said

Turn ibout Tile

All wich is 1go residents of a ple 1sant New York suburb looked on in wonder as a new family established itself in that tranquil countryside. A formidable metal fence was erected surrounding the newcomers' estate. Approaches were guirded by cunningly placed photoelectric cells. Sirens were installed to protest the approach of prying strangers and great lights were set to illuminate the house and grounds in the event of suspicious visitations after dark. To local reporters it was made quite clear that the vulgar touch of journalism was abhorient. The reasons for the prodigious precautions were finally explained, however, in an interview with the owner some time later.

'A man,' said Walter Winchell, the new resident with simple plaintiveness, "his a right to some privacy '—Charles I isher The Columnists (Howell Soskin)

Louis Untermeyer

Poet author editor of 'Modern American Poetry and many other anthologies

UNNING, like poetry, is some thing every person belittles and everyone attempts A pun, we are told is "the lowest form of humor," and "he who will make a pun will pick a pocket" Oliver Wendell Holmes condemned the punning habit but was a terrific punner himself, and apparently his house served is a sort of pun exchange, for Longfellow had occision to observe that there was no place like Holmes

Franklin P Ad ims, who has done a bit of punning in his time, feels that often a pun is perishable in transit, that, being mostly oral, some of its appositeness is lost in print Certainly the best puns, when removed from the situations that gave rise to them, often become virtually meaningless l or example one must remember the Spanish Civil War to appreciate what somebody said when the Barceloni ins were moving through a narrow corridor, that it was foolish to put all vour Basques in one exit Mr Adams himself has been ciedited with asserting that, in any case, Spain is merely a snare And ilusian

Punning, for all its detractors, has a long history and an honorable lineage Shakespeare used puns not merely to amuse the low-brows (or, as he called them, "groundlings")

but to lighten the tension of his almost overpowering dramas. He knew that a flash of wit would be welcome against the murky violence of death and disaster. In Romeo and Juliet, for example, Mercutio, who has been stabbed, expires with the pun "Ask for me tomorrow, and you shall find me a grave man"

It is no accident that the best punsters have been poets. A pun is a kind of thyme, it plays with a word not only for its sense but for its sound — a good rhyme like a good pun, has the trick of seeming both accident il and inevitable. When reprotehed for not writing more serious poetry, Thomas Hood replied 'If I would earn my livelihood. I have to be a lively Hood."

Hood is credited with the immortal pun made on a famous romantic verse. To the lines ' The light that lies in women's eyes. ' Hood added "and lies and lies and lies!"

Perhaps the best puns are those that embody not only a twist in meaning but a trick of idea. No one ever has surpassed the critical remark by Eugene Field, who ridiculed the actor McCulloch's performance of King Richard III. "He played the king as if he were afraid somebody else might play the ace."

The German Prisoner-

The way we deal with Hitler supermen now in our midst may suffuence the future peace of the world

Condensed from The Atlantic Monthly + James H Powers

To 99 base camps and 98 branch camps scattered across the United States, over 200,000 German prisoners of war are placing the Will Department — and incidentally the American people — in a quandary. The difficulty has little to do with such relatively simple matters as housing, food and security — all of which the Army takes in its stride.

The difficulty lies in the fact that these prisoners of war have been through the Nazi educational mill, which extripates ruthlessly most of the principles accepted by Americans is essential to civilization. Then outspoken arrogance is accompanied by a stiff confidence in the ultimate traumph of Nazi principles—if not in this war, then in the next

Remember," in Unterofficier was overheard briking to his fellow prisoners that you are still members of the German Army, whose duty it is to work for Germany. His warning carried obvious implications against backsliders At the same camp a prisoner who had served in the Afrika Korps told an interpreter that the Americans could be thankful they were giving the best food and barracks available to the Germans. "When Germany wins the war," he announced, "that will be at least one good mark on your record." That

view has been echoed by captives taken in France last summer

Almost without exception, prisoners attribute kind treatment to our icu of retribution. This unshakable ittitude is fostered by the functioning of a secret police, usually under the direction of a prisoner who has ties with the Gestapo. Sometimes prisoners have been found hinged apparently "dead from suicide." There have been more than a dozen instances of actual murder. I ellow prisoners offer no assistance to the inilitary in probing these "accidents." Having seen what happened, they tear to testify

Persistence of Gestapo tactics in the **POW** camps is but a part of the story of our shortcomings in handling disciples of the Nizi philosophy One defect has to do with the screening of the prisoners as they arrive at the camps Under Army rules a basic personnel record is prepared for each prisoner by our Army interrogators, called "processors" At the very beginning of the questioning the German noncommissioned officers, who hold this rank partly because of proved adherence to Nazi doctrine make their presence felt. They intervene, and whenever thev can which is often — they assume full control of the proceedings

The cooperation of prisoners, it becomes clear at once, is not in response to their American examiners but at the order of their own noncoms. As a matter of convenience in handling groups, this procedure may have its points, as a method of handling POWs schooled in Nazi doctrines, it is senseless. It builds a wall between every individual prisoner and the camp processors.

Examinations generally take place at tables set so near together that any prisoner wishing to make it pluin he is an anti-Nazi faces another hurdle If his fellows he ir him making any such declaration, he is a marked man To make matters worse, the examin ition disregards the issue of his being 1 Nazi or an anti Nazi Interpreters ire not permitted to solicit this information If he wants to be segresaid he must volunteer the information - - though he frequently does not know that he must Such proced ire obviously follows an assumption that it doesn't matter much what a prisonci s political views are That assumption is belied by a record of strikes, nots and murders in camps all over the United States

In most POW camps the responsibility for assigning duties is handed over to the higher ranking German noncoms. The result is to place a disciplinary rod in their hands. They employ practically the same authority they held in the German Army. No one with Army experience will fail to grisp the significance of this fact. Power over assignment to detail is the traditional club wielded by all Army serge ints, time out of mind.

In American corporal who served to hit months at a POW camp gives

the picture clearly in a letter to the New York Herald Tribune "It is the Feldwebel (sergeant) who commands the men's respect The sergeants are, in reality, a police force, since all activity in the camp is directed by them The effect of their rule is a little Germany, where persecution of anti-Nazis is thorough and violent"

German noncoms go to extraordinary lengths in enforcing their Nizi point of view They bar attendance at educational or other movies provided for the men's recreation, and even operate as censors over the pris oners' reading In a midwestern camp where the authorities prepared a booklet on American history, a Ger man sergeant declared that the book would have to be censored since it gave a distorted view of the real historv of this country - which he had studied in Germany Cump officials, timidly interpreting the Geneva Convention's strictures against compul sory indoctrination of prisoners, bowed to this veto

Says one officer, "It is not our business to change these men's habits or beliefs or to be educate them"

These prisoners are dynamite, not only while the will lists but through many uncertain tomorrows which will follow. These men will be citizens of postwar Germany and inhabitants of our postwar world. Shall we send them home with a clearer under standing of this country's decision to stand no more of their nonsense, or with an indulgent notion that we are simpletons, against whom a third try will succeed?

To blame the strictures of the Geneva Convention is idle. The Brit ish get results under that identical

Convention In Britain, German POWs are put all on one plane, regardless of rank, spokesmen and leaders are picked from carefully selected anti Nazi prisoners, German non coms have no authority whatever, terrorists are dealt with summarily, and Polish guards insure a minimum of quibbling by "Geneva Convention lawyers" among the prisoners England no longer plays with her deadly foes

Dealing with these prisoners is a foretaste of what we shall meet in dealing with a defeated Germany Here is an opportunity to show that we can be firm and just, to prove that we know the time of day in the world we inhabit, to make it clear that we do not propose to be fooled again. If we continue to bungle this job, here at home where every facility favors us, how shall we fare in Germany when the firing ceases?

D#,

Writes William L. Shirer in the N. Y. Herald Tribune

It is painful to contrast the attitude of the Cerman and American sovernments toward each other's prisoners of war

The Cermans subject American prisoners to systematic propaganda by means of a weekly newspaper called O(K-1) he Overseas Kid. This is the only journal of current events in Finglish which they are permitted to see

Most of the papers news' turns out to be N 121 propaganda in all its poisonous forms. It systematically drums into American priseners that they were swindled by their government, which had no business getting into this war that the home front is not backing up American troops, that war production is inadequate that when the prisoners return they will find ten million unemployed. News of the war is completely misleading. Deferitism and district of our allies are sown by falsified quotations from American writers.

The importance of this propaganda lies in its long range objective. For even if the Nazis lose the war and are forced underground, they aim to send back to America tens of thous inds of American youth embittered against their own country and pumped full of doubts as to whether the war was worth fighting

We have several hundreds of thousands of young German prisoners in this country. The Army seems frightened at the very idea of doing any thing to dampen their fanatical Nazism. It has not published a Germ in language newspaper which might give these misguided youths a true pic ture of what is going on in the world.

There is not a word in the Geneva Convention which forbids propa gandizing prisoners. And is it not true that the United States has a serious obligation not to send a quarter of a million Germ in prisoners back to Germany literally encouraged by their treatment here to be more Nazi than ever, and to become the backbone of the future Nazi underground?

300

The Most Unforgettable Character I've Met нь

By Henry James Forman

relivish to a fluminity

Find is vhodicy necessite to

Editor lecturer and author of many books and maga zinc articles

NYONE who didn t know I e Baron Russell Briggs might have taken him for a humble clerk or a schooltercher long past the hope of promotion. So modest was he that he seemed to court obscurity as others courted fame. And many a student, if he did not already have it, took home with him an abiding regard for democratic simplicity because Dean Briggs disliked sham, pic tense and snobbishness.

People sometimes compared him to both Lincoln and Emerson Physically he resembled neither. Of medium height and sturdy build he always walked briskly, loosely as if bent on some urgent immediate errand. I rousers bagging at the knees, a green base bag of books across his shoulder, pulling his coat collar askew, a much abused soft hat tilted back—all this gave an effect of negligence. But when you looked into his face, homely, alive with kindness, you understood the comparison to the two real Americans.

Among countless stories told about Dean Briggs is that of the fashionably dressed young man who drove up one day in a trap to the Boston State House. To a nondescript passer by whose face appeared reliable, he said 'My man, will you hold the horse

for about ten minutes?"

"Certainly," said the min "It's such a nice horse" When the young min re-emerged and offered the min a quarter, it was politely declined. Interested, the young min asked his name.

"Briggs" was the inswer "I B R Briggs" Then the young man recognized the De in of Harvard College Fictitious as the story sounds, it is nevertheless true

When I first met Dean Briggs, at the turn of the present century, he was still in his 40 s. I had come to Havaid from the Middle West on a small grant and had only \$80 I went to see the Dean in trepidation. If he knew I had so little to go on, he might then and there reject me But the Dean greeted me as though he had long been awaiting me.

' Tell me frankly," he said in the tone of the kindest of family phy ici ins, "how much money you have"

I told him, and for one breath taking instant awaited his verdict What he said was

"We are in luck The College Li brarian has just told me he has a job for someone three evenings a week. It doesn't pay much, but it runs throughout the college year, and you'll be able to study there at least part of the time Come and see me whenever you don't see your way" A surge of confidence swept through me In those few ininutes my life had moved up to a new plane Dean Briggs was now my friend and ally

After that I heard of many similar instances, which put mine in the One impoverished young man, who had early taken to the road as a hobo, heard somehow of this fabulous De in He be it his way to Cambridge, saw Dean Briggs, was helped to put himself through Harvid, and subsequently prospered as a teacher Still another had arrived on borrowed money from a tiny fresh water college. He was about to return home, but Dean Briggs saw his ment and detained him. He has had a bright career since then as a te wher, writer and lecturer

With Dean Briggs for a friend nearly all things became possible. He was in opener of doors. Those whose homes were fir away, especially if they were new or friendless in C imbrid e, were his peculiar and selfimposed charges. Noticing lonely students wandering through the Yard. he vould invite them to his home, his table his fimily 'Well, ma'am' he vould amounce to Mrs Briggs, 'Ive brought you a guest to din-And Mrs Briggs always welcomed us with unquestioning grace She had evidently made up her mind long ago upon the kind of husband she had

Or he might meet a student who obviously wasn't cating often and take him to some lunchroom counter not only for a me il but for a delightful talk "Mi Jones," he would mur mur almost shamefacedly upon leaving "someone has put into my hands

a little money for just such a purpose. So I'll be obliged if you will take these ten dollars to bridge you over You know," he would add confidentially, "it's very bad for the eyes to read on an empty stomach"

Every student counted in his scheme of life Just as Limerson knew that souls are not saved in bundles, so the Dean knew that every individual was a center of infinite possibility

The de in of a college is normally a disciplinary officer. In general, deans before him were formidable if not awe-inspiring. But Dean Briggs created a kind of golden age of dean ship, bringing a new humanity to the office. One of his rules was "It is the business of a de in to break rules any clerk can keep them. I would rather," he said, be fooled a dozen times than be unjust once." All the same, he was seldom fooled.

For those of us who were earning our own was there was little time of opportunity to break rules. But our richer contemporates often told of the Dean's unhappy squarming in his chair, of his plunful une issness when he had to inflict a penalty so that they frequently suffered more from the Dean's suffering than from the penalty. He took all extenuating circumstances into eager consideration, but he was always so absolutely just that no sinner even thought of disputing his verdict. One of the collect periodicals printed these lines.

Of all the sprightly figures that adorn the college scene

The most supremely genial is our own beloved Dean

He ll kick you out of college, and he ll never shed a tear.

But he does it so politely that it's music to the car To expel a student from college must have cost Dean Briggs much more than the student He was sorry for the boy, but still more sorry for the parents To one who had transgressed he said "Your father must know this from me, but he has a right to know it from you first I beg you to tell him You cannot help him more now than by going to him, or hurt him more than by avoiding him"

With all his work among students he still give certain courses and he vas one of the ablest professors of Finglish in the country. He taught for 12 years and was instrumental in revolutionizing the teaching of English composition in the United States.

Together with Professor Adams herman Hill, Briggs insisted that an obligatory course in writing Englishmu t come in the freshman year and together with Barrett Wendell he developed the idea of the daily theme. It made a vast amount of work for the teachers but the way to learn to write was to write, in daily practice on a variety of subjects

So successful was the plan that Freshman English" and the duly theme are now basic in almost all college courses Some of Briggs's own students became teachers and professors in their turn, and carried this practice throughout the country

Dean Briggs gave the most nearly professional course in writing offered by the University And to this day, when I meet some of his hundreds of students, eyes brighten and writers, editors and teachers grow reministent with the warm affection only a part and loved teacher inspires

Some of his comments remain un-

"This is as good as much that appears in Judge, but it is not very good"

"The trouble with the word 'meticulous' is that I always have to look in the dictionary to make sure whether it is being misused"

"A good story, but there is too much porch for the meetinghouse"

Before me is a bundle of themes written for Dean Briggs more than 30 years ago by a humorist now nationally known. One can see how the teacher encouraged the boy's native vein of humor, praising a phrase here, carefully noting lapses in style and even spelling there, yet marking the whole decidedly imusing," not omitting a caution about forced cleverness.

If there was only one good sentence in a piece the Denn gave credit for it. He would stop men in Har vaid \ard or in the street—or even call them by telephone—to say how much he liked something they had written. One day he left two professors, famous in their fields, to say a kind word about a small piece of mine in an undergraduate publication. He could not withhold praise if he felt it to be due.

The roster of his students includes such well known editors and writers as Frederick Lewis Allen, editor of Harper's, Edward Weeks, editor of the Atlantic Edwin Balmer, editor of Redbook, Robert Benchley, John Dos Passos, H V Kaltenborn and Conrad Aiken There were many more

Today I still meet men in various walks of life who smile when Briggs's name is mentioned, and say something to this effect "Did I know the Dean' I knew him as perhaps nobody

else knew him In fact, there was a special bond between us' So rich was the store of his humanity that every one who drew on it somehow came to believe he had all of it We all had a special bond

A bombshell fell among us the day Dean Briggs was promoted to be Dean of the Faculty, an office in which his work would be easier I still remember the feeling that hit me, like a blow on the head Dean Briggs would be my dean no longer. How many others felt the same way was soon made clear. By a ruse he was brought to the college office at dusk one evening. No rily 3000 students, hidden on the other side of the building, gathered in front and began to call for Dean Briggs.

Surprised, he pecied out of his office window. The Yird was dark with men. He came out upon the steps the homely figure we knew and loved so well. Was this to be the last time? He tried to speak. His voice faltered, but he mistered it. Then he said a few words about the new Dean — and added.

"The students of Harvard College can get along very well without me But I cannot get along without the students of Harvard College"

That was at once his secret and our hope. He needed people upon whom to exercise his genius for kind ness. Perhaps he would find some way of keeping contact with us? A deep throated roar came from the mass of students. Many of us choked as we tried to cheer.

He did find ways of helping us For a long time he consulted frequently with the new Dean, and he remained familiar with our problems And we still went to his house on certain evenings

As it turned out, Briggs became busicer than ever Radcliffe College in Cambridge, now one of the great colleges for women, was then still young and in a formative stage. It needed an experienced hand at the helm, and Dean Briggs was elected its "part time president." He served as such for 20 years. He is now part of its tradition, and a building of the college bears his name.

Dean Briggs was an ardent sports fan, and the ill will between the teams of Harvird and Yale disturbed him greatly. The rivalry between these colleges was at that time not a mere jocular enmity. There was really bad blood. And many a football or base ball player was more than tinged with professionalism. A change in the spirit of intercollegite sports was necessary. A new chairman of the committee on athletics was chosen. It was Dean Briggs.

Directly, with his usual whole souled energy, he became an apostle of intercollegiate good will Hirvard Yale and Princeton, he declared, were really "one bunch" The Dean visited the other colleges, addressed their students With Corwin and Mendell of Yale, and McLenahan of Princeton, he completely revised the thictic eligibility rules of the Big Three Soon he was able to say "I would just as oon leave a question of Harvard eligibility to Mendell or McLen than as to any Harvard man I know If I had any fear at all it would be that Harvard would be favored in the decision" That was his way

After my graduation my glimpses

of the Dean were rare but precious Twenty years after that date I remember greeting him in the Yard The Dean knew what I had been doing, and seemed quite conversant with details of my professional life Previously I had seen him in New York upon my return from France after World War I He had just been appointed exchange professor to the Sorbonne and was on his way to Paris

"Tell me, Mr Forman," he inquired confidentially, "is it all right to take white shirts to Paris? I thought if they lack means for washing them after the long war, it might

embarrass them "

DEAN BRICGS has been dead ten years now, but none of us who knew him will ever forget him. The reason we so loved and admired him was because to him we were not simply a "college," or a "student body," or anything merely statistical, but individuals, with problems to meet, minds to educate, souls to save He was the absolute antithesis of fascism in education and in life Picsident Eliot of Harvard phrased it beautifully in his citation conferring the LLD degree upon the Dean — a citation made, he said, because the Dean was "convinced of the overwhelming predominance of good in the student world ''

So warm and glowing was this conviction that it kindled something in even the least responsive among us To this day many a gray and graying head cannot think of him without emotion

The Marine Who Wouldn't Give Up

Two Marines on New Britain were sent out on patrol in advance of a big push to be made against the Japs on the following day Returning from their job, one of them stepped on an enemy booby trap The explosion shattered both his legs Realizing he was too heavy to be carried back to camp, he persuaded his companion to go on alone The second Marine treated the wounded man as well as he knew how, then reluctantly started back Fears that the Japs would find his companion plagued the Marine, but he continued on to camp and turned in his information

As scheduled, the attack on the Japs vas made the next day. The enemy soon was withdrawing in disorder When the Marines came to their wounded buddy they were horrified There he lay, silent and motionless And about his body and

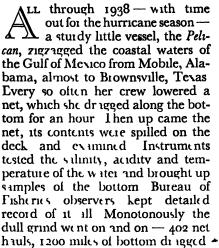

up and down the length of it were tangled wires Evidently the Japs had come and rigged him up as a booby trap

No one dared touch him This was a job, a delicate and dangerous job, for an engineering unit Suddenly the 'human booky trap' opened his eves, grinned feebly, and whispered Hey, fellas, get these damned wires off me '\n' help ine up" The Marines stepped forward and removed the wires There was no blast, no explosion

Knowing that the Japs would be attracted to the spot by the first explosion, the Marine had painfully wired himself up as a booby trap with wire from the one which had wounded him The Japs had come They took one look and fled And the quick thinking Marine had lain undisturbed until his companions found hun - C ntributed by Lt Seymour Arnold Gross

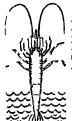

Where All Those Big (Shrimp Come From)

Condensed from The Baltimore Sunday Sun

As a result, 1 new \$6,000,000 industry has been created, 2 fleet of trankers has been built, 2000 men have found prosperous emp 0, 6 a whole community has been revivified. And the people of the United States have 50,000,000 additional pounds of food each year — delicious, nutritious and unrationed. All from a patient bit of research.

A mystery had puzzled scientists for decades — where do shrimp go when they disappear from inshore waters? The Bureau of Fisheries (now the Fish and Wild I ife Service) assigned Milton J. Lindner and William W.

A new and fabulous shrimj pool in the Gulf of Mexico promises an inexhaustible supply of delectable food — nutritious, unrationed

Lealon Martin, 7r.

and Carolyn Ramsey

Anderson, biologists, to find out, and gave them the *Pelican* to use

What the *Pelican* found was the greatest concentration of shrimp ever discovered uncountable hordes of shrimp And what shrimp! These are not mere two- to five inch morsels. the only kind you ever saw until recent years, they are eight to ten inches long, known in the trade as 'jumbos" The school centers on Ship Shoal, ten to 20 miles off the sheres of Louisian i — and it will never be exhausted. Any conceivable catch by the shampers fleet in any year will make no difference to the next year s crop, for these are adult shrimp that have spawned and will never spawn again. They have completed then life's work and have come to this git it rendezvous, a kind of 1 rp's St Petersburg where the food, temperature, and idleness just suit them If not caught, they soon disappear Biologists believe they die, in all their extensive researches, they never have found a shrump more than a year and a half old

I of more than a century I outsiana bayou folk have been catching shimp Their fleet of luggers gathers at the beginning of the season and is blessed in a picturesque ceremony, then scatters to work the shallow in shore waters The catch used to go mostly to the canneries, though a sizable fraction went to Chinese and Filipino colonies who spread acres of boiled shrimp on platforms built over the water, to dry in the blazing sun

The Louisiana shrimpers, however, had no craft that could dare the open Gulf So the first to take advantage of the news of the new fishing grounds were several shrimp trawlers from Florida Then Stathis Klonaris, now known to all the Gulf Coast as "The Greek," came to Morgan City La, with little more than his shipwright's tools He began turning out husky, 65 foot, 100-h p Diesel craft that can drag a big trawl net through waters 12 fathoms deep At \$13 000 apiece, Klonaris has built more than 100 of them — 50 in wartime So important are they to the country's food supply that priorities for miterials are readily granted

The boom that followed the development of the Morgan City shrimping fleet of 200 trawlers has been called the most amazing phenomenon in the innals of American fisheries A decade 190, we were exting 100,000 000 pounds of shrimp a year Now we are enting half again as much And where is most of the 100,-000,000 pounds was eaten from cans, most of this year's 150,000,000 pounds is eiten fresh. When jumbos becaine available in regions that never had tisted fresh shrimp before, their popularity was instant. Americans want fresh shrimp, now, and canners are Packing only one quarter as many as they once did And a new product, quick-frozen shrimp, is going ahead as fast as wartime restrictions permit Of all the food that comes from our

waters, only the catch of salmon, tuna and oysters exceeds in annual value the catch of shrimp Two thirds of this catch comes from Louisiana And most of that from Morgan City

Once an important port, Morgan City was drving up in 1938 There were cobwebs on all the cash registers, as the natives ruefully put it Now the Chamber of Commerce boasts, "It's the fastest growing small town in America" It probably isn't, there must be war-boom towns that have grown faster But when war industries wither away, the shrimp will still be there, Morgan City figures

The shrimp fishermen are a cosmopolitan lot — I lorida Conchs, Louisiana Cajuns, Greeks, Italians, Scandinavians Three men work a trawler, like fishermen the world over, they work on shares

Morgan City lies 18 miles from the Gulf, up the Atchafalaya, one of the deepest rivers in the world From this fine harbor the trawlers work their way through the thick morning fogs out to Ship Shoil The grounds are so large that there may be a weary hun with the try net before the school is found I hen out goes the trawl net, its purse shaped mouth 90 feet wide, six feet high So close-packed are the shrimp that a boat may fill its hold in eight runs. And so absupt is the edge of a school that one boat may lift a full net, another 30 icct away may get no shrimp at all

When the hold is full — some five tons of shrimp — the boat i ices back to harbor The buyers come from New York, Chicago even from San Francisco, and they pay cash on the dock — at the rate of about 13 cents a pound (OPA ceiling) for a common jumbo size Sixty refrigerated trucks and trailers rush the shrimp north, east and west, to be sold at

55 to 65 cents a pound retail

And very good for us they are, the dietitians say Shrimp have the common seafood virtue of supplying proteins and minerals, their special virtue is that they are easy to digest. They are rich in the goiter preventive, iodine, which is important to inland dwellers. Shrimp sometimes have a hospital smell whereupon suspicious housewives accuse dealers of using preservatives. This is unjust, the shrimp simply happen to have been feeding on a tiny sea creature which has an iodolorin smell.

Shrimp, sometimes called prawns, are crustaceans, as are lobsters. They look something like little lobsters, indeed, though housewives seeing only the edible tail, would hardly know that Their life history, long a mystery, has at last been puzzled out. The lemale lets loose up to 800,000 eggs, which drift in the water, offshore

They hatch as little creatures 1_{00} inch long When they have grown to be only a quarter of an inch long, they make their way for miles from the open sea into protected, warm and shallow bayous They look now like transparent fleas, and during the next few months they go through six or eight phases of growth with distinct changes in appearance When they have attained their final form, but only about half their ultimate size, they start back for the deeper and saltier waters This is when the old-time shrimpers seine them

Milton Lindner formed a theory that after leaving the shallows the shrimp bred in open waters, and then went further out to saltier and deeper water where temperatures would be more stable. His theorizing has been

magnificently justified

There may be somewhere else in the world another fabulous shrimp pool But thousands of iniles of search hasn't found it yet, and the great 'mine' in the Gulf remains unique

Unexpected Answers

A Topeka, Kansas, assessor recently ran across the best answer yet to the question on the tax assessment blank. Nature of taxpayer. The answer Very mean

In Northampton, Mass, a Smith College freshman scrawled as her denominational preference. I like to be called Betty."

A young man in green was puzzled by one question in the application blank he had been given when he applied for an apartment at the war housing center. He listed his employer as the United States Marine Corps and now the questionnaire wanted to know what his boss's business was

After careful consideration he wrote "Exterminator"

When meat rationing first began, a farmer reported to his board that he had several hundred pounds of beef in storage To a letter demanding why he had so much on hand he replied 'It was necessary to kill the whole steer at one time"

-G Clark in Coron t

ow to Keep Ghosts Out of Town Condensed from a forthcoming book, 'Mcn at Work

Stuart Chase

THAT IS a ghost town? One where there used to be a way to make a living which has somehow disappeared

America has been spotted with ghost towns, as their citizens have used up some resource — forests, fisherics grasslands, minerals, oil, or witer Sometimes a whole industry picks up and moves Certain New England towns have seen their cotton mills move South, or their shoe factories move West The Power Age can make ghost towns very rapidly

What is going to happen to scores of communities swollen by war orders when the pay lode runs out? What can a threatened town do about its hosts

Well, one way is to do what Elina, Wishington, did Elma never wis a ghost town, but, in the midst of seeming prosperity, ghosts were all around Elma, and it fought them off In a way the people of Flma worked out a new social invention. It is a demonstration that can be applied to many other places

ED STAMPER had a Douglas fir in his back yard in Elina. It was one of the 200 foot giants which crowded the Olympic peninsula Nobody ever counted or could count them Ed ran thumb over the edge of his axe and started swinging He built himself a frame house, a shed kitchen and a woodshed out of part of the tree He hewed out 300 fence rails ten feet long He made 334 railroid ties and sold them He split out 500 boards six inches wide and two inches thick He piled up 15 cords of fire wood in his new woodshed. He sold the bark for \$12 And still he had a lot of tree left

The Elma Chronicle reported this in 1889 There were six billion board feet of uncut timber in the Elma region then

The first sawmill began to hum in 1800 A decade later ten big mills were ripping and screeching The big outfits cut ruthlessly, taking the finest trees and letting the rest be burned Why not, wasn't the forest 'inexhaustible"

Elma, the rough camp, gradually grew into a well ordered community, as confident of its stability and its future as Seattle or Spokane By 1910, stands in the Elma area were 38 percent gone A schoolboy could have drawn a chart and foretold the year the ghosts would come But neither boy nor man did so

And so in 1938 the ghosts closed in Of the 153,000 acres of towering virgin forest, only 11,000 remained The Malone mills, which provided the livelihood of more than one third of Elma's population moved away

When would the surviving mill go, and what would people do then? More than a thousand jobs were dependent on the dwindling forest

The West was pock-marked with lumber towns where no more donkey engines screeched, but only owls Was Elma, too, to become just a memory? Six thousand men, women and children, good Americans, lived in the region Two thirds owned their homes What were they to do?

The Elma Community Chamber of Commerce called a meeting of leading citizens of the region. They decided to appeal to the State Planning Council. That was what the Council was for In Elma the Council saw an opportunity to set a precedent and work out a technique for revising a lot of other towns dependent on the shrinking forests.

Had the people of Elma ever studied the needs of their town their natural resources their economic hab its, their standard of living? Did they know their soil types, and the best crops for them Did they know what the forest situation really was for the long swing? How about mineral de posits, water resources, recreation possibilities, fish and game? How about the schools, the public services, medical care?

No the people had little such knowledge

Well, then why not take an inventory's asked the Council

If the survey were to be worth a hoot, said the Council, it must tell the whole story, not just the sweet parts And the bulk of the work must be done on a voluntary basis by citizens themselves If Elma was to be saved, the people themselves had to save it

A local Committee of 21 was organized, with a steering group of three members, to carry out the Council's suggestions

The closing of the Malone mill had really frightened people. So when the Committee asked for help the people responded Almost 80 percent of families handed in the detailed, confidential questionnaire baring their income and property secrets.

The school teachers got their students interested The Council regards this awakening of the youngsters as the highlight of the whole survey for in many cases they aroused ap thetic parents

One group of 120 high school students was specially trained for placing the questionnuic, and helping people answer it when help was wanted Some of the questions were pretty technical. The youngsters had to cover by car, bicycle or on foot an area of 2,0 square it iles, and deliver the four-page document to 1600 fumilies. Answers were collected un signed, in sealed ballot boxes.

Another group of students was trained to make a land-use survey Data were placed on a large base map The map and the questionnaires became original source material of the greatest importance for the survey Youngsters who worked on it began to know their town as no pioneer, no parent, no official had ever done

There was of course + lot of information about Elma already in print But it was scattered in census reports, Forest Service findings, state documents, county agents' records, rainfall readings, flood records — all over the place The Council got it

all together, fitted the jigsaw pieces into a comprehensive pattern, and determined what parts were missing Here, says the Council, is the second highlight — the vast amount of useful material available to any town in the country, if somebody rounds it up

The geology of the region was rechecked by the state So were data about stream flow, rainfall, flood control The U S Soil Conservation Service, with the cooperation of farm owners, made a soil map, in which it appeared that many Elma farmers were trying to grow crops on barren ground, while some excellent soils were being neglected A study of the butterfat production of Elma herds brought to light a miserable record And so it went The results are all set forth in the Survey Report

The section on forests is the most significant of all to Elma "Basically I lma will always he a forest region," said the report I our fifths of the whole area of 250 square miles was planned by nature for hig trees. The soil, the rainfall, the topography demand them Soils for farming are limited, new large industries are highly improbable. The forest must be nursed back if Elma is to survive with its present population.

By wiser treatment, said the report, the forest are a could be made to vield far more revenue, and yield it forever Elma's industries must chiefly process lumber Ed Stamper, back in 1889, had the right idea—use the whole tree

Only one fifth of the area is suitable for farming But farmers can make a larger contribution to the own's economy, by improving their uids, by irrigation, and by growing

crops fitted to the natural soils Too many families had looked on farming as a part-time occupation. There is an excellent chance that farmers can double their income by up-to-date techniques and all-out effort.

But there must be cooperation Take strawberries, a crop of which Elma is proud A small farmer cannot get anywhere raising strawberries alone But a cooperative, with pick up truck service, grading standards, perhaps a cannery, established markets in Tacoma and Seattle, technical aid in the care and feeding of the pesky plant, might work wonders Cooperatives could be useful too in marketing poultry, beef, Christmas trees, cascara bark, all sorts of things

Another strong recommendation of the survey was to make Elma a recreation center for fishing, hunting boating, swimming, hiking, motoring Its natural scenery is magnificent. It is only a few miles from the Pacific. In Maine, when the lumber barons got through, the tourists moved in It is interesting to see a similar movement beginning on the other side of the continent.

What did the questionnaire show the people wanted? Those in the mill villages mostly wanted to get out of them Half of those living in the town of Elma wanted to get on a firm or into a garden home. This is a nationwide trend toward the "twilight firm"

But, says the survey, if the people of Elma want this pattern they must plan for it. They must help keep the mills going by improved forestry on the one hand, and tighten up their agricultural practices on the other. They must be careful of scattering up the creeks in remote hill bungalows,

at a fantastic cost for roads, schools, water, power and other utilities Far better to scatter into a "garden city" development — one planned for living, not for speculative profit

Elma made real use of the survey
The children began to use it as a
textbook — a kind of springboard for
plunging into the history, economics
geography of their nation, their continent and their world. It is theyoung
sters who will save Elma. What better
preparation could they have for the

The high school acquired a 250 icre school forest where the boyare given practical training. In 1941 they planted 5000 trees, including 2000 cascaras. Me nightly the CCC camps in the area were encouraged to plant 25 million seedlings.

The Weyerhieuser Lumber Company, cooperating established a 120 000 created furn, to be protected until it can be cropped for a perpetual yield. Other timber lands were replanted on a small a basi

Tar nets and small wood lot owners formed a cooperative for marketing their wood products. They have a trained forester to show them bow to that their tree, and grade their poles piling and pulpwood for these best market price.

Acres outterfut output per cow wis more sed 7, percent is a result of the work of the daily head improvement association Another cooperative was formed to clear cutover land where the Soil Conservation Service pronounced the soil good
for crops The great Wenzell Slough
was drained, and more excellent
farmland brought in Experiments
were started for raising beef cattle
on certain cut-over lands, for producing tulip bulbs, for mapping local
trails and fishing holes A cooperative
was projected for marketing wild
bethies, and a furniture factory to use
local alder wood

"I or the first time citizens of Elma have been united in one large enterprise," says Ben Kizer chairman of the Council They have cooperatively made the survey, now they must live it"

Will they? I cannot answer that one But I can answer this one What is the best way and the most democratic way to keep shosts out of any town? The answer is Get a copy of the I lim a Survey, study it prayerfully, go thou and do likewise!

The traditional pioneer packed his family and the cookstove into the wagon and moved on, when the forests or the grasslands or the soils had had the life beaten out of them. The people of I lima do not propose to move on. They propose to stay in the homes they love, and instead of practicing assault and battery on. Nature, to work with her

Cuba's Masterpiece of Vice Versa

Dr Rum : Grau San Marti: He broke all records f r high uide and faicy dreaming Condensed from
The Saturday Lyening Post

7 P Mc Ecoy

wo years ago there was the usual Fourth of July celebration in Havina—a parade, a flowery speech by President Batista, a gallant a sponse by U. S. Ambassador Braden, a colorful military review. Our I ourth of July is a great holiday in Cuba, for Cubans realize that their independence was born of our independence and in their hearts they are a inteful to the Americans of yester divand friendly to the Americans of odly.

A lew miles from where the parade was to start a private citizen climbed into a modest filopy and proceeded down the street on his way to the reviewing stand. A mile or so from his de tinition his car broke down and he got out to walk the rest of the way People began to follow him, and as he continued still more fell in behind To the outsider he appeared to be a 1 1 ther shy, gentle, scholuly householder out for a stroll But the crowds, i ipidly pouring in from the side streets, looked up at him with shiring ives They shouted "Viva Grau Oh! \wa Grau-Oh!" By the time they nid airived at the reviewing stind, this shouting, impromptu pirade of the common people had engulfed and dwarfed the official celebration

In 1944 there was another I out the official parade, marching with President Batista and Ambassador Braden, was the same idol of the masses, no longer a private individual but the people spresident elect. By the bloodless revolution of the ballot, the people had returned to power Dr. Ramon Grau San Martin—the man who in four short months as president 11 years ago did more to libra thee the laws of the land and better the conditions of the common people than any other Cub in an history.

The Cub ins, humorous and sophiticated, pridefully refer to their lovely island as the I and of Vice Versame ining no one should be surprised by invthing that happens in their paradox paradise. Populated almost entirely by politicians, Cuba has no velected for president not a politician but a professor of physiology and internal medicine. The Cub ins — told by everyone, including themselves, that they need a strong military hand to rule them — overwhelmingly chose instead to be governed by a thought ful scientific brow.

Those who do not know Dr Grau well call him a visionary, an impractical dreamer and a mystic Deceptively mild, deceptively soft-spoken, the hard core of stubbornness that is the real Grau is known only to his intimates A generation of good doctors, inspired by his lectures, attest to a scientifically disciplined mind and in incorruptible insistence on personal integrity and professional competence 'A hard taskmaster," they will tell you, and proudly quote his favorite sardonic remark as he flunks unhappy fulures, ' Do you want to be physicians or assassins"

lor an 'impractical dreamer," Grau has done rather well in his profession. One of Cuba's most successful physicians, he built up a private practice of better than \$50,000 a year. He gave most of this up to battle for reforms, lecturing at the university mornings and holding an open clinic in his home afternoons for all who wanted to come and talk over their troubles, personal and political When called a Communist he is reported to have replied that no man could be a Communist who had a quarter of a million doll its he had made with his own hands, adding I don the to be a Communist to believe that the worker should be paid enough to live lile i min ind not like in inimil ?

Suffrage in Cube is universal and compulsory. If you don't vote you can be fined. And on election day, last June, overwhelming Grau majorities flooded from all o er he island. The defeated candidate, Di Carlos Saladia, is, had been backed by the Batista government, the army navy, bug business, the Communists and society—a strange bedfull farau

The people knew that Dr Grau was thinking about them. His elo-

was thinking about them His eloquent spokesman youthful Senator I ddy (hibas, had been carrying on a one-man war of words in newspapers and magazines, winding up with a dynamic electioneering campaign on the radio This same Chibis, 15 years before, had led a delegation of revolutionary univeisity students into the classicom where Dr Grau was lecturing 7 he committee explained they wanted the support of all the students and professors in the fight against President Machado's growing tyranny Grau told them "This hour is mine and I c in do as I please with it Go ahead"

The committee sold the students Even more important, they sold Grau, who became the spenifical of the people's revolt against Machado Grau spent a year in pail as a political prisoner on the Isle of Pines, but escaped in time to join the revolutionary junt which took over the government soon after Machado fled

* The history of those violent days is dark and bloody. With the strong hand of Machado sone. Cuba crupted into an orgy of revence killings, burnings and lootings. Butista, then an unknown army serge int, organized a revolt of his fellow serge ints and took over control of the army. Using the army as a police force he quickly cowed the island into some semblance of order.

A few weeks later Dr Grau, one of the revolutionary committee of five selected by the soldiers and s udents to take over the government, was chosen to let as president until the country could be presided and a legal lection held This was September

10, 1933

In the next hundred days Cuba's die mei" broke ill known iecords or high, wide and fancy dicaming More, he wrote them all down in the whooks of the lind, as official denees which no succeeding government has duted to abrogate. He gave uba its first electoral law, census iw wom in's suffrage, a law perinit ting women to become public officials. His agrain has provided for rural housing, redistribution of large Lind holdings into small homesteads, his social laws included founding the first ministry of I bor, establishing an (1_ht h)ui d v, minimum wage, a 41 hour week workmen's compensation compulsory arbitration, protection of workers from guinishment of wices and remy law He decreed free seriol life dists, public nurses, heme for the poor, free university matriculation for needy students, and mercuses of surry for all teachers

CIMIS COVERNMENT WAS NOT ICCOR nized by the United States. His first official of had been to denounce the Platt Amendment which granted the S Government treaty rights to intervene in Cuba with armed lorce il necessary at any time for the main ten race of order. Lor this stand Grau was called anti-American Grau maintained he was merely anti impermissic and that the Americans the inselves would someday agree with him One veni laun — after Grau had been forced out - our government did agree with him and the Platt Amendment was absorated

Grau also antagonized Americans and other foreigners by decreeing the 50 percent law, which made it com

pulsory for all companies doing business in Cuba to hire sufficient (ubans to account for half the payrolls

Finally, with U S waiships in Cuban waters currying the constant threat of armed intervention, and with no possibility of U S recognition, Grau yielded to the inevitable. On January 14, 19,4, he quietly walked out of the palace and went home, leaving the naming of his successor to Sergeant Batista

Batista i in Cuba like a private Coney Island concession In the background he pulled the levers, while up in front a procession of dummies crossed the stage, each solemnly labeled 'President of the Republic" Tuing of the power without the glory, Batista left the army four years ago to run for President Doctor Gran left private life to run against hini. Cubans will tell you that Grau got the votes — but the record shows drit Bitista got the job In 1944 nowever, it would have taken in nimy of Houdinis to rinke Grius majority disappear

Di Giru has won hi war, but his hardest job lies aheid winning the peace (uba is a small country about the size of Pennsylvinia but it is bedeviled with all the troubles of a big country, complicated with many personal heidaches not enough good to ids, schools or to ich ers, primitive similary conditions, bure judication inefficiency, partisan politics approximating guerrilla wirfare, a one crop economy, unhealthy laboi management relations, an iggressive Communist Liction Woven through it all is gi ift, what the Cubans call el chivo — the gent

Cubans say sardonically there we

only two industries on the island — Sugai and the Budget "But there is a third, even larger," Dr Grau told ine after his election, "the chivo" And then he added, "There is nothing wrong with Cuba that an honest administration can't cure Honesty at the top will percolate all the way down to the people."

A few days later his spokesman, Eddy Chibas, announced on the radio that Dr. Grau would make a sworn declaration of his estate before his in auguration, and that every member of his ending to would do likewise.

As the Cubans themselves put it with their genius for vice versa, they ne cursed with a soil so nich a ch mate so blessed, a labor supply so abund int and a market so near that they are always either going into bankruptcy or struggling out of it Cuba could produce all the food the people could est, with plenty to export but it clings to a one crop con only sugar tited to one mescapable buyer the United States Also, the island is populated by farmers who have no farms. Most of them are little better than squatters clustered around Cubas 150 odd sugar mills Owning no ground they have no interest in cultiviting it, not even to ruse their own food Owning no homes, they have no interest in keeping even these dutifloor palm thatched hut in repair

The Cuban sugar farmers are not really farmers at all They are essen-

tially factory workers who live on the land without any roots in the soil, their existence dependent upon and bound to a factory which is closed eight to nine months a very. This is the most painful of all Cuba's paradoxes—a republic of politically free people resting on a feudal base of economic peonage.

When Dr Grau tried to do something about all this during his first, brief presidency he soon found lumself in plenty of trouble. It is no surprise that his troubles have already staited again. The bitterest attacks are coming from the Communists, who are few in number but whose leaders are small aggressive, and work together on a straight line program of childlike simplicity. (1) to get control of all organized labor, (2) to use this power to capture economic and political control.

But Dr. Grau understands Cuba as philosophical Cub in who has lived all his life in the country can under tand it. He understands Cubans as only a truned diagnostician *and a wanishearted family doctor can underst and them. His simplicity gives a filse impression that he is easily swayed, his willingness to list n is misinterpreted as indecision People forget that a great doctor learns all about you by being a great listener And Dr. Grius iccord show that he has never backed down from a stand or backed away from a fight. It is unlikely that he will start now

Diagram of the things that cannot be changed Give us courige to change the things that can and should be changed. And give us wisdom to distinguish one from the other

I JOE Goes to School Under Fire

Condensed from The American Legion Magazine

Iridericl C Painton and Holman Harvey

III R PAINTON wrote from Rome 1, athered information about the Armed I orces Institute in Curo but held it up until I could visit the various combat divisions at the front and certitis really worling. It is in the list wir I was one of the millions who had no chance to attend chool in I rance of this story is dear to my heart. Mr. If arvey supplemented Mr. Panton's dispatch with material gathered in Washington.

M lunis Correspondents don the much paper work under fire of they can lelp it but Pte Lunis was doing paper work—a trigonometry lesson!

I want to be set for a job when I m out of this man's army, he explained

I unis is 24 years old he left school in first veir high, drifted from one job to mother Just before his Division suled he got married. He takes that pretty schously and, besides, his Anny experience thight him that the Eurs who really knew something were the one who got ahead. So he made tup his mind to become an electrician

The Army, I unis heard, had a new scrup for fellows who wanted to tudy. As a basis for his study of

electricity, he was advised to take plane geometry and trigonomictry So he sent in his \$2 registration fee and promptly received a course of instruction

It's twittle hard to get time to do the work? he said at Anzio I get into my foxhole it night and by pulling a blanket over it and using a bit of candle I get some work done. But when Jerry comes over bombing and straining I must say my mind s not on it y be son?

When I unis his completed his lessons examination papers will be sent to an officer in his company who will give him the test. If he passes he will be sent the next course—in his care basic electricity. His \$2 pays for as many courses as he wants to take so long as he completes a lesson a month to show he is in carnest.

Private Dwight B Schein had completed two vears toward his degree at the University of Washington when the Army called him. In a full during the attack on Valmontone, below Rome we found him studying the his tory of English literature. American batteries were thundering and German shells were sere aming overhead but Schear said hed got used to it and could work all right.

"The Army arranges with my university to allow me credit for the work when I pass my final examination before an officer," he went on "Mine is one of the universities which cooperate in this way I am really continuing my regular studies at my own alma mater"

The United States is running a school by-mail for its armed forces which is by all odds the greatest mass education undertaking in history. Thousands of men at the front whose schooling was interrupted are continuing their studies by mail, tens of thousands of others are laying the groundwork for life careers, and no service man or woman who uses this globe quelling correspondence school will return to civilian life without some new and useful knowledge.

The U.S. Armed Forces Institute, under the direction of Colonel Iraneis T. Spiulding, Hurvirlis dean of education, has headquarters at Madison, Wis., and fully equipped branch schools in nine major theaters of war. It offers more than 500 courses in 17 broad fields of study. Included are correspondence courses offered by some 80. American colleges and universities.

When the USAII—pronounced "Usoff's—was lunched in April 1942 excisone concerned had frank doubts as to its future. The Army ruled that to allow outside studies to encroach on military duties was out of the question. And to compel soldies to study on their off-duty tine might deprive their of needed rest in recreation. The question was Would any appreciable number of men voluntarily devote off duty time to such estimethories.

Doubts began to disappear as word of this new GI service reached the lines on distant fronts From Iceland to the Pacific, from London to Cairo and Rome, on battleships and in fighting zones, USAFI caught on like wildfire At this writing, 860 000 service men and women in every part of the world are busily studying And every day 1100 more ask for courses Enrollments are expected to treble this winter Fifteen million textbooks are on hand for early delivery, and printing houses have been swamped with orders for manuals and forms

So far, 1700 service students whose high school terms were cut short by wir have earned their final diplomas by mail. Some 200 others have completed their college work and received degrees from such institutions as Ohio State. University, the Universities of Michigan, Minnesota and California, and Tutts College.

Of 50 students interviewed at random in the Lifth Aims, every man was completely satisfied with his particular study course and pleased with the quick turn around on lessonanswer mail Regarded as a potent morale builder USALI study mail enjoys high Army priority

Groups of men have formed in formal classes to study some subject together. For instance, jeep and command car dravers have a lot of waiting time. Engines interest them, they will peer fascinated beneath the hood of a German Diesel engined tank or take apart a captured I olks eagen. So Buddy Bell, of Brownsville, Texas, started a USAII class in Diesel engineering. After 17 lessons, with captured engines to work on, they all expect to become Diesel experts.

The only way USAFI can extend foreign language instruction is through uch class study, because it undertakes to teach only the spoken language Any ten of more service nich may receive two double-faced 1. inch records, together with printed guides, with which they can acquire a working vocabulity of around 300 words and 150 useful phrises in ten or 12 hours of class time. For more extensive instruction in a language, there are de luxe courses with 24 double faced records Within 200 nours of study, such a class will mister not less than 1500 words, and will acquire a good pronunciation and considerable fluency of expres sion Courses he available in French Cermin, Itilian, Spanish and Chi nese and are soon to be available in no less than 18 other languages

A vouthful paymaster sergeane of Mirines isked for information on a coase in Chinese or Russian. We will be doing a lot of selling to those countries and I could get a good job in selling or promotion work if I how the lingo?"

Nivy, Mirme and Coast Guid officers have taken a keen interest in USMI and have spread its story to the rain. The Navy has called on USMI to help its enlisted personnel study for higher ratings within the service, and has appointed Educational Service Officers at each navalstation to organize tudy classes.

Iens of thousands of USAII students are scattered over the far Pacific areas. One field artillers man has had a particularly storing time getting ahead with his studies.

"This makes the second time I am writing for new material, due to a little bad luck," he wrote recently 'The first time it was a ship sinking that caused me to lose my material. This time it was a couple of bombs. I have writed a while to see what the situation would be like before I started again."

Many amusing sidelights are found in the letters received at Madison A Wave ensign in command of a baracks har issed by complaints, asked USAFI to give her a course in plumbing A sergeant wrote mournfully from the Caribbean to explain his delay in sending in his lessons. Tropacal insects ate up my papers

Service men on lonely vigil in remote posts where mail service is infrequent may apply for sell teaching courses. USALL has painstakingly worked these out to enable men to grade and correct their own work without benefit of a teacher or correctional advice by intil American prisoners in German prison emps receive these courses through the International YMCA and the Inter

Red Cross Committee at

USALI is looling to post hostilities period in Lurope and A 11 to tech ous interims when GI Joe will have time on his hands. There will be many more courses available to him then including courses in government and citizenship. Plans are well advanced, too, for organized discussion groups and forums on questions of the day. Joe's opportunities for study will greatly expand when the guns have cooled.

Life in These United States

11 A Boston lady was expressing her indignation at the indecent words being painted on the wills and sidewalks of the city. What will outsiders think of us?' she cried "Why some of the words iren't even spelled right!" - SCT HAROLD HELLER

Working on early shift in a War Department office, I usually bre il fisted at a certiin small cale Ivery morning I noticed an elderly wom in come in ind order a good breakfast. Because she looked so very old and frul I was somewhat puzzled by her early morning routine. One day I asked her if she had a war job

she replied with a sprightly smile, I in nearing 80 and no one would give the a job now. But years uso when I was rusing my family. I always had to get up carly and work hard Now I 11 alone with nothing to do, so I like to come in here and eat before daylight, and pretend that I megoing to work with the rest of you. This she clanced merrily about her - this is the highlight of my day for this he licer young again?

ditioning increty as an aid to the appreciation of Hedy I impre during dog days. Actually there is hardly a critical operation in the production of vital weapons, explosives, tools, medicines and foods that is not being done better, faster or cheaper because of machine made chinate.

Without in conditioning, much of
the sensitional new communications
equipment could neither be manu
fectured nor employed at the front
Llectronic tubes, life light bulbs, are
highly efficient furnaces and any
room where a large number of these
tubes are made tested or used would
unless artificially cooled—quielly
become a laulash bath Before proc
essing the in rejection of faulty tubes

fictory

The roofs of miletary ridio trucks in the South Pacific are often heated by the sun to 160 degrees, and inside there is enough radiation from the tubes to heat a house. No one could live long in these truck, were they not an conditioned

t in One

New communications equipment on rivil vessels is used it scaled chambers thickly willed is unstigunfire and outside disturbances. Cooled an makes these rooms enduable. An conditioning keeps sun crews efficient by pumping out powder fumes and pumping in fiesh, cooled air, and down in the magazines it protects stored powder from deterror ation

"Sweatboxes," they used to call the ready rooms on aircraft carriers, where pilots assemble in their heavy flying suits for orders before taking off Now these rooms are mechanically chilled, the pilots relaxed and comfortable

Repairing equipment on the hot sandy desert or a fetid Pacific island was once a job to try a mechanic's soul. Now there is a portable air conditioned repair hus which folds for shipment by air transport, and repairs to delicate instruments are made in half the time with no sweat and dust.

at an infield where there is no escape from the sun used to be hell on personnel and bad for weather recording and radio instruments. Packaged cold came to the rescue

Operating and X ray a some in many base hospitals are now comfort cooled thereby reducing the danger of infection from sweat and dust and increasing the efficiency of surgeons And an conditioned Pullman type ambulances keep wounded men more comfortable on the way to the hospital

Aerial photograph films must be developed and prints ready in a matter of minutes. This would be impossible in hot climates without the Ariny's new trailer darkrooms in which air conditioning keeps film free from dust, holds emulsions at specified temperatures, and checks perspiration.

During the fighting in Africa, a completely air conditioned motor caravan, the first of its kind, enabled a mobile squadion of engineers and technicians to eat, sleep and do their paper work in comfort while it wis 130 degrees outside. Linguisers used the car is in in constructing advance bases.

Pactured cold is bringing fresh food to more soldiers than ever before in the history of warfare. Self refrigerating storeroom units are carried in the hold and delivered full of frozen are it or ve etables at advance bases. It aleas early 8000 pounds of frozen beef apiece up to the front where the tractor is unhooked and the trailer becomes a stationary cooler with its own power plant.

An conditioning his broken is core of bottlenecks in whi production. Temperatures in copper immes run is high as 150 degree and once it was standard practice to blow in through the tunnels for three years or so until they were cool enough to work in Now these sweltering holds are cooled in less than a month

As factory technology improves, more and more machines are in talled in a given space. Every machine generates he it by friction, the ulbs and tubes which illuminate the plant give off heat and every worker constantly gives off as much heat as

a 100-watt light bulb Artificial cool ing is a necessity

High-precision instruments made for the Navy were being rejected in large numbers despite rigid inspection at the plant. After a few weeks, tiny specks of corrosion on their highly polished surfaces made them useless. The "saboteur" was finally identified. It a worker's damp finger tip so much as brushed one of the mirror-like areas, the acid in perspiration planted invisible germs of future deterioration. Air conditioning keeps the workers' fingers dry. There is no trouble now

A blueprint six feet long, driwn in the cool of the evening in iv expand by is much as in inch in the heat of the day, which may casily lead to a serious error. Also sweating hands used often to smear blueprints. Now war plant drafting rooms have dustless uniform artificial weather.

That modern machines of all lands, including ampling engines, me so much better than earlier models is due largely to the closer fit, or finer "tolerances," of the various parts This has rused problems in mass production A part made in the cool of the night and assembled in the heat of the day may expand enough to be rejected Production of the fimous Norden bombsight would be cut 50 percent during summer months with out air conditioning. Or a part in ide in St. I ouis may not lit a companion part produced in the cooler climate of Springfield, Mass Likewise, i change of even one degree in temper ature iffects the accuracy of highly polished gauge blocks and other super accurate measuring devices used to check the accuracy of tools. The solution has been to hold temperatures and humidities uniform, at all hours, all seasons and all plants

Until 1931 all the gases used as refrigerants were toxic, inflammable or unconomical. They caused a number of fires and fat il recidents. In that year, the late Thomas Midgley, Jr., discovered "Freon." With this are refrigerating machinery can be made lighter and more compact. For example, the new gas makes possible a supply of fresh cool in in a submitting. The crews can even smoke,

a thing unheard of in earlier days

An conditioning is slated for a tremendous postwar boom. It is reasonable to expect that within a few years virtually all factories, shops, laboratories, trains, hotels, assembly places, office buildings and new apartment houses will be equipped with controlled weather. Dividends in comfort, health and efficiency will be large. And in the future, though perhaps the distant future, lies the goal of weather as you like it in the average home.

The Psychology of It

I ous Kain president of Albert Kahn Associated Architects & I namers. Increports that workers complained of the reconditioning in one huge areraft plant even though scientific instruments indicated ideal temperature and humidary. The Kahn people one night tied ribbons to the grilles of the air ducts. Workers the next morning saw the ribbons fluttering and issumed that rehange had been made. Net only did complaints cease, but everyone began to boast of being more comfortable at worl than at home!

'WE SHALL COME BACK'

Condensed from News from Belgium

Jan- 1lbert Goris

richtr ind a half million Belgians are filled with gratitude for their liberation. But in their rapture they are ilso thinking of the future and they have good reason to do so. They were told something very important about it by the retreating Nazis. On September 1 the German 1 idio in Brussels told them four termink able things.

'We shall never "ob you We shall never pill ige you Do not show hatted against us. One day we shall come back till then, a bentot

Thes statements in their enormity throw hight on German mentality. They prove once more that the case of Cermany pertains to the paranorae and not to the reasonable.

Those who know the Germins—and most Americans do not, while most I urope insido—foresaw long ago that when Hatler and his consorts were forced to their knees they would start a shaning campaign. The Germans I now that the Anglo Sason feels for the underdog. They realize that by whining they achieved quite a few results last time, and the campaign is on again. For years we will hear these patiful—ines, and it is possible that some nations will successible once more

But the Belgians will not Why? Beuse when the Germans with gro sque solemnity declare, "We shall never 10b you" the Belgians can only answer, "What is there left to rob?" These gangsters drained Belgium of 85 percent of its production they imposed on scores of Belgian cities fines of millions of frances they robbed private homes, confise ited the property of Belgians in explicit stole after issues and the libitaries of scientists. They robbed Belgians for four years, and then, on the eye of being driven out of Belgium, they tell their victims. We shall not robyou!

For four years they lived on the fit of the land letting the Belgian children starve shipping the food the Belgians produced to the Reich They stole radioal material electrical equipment the coal from Belgian mines in fact excrything they could carry away. Then with the country scraped clean they say. We shall not pillage you."

But most imizing of all is that hingmin's prizer "Do not hite us

Thes are the words of men who may be killed to ooo women and children on the roads of Belgium, in a chine cummer them just for fun, who imprisoned more than 12,000 Belgian patriots who tortured and mass sacred hundreds of innocent hostages who abducted 500,000 men and women to slavery in German factories. They

have one little request when leaving Do not hate us!

Do not hate those who tried to destroy your institutions every freedom for which you have fought for centuries, everything that made life worth while!

but the final sentence of the broadcast as so sharp a warming that it deserves the greatest attention

This is the second time in a quarter of a century that the Germans have occupied Belgium for four years. They are beaten now but do they at last understand that the world cannot be enslaved? No, the only conclusion they draw is "We shall come back." We shall come back with a new edition of our Cest upo or our gas chain.

bers, of our arrogance and brutality

If there is anything the Belgians may be grateful for to the Germans, it is for this warning '1 bientot'"—
"We hope to see you again so in!"

The horrible truth is that they will be perfectly right—if we treat them again as we did in 1918, if we consider them as normal human beings. There is now but one watchword. Delenda Germania! German, must be destroyed. We must not take the risk of standing one day before our children, white wich shame and remoise, in I having to tell them. They told us they would come back and, thanks to our foolishness, our weak ness and our 'f it play,' they have done so.'

Parable of the Isms

Communism If you have two cows you live them to the government and the government gives you some null

Vi ism. If you have two cows, the overnment shoots you and keeps the cows.

Capitalism II you have two cows, you cll one and buy a bull

Wisconceptions

Sisten Bornar the great South American liber tor, was scheduled to pass the night in a small Peruvian town. His aide sent word to the local linke (per, asl in that a room be prepared with special accommodations, food, etc., etc.

Arrivia in the village, Bolivia was shown the best 10011 in the hotel After he had expressed approval, the great man was conducted into an adjoining room where sit three lovely señoritas. 'And who are these young lidies?' Bolivia asked

The three et ceteras, replied his host

Impasse at the Elevator

Condensed from Pageant + Robert Benchley

If is all very well for writers on

etiquetic to tell us what to say when we are introduced ('Hi-ya'''), or when we take leave of our hostess ("Thanks a million, toots!") But what do two strangers say to each other when they find themselves alone together?

You are in an apartment house or a hotel and for some reason, you are leaving. You may even have been asked to leave. You come down the hall to the elevator and find a stranger there waiting.

Now presumably he has rung the bell already. He wouldn't be just hanging around watching the cars go up and down unless he were the village ideat. But you march right up and ring the bell, too

This district between strangers is instinctive. You have a tecling that he might not have pushed the bell hard enough. He might even have pushed the up bell. Anyway you push the bell. Then you stand back and wait.

Naturally this turns him against you You have contained in specisions on his bell pushing abilities. So he too, steps back, giving you a dirty look You each pretend that you are very busy with your gloves or your the or your underdrawers, or something. It is the zero hour

If you are representatives of two of the more prominent sexes, the strain is even greater. In fact, for a lady and a gentleman to be placed in this position is well nigh intolerable, if the lift is a long time in coming — which it is

The time for ice breaking is right at the start or not at all. After a 30 seconds' wait the breach can never be healed

Of course, in the case of two men, the obvious remark for the one who was there first is

I ring it once, you mugg!'

To which the equally obvious reply is 'How was I to know! I thought you were the floor clerk" (Or 'the house detective")

This each inge of courtesies, however would not clear the situ tion up it ill Better to say nothing than to start smalling right off the bat

The remark least calculated to end in bloodshed would be

"Some service, ch'

With the reply 1 il siv!

Then what' You have established contact, and a reasonably friendly one but where do you go from there' You can talk about the weather as neither one of you knows what the weather is at that it o nent, being on the way out into it. It is a pretty problem in etiquette, and, so far is I have been able to ascertain, one which has never been dealt with by the experts.

Of course, if Noel Coward or so ne other banterweight champion were

there to banter his way through the situation, at least one party would come out beaming A rather smart scene could be worked up between a Noel Coward character and a Dorothy Parker character ineeting at an elevator But, with the general run of everyday characters, it is anything but a smart scene It is what people who speak French call an "impasse"

Now, since the etiquette experts

know so much, why don't they tackle a problem like this? They always, pick things like "How do you do?" (holding out the right hand with the thumb up) or "So good of you to ask mc" (with the fingers crossed) I could think those up myself

The answer to it all must be that, in the real crises in life, nobody knows what to say, which is why we all look

so foolish

'Through That Remembrance Gain Strength'

The following letter was written by the 21 year old navigator of a B 17 bomber to his sister, the widow of a U S infantry licutement who was killed in action in Normands

Hello, Cinny

Sitting on a lone strand of black cloud, a beautiful orange moon shines out over I ondon tonight beautiful in itself but 'ooking down on the scene of some of war's worst misery. My heart aches, Sister, that this misery has touched you

Under similar circumstances I have heard people say, 'If he were here he would want you to do this' or He would want you to do that Who knows just what he would have desired? No one

of course, can be sure, but I feel that Royce would say

I cannot ask you not to grieve over our separation, for I fully realize the deep love you have for me and the mutual joy of our comradeship—nor do I ask you to forget me. I want you to remember me always and through that remembrance gain strength never allowing it to drag you down. That infinite love y high I had for you is not made of stuff that comes and goes with the physical form, it is a spirit that will be with you always. Pake strength from it now to meet your hardships and you prove its invincibility. It pleases me greatly to know that our love meant nough and was great enough to overcome any obsticle, to provide an unyickling support with which to meet every challenge of life. Using the remembrance of our relationship to help you lead a happy, useful life yill give that relationship meaning until the day you die."

Well Ginny, I have said it poorly I knew I would John Gal worthy once wrote. It s not life that counts but the fortitude you bring into it. I am proud of the fortitude you have displayed, (inny I am proud that you are my sister and I am more than

proud to say, I love you' Good night for now,

Paul

The Genius of SAMUEL MORSE

Condensed from Esquire + Kurt Steel

HEN the United States declared was on England in 1812, Congress had no way of knowing that two days earlier Parliament had taken conciliatory steps that might well have averted was A

21-year old American painter who had recently arrived in London was deeply impressed by this traced. He wrote to his family in Boston lanent ing that it was impossible to communicate news 'an in instant" icross the Atlantic Loi centures men had had this dream of nessages swift as thought, but it en and not the young America, Sinuci Linkey Breese Mors, to do o rething practical about it

That Morse was primarily in artist—and a very fine one—has been obscured by la more specialities are venients. It Morse himself regulded painting as his career, and with reason. He became internationally famous at 22, when one of his pictures placed among the first mine out of 2000 exhibited at the Royal Academy in London. He was one of the founders of the National Academy of Design, and served as its picsident for nearly two decades. In 19,2, 60 years after his death, the Metropolitan Museum in New York hon-

Irivilip rtrat f Mr painted in Inlial 1818

ored his memory with a one-man exhibit of his work

Morse was born in 1791 His father, Pistor Jedidiah Morse, was a friend of Washington and Adams He was also the author of The American Universal Geography and The American Garet*teer* two books v high made the family name Inmous and provided money to send Simuel and his two brothers to college Sumuel wrote home from Yale that he enjoyed all his studies, "especially Mr Day's lectures on electricity," and he innounced that he was spending all his spare time painting miniatures of his friends on ivory at five doll its apiece. The study of electricity was his chief hobby, and he constantly sought out scientists who were experimenting with the ncw "fluid"

At first his parents were opposed to his making a career of parating, but when at 19 his work won the praise of the famous Gilbert Stuart, they let him study art in England For a time viter his return to America in

its opening, and at daybreak Moise was down at the water front making sure all was ready Suddenly looking out across the bay he saw the skipper of a fishing smack haul up the cable on his anchor shake it angrily and chop it off to let the severed ends drop The ceremony that afternoon turned into a public jeering. For many years the scheme was derided, but finally Cyrus I ield organized a group of fin inciers to underwrite the ambitious Atlantic project and after three fulures a successful cable was laid in 1966. Morse was for a time associated with the I ield enterprise

His tremendous energy curried him into politics and made him a vigorous

participant in every national fight—almost always on the losing side. He was stubboardy opposed to the Civil War, and at the age of 73 he campaigned furiously against Lincoln's ie election.

Morse died in 1872 within a few days of his 81st birthday, grieving that his genies as a painter was not appreciated. The specific inventions for which Europe and America showered honors and wealth on him have been superseded by later devices. But his paintings grow more valuable every year and he is now ranked as one of the world's great portraitists. Nothing could have pleased him more.

VENEREAL DISEASE far from Beaten

Condensed from Haiper's Magazine

Helen V Tooker

HE FIGHT against venere il disease in the United States has been hailed as a success story. Ever since 1936, when Di Thomas Parran, Surgeon General of the U.S. Public Health Service statted the nation by asking, "Why don't we stamp out syphilis" * the control program has been forging the id and recently the discovery of peniculin has seemed to promise a quick and glorious victory. But doctors and laymen working on the program know better

They know that a moullin isn't the complete answer. They know that the minute they relax their efforts anywhere venere il discuse rites son ig in They know that no community can afford to be complacent because its own control work is conscientiously done I or in war or in peace Americans are much given to traveling Suppose a min — or wom in — icquires VD in one state, before the symptoms appear and he receives enough treatment to render him noninfectious, he may pass the disease along to pickup, prostitute or wife in another state. The Army Third Service Command studied the sources of venereal disease infections reported by its men Alchough the

*See Why Don't We Stamp Out Syphilis? The Reader's Digest July, '26

5899 men covered by one study were stationed in Pennsylvania, Mulyland and Virginia when they reported sick, the places where their exposures occurred involved all the states of the Union except Nevada and North Dakota

Three things still hamper the national control program

Inst The U.S. Public Health Scivice has to work through the states which me ins 48 sets of laws, many of them passed by remarkably misinformed legislators.

Second Though syphilis and gonorther the listed as dingerous communicable discuses, an awareness of the manner in which VD is acquired has a subtle, negative effect on the aggressiveness with which health of ficers act. A health officer makes no bones about isolating a smallpox patient and quarintining persons known to have been exposed, but when VD is reported he tiptoes about his work for fear that he will start an uproar about constitutional rights

Third Confusion arises from public misinformation, particularly as to the manner in which VD is spread

Experts in syphilis and gonorrhea agree that stories about accidental infection are "fairy tales" Dr. Nelson, Associate in Venerical Dr. eases at the Johns Hopkins School of

Hygiene and Public Health, states flatly that syphilis and gonori hea are not spread by inanimate objects—not even by toilet seats. He doubts whether it would be possible 'to get any of the country's good syphilologists to say that syphilis (excluding congenital) is often spread in any other way than through sexual intercourse."

The syphilis germ can emerge from the body of an infected person only through an open lesson. It can enter the body of a second person only through mucous membranes such as the lining of the mouth or centralia or through a break in the skin. For the second person to become infected, there must be direct contact between a susceptible part of his body and the open lesion of the infected person In sexual intercourse and kissing especially in intercourse — the most easily penetrated tissues of the victim are brought into contact with tissues most likely to have open lesions

Accidental infection can, of course, occur for instance, when a doctor or nuise is handling a patient of a break in the skin comes in contact with an open some But, since the spirochete germ dies almost immediately upon drying and can live a very short time after leaving the body, its outside activities are negligible

The gonoriher germ likewise dies very quickly after it has left the humin body. The mucous membrines which it attacks are so located that only sexual contact can bring infectious material into contact with them. Prompt detection and proper treatment render gonorrhea also al most immediately non communicable.

One result of popular mix for

mation is that persons with VD are now subject to senseless discrimination Factory workers have struck because a fellow worker was believed to have syphilis Most states deny jobs to infected food-handlers. Many industries refuse to hire persons with positive blood tests As a matter of fact, infected persons are not a workday danger to their companions and to test the blood of job applicants merely as a safeguard for personnel is stupid. On the other hand, to include the blood test in a complete physical examination for the purpose of providing treatment for all sickness and raising the general level of health of all employes is sound policy

'If we could find 75 percent of the cases of VD and treat them adequately 'says Dr J R Heller, director of the Division of Veneral Discase of the U S Public Health wed have the problem licked? But in trying to do either of these two jobs the health officer runs into the secrees that protects senere il *discuses The neison who has VD won't tell how he got it Moreover, private practitioners are lax about reporting cases even though they may protect the names of their patients And too often neither the infected person nor the practitioner bothers to see that the individual who caused the infection is brought under treatment

There are various methods of finding infected persons who do not present themselves voluntarily proper use of the blood test in industry, laws requiring premarital and prenatal examinations, examinations in prisons and juls, and the tracing of sources of known infections. Intensification of all these methods in the

control program has revealed many hidden infections. In the fiscal year 1943 nearly 600,000 civilian cases of syphilis were reported — 100,000 more than had ever been reported in one year.

When a service man reports an infection, he is asked to identify all persons with whom he had sexual intercourse during the period when he may have acquired the disease and transmitted it to others. The same procedure is followed in civilian health work. The confidential report is sent to the VD officer of the locality in which the exposure occurred. And now the job sets really tough A health officer must try to locate that girl and yet protect her privice.

I oo often the information on these reports is madequate. Sometimes mistaken chivalry leads infected men to he about their contacts. Often a man knows the girl only as, say, Susic. He says she's shorter than he as fairly plump has buck teeth. He picked her up in a calcabout 10-30, he thinks on C. Street. What block? He doesn't know you so down two steps to go in. The health department worker has to look for a all with buck teeth who may call har ell Susic one day but a likely to be Victoria the next

The time of ment is mother obstacle. Dr. Nelson says. Let's suppose a prostitute handles only five men a night and infects only three of these. The average incubation period of syphilis is three weeks, so it's going to be more than three weeks before the health department can receive a report that she has caused an infection. She's infected 63 men before we even know she exists.

And the health officer's troubles

aren t over when the contact is located Persons suspected of having a venereal dise ise in an infectious stage frequently refuse examination They would not be allowed to do so for smallpox. Yet syphilis in 1940 was reported to affect more persons than the total affected by smallpox, infantile paialysis, malaria, tubeiculosis, typhoid fever pneumonii, meningitis, diphtheiri and typhus. It is a discuse that youly costs the taxpivers millions of dollars for patients in insine isylums and public clinics and he pit ils and for veter ins' liabilitis Io il dimage must be added that caused by gonorahea, less dincerous but ittacking three to five times more often

Minors constitute another difficulty especially nowadays. By law a minor can tibe examined without the consent of his parents, and many minors won't even give the names of their parents.

So much to finding cases. The next thing is to get them to take the atment and — here's the hitch — keep taking it long enough. The U.S. Public Health Service declars that less than 25 percent of the people with syphilis in infectious stages and taking clinic treatment receive the millionance, as received.

To offset the difficulty of holding patients until they have completed the long regular course of the atment for syphilis, which sometimes extends over a year and a half some 60 communities have established rapid treatment centers in addition to requiat VD clinics and about ten more centers are in the process of language up. Several shout treatment methods

are used, especially the eight-day drip method, by which an are nical drug s dripped into the veins of the patients as they lie in bed

Penicillin, which provides a short and safe treatment, may eventually make it easier to hold patients until the course is completed

Commercial prostitution is the reservoir of venerial disease. Such prostitution isn't a hit-or-miss affair It's a money making racket run by shrewd criminals. It can be wiped out of a community only if public opinion is behind enforcement officials but many people question whether it should be wiped out. One argument is, 'You've always had prostitution and you always will have it" To this Dr. Nelson retorts that we ve always had other kinds of crime, too but we don't make that an excuse for toleration of murderers or thieves Other people argue that medical supervision of prostitutes will prevent disease. This is a danger ous bill of goods. Its failure stems from two facts (1) that gonorthea is often impossible to diagnose in a woman, and (2) that freedom from infection one day is no guarantee of safety the next Danger lies also in the false sense of safety that certification gives to the prostitute's cus tomers

Pethaps the best answer to the advocates of red-light districts, one doctor pointed out, is that when all houses have been closed in a community, local VD rates have almost always dropped. Since the emergency campaign for repression was begun in 1941, red-light districts have been closed in niore than 600 communities, and the Army rates for VD.

have dropped from 41 infections per thousand men per year to 26 in 1943 Navy rates have dropped from 40 per thousand in 1940 to 25 in 1943

In view of these problems, how can VD be climinated from the nation? Some health officers advocate attacking VD in the same uncompromising way as other dangerous communicable diseases, such as smallpox and yellow fever except that every precrution should be taken to preserve the priviley of the patient as long as he cooperates Others, however, feel that such a strong program defeats its own ends, that since syphilis and gonorthea are secret diseases aggressive attack drives them underground But every specialist with whom I have talked has emphisized the fact that venere il disease is a symptom of bid social and eco nomic conditions ignorance and poor sex relationships — factors breeding promiscuity They think that parents schools churches and governmental and private agencies should cooper ate in building new defenses

Dr John H Stokes director of the Institute for the Control of Syphilis, of the I mixersity of Pennsylvania, believes that fundament il instruction is increasingly important. The "sexualization of our type of civilization with its cinpl asis on sex in clothes, movies, pin up guls, advertisements, and conversation — stimulates erotic impulses at the same time that modern equipment has nearly el minated the counterbalance of exhaustion from physical labor.

We must attack the problem from many sides if we are to conquer veneral disease. There is still a lone and hard road to travel.

Bear Facts About Duluth

Nathan Cohen

RICHARD NORTHUP, a real estate min who lives in my home town, Du luth, wis spending a quieteve

ning at home not long ago when he he is d a pounding at the back door. He went to the door, opened it and came face to face with a be it

The friendly bruin, evidently in search of all te supper snack slouched in the Goodway with such a honeyed. hat in hand charm in his manner that Mi Northup almost regretted having to slam the door in his shout When the police arrived, a sime of hide ind seek began in the moon light Finally coincide in a guage, the bear was shot trying to stuff his bulky name through the door of a The circuss weighed pounds A desk seige int scribbled the details into his night report and Duluthians had one more varn to tell about the incredible bears who come to visit them

No one has figured out just what brings the animals into town. In late summer or early autumn, newsboys run into them while delivering morning papers arate housewives see them steal pies from outdoor cooling spots, startled motorists find them blocking the highway. At night they poke through garbage or graw at garden

Who said Am rican cities had be tather andividuality

Condensed from

vegetables Daytime be its, on the other hand, are strictly tourists who come to see the folks. They are generally a timid lot, but occasionally one will venture downtown

and tangle with the police — always a fit il experiment

Duluthians have developed a cautious affection for the intruders and they enjoy regaling outsiders with tales of their adventures. More often than not their stories are accepted as companion pieces to the tall tales. Minnesotans tell about the legendary north woods giant, Paul Bunyan who could cut a winter's supply of cordwood with a single swipe of his axe

However, the story of the 3,00 pound bear that was shot in the fash and ble Hotel Duluth has become as much a part of local nistory as the arrival of Sieur Du I hut, the city stounder. The hotel manager had the foresign to stuff the carcass, earning the everlasting gratitude of local storytellers for such incontrovertible evidence simplifies the job of convincing strangers.

A waitiess at the Hotel Duluth had just served a man who proclaimed himself "hungry as a bear. She looked up and cried, 'Here's a bear hungry as a min!' and raced into the lobby. This bruin had followed a

fish truck into town Passing the hotel he was attracted by the troma of food inside and plunged into the coffee shop

Bellhops piled chairs and tables into a barricade Someone called the police and the rescue squad arrived with tear gas rifles and rope. Sergeant Eli LeBeau kicked open the door of the coffee shop. There sat the culprit on an overturined table, licking a sugar bowl and grinning happily.

'I his,' said the seigeant, taking aim "will be something to tell my grandchildren". The bullet struck the bear between the eves

Although the bears have never harmed invone they have frightened the daylights out of many citizens One newsboy thought he was being truled by a dog until he turned calling, Hello Sport and to his dismay discovered it was not a friendly hound. He raced for a nearby service station and sounded the alarm The chase which followed would have done justice to an old time movie script While the police roused up and down the treets, the bear scampered over back yard fences, ripped through morning wash lines and s at frightened housewives seur rying to cover Citizens watching the chase from their windows telephoned communiques to police headquarters, which in turn broadcast them to the squads Finally the tired bruin, in desperation climbed a tree and the chase came to an end He was brought down with a shotgun

On another occusion a matron stood waiting for a bus in an exclusive residential district. Just as it appeared she caught sight of a four legged gian trudging down the road.

toward her Bus and bruin were at equal distance, and it was a case of which reached her first. The bus rolled lazily down the street. The bear kept ambling along. He was within a few feet when the bus pulled in to the curb. The mation kaped aboard, dropped her token into the fare box and runted.

Many Duluthians, however, think the bruins are cute "You just can't be angive with them, no matter how mischievous they are, one citizen said At the Ld Huivey home, two be irs streed a private circus. While neighbors crowded into the livingroom grandst ind the pair wiestled, boxed and rolled on the lawn in a to minute perform nee which would have been a credit to Ringling seducrted troupe At Al Wilson's place, a Peeping Ion bruin perched on a limb outside a bedroom window and refused to come down until a game wirden bribed him with sweets

It just doesn't make sense to have bears coming into a city of 102,000 and Duluth has tred to discourage these autumnal incursions. Conservationists reported that the animals came to town because they were hungive in seasons when there was a shortage of bearies and small came. Accordingly, a citizens' committee was appointed to feed the bears. Garbage from hotels and recaurants was halled to outlying gravel pits. The bears smiffed, probed and tasted—and came right on into town.

By now, Duluthi instrike the annual pilgrimage as a matter of course. Fewer of the bruins are being shot, and more are being shooed back into the woods. Bears don't like noise, and usually a vigorous drumming on

a dishpan will frighten them into retreat

No one, however, has tried a better stunt than an old woodsman named Sam, who, in his haste to escape a trailing bruin, climbed a stately pine — forgetting that a bear is an expert at scaling a tree. As he watched the anim il jicking himself up the tiu ik Sam took off his shirt, lit a match set it afire, and dropped the incendiary cloak on his pursuer. The last he saw of the bear was a blazing streak headed for the woods.

Who's Ready to Go to Sea in Our New Merchant Ships?

I o thous inds of men not now in active service

Here is your immediate opportunity to volunteer in a national emergency, to get supplies to the boys at the front, to help uin the war sooner

A NEW and hitherto rucly mentioned crisis is developing in our war effort. It results from the paradox that the nearer our armed forces come to victors, the harder it gets for our merchant fleet to supply them.

Lot Ceneral MacArthur's invision of Leyte, inerchant ships had to deliver 500,-000 tons of supplies and 30 000 men in the first three weeks — not 3000 miles from home, as in Linnee but 7000 miles away

I he vastly greater Pacific invasions yet to come will need more than triple the amount of shipping used in the Atlantic for the I uropean war

We is getting the ships But we aren't retting enough men to run them all

At least three new ships are added duly to the War Shipping Administration s 3570 vessels. I hat means that three new crews must be ready to go to sea every day that a total of 5000 new merch int mainers are urgently needed each month

The War Shipping Administration's training schools for unlicensed scanien,

with cipacity for 15 000 men must be kept full. Unless they are there will be an interruption in this all important lifeline to the fighters at the front

So pressing is the emergency that any physically qualified man, 17 to 50 may now apply for Maritime Service raining if not already called for Selective Service induction. Discharged war veterans if physical disabilities are not too great are welcome, and a considerable number have joined.

As the facts about the Service become known—the good pay while in training, the opportunitie for promotion, the probability of steads employment during the postwar period, the lure of life at so a and of travel to foreign ports, and above all the chance to do a great job in the war—the U.S. Maritime Service hopes that patriotic citizens by the thousands will be cager to emoll

Volunteers may apply for training at any office or the U S Maritime Service or of the U S Limployment Service

nearly two years after his life had been spared. Most men would have lost their minds under month after month of such tortuic. Will Purvis, praying constantly, was sure that the Lord would save him again.

No new evidence was discovered, but public opinion turned The Godfearing citizens of the community were convinced that a sign from Heaven had declared Will Purviss innocence And now the hand of man took hold Will was granted an extriordiniry favor by officials of Marion County He was transferred from the strong Columbia jail to the shabby little prison in his home town of Purvis, "so he could be near his friends for the list weeks of his life Probably the officials were not surprised when, a few days before Will's sentence was to be carried out, a mob overpowered the guilds at midnight and rescued him

The Governor, furious, offered a reward of \$7,0 for Will's capture and \$250 for evidence that would convict his rescuers. But the rewards were never claimed although almost every body knew who had broken into the jail and almost everybody knew that Will was living with kinfolk in the forests and hills.

Then a new governor was elected During his campaign he had declared that a miracle had been performed, and he had promised to commute Will's sentence Will gave himself up, and his sentence was commuted to life imprisonment

Two years later, in response to a petition signed by thousands of citizens, including the District Attorney who had prosecuted him, Will was pardo ied. He was free not because any new evidence had been found but because the majority of the people of Mississippi believed that God had overfuled the jury s verdict. He moved onto a back country farm, and a few months later married the daughter of a Baptist minister. They become the parents of it children. Every Sunday Will and his wife went to church and gave thanks to God for saving his bit.

And then when Will was 47, the list chapter in this amazing case was written. An old planter named Joe Beard, dving, confessed that he and another member of the White Caps had committed the Buckley murder. The news was a Mississippi sensation and for weeks those who had believed Purvis was innocent went around saving, 'I told you so," to those who had it. The State I egislature paid Purvis \$5,000 to atom for the State sections.

Will Purvis died two years 220, a respected citizen of his community Doubt it you will that his his was saved by a rairock. Call it an accident, an accident that might happen once in the history of the world. But Will Purvis has testified, "God heard our prayers. He saved my historeause I was an innocent man" Will Purvis believed. And it was his neck.

Outracer young girl to employe in the telephone company office Certainly its essential! I want a telephone to make dates and get married and have children with! — Irving Romerities in I hiladelphia Reset

🗤 |o Understand Japan Consider Toyama Condensed fiom Collier's George Creel

THERE IS NO shorter cut to an understanding of Japan and the Japanese people than the life story of Mitsuru lovinia * so stept a power and so much an idol that he was long recognized as his country's Unofficial Imperor It is exactly as though the head of Muider. Incorporated were to be hailed by Americans as Unofficial President

Yet from carliest youth. Toy ima plied the trade of ississin openly and without the slightest pretense of concealment The scores of organizitions he formed, while using patriotism is a mask have mide assassinition their business. At his beel were thous inds of young finitics, ready to go forth and kill at their master's order Eventually the militarists took him under their protection, and began their teriorization of all who stood for peace and modern ideas Lven Hideki Tojo did not dare op pose Foyama's will

It is not possible to imagine some innor officer walking into the office of Secretary Hull or Secretary Stimson, and either killing him outright or menacing with a dagger until

Loyama died last October at the age of go

promise was grined to change a policy Yet that is the way Tovama ian Japan for a full 40 years At his com mand, cabinet officers, generals and admirals were stabbed or shot And not once in that long stretch of time

did the authorities dare lay hands on

him of on his killers

loyama helped mightily to bring about was with China in 1894, and ag iin with Russia in 1904 Now rich by reason of valuable mining concessions that were his part of the loot in these camp ugns, he organized the dicaded Black Diagon Society and spicid it throughout the empire Other "patriotic" organizations burst into being and soon Toyama had his hatchet men in every city and village

A spirit of democratization swept Jupin is in aftermath of the first World War and there was a while when it seemed that the country was on its way to civilization. The Libcrals, however, had only ideas the m litarists had Tovama and his assassans. In 1950, Premier Hamaguchi was shot down at his desk, and one ve ir later the Army marched into M inchuria

A peace party still persisted, and so, in 1932, Toyama struck again, murdering Prime Minister Inukai, Finance Minister Inouve and Baron Tikuma Dan head of the House of Mutsun

In 1935, Japanese forces invaded Chin i, miking war inevitable When sane statesmen rallied to curb the power of the militarists, the Black Dragon's representatives in the army assassinated on an even greater scale Four cabinet members were killed, and the Prime Minister escaped only because the killers shot his brotherin-law by mistake At Toyama's behest, the supreme court applauded the a sassins as "patriots"

Toyama now proceeded to speak for the nation Sounding a call for the Greater Fast Asia Co-Prosperity Sphere, he innounced that the white "barbarians" must go A pact with Germany and Italy was demanded as the first step toward was against the United States and Great British Premier Konove and Home Secretary Hiranuma argued that Japan had all she could handle in China

Whereupon, a Toyama fanatic walked into Hiranuma's office and attempted his assassination. A bulletproof vest saved the old man's life, but a shattered jaw and perforated throat put him out of commission. Konoye, openly warned by Toyama that he was next on the list, promptly resigned, giving way to Hideki Tojo, Toyama's man. This done, the Master Murderer sat down with the admirals and generals to lay the plans for Pearl Harbor.

There, then is the story of Mitsuru Tovama A lifetime given over to cownielly cold blooded murder And vet he was the best loved and most revered man in all Japan What more terrible indictment of a people? What is one convincing proof that they are still creatures of the jungle?

()ne hundred thuty physically handicapped men and women un this successful business

NOT CHARITY, But a Chance

Condensed from The Progressive + William F McDermott

i voung chemist working for a firm in St. Paul, lost a leg and then his job. Unable to land another position, he launched out for amount in Chicago grosses \$5,000,000 annually and employs 147 men and somen - 1,0 of whom have such crious physical handicaps that they once seemed doomed to lives of dependency and idlences. They are plud ood wages, plus bonuses

"It's imizing how many jobs can be satisfactorily filled by the crippled," he told me 'Correctly placed, a handicapped person will do more work than a normal person. A man who uses crutches develops strong arms and shoulders and can feed a heavy machine with greater ease than an ordinary man. A deaf mute can do better work requiring finger desterty, while a blind person used to reading Braille, can do better where sensitivity of touch is required."

When you visit to Bur & Co, George warns you to check your pity at the door 'I have people don't need it or want it," he explains proudly And you soon understand that, the place is electric with cheerfulness

At one assembly line are 25 blind men and women Their fingers fly fist and sure, and as they work they gossip and wisecrack with each other At another long table are 30 deaf mutes, their faces alight with expression when they 'talk " And here are 15 men and women who have lost an arm or a leg, ten victims of infantile paralysis, some who have lost an eye. They operate inachines, work on assembly lines, weigh, neasure, pack and ship products, and do office work, fully as well as and often better than the average nonhandicapped employe

The plant reflects the buoyant personality of its 32-ve ii-old president George Birr was graduated with honors from the University of Wisconsin in 1933. Three months after he got his first job he lost his leg in an automobile accident. With an intificial leg he learned to walk without a limp, today he goes about his job like a whirlying

Bari couldn't find work because of his handicap, yet he refused to be doomed to pencil peddling. He de veloped a new formula for a han wave set made it at night, and sold it is daytime to beauty shops and drugstores.

A deaf mute, Mitchell Echikovitz, was given a job As sales increased George and Mitchell needed another helper Mitchell knew a jobless deaf mute girl, and she was hired to label bottles. She still works for the company — and is now M tchell's wife

At the end of four years the concern was manufacturing a number of drugs and cosmetics and had 18 employes, all deaf mutes. Then, one day, while George was operating the labeling machine he realized that a man needed only one leg to press the pedal. So he promptly hired a one legged man, and from that time on he has hired handicapped persons.

At the Bair & Co switchboard is an aleit smiling gill who apparently has no handicap. Then in the corner you notice a pair of crutches. A legless man operates a tube filling machine. A 35-year old factory worker who lost his sight three years ago now earns more than when he could see A 32 year old woman, born blind stated to work three months ago, it's her first job and she's as happy is a child with a new toy.

When employes know of cuppled people unable to find work, Bursays, Bring'em in," and he does his best to provide jobs

Bur finds it case to maint in high morale in his factory because handicapped workers secure confidence and gratification through being gainfully employed. Moreover, being among their own kind gives them a feeling of normalcy which is lacking when they are among fully active people. For that reason, Bair recommends to other industrialists that handicapped persons of like affliction be given the same type of work, and that they be grouped together

The labor turnover is less than one percent. Ab enterism is only one half of one percent. Employes are on the

job "on time, all the time? The plant's safety record is excellent, for the crippled have learned to be careful

Much of the plant's present production is devoted to war medical supplies, but civilian business on its 35 items has doubled in the last two years

"There are plenty of opportunities for peacetime industry to give every handicapped person a self supporting job." Bair sud. "They will earn their pay. Moreover, if the handicapped have to live in idleness they re a burden to relatives or to the state. Our little factory has taken 30 blind people off pensions, saving the state of Irlinois more than \$10,000 and times and you really have something.

When the comp ny won the covered Army Nivy I' iward, the ceremony was unique. The presentation was made by in Army private on crutches, who had lost his keep it Anzio. Two deaf mutes, a blind boy, and a gul who had lost in arm received the award on behalf of the company. The blind lad made the speech of acceptance, which was translated into sign language for the benefit of the deaf intes.

Bur's employes believe that their experience points the way to self-support and happiness for thousands of mained war veterans. They insist that, if industry will eige the handicapped not charity but a chance, they ill prove their usefulness. It looks as if George Barrand his employes had already proved their ease.

My Brother &

Morton Thompson

-Who Talked with Horses

Condensed from The American Mercury

was ten, my brother was called Lewic the Horse He lived among horses, ate with them and dreamed their dreams He smelled of them.

That was Lowic the Horse's seret He talk d to horses And they talked back

It begin the year we shipped him off to a small private school near S in Diego. The school's horses were purchased from a nearby Indian tribe. These Indian ponies rounced un broken. I ewie got his own simply by coing out on the range with a rope and pattering, barefoot after the ore he wanted and nobody knows how he did it but he rode jauntily into the school corral bareback guiding the horse with a rope. When he was 11 he rode a horse over a four foot jump b reback standing erect.

And then one day, when he was 12, I was down at Callenie for the lares

Mora on Inomison who was a street of screen stones a most scripts and maga are articles before he entered the Army, in which he is a staff sergeant, wrote this piece about his brother two years ago. The brother, Air Cadet Lewis Marshall Thompson II, wis killed last year. The article will form part of the book, Joe, the Wounded Jennis Player, to be published by Doubleday, Doran.

I bumped into Lewie The school had been given a holiday, and for a treat all the kids were taken to the track. It turned out that the kids were betting their desserts on the races. The odds on the board meant nothing to them. They had a fairer system. Lewic got first pick he had to give the kids 3 to 1 on any horse he selected. He had to give odds.

'How many descrits do you owe"

I asked blandly

"Don towe inv! he said wonder ingly

It tuned out that he was meed 27 descrits everybody it school was in hock to him for the remainder of the semester. He said he always picked the right horse. I asked him what animal he liked in the next rice. He pushed his was through the crowd to where the horses were beingled around. There, as each horse came by, he looked at it questioningly. I our of them looked right back at him, craned their necks, looked him in the eye.— and made noises at him.

'That Number Four,' he said with the candor and calm of a small brother being sent to find out what time it is

Number Fourwas 12 to 1 He won There were only three rices left Lewic the Horse picked them for me Just like that He asked the horses and they told him and I bet on them I went home delirious

I tried to find out his secret He couldn't explain it. Not in any way an adult mind could grasp

"They tell me," he would say simply

'What do they say?'

'Oh, stuff They don't feel good, or they feel good How they think they're gonna run, what they think of the jockey, the track, the other horses I otsa stuff Gossip, mostly '

I had to see it work My logic told me that at best the kid was lying and imaginative and that at worst he actually believed what he said I borrowed him from school and took him up to Santa Anita

We went back to the paddock He stood by the ring

"Now talk to them '

There were eight horses in that race He talked to six of them. They talked back to him, with neighing noises

He turned away "You just want to know who s conna win, don t you?" he asked "I hat Number Three"

I looked at the tote board. The odds on Number I have were 8 to 1

"How do vou know?" I said sus piciously

He looked at me crossly "Didn't you see me ask 'em"

"What did they say?"

"Number One said he was not but he didn't like his boy. Two said ab solutely no. Three said he was sore as hell and out to take everybody if he had to kick 'em over the grandstand to do it. Four didn't care one way or the other. I we had a sore back, hurting him like everything Six said he felt good, only he knew dunned well Three could lick him The other two don't count All of their said not to pay any attention to the other two No good"

I stabbed a quick fore finger at him "Number Five's a list, then! Look at him walk! He's no soier in the back than you are!

"What would he lie for?" Lewie isked simply He said he's sore, he's sore?

Number Three won, going away Number Five broke down in the backstretch and limped in

That day Lewic picked six rices out of eight. In one rice the horse he picked came in second. Lewic was livid with rage.

That dirty louse! he screamed "That jockey crook! I hat thief!? There were tears in his eyes. The jockey had pulled the horse Lewie had picked Lewie never watched the horses run. He kept a pair of field glasses trained on the jockeys from the moment the race started.

And in the other ince there were only maiden two year olds. He liked to talk to two year olds, but he said they were unreliable. They all talked big, he said, and they all meant it when they said they were going to win. But they were too young to know what they were talking about

When school was out for the summer we used to go out to Santa Anita every day we could I am isnamed to confess it, but that year I had a bank balance that was awesome Lewie himself didn't care about betting He just loved to watch the horses, to be near them and tall to them Many a morning he would get up

just to sit on the rail with a stop watch in his hand. He wanted to be a jockey, but his bones were too nig. Then he wanted to be a trainer I got him books. I introduced him to owners. If it were possible for him to be a horse he would have tried for it

I remember the day he told Jock Whitney that a horse Jock once owned would win the next race Jock norted The ode's on the hoise were 22 to 1 Jock pickeried mother lewic said Jock's pick wis lime jock looled a im very circlully, then turned to Lewic

"That horse is sounder than you, iny boy," he patronized

The 22 to 1 shot won The horse tewe said was land tolded in the third furlong and came in lamping

One divinovic director Sam Wood sked me if he could borrow I ewich and isked me to go along Down it the puldock Sim witched Lewicalk to the horses. Then I ewic sud Number Seven. That was Cerro, so to a Sim thanked him gravely. He wilked up to the naturel window and laid a hundred on his nose. Cerro won While Sam went down to collect his three thousand odd dollars, there was absolute silence in our book were watching I ewic. Lewic was calmly watching the horses canter back to the judges? stand

In the next race I cwie picked Nunber Four We bet Number Four won Odds on And then there was a bluried succession of faces winner after winner

Lewie wouldn't pick the sixth race Said any horse could win it Said all of them thought they could do it

We begged and pleaded with him 'I can't tell vou," he cried "They don't know, themselves"

We bet anyhow We lost It was the same for the seventh and the eighth, only this time somebody came along with one of those hot studio crowd tips and we plunged We went home in a burrel

I twice was entirely satisfied. He was having a day at the races. He was calking to some swell horses, ste ping himself in the smell sound, such trand touch of horses, and nothing class mattered.

That is how I come can to be called I come the Horse When he left school the horses cried to see him so, his own horse in particular—I saw the horse do it when Levi stood in the stable and told him he was going away.

When he was 16 he suddenly stopp d talking to horses and they stopp d talking back to him. He got to be a little indignant about it.

'I don't know what you're talking about he'd so n'times say. But I think he was impaible I saw him tay to accepture whatever at was now and then, but it always failed and at last he gave it up. I think he outgrew it. He can still move among angry, kicking he ises and quiet them with a pat, a cluck, an easy eye. He loves them

But he doesn't talk to them any more. And they don't answer lick

Kudzu-

Another Agricultural Miracle

Condensed from Country Book Migizine Russell I ord

It was a hill farm in Alabam If ever a farm were visibly dving this one was All of the topsoil H had gone to the creeks and the ser The feld on which we stood was so gullied you had to keep jumping to g t icross it The lind was worn and bare the sagging house was empty But it you looked closely he e ind there in the gullies you could see ropel ke vines or twing hugging the g ound beginning to not it down. It was the first plantage of kudzu, the new co er crop that I had ever seen

A min hinged himself in thit and the bank took over the place Now this field will hear oon and make fine p sture. It will be gicen next spring in a companion R Y buley sad Kudzu Buley

Risi I I ord hi written ibout firmin for more than 20 years and is a consultant to the U S Department of Agriculture I ven as a boy of 13 he found agriculture on a Maryl ind farm so c citing that he began to report farmers doings for a country weekly At Cornell University he precialized in igriculture, and later he became a contributing editor of The Country Home Country Life and The Progressic Larmer He edits The Land published by Luends of the Land a nonprofit society formed four years ago to combat the alarmire wist of our natural resources a las author of Behold O at I and The 1 range Reveal To Hold This Soil

they called him. It was in December of 19,6 Only a lew shared Buleys ruth in this Japanese vine as a field crop and not a few were afraid that it would be a more menacing pest than honeysuckle spreading to take over the entire countrivide

Buley and a few other believers replied that when a plant grows like honevsuckle vet feeds like clover or alfalfa with approximately the same protein and carotene content, there was no point in being cautious. They showed that Kudzu not only wove a mat of protective cover but worked is a lecume to ariw free nitrocen from the in and store it for plant use in the soil. So kudzu plantings kept m uching on to be ilslished lind and erent aulius

I ist June I spent a week end at the Congritum of Chamma Cope, an ınfluenti il kudzu grower. Cope siys kudzu was brought in from Japan as in ornimental vine. He pl nted his first field of it in 19-7, when I c acquired 700 icies of run-down land near Covington to miles from Atlinti Yellow River Firm, it wis called, for the river that drained it was yellow with topsoil

I od by the whole place stands out as a gicen ousis imid givy brown cottoned down country Cotton isn't king here any more," Ch inning Cope says happily 'Kudzu is king!' Livestock multiply in the meadows, the soil is held secure, the place is making money

We stood that blazing hot Sunday at the edge of a marvelous vineland. The kudzu had made a riotous growth, hip deep all over the hill

"Reach down," said Channing The ground was as damp and cool as that of a deeply shaded forest floor. They took some temperatures over at the Experiment Station on a day like this," said (hanning 'Bareground was 140 elegrees Fahrenheit at the surface Under kudzu the ground temperature was only 89 degrees. That s something to consider Many soil mer here in the South wonder if the fierce heat on the tilled fields doesn't hurt soil and hinder humidification.

"And just look at this kudzu duff!"
He scooped up a handful. I hose big, delic ite leaves shed from last year's crop make a flaky mold that covers the ground completely and enters as organic matter to lighten topsoil fast. The cover on that field felt like a deep mattress under your feet.

K idzu stands drought well Some roots go 12 feet deep Lich crown puts out from one to four vines, and new crowns form 11 the joints and nodes I we hundred crowns will plant an acre—about one crown to every 85 square feet. On rich soil the vines in my grow 12 inches a day at the peak of the growing se ison, and too feet of growth in a year is not unknown. Even the first year's yield may be considerable, but it usually takes three years for the crop to take full possession of the acreage. Kudzu

may be pastured or cut with a mower and taken as hay 'l his 35 acres will make at least 3½ tons of hay to the acre this year, drought or not," Cope told me

I do not think that I ever saw a more erosible soil anywhere than on this farm. It washes like sugar. Even a cart track through new grassland will start a gully. But once Kudzu has taken hold thoroughly, the trouble end. I hat soild mat holds the soil.

Hugh H B nnett, Chief of the U S Soil Conscivation Service, said recently "It hat short of a miracle, can you call this plant? Kudzu has forced our Service to revise our appraisal of a lot of severely eroded land as having been ruined for further agricultural use And it is not only a cicp for gouged out land, it is a splendid crop for good land too It will cover a coinfield in one year, the next spring or early summer it can be plowed and the land planted to corn, then after the last cultivation of the con it will igun spread over the field, stop the crosson, store in c nitiogen, and at the first hard frost lay down a carpet of rich leaf litter at least the equal of forest litter. All this ın one year !"

Northern farmers are beginning to envy the South in having this marked Geneticists are now working to develop hardier strains that will push the kudzu Lelt northward. The general range of the crop is south of the Potomac River, although in my home county of Harford, Maryland, I have seen a growth as luxurant as any

In a part of the country famed almost to death under the old cropand chop system, kudzu is lively, hopeful, exciting 'A strange ecstasy,"

Cope sixs 'lifts southern growers hearts and exalts then linguage when they get together to prinse kudzu.' At a meeting of the Kudzu Club of America in Atlanta list spring one man told how her rised eggs for three cents a dozen on kudzu hen pisture, others testified that corn yields had risen from fourfold to sevenfold on fields that had been in kudzu. One man told of his progress in delay

diating kudzu for stock feed and human use It makes fine breakfast food he said

The Kudzu Club has set as its goal a nullion acres of kudzu in Georgia by 1950 and eight million acres for the South as a whole "I hat wouldn't be a bit too much to support the live-stock economy we need, and help make our agriculture perminent, Channing Cope says

ootprints on the Sands of Time

Condensed from The American Scholar + Ruth and I dward Brecher

can Council of I e uned Societics started off on 1 manhunt its quarry the 15 000 or so Americans who have contributed most to our national life and culture. So far 14 285 have been rounded up and accounts of their lives - alphabetically ar 1 inged from Abbe Cleveland to Zunser, Flakum - have been published in the fast 21 volumes of the Council's monumental Dictionar of American Biography

Critics have called the D 1 B "a page int of America and the master key to our country's past. Or dinary readers thumbing the D 1 B to learn when 1 amers Scott key wrote. The Star Spangled Banner or where Calvin Cooledge took the Presidential oath, have been amazed to find adventure stories to awal Hollywood's best.

In the D 1 B you will find of course, Washington, Franklin Jefferson, I incoln and Wilson—the only five for whom the editors broke their rule against biographics longer than 10,000 words. But it is the lesser figures who give the D 1 B the quality of an American saga men like Crispus Attucks the swarthy giant who was the first to fall before the redcoats in the Bostor Massacre, Howard Taylor Ricketts, who discovered the organisms (now classed

under the 12mc "Rickettsia") which cause Rocky Mount in spotted fever and typhus, proved that they are transmitted by ticks and lice, and himself died of typhus while still in his 30 s. Moses Farmer, who illuminated his parlor with electric lights in 1859, two decides before the laboratory experiments of Thomas Edison and Francois Prevost an early 19th century physician incinorable for his obstetrical skill

Pievost, a simple country doctor in a remote I ouisiana parish, aston ished medical authorities by delivering babies safely through Caesare in operations Says the D/1B Alone in a Negro cabin dunly lit by a candle or in oil lainp, issisted only by a slive woman, without anesthesia without asepsis without modern instruments to control by morehage he saved seven out of eight lives by an operation which had been condemned in the greatest hospitals in the world" Prevost's patients were slaves his fee was a promise from each slave's owner that if the operation were successful both mother and child should be free

By such men and women America was fashioned. There is the story of John A. Brashear. As a child, Brashear had been shown a view of the heavens through a telescope. Ye us later, after he became a steel worker.

in Pittsburgh, he acquired a five-inch piece of glass and a book of instructions, and started to make his own telescope. Every night for three years, after his exhausting days at the mill, Brashear ground and polished at his lens. At last it was ready. Mounting it in an improvised frame, he aimed the homemade instrument through an open window and saw again, with the intimacy of his first view, the stars and planets in their courses.

The director of the Allegheny Observatory examined Brashear's lens and give him others to grind Soon scientists everywhere were ordering lenses from this steel worker, for there were none more accurate. Even today lenses ground by Brashear are in use at observatories all over the world Says the DABIt is impossible to estimate accurately the progress in the science of astronomy due to his mechanical genius" Brasheai became acting head of the Allegheny Observatory, and he built there an observation room where other youngsters too poor to buy a telescope could view the heavens nightly without charge

The late Professor Liederick J Turner of Haivard is given ciedlit for suggesting this biographical dictionary. The American Council of I earned Societies approved the proposal Editorial costs were estimated at \$500,000 — a scemingly insurmountable obstacle. But Adolph S Ochs on behalf of the New York Times, advanced the entire amount. The editors chosen were Allen John son, who had proved his competence by editing the 50-volume Chronicles of America for Yale University, and

Dumas Malone, who became editorin-chief following Johnson's death in 1931 An initial 20-volume publication was planned, to be supple mented periodically by volumes covering Americans who died after completion of the initial set

Volume I appeared in 1928, Volume XX in 1936, and the first supplemental volume in 1944. In all, 2601 contributors supplied the 14,285 biographies and their names read like a Who's Who of contemporary history and literature. Hereey Allen, for example, wrote on Poe Carl Van Doich on Mark Iwain Justice Felix Frankfurter on Justice Oliver Wendell Holmes

The first task of the D 1 B editors was to determine whose biographies should be written Earlier biographical collections and historical works were ransacked, card catalogues checked, obituary columns indexed. The scores of basic lists thus prepared were then circulated among the experts concerned—the physicians' roll went to medical historians and o on Fach expert made additions or deletions and also suggested appropriate authors

Though sponsored by scholar, the DAB includes the stories of many people whose talents were not primarily intellectual. The dragnet caught up Lillian Russell, whose fortune lay in her face and figure. Tex Rickard, the boxing promoter, George Washington Gale Ferris, who invented the Feiris wheel, and Hetty Green, the female wizard of Wall Street. The DAB also provides a full account of Knute Rockne's career, appraising the achievements of the football coach as scriously as if it

were evaluating those of a statesman 'I hough Rockne originated little in football strategy he brought the forward pass, the shift, the spinner plays and the flexing-end play to a high peak of perfection. His players went out in great numbers to be football coaches at colleges all over the country, carrying with them the infectious enthusiasm of their famous coach."

The D 4 B discovered that some well known names did not deserve inclusion One member of a prominent New England family was found on half a dozen lists of suggested subjects His name appeared in many histories severil niticles ind even a book had been written about him A biographer was duly issuned the task of reassessing his life but he found no facts sufficient to explain his fame Then a research worker established the fact that almost every favorable reference to the man had been written by someone related to him his circ itness existed merely as a carefully nurtured family myth You won t find him in the D + B

Despite the scholarship of the contributors, and the care they took with their assignments, a few errors inevitably crept in After cagle-eyed readers had pointed out one error, a dozen researchers were employed to check every statement made in subsequent volumes

Fo check birth dates, actual birth certificates were examined, as well as family Bibles and baptismal records Dites of death were usually verified from contemporary newspapers, a newspaper statement or July 24, 1846, that the oddly named Rhode Island whale-oil merchant Preserved Fish, had died the night before was

deemed better evidence than a statement made by some biographer many years later

The D A B sought to comprehend "all sects and sections, races, classes and parties" Special attention was given to noteworthy Indians — to Squanto, for example, the Pawtuxet whom the Pilgrim fathers cilled 'a spetiall instrument sent of God' to tide them over the first lean years at Plymouth Squanto had been abducted by an Fnglish sea capt in in 1615, and sold into slavery in Spain He escaped to England, learned its language and ways and after four years was returned by a trading vessel to his wildciness home - only to find his whole tribe wiped out by a plague The Pilgrams landed the following year, and Squanto adopted them As their counselor and interprefer he arranged a peace between the Plymouth colonists and Chief Missasoit which was to last for 50 veats 'He directed them," wrote Governor Bradford, "how to set then coine, wher to take fish and procuic other comodities, and never left them till he dyed" His last request was that the Governor pray for him, 'that he might goe to the Linglishmens Cod in heaven "

There arose during the 1920's, when the D 4 B was being planned, a whole school of biographical debunking" The D 4 B editors insisted that their work should "avoid fulsome eulogies on the one hand, and the flippant, irresponsible tone of much modern biography on the other" You do not learn from the D 1 B that George Washingto twoie false eight but you do find the far more significant story of how, when

he was chosen Commander in Chief of the Continental Army, he refused any pay except his actual out of-pocket expenses through the war, and of how, after eight years of campaigning, his battlefront accounts were audited and found to balance with an error of less than one dollar

The alphabetical arrangement of names in the D A B, like politics, makes strange bedfellows, side by side with Presidents and prophets you will find such renowned bad men of the West as Billy the Kid, Jesse James, Robert Dilton and the sinister Henry Plummer As a youth in Califorma Plummer casually murdered a man whose wife he had found attractive Granted a pardon as he supposedly lay dying of tuberculosis, he proniptly rose from his deathbed and entered upon a career of seduction, bandıtıv and murdei which belied his ill health When California got too hot for him, Plummer escaped to Washington and covered his trail by sending back to the Cilifornia newspapers a thoroughly plausible account of his having been lynched by an outraged citizenty Then he moved on to Montana, where he was elected a county shenff

All of southern Montana during this period was being harried by a band of desperados operating under an unknown leader. Within a few brief months, 102 Montanans were waylaid and robbed or murdered. Sheriff Plummer failed to suppress their maraudings, and so a vigilante committee was formed to end the terror Eventually the gang was rounded up, 24 of its members were put to death, and its leader finilly cip-

tured Yes, you've guessed it, the leader of the outlaw gang was none other than Sheriff Plummer! He was hanged in 1864, on the very gallows which as sheriff he had erected, but his story has echoed on down through all too many dime novels and double-feature westerns

America has been tich in humorists as in villains, and so is the $D \cap B$ The humorists' very names, or pennames, have an American twang Mark Twain (a Mississippi riverman's term for "two fathoms deep"), Josh Billings, Petroleum V Nasby and Q K Philander Doesticks Bill Nve is quoted as telling how his family moved from Maine to Wisconsin when he was a boy to settle on 'ibo acies or beautiful feins and bright young tattlesnakes" And there is Bill Arp, the Civil War veterin who summed up his fighting experience briefly "I joined the Army, and succeeded in killing about as many of them as they of me"

Statesmen, authors and men of affairs of course, fill the bulk of the pages, but variety is the spice of the D 1 B — its lobbvists, lighthouse keepers, and patent-medicine kings, its blockade-runners and spirit mediums. There is even a bally girl about whom nothing is known be yond her ninth day of life — Virginia Pare of Roanoke, important as the first child of English colonists to be born in what is now the United States.

From these and thousands more the D AB has distilled, that all may read, the essence of the men and women who have made and given color to America

Will Europe's Educators Lose the Peace?

Condensed from The Saturday Review of Literature

Norman Cousins

spondent for Collier's, William G. Shepherd, was invious to find out what Luropean children were being taught about World War I. The answer, he was convinced, would largely determine the nature as well as the duration of the peace. History's lessons of inistaught, misunderstood or ignored, might have to be learned again the hard way.

Mr Shepheid came back from Furope with his worst fears realized. The leading nations, he discovered, had sloughed off the responsibility for teaching children about the war. In each country there was conflict between countless factions over what should be taught and by whom with the result that children were lucky to learn any scrap of war history.

In Germany, for example, there were is many educational policies as there were districts. The only thing they had in common was that all mention of the war itself was scrupulously avoided.

Dr Cail Heinrich Becker, secretary of the Prussian ministry of education, readily admitted that neither teachers nor textbooks were allowed even to mention World War I

"You see he explained, 'we have six different parties, each with a different idea about the causes of the war the events and the mistakes. We must find some story that will

suit ill the parties, including extrem ists on both sides. It is impossible—and we have quit trying."

Even four experts who were assigned to make a straightforward chronology of the war quarreled over what happened on certain dates, and the chronology was ab indoned

What Mi Shepherd found in Frince was disturbingly part of the same pattern. An official of the Ministry of Public Instruction told him that French schoolteachers welcomed the end of the war, with its military regulations in the classroom and since no textbooks were available, immediately began to give their own versions concerning what happened and why

Parents had their own conflicting versions and complained that their children were being lied to in school Some parents said their children were being indoctionated with imperialist ideas, while others were horrified to discover that their heirs were being exposed to Markist dogina

So, the Irench education ministry took the easy way out. The only way of satisfying everybody, apparently was to drop the war as if it had never existed. Textbooks? Yes, attempts had been made to have impartful textbooks written, but the textbook writers, like the teachers and the parents, had stories of their own.

The whole difficulty, the official

explained to Mr Shepheid, was that it was almost mathematically impossible to write a textbook dealing with the war that would please all of the seven influential parties in I rance, as well as the teachers and the parents

"When" asked Mr Shepherd, will you be able to begin studying the history of the war in your

schools,"

"We will begin when the next generation dies" he said without realizing any cause and-effect implication in his reply. It would take that long, he explained for white hot prejudices to cool off, enabling scholars to undertake an authoritative study.

In London, Mr. Shepherd put the same questions to Sir Henry Maunsell Richards, in charge of the English school inspectors. The British Government had no policy on the war local school boards prescribed the courses and any textbooks they wished

"No reliable and well known textbook writers have attempted to write any schoolbook of the war" Sir Henry added. All the school histories that have appeared with fevexceptions, have been written by anonymous hack writers. Since the facts' were absolutely unreliable, our inspectors immediately threwall these books out Consequently, the children of England are not learning the history of the war"

This was in 1922 But had Mr Shepherd lived to undertake a similar survey in 1939, his findings would have been substantially the same — except in the case of Germany where the Nazis had capitalized on the confusion through iron clad control of education. In England and I rance,

the situation had become even more complicated because of the trend toward pacifism, with its dogmatic, black-and-white approach to the causes of the war

Dors anyone doubt that the failure of nations and of educators to teach the new generation after World War I helped to bring about World War II³ Or that the educational vacuum existing in Germany after the list war was an open mystation for Adolf Hitler to fill this vicuum with the peculiar stuffings of Nazi ideology and then seal it is jinst contact with the outside world? We see how effectively it was scaled as we read about the pathetic but nonetheless menacing ignorance concerning the everyday facts of late in the non Nazi would revealed by German prisoners Since these young Nazis have been educated for death ? 4 we have to **★onder** whether it may be next to impossible to re-educate them for life to acquaint them with concepts of individual liberty and dignity and then to get them to respect these concepts

Once more the end of the war in I urope will be in a ked by a truggle for power in each nation. Again there will be the conflict of various political parties. Again the pressure on the schools to teach this doctrine or that Again the temptation to solve the problem by saying nothing about the war—until the next generation dies.

Here is a problem as tangible as a brush fire Can we present world-wide anarrhy in education after this war?

^{*}See' Education for Death,' I he Reader's Digest, February, 42

There is a movement under way in this country and abroad for an international office of education. It would correspond, in its sphere, to the International Labor Office. What an opportunity for leading educators everywhere, acting together, to guard against a recurrence of an educational breakdown by taking real leadership after this war!

The agency could appoint a committee of leading historians men whose allegiance to scholarship is greater than their individual partisan views, and charge them with the responsibility for writing the story of the last five or ten years. Differences will exist within such a group, but at least their would be a realization by every member that the very purpose of the group is to reconcile these

differences in order to avoid a disastrous anarchy. The chances, too are that people within each country would be likely to respect the work of a nonpartisan group of internationally famed scholars.

We can grant that it is far-fetched to expect all the major nations to accept the pooled efforts of such a group Yet, no matter how few nations participate, the very effort will dramatize for peoples everywhere what will be the world wide No a problem in education. The crucially important thing is to get public thinking started on this question before the jealousies and cleavages and sharp contests for power that are almost certain to follow the war take their toll of the schools which can least afford it

Mother s-Eye View

LAST spring the city editor of the Chicago Herald Imerican sent me to Abilene, Kansas, to get pictures of Mrs Eisenhower, the General mother, along with a story about his boyhood After I had been there a few days Mrs Eisenhower, a kindly old lady, asked hesitantly, Do you know my son Dwight?

No, I said 'but I may meet him any day now You see, I'm in I A
Oh, I do hope you will, she replied happily "You'll like him so
much'

— Rebert Lalmer

Medicine Men of the Air

Condensed from The New Republic

R M Cunningham, Ir Associate Editor of Hygeia

Lo prompt relicf turn off your radio!

THE pitent medicine peddler is happily estinct, but the evil that he did lives on — embodied today in the breathless, compelling indio voice which urges you to rush to the nearest drugstore for pills and tonics to wike up sluggish kidnevs, combat exces acidity, cure headaches, relieve colds or restore lost vitality Because the Lederal Trade Commission forbids it the specific promises of cure mide by the medicine peddler a generation ago are not he aid over the air But incho has developed a sly formula of implication and innuendo which gets the idea across just as persulisively

If you had an excessively acid stomach,' one network innouncer tells millions daily in a liquid voice charged with sympathy, alkalize with milk of magnesia table ts! Eliminate trouble making acids! Get prompt relief from digestive upset!'

Now the FIC doesn't cite this type of advertising as fraudulent, because it doesn't say anything that isn't true. The tablets will neutralize or ilkalize, 'excessive acid in the gistric secretions and relieve digestive upset caused by such excess acids. The point is that not one person in a hundred who think he is suffering from this condition actually is, yet the whole

announcement has the effect of convincing the listener that his or her digestive upset—and everyone suffers gastric distress or asionally—is caused by excess acidity. Further more, good doctors say that no case of acidity can be demonstrated except by actual removal and analysis of the contents of the stomach. Plainly few ever take the trouble to find out whether they have the one condition this product can remedy.

Thus thousands of dollars weekly are poured into the purchase of relief from a probably nonexistent all ment Worse yet many people whose vastric pain is caused by some functional disorder which cally scientific diagnosis and treatment might easily detect and care, continue instead to seek a magic short cut to health which they can take in a class of water after meals

Fragic for much the same to a on is the way radio rings the cash register on man preoccupation with the state of his bowels. All doctors warn against the habitual use of his tives, repeated overstimulation of the colon permanently contracts it, they say, and esults in chronic constipation. Moreover many doctors would hesitate to call 'gentle' my drug which acts chemically to induce evacuation of the bowels.

To the malers of eathartics, how-

ever, this danger is either nonexistent or unimportant. On a coast-to-coast hookup featuring nationally known entertainers, the use of one laxative—a saline preparation—is urged as a mears of insuring "regularity". The gentle action of the drug is emphasized, unmistal ably, the advertiser recommends its daily use—medical opinion against such use of any laxative notwithstanding

Radio listeners he constantly importuned to seek relief from headache by using this or that pill or powder, Outck acting! — Iminvariably mediate! - Listective! But he idache is rarely an isolated phenomenon Almost always it is a symptom of ome underlying disorder, it may occur in connection with such widely diverse conditions as alleigy, eyestrain, sinusitis, menstrual disorder, digeslive upset, gall-bladder disease, or tumor of the brain Clearly the last thing a person with he idache should do is simply take a pill or powder to kill the pain, and forget it

The advertisers themselves recognize that fact Net by a clever use of inflection the amouncer for one headache tiblet" uses the very words which warn of possible danger to minimize the danger and promote the product 'Of course," he says in a condescending, almost soonful pranissimo, "if your head iches persist you should see your doctor But [crescendo]

for prompt, we know relief from nagging pain "And so on It rou're sensible, the implication is, you'll buy those tablets

If you doubt that implications such as this are deliberate, listen to radio commercials dealing with medical subjects. See how often you can iden-

tify phrases which it seems the Federal Trade Commission has requested the advertiser to insert and the advertiser has obviously instructed the announcer to "kill" by inflection You'll note dozens of unmistakable examples

When vitamins are sold on the air, anything goes The commercial for one vitamin product begins with a dramatic dialogue between husband and wife Coming home from work, the husband speaks dispiritedly to his wise He is dead thed, petered out, lacking energy and vitility "Is this the way you keer at the end of the d 1y?" the innouncer wints to know It is? Then you ll be thrilled to look in on this sainc husb ind a few weeks later after he has been taking these vit imm pills a friend told him about In he come, obviously in the pink Bursting with pep, he giects his wife ardently and suggests that they go stepping for the evening The concluding sales talk drives the point home with a repetition of words like "energy," "vitality" and "vigor" His product, you gather, incieases e xu il vit ility though the announcer doesn t use those words

Unlike printed advertising, in which misrepresentation is fairly easily detectable, the spoken word can be made to say one thing and me in another. Thus, until radio takes the responability for cleaning its own house, the public will probably continue to be misled about the efficacy of patent medicines advertised on the air. Voluntarily one network has recently appointed a medical consult ant to inspect vitamin copy in advance the extension of such wholesome self-discipline is sorely needed.

PART II

A CONDENSATION FROM A FORTHCOMING BOOK BY

->>->>->> ★ William L. White ★ ´´´< -<<-´<

Noted war corre pondent editor of the Emporia Gazette author of They Were Fipendable, Queens Die Proudly and Journey for Margaret

USSIA has the most rigid political censorship in the civilized world. My first experience with the censor is when I submit a news story on my trip to Leningiad which includes the sentence. The Finns were fighting hard for Viipuri, which prior to 1939 was Finland's second targest cit; "The censor struck out the italicized words Yet they contain no military information—nothing which is not in every child's geography

The foreign reporters explain to me why this cut in my copy was made When the Soviet Union claims territory, no Moscow story may mention the fact that this territory once belonged to another nation For example, the Baltic States — Estonia, Lithuania and Latvia — are now parts of the Soviet Union and no hint can be capled from Moscow that they were ever independent republics

You cannot argue with the censors or give them your reason, not will they give you theirs when they hand back a mutilated cable Their reply is always, 'We can't discuss this with you It's been decided '

The censorship, of course, excludes everything which might give the outside world an unfavorable impression of conditions within Russia. A correspondent may not give the size of the monthly bread or meat ration allotted to each citizen, nor may he say that favored classes get special rations. He may not say that outside the meager scope of rationing, prices for the necessities of life bought on the free market have become widely inflationary, surpassing anything dreamed of in the American black market.

Likewise, authorities conceal exactly how many hundreds of thou sands of Leningraders starved during

THIS IS a concluding condensation from Mr White's candid account of his observations in Soviet Russia during a six weeks visit last summer with Frie A Johnston, President of the Chamber of Commerce of the United States

The reader in my be interested in referring to numerous other points of view on Russia published in The Reader's Digest during the past two years. They include 'I is on the Russian Frontier," by Wendell Willkie, March 1913, 'The Price that Russia Is Paying," by Maurice Hindus, April 1943, "The Nazis Describe the Russian Soldier," by 1 t. Col. Paul W. Thompson. June 1913, "The Russian Slogan 'Work, Study and Learn," by Maurice Hindus. I chauary 1944, "To Bridge the Gulf Between the U.S. and Russia," by Life A. Johnston, August 1914, My Talk with Stalin." by Eric A. Johnston October 1914, and 'What Russia Wants," by Suinner Welles, November 1944.

the siege. The result is that the world has little knowledge of the sacrifices the Russian people are making

A minor bureaucrat in the censor's office will occasionally strike out a whole paragraph from a story written by an experienced correspondent, explaining that he found it uninteresting," or considered it 'unimportant'

Correspondents would not mind the bleak living conditions of waitime Russia if they were not treated as tolerated spies—cut off from any real human contact with a people they admire, herded into the institutionalized life of the Hotel Metropole, talking only with one another or with the small diplomatic colony, reading only the controlled Russian press, and then having their daily work messed up by a rigid political cen orship in the hands of men who are often mediocre

While correspondents may never visit the front, they are occasionally taken en masse on visits to recently liberated cities or to rear-area military headquarters. They are always escorted by an assistant censor, one of whose duties is to verify everything which happens. If the censor fails to

sec or he it something on the trip, the reporters are not allowed to report it It didn't happen. I ven in routine stories from Moscow the censors usually blue-pencil anything which has not appeared in the Russian pies, hence there is no such thing as a new best of an exclusive story. A reporter can work for weeks gathering material for an article only to have it killed because it has not appeared in Pravia. They view his independent activity as bordering on espionage.

Military Strength and Weaknesses

AMI PICANS frequently express amizement that the Red Army was able to resist when the Germans attacked Russia, and feel that its exploits are a mirricle

The Red Army is good Russians make good soldiers. They are well disciplined, competently led, equipped with good rifles and plenty of heavy artillery which they use with skill But let us consider statistics.

Soldiers must be young, and the military strength of any nation is determined not by its total population but by the number of boys in their late teens and early 20 s. Because of the enormous population and the

high Slav birth rate, in the Soviet Union 2,000,000 boys each year attain the age of 18, compared to only 500 000 Germans — a four-to-

one superiority

Considering only military effect tives the mulacle is that any German soldier was able to set foot on Russian soil They were able to penetrate to the suburbs of Moscow and Leningrad and ringe as far as the Caucasus (1500 miles from Berlin) not only because of Russia's technical poverty and the disorganized state of her industrial development but also largely because at the time the Red Army Incked experienced officers. Her initral in force for instance could not compare with that of the Germans much of it was smashed in the first few weeks of fighting

Russian pilots rank among the world's best, but Russia lacks the skill to turn out good planes I ongrange bombers such as the British Lancaster and American Fortress and Liberator require the highest degree of industrial skill for production and operation in large numbers. They are almost totally absent in the Red Air Force

The men who plan the Red An Force, facing shortages of key materials such as aluminum, and of indus trial skill have concentrated on production of the Stormovik, a slow, low altitude strafing plane this efficient little tank buster usually operates at treetop level, the Soviet fighters which protect it have no need of high-altitude equipment

Of the 10 000 planes which America has delivered to the Soviet Union the Russians like best the Bell Airacobra, which is a low-altitude, ground cooperation plane similar in func tion to the Stormovik

Soviet targets within range of German bombers rely for defense on fire from anti-aircraft batteries However. lacking radar to guide their fire, the gunners can shoot only at the sound, which is a rough indication not of where the bomber is but where it was several seconds ago Therefore, to be effective batteries must vonit continuous fount iins of fire during a raid, an expensive procedure

But by the middle of 1944, the German superiority in modern equipment had been reduced by three factors Russian industry behind the Urals was getting into its stride in tank and artillery production German factories were slowing down owing to Anglo Anicircin in pounding, and Russia had by then received from America 5750 million doll us worth of lend lease aid which included 10 000 planes 40 000 jeeps 225 million doll us' worth of machine tools and 210 000 trucks Without those trucks it would have been impossible for the Russians to have followed up their major victory at Stillingrad in 1943 It does no good to turn the enemy unless you can pursue him Without American trucks the Red Army would still be stuck in the bottomless Ukrainian mud

The top Russi ins do not underestimate the value of Americ in aid If the lesser ones seem unappreciative, it is only because, in spite of vigorous protests such as that of Admual Standley, they have not been told the extent of it

For instance, the Moscow coircspondents tell of a trip on which they were escorted through reconquered territory by a Red Army licutenant They saw a jeep in a ditch Russia makes no comparable car, but quantities of jeeps have arrived through lend-lease, with instructions in Russian that were stenciled on them in Detroit

"Is that a German or an American jeep?" the correspondent asked

"Neither," said the licutenant proudly "It's Russian Your American jeeps are too flimsy to use on roads at the front — 5000 kilometers and they fall to pieces. Here we use only Russian jeeps!

Russian losses have been heavy, and in the summer of 1944 proctically every man between 16 and 45 was in uniform at the front except a few technicians and key executives. Nevertheless when the Anglo American offensive opened in France, the Soviet Government loyally kept its Leher in agreement to start a drive from the east. In order to do this, the Russians drafted for front line duty men who had been discharged with wounds or rejected for serious physical defects. But the Soviet Government kept futh

Rationing and the "Tree" Market

I have just been pricing food in the Moscow government run stores and in the uncontrolled tree public markets, and at list I understind how and what these people ext

In America, a worker who lost his food coupons could still live magnificently on unrationed goods—milk, eggs, fish, poultry, breid, fruits and vegetables. In the Soviet Union everything which has any food value is rigidly rationed or is unobtainable except at fant istic prices.

There are several categories of rationing corresponding to different strata of the Soviet caste system. The Red Army is extremely well fed, particularly in the front lines Soviet officers are given a 50 percent discount at the "commercial" stores The Kremlin is luxuriously fed through its own commissary. Foreigners are about as well fed as the top Bolsheviks They get ample meat and bread rations, may buy four pints of vodka a month, and so on Wilters, actors, singers, musicians and other artists are also in a special luxury category, not only for food but for clothing and living quarters

In Moscow, a first class war worker gets a bread ration, for example, of 600 grams a day — which is more than a pound A second class worker gets 500, an office employe (not an executive) gets 400, and dependents (old people, children, cripples) get 300 orams

A war plant worker who exceeds her production quota makes about 1000 rubles a month, at the cheap diplomatic rate of exchange which I enjoy, this 1, \$80. But the quantities which she can buy on the ration are so meager that she can't spend more than about \$6.50 a month for rationed food.

The Soviet food ration, which she must buy at her assigned grocery store, gives the worker about nine tenths of what she must have to keep alive and working I or the other tenth, and for any food delicacies she wants, she must look elsewhere The first place to look is in the free market, or Rynok, where farmers bring produce for sale

The farmer lives on a Collective or

ing luxury items at a greatly reduced rate. Morey is always kept secondary. The authorities are suspicious of it, and are afraid it will accumulate into great fortunes which will destroy their system.

"Because of the way Russians have been educated they can't understand our system. If you try to tell them that we control great fortunes by breaking them up with inheritance taxes, they don't believe you, because such a thing could not exist under capitalism as they have learned about it in their textbooks."

The way to understand capitalism is not to incinorize the long words economists use. It is to go some place where the people don't have it, and see what they do instead

In America a man who saves money is regarded as a sound and valuable citizen. He performs a useful act, for out of such savings our industries are built at dour farms improved. In Russia he is viewed with suspicion as a hoarder, a potential capitalist someone to be watched for criminal tendencies toward exploiting his fellow workers by me ins of giving them jobs.

These Socialists argue that panicky saving can stop all business activity and throw millions out of work. They say that the greatest waste of capitalism is the valuable man-hours of work which our nation loses when these millions are idle

But are capitalist depressions any more wasteful of human energy than this bureaucratic society with its inefficient methods, where almost every activity is a State monopoly, and where there is no competition to force inefficient businesses to reform

or go broke? True, these people don't stand in line at employment agencies They work terribly hard and stand in line to pay \$1.25 for a fresh egg

Although they work so hard they produce so little that their living standard is less than was that of our jobless on work relief During our depression as many as 5,000 000 of our people were for a few years down to this low WPA living stindard But in the Soviet Union about 180,-000 000 people have been on an even lower living standard for 25 years. And only a few privileged millions know anything better During this quarter century the Soviets have controlled one seventh of the world's lind surface, an area rich in nituril resources

They expl in this low living standard by pointing out that the Russian people lack technical experience and that Russia's resources are largely undeveloped. But to correct these things they had a quarter century of peace—which is a long time.

The whole picture was nicely summed by William Henry Cham berlin, the veterin Moscow corre spondent, who has written several scholarly books on the Soviet Union Chamberlin was caught in Bordeaux the week that France it le People were sleeping five and six in a room, grocery stores were sold out, there were long lines waiting to get into restaurants Chamberlin surveyed all this and remarked to a fellow correspondent (who quoted it to me in Moscow) "You know, it takes a catastrophic defeat in war and a national convulsion to reduce France to that state of affairs which is normal everyday life in the Soviet Union!"

How About Frade Unions?

ERIC JOHNSION has asked if our party may talk to the heads of the Soviet labor movement. He knows the top American labor leaders, gets along smoothly with the unions in his Washington plants, and, like me, is curious to see how free Russian labor is

We talked to four of the leaders, but the head of the whole thing was a very smart man of 43 called Kuznetsov He was really keen He d lived in America, graduated from Carnegie Institute of Fechnology with a master's degree in metallurgy

Their sctup as he outlined it goes like this All Soviet unions—representing 22,000,000 workers—send delegates to the All-Union Trades Congress This Congress corresponds to our AFL and CIO national conventions rolled into one It elects 55 of its members to something they call the Plenum These 55 elect 18 to something called the Presidium And these 18 have elected Kuznetsov its secretary, which makes him head of the workers

We asked him if all the workers belonged to trade unions, and he said at least 98 or 99 percent. The dies are on percent of a worker's salary. There is no initiation fee

"Now is this a perfectly free union movement," we asked him, "or is it directed by your government?"

It was perfectly free, he assured us Of course, he said, anyone they elect to their Congress must be approved by the government, but we could see he considered this a very minor detail It occurred to me that in America, if some carpenter's local

couldn't send a delegate to their national labor convention unless the government approved him, our unions certainly wouldn't consider this a minor detail — but let that go

We tried another tack "Are you a member of the Communist Party" we asked him He said he was "And all the members of your staff?" He nodded Since the factory minagers are all Communists too and since the Communist Party controls both labor and management under very strict discipline, I felt that would leave very little for them to argue about So I said, "What do the trade unions discuss?"

"Working conditions, social insurance, vacations — things like that,' he answered

'Do they talk about wages?"

"Yes, 'he said 'particularly the pay for piece work. The factory bargaining committees discuss rates with the management."

"If they can t agree, what then?' He insisted they practically always agreed But if they did it, they could appeal clear up to the Presidium, who could talk the dispute over with the Vice Commissar who managed that particular trust In that way, he said, amicable agreements always are arrived at

"Always? Aren t there ever strikes?"
"Yes," he said, "in 1919 a stilke in
one steel mill lasted two days. And in
1923 there was another little strike
out in western Russia. There have
been no strikes since, and in the future there won't be any because our
workers understand they are all
working for each other."

"If a worker gets discharged for any reason, would it be difficult for him to get a job some place else"
"Very, very difficult," said kuz
netsov

"Well, isn't this what the workers in America call an employers' black list?"

"No," said Kuznetsov But he didn't say why it wasn't

"Is joining the trade union in any plant voluntary or compulsory"

"Completely voluntary," Kuznet-

sov said

"How do you account, then, for the fact that practically everyone joins?"

'It is to their adventage in any country' he said "and particularly in the Soviet Union Here a union member receives greater sick benefits than a nonunion member. There is a housing shortage and most factories own apartment houses which they rent to the workers. Union members receive first consideration. A nonunion member would have trouble finding a place to skeep at night. Also, he wouldn't have access to the factory recreation center, where they have dancing, games, movies and meetings."

"If a worker is dissitisfied with his job, can be quit and go somewhere else?"

"He may put in a request," said Kuznetsov, "but the decision will be up to the plant management. The head of the plant is a fai better judge of a worker's qualifications than he is himself."

'Will this continue after the war?"

"Why change?" he said "We must all wor' where we are needed, to further the progress of the Soviet Union" That settled that We thanked him for giving us this information. As we got up to go he said to Eric, "You are the first American businessman who has ever taken the trouble to call on me, and I want you to know I appreciate it. We want you in America to understand our trade unions and realize that it is a free movement here." He seemed to me in every word of it. I don't know that I can agree with him, but I thought he was highly intelligent and completely sincere. I rom the Communist standpoint, I suppose their labor is free.

Slums and Mansion

JOHNSTON, JOVE O Hara and I are flying to Siberia With us, at Eric's request, go several reporters who have long tried in viin to see the country Also with us are Zemenkov, the Foreign Office representative, Kuilov our official guide and a figure we had come to know as "Nick" Pre sumably Nick spoke no English At least he spoke none to us But he had always been a part of our group eating obscurely at the ends of banquet tables, and traveling silently in the front seat of our car. The reporters identified him as the NKVD (secret police) man

We cross the Utals, which in this area are not mountains in our Rocky Mountain sense, but rolling, wooded hills In a valley not far beyong them is Magnitogorsk, the Pittsburgh of the Soviet Union, its huge blast furnaces vomiting smoke

From the airport, we drive to the house of the plant director, where we spend the night To reach it we pass through teeming, unpainted sluris which are worse than those of Pitts-

burgh Then the road goes up a hill upon which, overlooking the slums and the blast furnaces, are the spacious homes of the executives. Our cars turn into one of the cement driveways. The big house is new, and the bathroom is both clean and in repair—as are these things in Russia where the comfort of some reasonably important individual is at stake.

I his is the first time we have been in a Russian home. It has hardwood parquet floors, the furniture is of dark, heavily varnished wood, and on the big mantel are busts of Marx and Lingels.

Now we get a closer look at the director, who runs these great steel mills. He is a tall, stocky Russian very much the engineer type, and only 35. He tells us his father was a blacksmith. He also tells us about Magnitogorsk. The town was started in 1916. There are now 45,000 workers in his plant, of whom 25,000 are construction workers, for it is expanding. I wenty open-hearth furnaces and six blast furnaces are operating.

After lunch we drive back down the hill to the plant. There are many workers on the road as this is ap parently a change of shifts Suddenly our car turns out to one side as we overtake a leng column marching four abreast, on its way to work at the plant Two things are remarkable about it The first thing is that, marching ahead of it, behind it and on both sides, are military guaids carrying rifles with fixed bayonets I he second thing is that the column itself consists of ragged women in makeshift sandals, who glance fur tively at our car

In the armament factory we visit, where guls are lathing shells for the Red Army, there is again no assembly belt. At one point they have devised a substitute. When one operation is finished, a shell is placed on a long, inclined rack, down which it rolls into the next room for the next operation. Only the rack is badly made and now and then a shell falls off. Instead of adjusting the rack, a girl is stationed by it to pick up the shells and put them back on straight.

Now we go through a brick plant, and here Elic is in his element, for he makes brick in his I acoma plant. After inspecting the product and the production line, he asks them how many worlers they employ, and how many bricks they make per month. Then he figures on my reporter's paid and finds that his plant, by using the continuous lain system, turns out three times as many bricks per worker. They have nothing remotely like it here, we watch the women laboriously moving bricks by hand after each processing operation.

We wonder how much politics has to do with the scalety of skilled brains here. Suppose the Democratic Party were limited to about 4 500,000 members, and that no man could hold a responsible job whose logalty to the Secretary of its National Committee was in any way questioned? Main good men might have to be discarded because they were not politically sound.

Our Red Army pilot has us terrified Yesterday we thought it was an accident but today, en route to Omsk he did the same thing Before you board an American uiling they

warm the motors so there can be no faltering on the take-off which could send the plane crashing into a ience. When the plane makes its run and is air borne the pilot continues in a straight line until he has 500 or 1000 feet of altitude, before he males a sentle turn which puts him on his course. Then he climbs to about 5000 or 6000 feet which gives him time to pick a suc landing spot in case anything happened.

Soviet an lines procedure is as follows You get about The door slams shut the pilot starts the motors, which have been cold since the night before. If they run at all he releases the brakes, guns the plane on down the runway You cather speed and clear the runway by maybe ten feet At this instant the pilot makes his turn by the process of tilting one wing up toward the zenith and the other down until its tip is digging potatoes on the adjoining faim Once pointed on his course he levels off and continues at an iltitude of from 50 to 100 feet, scaring Kolhoz (Col Sovhoz (State lective fum) cow farm) chickens and the passengers

We recall that when this procedure left American pilots wide eyed, the Red Air Force boys would isk them, "What's the matter, are you afraid to die?"

"The answer for me is 'yes,' says Joyce "Now if I had to live in Rus sia, I might feel differently"

How Free 11e Flections?

WE ARE talking with the Mayor of Omsk He is 44, and this is his second year in office Before that he was Director of Autoniobile Highways, a title which is confusing to us, since the Soviet Union has few passenger cars and almost no highways

We ask him how he got elected and he answers promptly that the people did it

But how?

He goes into detail There were in all five candidates, each representing one of the various trade unions Freighody in Omsk could vote, he says, and of course the ballot was secret He won casaly

Is he a member of the Party?

Oh, yes One other candidate was, too, but our friend was its official candidate, endorsed by the Party organization

I hen we ask if, in any Russi in city, iny non Party member has ever been cleeted mayor

He thinks a minute. Then he says he doesn't know of any big city, but he has heard that occasionally in the villages men who were not Party members have been chosen mayor.

How free can in election be when one party controls the press and the ridio? I am sure they go through the forms of a secret billot and in honest count. But if any candidate should attack his Communist opponent vigorously he runs the risk of being arrested by the NKVD as a political offender and hustled off to the salt mines in the middle of his campaign. Is the Party only letting the people play with the forms of democracy? Never having known anything else, they think they have the real tring.

We now inspect a factory where they are turning out eight tanks a day It looks (lean — well above the average of what we have so far seen in Russia

But a curious thing happened to

me Omsk boasts a very attractive female Tass Correspondent who was covering our trip for the local press She was about 25, pretty, lively and most intelligent, and since she spoke German we could converse In the plant we were talking together, she translating for me ahead of the interpreter It was all going well until I left her for a minute to speak to Eric When I turned back, I saw that Zemenkov, our Foreign Office man, and Nick the NKVD plainclothes man, had each grabbed her by an clook and were hustling her along lecturing her angrily

Now there are so many possible offenses in this country that it did not then occur to me to wonder which one she had committed I regarded it as an intra Party matter into which no tactful foreigner should intrude Presently they diopped her elbows and after a discreet interval, I walked up beside her, picking up the conversation where we had left it. But she would neither answer nor look at me After a couple of trials I fell back, trying to think what I could have said that offended her Then I discovered the correspondents laughing They had seen the whole thing

Didn't you know? You didn t think they d let you talk to the people, did you?'

Report from the Mines

WE HAVE comfortable rooms at the Omsk an port, but for some reason I can t sleep, and at about two I tiptoe quictly out and down the hall toward the empty waiting room for a cignicite Only it isn't empty

Sprawled on the benches are two

khakı clad figures who sit up, blinking sleepily One of them asked me something in Russian Before I could explain I didn't speak it, the other one said, "Hell, Tex, he s no Russian"

"No, ' I said, "I m an American You guys Americans too?'

"I should hope to kiss a horse we are," said Tex

"Who are you," said the other, "and what are you doing here? By the way, what's the name of this burg?"

I told him what I was doing here and that this was Omsk

"Omsk,' he repeated sourly 'Well, good place to wait for a plane as any We ve got another hour

They told me they d been assigned as technical advisers on a big war construction project

'A mine up north, 'said Tex

"How did you get along with the Russians? I asked

"Very friendly the first day Said next week you must come over to dinner. But that was all we ever heard of it, although one or two apologized later. Seems word had passed out it was against government policy to have anything to do with us. On the job they were nice guys though. We would help each other with Russian and Linglish lessons, but that was as far as it could go.

'Had a Russian-English primer that was a honey,' said Tex 'The first sentences were 'Miners in America get very low wages,' 'Great Britain is a Capitalist Plutocraey,' and 'The Soviet Union is surrounded by enemies' I here was stufflike 'Ivanov invented electricity' or 'Petrov first harnessed steam animes you never

heard of Certainly gives them a cockeyed picture of the rest of the world"

"How do they run their mines?"

'They sure do things different from what we do," said Tex "Now you take any ten year-old American child with a Meccano set and he'll start at the bottom and build up But these Russians always start at the top, build the roof first and then raise it"

"Oh but first thing," said Ed, "they always put up a tribune to make speeches from, and hang big pictures of Stillin and Lenin"

"All those pictures and speeches are because Russians are not steady workers," said Tex "They putter around a long time, then all of a sudden they hop up on those platforms and make a lot of big speeches about Stalin get themselves worked up under a big head of steam, pitch n and get it cleaned up They call hat Socialist competition

But we wouldn't know why, 'said

'The worst thing is they've got no respect for materials," said Tex

Never owned anything themselves. It belongs to the state so what the hell do they care? I've seen them unload valuable pipe from a flatear by just rolling it down an embankment — smashing hell out of it. And fire brick for smelters the same way. It's cut very accurately and you can t use chipped ones. The way they dheave it off, about 25 percent would be damaged."

'When we'd try to stop it," said Ed, "they explained they had a law in Russia, because of the fieight-car shortage, that they had to be unloaded within two hours after arrival No one seemed to see it would take more cars to bring more material Or maybe they didn't care"

'The top director and his engineer were capable," said Tex, "but their system bogs them down with detail and paper work. They even have to sign whehouse receipts — things that in America we leave to an underling. Definite instructions often don't get out to the men in the field, and the top men haven't time to get out of their offices. The trouble with the whole country is there went enough capable men to carry out orders."

'I think it's their system," said Ld "It doesn't give them the drive the personal ambition, the incentive that ours does And it's so comples -they have to talk to so many people before mything gets done. The Communist Party has a setup which duplicates everything in the industry. In every organization the director is i Party member and the engineer cometimes is Purty members are the only ones who can ever get anything done But even they are slow In general, the Russians could never be a competitive threat to America We can aways build in a year and a half anything it takes them ten to do "

Convict I abor

"Are then engineers well trained"
I asked

"Some," said Tex "The best en gineers were the NKVD"

"But isn't that their secret police organization?"

"Sure You see, there're always about ten or 15 million prisoners in Russia, only they don't have our pen

itentiary system They herd them into convict labor gangs, and the NKVD, which has charge of them, has developed a fine engineering staff They bid on construction jobs, supplying both the engineers and prison labor "

"On our particular project," said Ed, "there were about 70,000 workers, and half of these were prisoners Mostly women On the job they

worked under guards"

"Prisoncis are a subject in itself," said Tex "When they're arrested, they just drop out of sight. If your write is really fond of you and works hard, maybe in three months she can find out where they're got you and what the charges are. Then, if she hires a lawyer, she may get the right of correspondence with you, which means she can write you once a month, and you can write twice."

"Political prisoners get the roughest deal," said Ed 'They usually get ten years with no correspondence."

"If you miss getting typhus and live out your sentence," said Tex, "they turn you loose, but your passport has a red line through it That means you can never get a house or a good job—you've got to keep moving"

"Tell him how the workers on our project were housed," said Ed

"Well, they dug a pit about ten feet deep, 20 feet wide and 10c feet long. Then they made a peaked 100f of pine logs over this. The mattresses lay on the cold dirt."

"How did they work?" I asked

"They were supposed to work 12 hours a day They'd work about 30 to 50 percent of the time Didn't get enough to eat — any of them We used to watch their being fed

Each prisoner was supposed to provide himself with two American tin cans that he fastened to his belt by a wire They'd haul out one kettle of soup, and one of kasha Some days the food truck would have dried fish on it, and they'd toss this out over the tailboard like you'd throw fish to a bunch of seals. We couldn't see that the food of the free labor was any better. Nobody gets enough to eat, and they hardly had the energy to walk around."

"How did you eat" I asked

"In order to keep eating decently, we had to raise hell," said Ed

"You've got to be tough and real istic in your dealings with the Russians," said Tex ' They've got no sympathy whatever Remember that red he ated girl"

"She was in our organization," said Ld 'She got sick, and could hardly drag around We mentioned it to the boss, trying to get him to lighten her work. He just looked blink 'What does it matter?' he said Couldn't understand why it was anybody's business but hers."

"The last month we were there," said Tex, "2600 out of the 70,000 workers on that job died of typhus'

"Hey, listen? said Ed From outside came the roar of motors. They picked up their bags, said good-bye, and went on out to the plane."

Suspicion of Foreigners

Russia does not yet trust the outside world Diplomats are just as closely imprisoned in Moscow as are correspondents. At the time of our visit the current British Ainbassidor had been unable to secure permission to travel outside the capital. One of

the Allied countries which has in power a left wing government adorned its diplomatic staff in Moscow with a special labor attache, and appointed to this post an important union official. He came to extend the hand of fellowship from the toilers of the West to their fellow workers, in Russ 1 He complains now that the Soviets gave him countless banquets but let him see nothing. This lack of freedom has so warped his viewpoint that he now insists that the Soviet system of unions is only a scheme to get the list ounce of work out of labor

By contrist the 1500 members of the Soviet Purchasing Commission in America are free to get on any trun at any time and so to any part of our country. As trusted allies they are welcome to inspect our war industries. No Americ in should obicct to this but Americans should understand that hitherto it has been a one-sided ari ingement. On our trip we were taken to any factory we wished to visit and questions were freely answered, but foreigners as a rule are treated as spies. Soviet offi cials withheld from their allies even the location of their war industries back of the Urals, while permission to visit them was unthinkable

Although Russi in suspicion has decreased since the Roosevelt Churchill Stalin conference at Teheran, it is still strong. It has roots both in the Communist Party and in Soviet Russian history. After the Bolshevik nevolution, a cordon sanitane was built around Russia France supported Poland in a war against the Bolsheviks in 1931, and Russia was for over a decade excluded from the I cague and

denied diplomatic recognition So Russias suspicion of forcignois came to have some basis in fact

The Bolsheviks originally held the view that it would be impossible to build socialism in one country alone—a world revolution was necessary to their success. But Stalin came to support the thesis that socialism in one country was possible and Russia could dure to devote her energies to building up her own economic structure. World revolution was desirable and he pledged himself to bend all efforts to bring it about. But for the immediate future it was not indispensable to the Russian Bolsheviks.

In recent veirs, there has been a The Kremlin has further change announced that world revolution is ne ther necessary nor desirable from the standpoint of the Soviet Union And the ablest foreign observers in Moscow agree that these protesta tions are sincere. They point out that Russia has been terribly weakened by war and needs desperately a few decades of peace. They say she now realizes that Europe does not want to be liberated' ind that this could be accomplished only by a further bloody struggle involving the sacifices which the Russians are both un willing and unable to make Russia wants, they insist, only a stable and friendly Furope

These observers do not pretend that Russia has any enthusiasm for either democracy or capitalism in Lurope. She accepts them only be cause for the next few decades they promise to give Europe that peace and stability which Russ a needs. However, if they do not bring stability, if there are disorders and unrest.

which create a power vacuum anywhere on the Continent, the Russians are not stupid, and they will move a Communist government in to fill this vicuum But if America and England act firmly both diplomatically and economically, to preserve real democratic order in Europe, these observers think Russia will be well satisfied to accept the decent compromises which we should insist on

1 Political Boss Entertains

At Novosilissi, the capital of Siberia we lie taken to a dacha—a Russian word meining country residence for someone who normally lives in the city. It gle lins new and white against the great tree which surround it and overlooks the vellow waters of the Ob River, one of the biggest livers in the world. The house would be indistinguishable from the great estates which line the Hudson. It has an equally large staff of servants. The rooms are as large, as clean and as luxurious.

The next two dives are dominated by one of the most vivid person alities. I have ever met. He is an undersized man it has pos with a shock of early hair. He is quick as a fox terrier—and strikingly un Russian. Some odd combination of chromosomes has produced out here on the steppes a quick-minded, tough little Irishman. He could be Jimmy Cagney—complete with why hair and jutting jaw. His name as Michael Kalugin, and he is Secretary of the Communist Party for Siberra.

We remark how curious it is that so perfect a I imm inv Irish type as Mike Kalugin could be repeated out here in the middle of Asia, running

another party Not only does Mike's Russian slide out of one corner of his mouth, but he looks at you hard and raises one eyebrow skeptically when he talks

After a big dinner the first evening, Mike ushered us down to the river and aboard a gleaming white steamer The sun was shining brightly and would not set until ten o clock Mike waved us expansively to a row of deck chairs just forward of the bridge Λ military band, lined up on the bow facing us, struck up as the boat moved out into the current The band was magnificent and no wonder. it was the official band of the Red Army — musicians selected for their skill from all of Russia's millions Their uniforms were spotless. Half of them played instruments, the other half was a perfectly drilled male choic of perhaps 30 voices. The big river ring with Red Army maiching songs and heutbreaking old Russiin folk tunes

Whenever they stopped for breath, another band out of sight on the stern of the boat would play

'Did you een see invithing like this" i correspondent whispered to me 'Whit American millionaire could put us up in a summer house like this, give us such food and enter tain us on a big yieht with not one band, but two? Do you know anybody who could"

When dust fell, Mike advanced with what appeared to be a blunder buss pistol

"He says," translated Kurlov, "that he will now fire salute"

Mike pointed to the darkening sky, and pulled the trigger There was a soul-shaking bang, a shower of sparks, and a hissing rocket leaped from the gun's mouth and spiraled its way toward the zenith, where it burst in a beautiful pale-green star which slowly settled toward the river and then winked out

Mike reloaded the gun from a large box of shells on the deck and handed it to Eric with a loidly gesture. Eric pointed the gun toward a small island out in midchannel and his star fell among the weeds on its shore, where we watched it burning out. Mike immediately took the gun and placed a second flaming star on top of Erics. This was precision shooting in any army. It occurred to me that Siberia would not be a healthy place for any Party member who did not see eye to eye with Marshal Stalin.

The next morning we visited Lenin Optical Plant No 69, which now makes range-finding equipment for artillery and tanks. The factory is clean well lighted and apparently very well run for no one is idle at the benches. Walking down the assembly line the director explains the process to Eric, but Mike lags behind talking to the workers, a wave of the hand to this one, a pat on the back for that — a ward boss patrolling his precinct.

In the factory dining room each of us is presented with a fine pair of Red Army field glasses, with our names engraved in Russian characters and of course there is another banquet On the way back to the cars, a correspondent overtakes me

'Had a little run in with Mike,"
he says

"What happened?"

"Guess I kind of blew up at him You know, all these banquets and

everything So I finally just told him 'You haven't got Marx and Lenin here at all! You've got the damnedest inequality I ever saw! I've read Marx and Lenin and they certainly weren't for this!'

"What'd he say"

"Said I was all wrong That Lenin had never been for equality Said equality was only a dream they hoped to realize in the far future. That now people were paid on the basis of what they produced."

Party Power and Privilege

AND NOW while we are on the plane, he ided south out of Siberia and down into the country of the Inters and the Mongols, whose nomadic emperors I inicilate and Genghis Khan once ruled nearly all Asia and threatened Europe, let us consider this Communist Party whose rule here is no less absolute

In 1917 when it seized power from the collapsing Romanoff dynasty the Bolshevik Party was a handful of Marxist theoreticians Russians only fleetingly enjoyed freedom and the Party then assumed the autocracy handed down from Genghis Khan The heritage of this Party is in almost equal parts of Marx and of Genghis Khan

The small hereditary ruling class from whom the Bolsheviks seized power had done little to justify their privileges. At the time of the Revolution, Russia was not ready for liberal democracy. The greatest indictment which can be brought against Stalin is that, because of his iron rule which suppresses freedom of opinion, Russia is still less ready today, in spite of his paper constitutions.

In America anyone can be a Republican But becoming a member of the Communist Party is extremely difficult. The aspirant is watched carefully for a year. Everything about him is investigated—from his work habits and political opinions to his sex life.

Once the coxeted membership is the min is less closely witched but any slackening in zeal, any deviation from the Party's politi calline or any signs of 'personal ambition" are punished with expulsion These admissions and expulsions are controlled by the Puty's secretary, and in the culv days this was put in the charge of a comparatively obscure Bolshevik, Joseph Stalin Only after I cam's death did the more prominent Communists like Zinoviev, Kumeney, Bukhurin and Trotsky come to realize that the nan who controls the Party's membership controls not only the Party but all Russia

The High Pirty members who now wield the power of the Roman offs, have moved into both the palaces and the privileges of the old aistociacy and are drinking quite as much champagne. But no one can ague that they do not justify their existence by hard and useful work for the State, and by taking leader ship and responsibility. Class distinctions are rapidly springing up in Russia, but, for the present at least, these distinctions are based on achievement and hard work

The Communist Party had about five million members until Stalin's purges beginning in 1936 reduced it by about half After the war began the base was broadened and membership raised to some four and a half million

One of the Party's functions is to provide the Kremlin with accurate reports on the tate of Russian public opinion In the field of foreign affairs, the people have no facts other than those provided by the government controlled press, which is, of course, only what then government wants them to know Incking any inde pendent basis for judgment, they must accept allies and peace treaties as these are handed out from the Kremlin But in domestic matters the people have definite ideas as to what they like and do not like The Purty is sometimes unable to check a trend in public opinion. If it is a real ground swell they do not fight it but divert it into proper channels

They remember 1917 when they themselves rode into power on the crest of a udal wave of unrest which the old autocracy failed to recognize in time, and was too stupid to handle. They expect similar unrest after this war, and are sure they will be cauck enough to can alize at before it gets out of hand.

On one side of the picture this is a slive Linpure On the other side it is a vigorous, dynamic empire mov

ing on

Communist 'Social Ingineering'

WE FIX south across the huge and Soviet Republic of Karakstan Be low are bleak cooperative faims, to which were sent in 1939 and 1940, hundreds of thousands of middle class families from the Baltic States and Poland's eastern provinces at about the time Russia annexed their home lands. In order to understand why these regions voted by majorities as high as nine to one for union with the

Soviet Government ifter they were occupied by the Red Army, it is necessary to understand the meaning of the term 'social engineering,' is first coined and later practiced by the Communist Party

Communists recognize that in newly occupied areas many individuals cannot adapt themselves to the Soviet system Least likely to adapt themselves are those individuals who have functioned successfully under the preceding regime. The Soviet black list includes all who have held positions of trust in the former state - public officials, government em ployes, local police and, of course large landowners as well as conspicu ously successful manufacturers, meachants and farmer Prominent on the list are officials of tride unions All these leaders are anested for deporta tion immediately, the smaller fry are rounded up at 1 more lessurely 1 ste during the ensuing months

Raicly are they hot Social engineering is a science with no place for the emotion of hate, and shooting can be wasteful. Therefore the merabers of the classes to be removed are customarily sentenced to ten years in a Soviet labor camp.

Meanwhile plans for elections proceed With all such "enemies of the people" disposed of, the Soviet propaganda apparatus moves in, the Red Army taking a prominent part Only one Communist-approved candidate runs for each office A tremendous effort is made to get out the vote Banners parades and speeches imply that anyone who fails to go to the polls thereby declares himself an enemy of the new state

Most curious of all from our West

ern standpoint, is the fact that soldiers of the occupying Red Army are permitted to vote in these elections. Once at the polls, the voter is handed a ballot and told that he may either drop this in the billot box or retire behind a screen and make changes in it. He does not need to be told that, if he does step behind the screen this fact will be remembered. Tew changes are made.

The issembly raide up of delegates so elected meets a few days later. In occupied Poland such assemblies passed standardized resolutions taking over the authority of the old government, requesting admission to the Soviet Union, confiscating large estates, and praising our great leader, Stalin?

In addition to the 180,000 Polish war prisoners, an estimated millior and a hilf civilians were removed from Polind in the early part of 1940 as a part of the social engineering program. These people were moved in 'transports' A Soviet transport is an ordinary boxear with two mall, high, buried windows, a stove, and a hole chopped in the floor for a toplet Between 30 and 40 deportees are locked in each car

Most deportation roundups were conducted by the NKVD late it night, when the population is most docile. It is also an axiom of social en gineering to separate families, not as an act of needless cruelty but because men are suited for stronger, more rugged work than are their wives and daughters. It was the practice to send men to lumber and mining camps in northern Siberia, women and children to brick yards and cooperative farms in southern Kazakstan.

There was much unavoidable confusion Although the cars were supposed to be opened duly, sometimes through neglect, they stood for days on sidings, and when they finally were opened it was nearly always necessary to remove a number of bodies of those who had died from general weakness induced by thirst or cold But none of this was deliberate, and in such large imass population movements, oversights are intentable

I should be said in defense of the Soviet Government that under similar encumstances it his treated its own people exactly as it did the Poles

The Worler Lucs Where Hes Told

WE ARL now in the Socialist Soviet Republic of Uzbekistin, whose capital is the ancient Mohammed in city of Tishkent The Uzbeks are a racial mixture. Some are Mongolian Others resemble the nearby Afghans, and others might have Persian or Arab blood

We chat with a handsome young Russian named Rodion Glukhov, who is Vice-Premier of Uzbekistan He tells us that Uzbekistan had a total of two million evacuees from other parts of the USSR early in the was Many of these have now returned to their homes, but others came with their plants, and, of course, these will stay permanently. Where had the plants come from? Moscow, the Ukraine and the North Caucasus And from Leningrad they have many skilled workers and engineers. He tells us with a smile that, of course, Leningi id is anxious to have these engineers back, but Uzbekistan is anxious to keep such valuable men. It will be for Moscow to decide

But we ask, what about the people themselves? Where do they want to live? That seems to be a matter of little importance. The workers would want to live wherever Moscow decides they are most useful.

Now we visit a textile plant, entering a huge clean, well-lighted building with endless rows of looms all turning out heavy sheeting. At first I assume this to be the entire plant, but it is only one small section. Other sections are making different we was and weights for uniform limings of women's diesses.

They explain that the factory has only recently started making print goods for civilian consumption. For three verits Russian women have been wearing their old clothes. And who will get this limited new supply? The shops maintained by those factories or faims which have overfulfiiled their norms. Again we see how little money means in the Soviet Union. It you don't work in such a lucky factory it is almost impossible to buy such a dress at any price.

That evening we go to the local opera house (new, and well done with Oriental decorations copied from ancient Uzbek designs) for a concert They give, especially for us, one act of an opera based on an incident in Uzbek history

Watching the opera I begin to realize that the most admirable thing about the whole Soviet Union is what we might call its colonial policy—its relationships with the smaller and sometimes backward races. This is partly accounted for by the fact that

Russians historically have few race prejudices

Instead of Jim-crowing the weaker peoples, the Russians lean over backward to give them titles and offices. At first I jumped to the conclusion that the native officeholders were stooges dressed up and provided with fancy offices but with little real power. But we learn that the Premier of this Republic is an Uzbek and a smart one — no stooge, but an old-time

Bolshevik with a steel-trap mind,

highly respected in the Party coun-

The next day they offer a brief tour in the Oriental quarter of Tashkent We drive through the broad street of the new Russian town to the old city which is a labyrinth of winding illers like those in the Airb Medinas in North Africa or the old quarter of Jerusalem But ju t outside this old ne two beautiful new white buildings, both ornamented with Uzbek designs — the post office and a huge cinema. The Russians have put their two most beautiful modern buildings next to the native quarter instead of in the center of their own section of Tashkent

I alk with an Intellectu**at**

At the opera that night we see something called Ulug-Beg, which is a story of Tamerlane and his times Between the acts we are taken into the banquet room (ves, God help us, the usu I table is laid) to meet the composer, a slender young Russian intellectual who has arranged these primitive Oriental tunes for a beautiful ballet. His wife, a handsome but worn-look ag girl, who has written the words — not in Russian mind

you but in Uzlak - is here to explain the plot to Eric

Her Linglish is fluent and beautiful If she hadn't told us she learned it in America where she spent a few years as a child (undoubtedly during the Revolution) I would have guessed she had learned it it Oxford

We are fascinited by them both The opera is a lovely thing. Here are two young intellectuals, interested in the theater, who in any other country would gravitue to its metropolis. She tells us escually that once they lived in Leningrad.

What brought them down here to the ends of the enth?

"Do you like I ishkent?" we ask

"Yes," she answers, a little we fully There is much material for her hus band's work in the old native songs, and, of course she is busy, for she had to learn Uzbek in order to write the verses. They left Leningrad for Tashkent seven years ago

I count back I hat would make it 1937, the year of the purges People were exiled for knowing foreigners. This girl, with her beautiful English and her cosmopolitan manners, surely must have known many I isked it she had left for political reasons.

"No," she says 'We have our work And in Russia one should go where one is most useful Here there is much to be done'

At this point the Vice-Premier and Kirilov come up to talk to Eric After a few minutes Eric breaks away and suggests to the girl that they troll in the fover with the crowd Kirilov and the big Vice-Premier ever-attentive hosts, get him between their for the stroll

So now I see that person il happi

ness counts for little Loyalty to the Party, to the leader, to the cause are all You go where you are sent If you should find yourself in Fashkent, you may then be most useful for the rest of your life in the baking heat writing beautiful operas which only Uzbeks hear, in words which only they understand, to do your small and quickly forgotten part in giving self respect to what was once a half-siving tribe.

The Contrast of Capitalism

NINT MORNING, as we start by plane for Icherin, I follow the custom of all correspondents leaving Russia which is to divide among my colleigues all my worldly goods (unpurchisable in Russia) except the clothes on my back For days they have been looking covetously at my extra notebooks, spare socks, shorts pencils, paper clips, shirts, handkerchiefs, tooth paste

Arrived back in Teher in we spent the afternoon using ourselves as laboratory gainer pigs. We had just come from six rugged weeks of socialism, diluted only by Soviet champagne. What were the things which would strike us most vividly on our return to capitalism?

First of all vire the shops As we had passed through Teherin en route to Moscow and fresh from America, Teheran had struck us as one of the world's slum areas, as in point of fact it is Today our eyes feasted on the wonderful little shop-windows, piled high with fruit — pink meat hanging from butchers' pegs — windows of sciew drivers and saws or new clothing. This disreputable sink-hole of the capitalist world was by

contrast with the empty shops of the Soviet Union a Dickens description of Christmas plenty

Now for the people, here in what we had called shabby Iran a majority of the people we saw on the sidewalks were much better dressed. About one in ten was in rags and tatters—worse than anything we had seen over the border. For Soviet rags are never quite that—they are always clean and neatly mended. And in Russia there had been no beggas—there had been a jobust self respect which we liked.

That night we had our final Soviet dinner as guests of the Soviet Ainbassidor. Here I no made easily the best speech of our trip. He thanked the Russians for their great hospital ity. He told them they had not only given us their best but that they had in every respect fulfilled their promise that he niight go where he liked and see what he wished Some of the towns we had visited, he and, had not been open for foreigners since 1926 If he had a regret, it was only that in the past there had been so much suspicion of foreigners that outside is had seen little of Russia. He hoped that in the future Americans could travel just as treely in Russia as Rus sians may travel in America

The Ambassador hastily said that we would now proceed to discuss eco nomic mutters, because Mr Johnston had been invited to Russia as a businessman So we did

This ends my report on the Russians and here are my conclusions I should add that these as well as the general viewpoint of this book are entirely my own and not to be charged against my good friend Eric Johnston

Any close relations with the Soviet Union are fraught with considerable danger to us until American reporters get the same freedom to travel about Russia, talk to the people unmolested by spies, and report to their homeland with that same freedom from political censorship that they er joy in England and other free nations. This must also apply to Europe in territory occupied or if filiated with the Soviet Union Coi respondents abroad are the ears and eves of our Democracy If we are to help build up Russii, our people iic entitled to complete reports from press epresentatives of our own choosing on what we are helping to build

We should remember that Russia is entitled to a Europe which is not hostile to her. We should also remember that while American aid in building back her destroyed industries is highly desirable to Russia it is not indispensible. She will not swap it for what she considers her security in the new world.

She is, however, in a mood to accept decent compromises. But if, as our armies are in Lurope while this settlement is being worked out, we find that we can't get everything

we want, we would be childishly stupid to get mad, pick up our toys and go home

If we decide it is wise to do business with the Russians we can trust them to keep their end of any finincial bargain. They are a proud people, and can be counted on to pay on the nose before the tenth of the month.

But any business deals should depend on their aims in Lurope and Asia We should extend no credit to Russia until it becomes much clearer than it is now that her ultimate intentions are peaceable

I think these intentions will turn out to be friendly However, if we move our armies out of Europe before the Continent is stabilized, and if disorder bloodshee and nots then ensue, the Russians will move into any such political vacuum. After all, the are not stupid Russia for the present needs no more territory, but badly needs several decades of peace She is however, still plagued with suspicions of the capitalist world and needs to be dealt with on a basis of delicately balanced firmness and friendliness. The Roosevelt administration has done an excellent job of this to date

Knotty Problem

A ITILI boy and girl who lived next door to a nudist colony found a knothole one day The little girl took the first look "What are they?' the little boy asked Men or women?"

I don't know," she replied, they haven't any clothes on "

What the Dumbarton Oaks Peace Plan Means

By I due ard R Stettimus, Jr + Secretary of State

The experts framed a plan Here we as citizens are challenged to understand it, discuss it — and do something about it

ple in the maintenance of peace after this war could not be greater. We hate war Yet twice in a generation we have been forced to fight to defend our freedom and our vital interests against powerful aggressors.

Our young men are giving their lives dilly because we and other peace loving nations did not succeed after the last war in organizing and maintaining peace. It is up to us to see that their sons — and ours — are not forced to give their lives in an other great war 25 years from now

In this war we were attacked last by the aggressors and we have been able to fight them far from our own soil. The range of the airplane and the new weapons already developed make certain that next time — if we permit a next time — the devastation of war will be brought to our own homes and our own soil Next time—
if we permit a next time—it is
likely that the United States will be
atticked first, not last, by an ag
gressor nation

After we have won this will we shall have only one alternative to preparing for the next war. It is imperative that we start now. We can do it only by planning and developing, in cooperation with the other peacaloving peoples of the world, an organized peace that will really work.

I

A sound peace plan must be based on the fiets as they are and aimed at the realization of our ideals for a peaceful world. Both of these requirements, I think, are met by the proposals which were drafted last summer and fall at Dumbarton Oaks in Washington by representatives of the United States, Great Britain, the Soviet Union and China. I wish here to state what I believe to be the plans animating spirit and its practical operating value.

Organization to apply pressure to any offending state by such non military means as "the severance of diplomatic and economic relations" and "complete or partial interruption of rail, sea, air, postal, telegraphic, radio and other means of communication"

If these further means are not enough, the Security Council is empowered to take military action 'by air naval or land forces'

The members of the new International Organization would agree, in the Charter itself that throughout these efforts the Security Council would be acting "on their behalf" They would also agree to assume the obligation to make "armed forces" and "facilities' and "assistance" available to the Security Council on its call" and in accordance with special agreements previously con cluded To insure effective employment of these forces the Security Council is to be provided with a Military Staff Committee composed of the Chiefs of Staff of the permanent member nations of the Council or their representatives

The Security Council is thus given powers which the Council of the I eague of Nations did not possess. The League's powers proved too weak. It is surely evident that stronger powers are necessary.

On the other hand, these stronger powers do not produce what some commentators have described as an "Irresponsible and Uncontrollable Great-Power Super State' The Plan contains many checks to the contrary For example

(1) The Security Council cannot call upon any state for armed

forces except to an extent agreed upon beforehand by that state itself Each state will determine its own international contribution of armed forces through a special agreement or agreements signed by itself and ratified by its own constitutional processes. That is, the Dumbarton Oaks Plan leaves each state free to set its own limit upon the quantity and quality of the armed forces and other military facilities and assistance that it will furnish to the Security Council The Security Council cannot require it to go beyond that limit The Security Council does not in any way become the arbitrary master of the world's military resources (2) The great powers who are to be the five perminent members of the Security Council do not constitute a manority of the Council Any decision of the Council would therefore to quire the affirmative votes of at least some of the six nonperingnent members (3) In the General Assembly the smaller powers, with their overwhelming majority of the membership, may adopt a recommendation on a question of peace before that question rises for action in the Security Council The General Assembly is to meet at least once a year. It may meet oftence It is to receive annual and special reports from the Security Council and has the power to consider them and to express either its approval or dissent

Agreement among the great powers is an essential condition of peace At the same time, the opportunity of the emaller powers, under the Dum-

barton Oaks Plan, to stand sentinel over the behavior of the great powers is surely far greater than it ever could be in a world left unorganized and planlessly open to predatory aggression

III

The third corner of the peace plan is the essential complement of the second. To prevent and suppress wars is not enough, just as winning this war will not of itself bring us listing peace. If we are to have listing peace we have to build peace. We have to build it stone by stone continuously over the years within the framework of such an Organization as that proposed at Dumbarton Oaks. We have to make peace with the same strong purpose and the same united effort which we have given to making war.

In this field the General Assembly of all the incimber states of the proposed United Nations International Organization will be the highest representative body in the world. It will represent the ideal of a common world humanity, and a common world purpose to promote international cooperation, extend the rule of law in international relations and advance the material and cultural welface of all men

The function of the Assembly 1 a free forum of all peace loving nations and its wide powers of investigation and recommendation are in them selves powerful weapons for peace in an age when public opinion can be instantaneously mobilized by press and radio

But the Assembly will also have at its command an effective instrument

of continuous action in building peace This is the Economic and So cial Council to be created under the Dumbarton Oaks Proposals

This arm of the General Assembly is provided for in recognition of a great fact which increasingly charac terizes the international life of our times. It is the fact that the whole world is more and more one single area of interdependent technological inventions, industrial methods, maiketing problems and their related so This interdependence cial effects destroys any equilibrium that may ever have existed between so called "advanced countries and "back ward" countries It means either universal economic friction which will disrupt the world toward war or uni versal economic cooperation which will harmonize the world toward peace Failure to recognize this fact after the last war was one of the rea sons why this war got staited

The Leonomic and Social Council is to be elected without help of the Security Council, by the General Assembly of all states. It is to consist of representatives of 18 states holding their posts for three year terms. It has no power of compulsion. By voluntary means it is under the direction of the Assembly, to "facilitate solutions of international economic, social and other humanitarian problems, and to "promote respect for human rights and fundamental freedoms."

It will create commissions in all fields of economic and social activity that it may consider appropriate. The members of these commissions will not be political or diplomatic delegates. They will be technical ex-

perts. They will furnish professional advice to the Economic and Social Council and to the Assembly. There will be a secretariat and research staff for all projects.

The Assembly and its Economic and Social Council will also provide a center for coordinating the numerous separate specialized international organizations now or hereafter operating for economic and social pro-

gressive purposes

There is the International Labor Organization with its long record of successful service to sound labor causes There is the proposed United Nations Food and Agriculture Or ganization with its heavy duty of service both to the food producers of agricultural countries and to the foodconsumers of all countries is the proposed International Monctus Fund and the proposed Internitional Bank for Reconstruction and Development with their highly difficult and delicate responsibilities toward the world's currencies and the world's investment funds. Under discussion also are new international specialized" organizations in avail

tion in cartel control, in health in education, in wife and wireless communications, in foreign trade, and in many individual agricultural and industrial commodities

All these organizations clearly, are but so many spokes to the international wheel They need a hub. The Duil button Oaks Plan authorizes the Assembly to act as that hub with the Leonomic and Social Council as its principal operating mechanism. It provides that all specialized international organizations shall be brought into relationship with the

new general International Organization through agreements with the Economic and Social Council under the approval of the General Assembly It provides further that the I conomic and Social Council shall receive reports from the specialized international organizations and shall, under the General Assembly's authority, coordinate their policies and activities

Here for the first time we see the possible emergence of an advisory Economic General Staff of the World

It can be soundly hoped that the recommendations of the General Assembly and its Leonomic and Social Council, proceeding from what will be the concentrated he idequaters of the world's economic and social thought, will promptly reach the form of widely ratified treaties and agreements making for fuller employment and higher standards of living in all countries. The attainment of these objective is indispensable to building a peace that will list

II

I now come to the fourth corner of the square on which the Dumbuton Oaks Proposals would erect ar edifice of percetul international relations

This is the progressive reduction of imaments, which in the modern world have become a crushing burden on the resources of all nations. If we, in this country, for example, could have used for productive percetime purposes only one half of what we have devoted to arms for this war, we would have advanced beyond measure the standard of living of the American people. And after this war

is won, the rate of economic advancement for ourselves and for all peoples will be determined in important measure by the rate of armaments reduction that the nations of the world are able to achieve

The General Assembly of the new International Organization is to "consider the general principles governing disarniament and the regulation of armaments" The Security Council is to go further. In order to achieve "the least diversion of the world's human and economic resources for armaments," it is to formulate "plans for the establishment of a system of regulation of armaments," and it is to submit those plans to all members of the new International Organization

It is not proposed this time that the United States or any other members of the new International Organization shall distim as an example. It is proposed that all members of the Organization shall travel the road to gether and at the fastest possible joint pace.

No nation, however, is likely to travel either fast or far on this road until it feels able to place full religione for its security on the International Organization. The nations of the world will give up guns only in so far as they make the new Organization work, as they gradually build up a living body of international law, as they create and operate effective joint instrumentalities to keep the peace, and as they develop strong and sure means of economic and social cooperation to their mutual benefit

Thus the fourth corner of the peace plan is dependent upon the other three

V

Such is the plan I think it takes into account both the world's stubborn realities and the world's unquenchable aspirations. Nor is it deficient, I am certain, in what the authors of the Declaration of In dependence rightly called "a decent respect to the opinions of mankind. No other peace plan in history has been so fully exposed to the impact of those opinions.

The proposals emerged from their Dumbarton Oiks stage on October 9 of last year. They were disseminated to the whole world. For months now they have been the subject of study by all governments, by the press and radio and by individuals and groups in all countries. They will go in duccourse to a conference of the nations which are fighting this war to build a world of freedom and peice. They will then go to their home countries for approval by their legislatures or other appropriate governmental bodies.

We seek a calm and considered and complete popular judgment upon this plan and then, if it is approved and ratified, a solid effective support for it not niciely by governments but by peoples. In the end it is they, and only they, who by their determined purpose, their understanding and their continuing loyalty can bring to the world peace, security and progress.

Scrub Team at Tacloban

Condensed from Liberty

Lucien Hubbard

In cooking, let us say, everything is timed to the turkey, in an invision, such as that of Leyte, to the air strip Until you have a landing field from which you can oper ite comb it planes. vou have not established an invasion

The Leyte timetable called for the an strip on Calaisan Peninsula, five miles from the capital city of I iclo ban to be ready on A Day plus five - five days after the first assault troops went ashore It was A plus four when I arrived at Calaisan from Red Beach I wanted to see how an airdiome could be established in enemy territory in five days. I could not know that I was settling into a

. LUCIEN HUBBARD Writer and motion pic ture producer was in Australia and New Guinea with our early contingents and wrote two notable articles which appeared The Lighters at in The Reader & Digest Humpty Doo December, '42, and Yan kee Machine Shop in the Bush January '43 While producing the movie (un; Ho! Mr Hubbard acquired great ad miration for Colonel Evans Carlson and wrote an article on that fabulous officer and his raiders which appeared in the Digest in December '43 Mr Hubbard landed with the assault troops in the Philippines on A Day, on an official mission

ringside scat at one of the most dramatic and citical episodes of the entire Picific war — an action which might have meant disaster to the

whole Philippine idventure

Calaisan Peninsula is practically level, and the water table lies only 18 inches below the suifice so that it you dig a two foot forhole you soon have a six inch well. An air strip there could at best be a turn slice of cor il or metal laid upon a jelly mold At its worst it could be the jelly

I found an Figureers Construction Bittalion wiestling with the problem of making a military androne out of what had been a small civilian air port only partly improved by the Japs Into a sea of thin black mud trucks were pouring endless loads of crushed coral which disappeared like chunks of vanilla ice cicam into a saisadaiilla soda

Muor Richard P Davidson and his outfit he competent and experienced Since Ichiuary 1942 the outfit had built 13 strips in Austra'ia, then moved northward, dropping anfields here and there as if sowing them out of a sack

Specifications for the Tacloban field called for a fairly long strip that could handle transports and fighter planes Later it was to have another strip 1000 feet longer, suitable for medium bombers The first strip would be in operation while the second was being built

The Engineers unit landed soon after the assault troops, and by ten o clock that night had all its equipment safely ashore Shortly after daylight on A plus one, bulldozers, trucks and rollers were at work, sometimes stopping and sometimes not when Jap planes came over The night shift worked under lights whenever a raid was not in progress

Then late in the afternoon of Aplus three an order came to hold everything. The longer strip was wanted at once

It was impossible to extend the number on which the Battalion had done all its work, because it ended in a swamp. Davidson's superiors cut through this difficulty by directing that a long strip be put catty cornered acress the field

"You realize, of course,' said Davidson quietly, 'that you have thrown away practically everything we've done to date. This way you won't have any strip by A plus-five. It ll take five days, starting from now A plus-ere ht."

'Well, Air Forces wants it" And that was that

The trucks changed from hauling coral to hauling sand. They continued all night, next day switched back to coral. A hard surface was rolled over about half the track. During the night of A-plus four they began bringing in more sand for the other end. By morning of A-plus five about 3000 feet of runway had been rolled. The north end was six inches deep in loose black sand. From the air, it must have looked smooth and safe to land on

Suddenly a nondescript aggregation of planes appeared out of no where and began circling the area

We thought this was it — the Japs' first mass air attack Tentative ackack reached long, graceful fingers upward, then stopped The gunners saw what we all saw now These were American Navy planes, and they wanted to land They had to land — on that strip, or in the sea

For the great naval battle of the Philippines was on These planes, from four small carriers, had been attacking the Jap fleet They had no more gas. One of their carriers had been sunk, and the others were under attack by a vastly superior Jap force. They were coming down somewhere in a very few a unutes! The pilots wanted to refuel, gash some bombs and go back. They knew Tacloban field had not been opened, but there was no choice.

Now planes can't just settle down on a military androme like ducks on a pond and take off again. They must have communications to guide them in, and service squadions to refuel them, reload machine guns and bomb racks, make repairs, give first aid to the wounded, and an androme squadion to operate a control tower and designate where planes are to park. None of these had been set up

The planes overhead quickly formed a landing pattern and the first in line came in to land. It touched its wheels daintily to the hard portion of the runway and sped toward the soft end. Watchers on the field i in out and tried to flag it down. The pilot gave his plane the brikes, but it tore into the soft stretch, somer-

saulted heavily and came to rest upside down with wheels spinning

The next plane, already dropping for a landing, buzzed the field instead and with roaring motor zoomed out of harm's way. Then the whole landing pattern broke up, like a flight of birds at the first crack of a shotgun. There was a babble of questions over the radio. Whether to chance landing despite the wicked plane now blocking the runway, or hit the drink, or make a last desperate effort to find a carrier—the choices were all bad

Suddenly a new voice cut in on the pilots wave length

Navy planes Navy planes This is Tacloban air strip beneath you Can you hear me? Come in please?

'Yes, ves Go on Over

'Continue circling field Identify vouiselves as you pass over"

The deliberate voice went on with technical landing instructions, waining of the soft sind, living out the best course. A C2 wrecker diagged the damaged plane from the runway. The pattern quickly reformed and the first plane was called in Before this new arrival had cleared the runwity, the next was hitting the ground. Others followed in swift succession, the voice over the radio guiding them in

The voice belonged to a young An Forces officer, I t Edward Worn id, of Savville, Long Island, whose presence on the field at that time — in a radio peep — was sheer good luck Worrad was attached to the Fighter Control I ater, when Army fighter planes were operating at Taclobin, it would be his job to help direct by adio their interception of the enemy On this morning he was just hinging

around to see how the field was getting on Lt Russell Forrester of the Navy, from Austin, Texas, also just happened to be there with a radio

1ecp

A radio linison officer who was waiting for the field communications to be set up, Foirester had been biting his fingernals for three days and cursing his luck at being majooned ashore when things were happening on the water. He had come over from the landing area just to take a wistful look at their insport fleet dotting San Pedro bay and maybe to see a Jap plane or two get dunked by ack ack fire

Now Worlad and Foirester put their jeeps and their heads together. Between them they converted what might have been a disaster into a major factor in the ulumate rout of the Jap fleet. Worlad on his radio, took the planes in the air Foirester got the Fleet Control Ship on his A sergeant they had never seen before ran up — Sam Halpern Service Squadion, from Brooklyn He had been to Air Operations School and knew the ropes. They took him into the firm. Halpern checked the planes as Worrad guided them in

In all, several score planes came down Some crashed, some burned, some banged into wrecks already on the field But most of them got down safely. Only eight were completely wrecked. Not a pilot was killed, and only one was injured at all badly.

Meanwhile an imprompt i organization had sprung up, no one knew just how When a plane turned over, men rushed to lift the tail and get the pilot out When a plane caught fire they dashed in to put out the flames

But the planes did not come to stay As fast as a quickly improvised service squadron could gas them up and hang bombs on them they took off There were no bombs ashore when the planes came in, but within two hours an I ST brought in a load Halpern lost all count of take-offs and landings as the planes made trip after trip to continue pounding the Jap fleet These were Navy planes, serviced off the cuff by Army units utterly unfamiliar with them, put into the air by an Army officer then directed by Navy Fighter Control through Lieuten int Foriester

By now the Japs' fleet was heading back through the Sibuyan Sea. And it was these planes from Tacloban that kept on their tail and guided other striking forces to them. A battleship and a cruiser were reported in sinking condition, and others were damaged—the work solely of the planes from Iacloban

In their haste to be in at the kill, planes took off upwind or downwind, depinding on which end of the field happened to have a wreck on it at the time. Once a torpedo homber landed from one direction just as a fighter zoomed over it in a take-off from the opposite end of the field.

Gas and oil trucks and ambulances kept up a stead, grind, the drivers leaping out to hit the dut when Jap strafers and bombers came over During the day there were a dozen enemy raids. Once three Jap fighters came in so low that Halpern gave them the green light from his improvised tower, thinking they were ours.

I or a breathless half hour just be fore noon, all planes were flagged off and an echelon of tractors—eight graders and four rollers — stalked slowly down the field, flattening out the furrows plowed up by crashing planes Then they wheeled off with parade ground precision, and the planes whizzed again

Through it all, Forrester and Worrad never left their jeeps. As the day wore on, a lot of Army rank wanted to take over Forrester radioed the Admiral's aide about it, and asked for orders. By now his jeep had been officially christened "Base Forrester" and there wasn't a plane or ship within 50 miles that had not picked up some of the "hot" messages between "Base I orrester" and Hei cules," the Control Ship station

A little later Hercules give the Admiral s reply

'Calling Base Forrester This is Hercules You are in control Repeat, you —are—in—-control That is all "

'Sonv, su," Wonad, the voung Army licutement, told an indignant colonel "I'm just working for the Navy They're Navy planes sir

The firm of Worlad, I oriester & Hilpern kept shop until midnight, opened up again at daybreak and stived in business until 4 30 the next afternoon. Then the First I cam took over at Tacloban, with standard androme staff and equipment, and Base Foriester folded up forever. And this was the last message that came over the loudspeaker.

"Calling Base I orrester This is Hercules speaking Lieutenant I or rester, the Admiral sends his commendation You and those with you have undoubtedly sived in my lives and many planes That is all."

It was enough

In more than 2000 city and county july condemned by the Leder d Bu re in of Prisons, children are being detained annd physical and mor d'filth

Get the Children Out of Condensed from Woman's Home Companion the Jails!

I era Connolly

THE city fail was a small brick building, covered with ivy rather attractive from the outside But as the federal inspector and I stepped inside, a nauseating stench struck us

A rheumy eyed old turnkey stumbled to his feet 'Whaddya want?"

'We dlike to see your juvenile section

'Upstairs"

We entered a barred dark corridor onto which four tiny pitch-black cells opened The place reeked from a toilet which had overflowed into the corridor Standing in the overflow clinging to the bais and blinking at us in desperate поре were two boys One, a cripple was charged with petty theft and awaiting court action The other, a tall handsome boy, had been in jail for 31 days. He couldn't pay a fine for a petty offense

It e beam of my flashlight revealed the boys bunks On them were only bare mattresses indescribably filthy, crawling with vermin The boys' faces and necks were covered with bites

"What kind of food do you get?" I asked

"Mostly fried potatoes or boiled beans," said the older boy

He go tured toward two plates of

untouched food Cockroaches were swarming over them

The women's cell block, a flight farther up, was even smaller and more suffocating Mattiesses were called with dirt and stained Girls whose only offense may have been playing hooky share this hole with prostitutes and other hardened female offenders, and the insane On one wall a recent inmote a guil of 16, had sciawled over and over don t get out of here I ll go nuts '

I his county, like hundreds of oth ers all over the country, has no ju venile detention home where children awaiting court action may be held In many states this is because of the vicious fee system, under which a justice of the peace must iry cases to make profits and the sheriff must have prisoners in fail to make money feeding them So into the reeking county jail the children go, a vicious crime school in which they must stay for days, sometimes months - their fate postponed by courts, welfare agencies and an indifferent public

I have traveled hundreds of miles visiting fails with an inspector of the Federal Bureau of Prisons In Washington, D C, I studied the reports of other inspectors Almost every-

where the story is the same

Some of the children are serious lawbreakers awaiting transfer to reformatories. But they too should be held in clean, cheerful places of detention. Many are runaways, curfew violators, school truants. Some are simply witnesses. Others are thrown in by their own shiftless parents as "difficult. Still others, deserted by their parents, bewildered and homeless, are forced to wait in jail for foster-home placement."

Few Juls have separate quarters for children I remember Billy, blond, clean cut, blue eved, who was sitting on the top bunk of a gloomy cell in a tier with men prisoners. He had pushed the grime caked mattress off and was desperately swatting bugs as they crawled up the wall. His un touched danner of cabbage and stewed tomatoes in a tin dish stood on the floor.

'He s been like that a whole day,' the jailer said 'Ain t et ain t slept Came from a clean home '

'Don't his parents know? I asked "Sure, his dad put him in He says the kid forged a small check on him Wouldn't you think he d bail him out, keep him at home till court sits? The kid needs a reformatory term, sure But there ain't no cure in this so far as I can see

Aid there was Jim, a freekle-faced boy in another city jul. He had helped to steal an auto and was awaiting transfer to a reformatory. His cell-block mate was a prostitute with whom he was playing cards. A rear door was open into another cell block full of staring men prisoners, one of whom was sentenced to 20 years in the penitentiary. The boy was in peril not only from the woman

but also from possible attacks by the men The jailer had turned all these prisoners loose in the corridors, locked the jail and gone out to work in his garden

Reports from federal jail inspectors all over the country tell of boys as young as eight locked in jails. One boy of ten, found by an inspector, beseeched pitifully "Mister, please get me out of here. I'll be a good boy." The child was a chronic school truant. The jailor referred to him is an "habitual criminal." The inspectors tell, too, of frightened little guls of ten or 12 locked in cells opposite hardened men from whose eves, voices and gestures there was no escape.

I've seen young girls locked in on top floors of partly wooden fire-hazind juls that had no night julei, no matron, and only intermittent day service. One such girl, is had been entirely alone for more than a month in the silent choking dimness of her cell. When we entered she spring up and burst into tears 'Don't go, talk to me she begged.

A girl prisoner in the West was mentally unbalanced and proved obstreperous. The sheriff, not realizing the girls mental condition, disciplined her. Her arms were crossed and strapped, her clothes were taken from her and she was left in her cell nude, exposed to the view of mile employes.

Why doesn't the Federal Burcau of Prisoners do something to clean up these filthy, degrading jails? I put the question to Miss Nina Kinsella, executive assistant to the director of the Bureau and supervisor of jail inspection

"The bureau doesn't because it hasn't the authority," she replied 'Only the people of each state can do that All we can do is inspect the july regularly to determine which are it to be used temporarily for federal prisoners'

In the year ending last May 31, Miss kinsella said, the Bureau inspected more than 3000 city and county jails and workhouses Of these it approved only 448, listed a few others for restricted use, and flatly conde nied the rest as unfit

'What is the answer to the children in jail problem?' I asked James V Bennett Director of the U S Bureau of Prisons

'First, he said, "the total police must be trained to take child delin quents directly home whenever possible

Second, for those who cannot safely be taken home and for homeless children provide a juvenile detention home, operated on a budget and not on a fee system

'Third, for tougher older boys awriting transfer to a reformatory, previde special regional quarters in cooperation with other counties, or pass a state law to send them to the big city jails, which are cleaner and better able to hold them

'Fourth, set up effective machinery for foster-home placement of the homeless And in the meantime make sure that children now in jail are not being held unnecessarily or treated inhumanely

Every state should frame a bill like that passed recently in Virginia centering authority for all jails in one state official. This will pin down the job to one man on whom the taxpayer can put his finger at any moment. If things go wrong he won to be able to pass the buck.

After every war there is a way? of lawbreaking, especially among boys and girls. There was one after the last war and it caught us unprepared Now is the time for the American people to wake up, tackle this jail problem, get it into their postwar program. Women's organizations could launch a crusade. County politicians are afraid of them. We can't dodge it much longer. Jail conditions are horrible all across the country. After the war, things will be even worse unless we act now.

Just What They Needed

When a girl applies for admis ion to Vassat, a questionnaire is sent to her parents. A father in a Boston suburb, filling out one of these branks, came to the question. Is she a leader." He hesitated, then wrote, I am not sure about this but I know she is an excellent follower."

A few days later he received this letter from the president of the college "As our freshman group next Fall is to contain several hundred leaders, we congratulate ourselves that your daughter will also be a member of the clas. We shall thus be assured of one good follower."

- Th Journal of I lucation

Why Is Labor Unrest at the Cuse of those will time strikes—and what should be done about it

Condensed from The American Magazine

William M Leiserson II ith Beverly Smith

PHF labor situation in this country has drifted to the danger point Strikes are increasing Labor disputes are piling up faster than they can be settled Workers are resentful Employers are angry The public is puzzled and alarmed

It will not do to call names — to denounce workers and unions as 'un patriotic, employers is war profit cers," and Government people as bungling bure mer its ' These groups ne is patriotic as any other group of citizens. They too have sons and brothers dying on the fighting fronts, they too long for the speediest possible victory and for a peaceful and prosperous America after the war

Why, then, do we have this ever growing turmoil bitterness and dis pute' I believe it is because, three years after Pearl Harbor, we still have no definite policy toward labor during the war, or plan for labor after

In the last 35 years Di Leiserson has served as a mediator and arbitrator of labor disputes in many industries. In addition to being chairm in of the National Mediation Board, he has served as chairman of the Petroleum Labor Policy Board, member of the National Labor Relations Board and chairman of the National Railway I abor Panel He is now Visiting Professor of Lco nomics at Johns Hopkins University

the war We have met each crisis with an improvisation which, while patching the immediate breach, has generated new inisunderstandings

Is it possible to have a definite laboi policy in wartime? Yes

We had one in the last war President Wilson called a Wai I abou Conference, made up of representa tives of labor and employers, with ex President Talt and I tank Walsh as joint impartial chairmen. This con ference, in several weeks of hard work, patient negotiation and pa triotic compromise, thi ished out il c main differences between labor and employers. It recommended the cre ation of a War Labor Board to settle disputes It also - - and this is the im portant thing - liid down definite principles for the Board to follow

Thus we obtained a specific program, mutually agreed upon by labor and industry, backed by Govern ment authority, and endorsed by public opinion. It worked, and cir ried us up through the Armistice, not without strikes but with remarkably little opposition to the Board or its policies Real labor strife came only in 1919, after the Board was discon tinued and nothing put in its place

Let us see what happened as the present was came upon us

Our Defense Program started in 1940 Arms factories began to hum At such times labor disputes always increase, because the worker, in greater demand, sees a chance for a ruse. The long established U. S. Conciliation Service of the Department of I abor could not keep up with the growing flow of disputes.

Then Sidney Hillman of the Office of Production Management, took a hand Hillman established an OPM I abor Division to mediate labor disputes Unfortunately, this duplicated and conflicted with the work of the U.S. Conciliation Service.

Next the President, without any general agreement on policy between labor and employers created the National Defense Mediation Board. This Board not only duplicated the work of the other two agencies but inade the fatal error of confusing mediation with arbitration.

I his difference is fundamental A Mediation Board acts is a mutual friend of the parties in dispute helping them to reach an agreement A voluntary Arbitration Board acts as a judge, before whom the parties bring their dispute voluntarily, agreeing to be bound by his decision. A compulsory Arbitration Board is also a judge, but this time a judge before whom the parties have been diagged by the scruff of the neck, and whose decision is backed by force.

If any board tries to be now a mutual friend, now a judge-by-agreement, and now a judge-by-force, it is going to get into trouble

The National Defense Mediation Board started out to be a mediator But when disputes could not be settled by agreement, the Board appealed to Mr Roosevelt to use his emergency powers. In the Federal Shipbuilding case, for instance, Mr Roosevelt had the Navy take over the company. A settlement by force

In this way the Board drifted into compulsory arbitration. First, it lost the confidence of employers. Then, as its decisions seemed to follow no set policy, it lost the confidence of labor. Finally, the Board died, destroyed by its own confusion.

Now the mineworkers struck and other disputes accumulated Pearl Harbor was just around the corner The public and Congress were croused over labor unrest. The House of Representatives passed the Smith Bill providing for dristic legal controls of unions and labor relations. The Senate seemed about to go along with the House

To head off this legislation, high Government officials induced President Roosevelt to call a War Labor Conference to arrange by voluntary agreement the elimination of strikes and lockouts, and the establishment of policies and machinery for peaceful settlement of labor controversies

Meeting just after Petil Harbor, this conference had a great oppy tunity. What happened? It was in session for only two or three days. True, it agreed promptly that there should be no strikes or lockouts in war industries, and that there should be "a Board" to settle labor disputes. It did not consider the kind of mediation machinery needed. It evaded the two basic issues wages and the union shop, which have bedeviled the labor situation ever since. The great opportunity was lost

The conference failed because no

serious preparations were made to insure its success. It was hurriedly called to head off hasty legislation

Consequently the new War I abor Board had no set policy, it "decided each case on its merits" This meant that workers and employers could not know just what their rights were, unless they took cases to the WIB Unions and employers instead of patiently settling their disputes by the old fashioned method of collective hargaining, ran to the WIB with their troubles. And since you had to have a dispute in order to get a decision, disputes were often drummed up retificially With disputes piling up faster than they could be settled, exasper iting delays ensued

A new confusion was introduced in October 1942, with the passage of laws stabilizing wages and praces and making the WLB responsible for administering wage controls. Thus to its already split person ality of mutual friend and judge, the WIB added the character of cop. And this authority was tangled up with that of the Director of Economic Stabilization, who might or might not grant a wage raise approved by the WIB.

As a 'wige stabilizer," the WIB might grant raises up to 15 percent, according to the Little Steel formula But the workers alone could not apply for this raise and even if the employer added his plea, the WLB might deny it The best way to get a raise, organized workers soon learned, was to make a rumpus, perhaps even pull a wildcat' strike under the principle of "the squeaking wheel gets the grease" And some of them have learned that if they make cnough of a rumpus they can get even

more than 15 percent, hidden under such euphemisms as travel time or reduced meal periods

The WLB did not intend any such policy. It just drifted into it. But the icsult was a positive invitation to labor unjest. Also, it was unjust to white collar workers, to unorganized workers, and to all the quieter type of men who in waitime work hard and keep their mouths shut.

The railroads of the United States have their own system for settling labor disputes, as set up in the Railway I abor Act. This provides definite procedures for a step by step process of collective barg mining, conciliation mediation and inbitration. It has worked well for many years

In 194, the failtord workers noting that other unions were getting pay raises to remove gross inequities asked for a raise. This demand passed through the regular railroad channels of negotiation, resulting in a recommendation for a raise of cight cents in hour Then the Director of Feogomia Stabilization intervened and vetoed the raise The railway workers, surprised and aggreed patiently tried for six months to get their case ad justed peacefully. Then they gave up and prepared to strike The President had the Army take over the railroads The wage question was reopened and new issues were injected in the case The upshot was that the railroad workers were given raises of from nine to 11 cents an hour, and this was approved by the Director as proper under the Stabilization Program, although he had vetoed the eight cents

In this case lack of a coherent labor policy almost produced a serious transportation tie up, placed an unnecessary extra burden on the Army, re-enacted earlier negotiations and ended up about where it had started

Let me emphasize here that the men involved in this mess are not 'bad' men Most of them are very good men The members of the WIB are serving, often at a personal sacrifice, in a perplexing, ungrateful job At the same time American industry and workers, despite the labor tangles have performed up to now a miracle of war production. And most of the top labor leaders have tried hard to live up to their no strike pledges.

It is the system which is impossible. Most of our current strikes are directed not against the employer but against confusions and delay in the Government machinery for settling disputes. Sometimes these strikes are directed against the workers own leaders, for failure to get action? from the Government agencies. Political bargaining is too often replacing collective bargaining.

Clearly, haphazard, unprepared methods of meeting labor problems do not work. We must have another joint labor conscrence as soon possible, to decide on a cooperative national labor policy both for the war and after it To succeed, such a conference cannot be a hasty affair Representatives of labor and industry must come prepared to work hard and long, to negotiate patiently, to plan wisely, and to compromise whenever possible in the public interest Every issue settled at the conference will avoid a thousand disputes later on

The conference might well agree on some such policies as these

That workers and employers, in any labor dispute, first make a scrious effort to resolve their differences by collective bargaining; and mutual agreement within a fixed time limit

That Government mediation machinery, now scattered through many agencies, be centralized in the Department of I abor, and that voluntary arbitration be recognized as a separate function to be encouraged if mediation fuls

That the administration of Economic Stabilization be made entirely separate from that of settling labor disputes so that workers will get what they are entitled to under Stabilization without having to drum up an argument

Above all clear cut policies must be laid down on those issues which most frequently cause strikes, such as wages and the union shop

The area of disigneement at the conference may well be surprisingly small. The leaders of both labor and industry look forward with dread to what may happen when the war ends. If strikes then get out of control it will not merely cripple industry. It will damage the labor movement itself. It will disgust our returning soldiers and sailors. It will do harm to every one of us.

There is thus a great power of public opinion which can be invoked to bring labor and management to agree on the fundamentals of a coherent national policy. If the President of the United States will put this squarely up to such a Labor Conference of 1945, I believe it can perform an historic service for our country.

Here's a Banker with Imagination!

The Luklu Squa National sender described a unique service to the amounts to Lippong the symmetry

Condensed from Advertising & Selling

Roger William Rus

ANY 3 motorist has driven through Franklin Square's business section, and never noticed it It's only a place along a highway on Long Island, 20 miles east of the center of New York City, a few traffic lights, 30 stores, a dozen truck farms. Not much material there for postwar planning, apparently

But I ranklin Square has a bank, and the bank has an executive vice-president, 38-year-old Arthur T Roth I hrough his efforts Franklin Square is widely known and closely witched in banking circles. Says the eastern representative of a bank stationery firm who calls on hundreds of banks. Everywhere I go, the first question bankers ask me is, 'What's I ranklin Square up to now?'"

Most recent of the bank's actions was a community face-lifting project Roth obtained a photographic panorama of the somewhat dismal stores along the main street. Then he had an architect sketch the street with every store front done over in a uniform early American motif. Calling the businessmen together, he showed them the picture of today, pointing out a lack of paint here, a torn awning there, narrow shop windows, cramped doors. Su Idenly he flashed the panorama of tomorrow, each store modernized and in harmony—white,

trim neat, with its name lettered on the front

"To make our town look like this? Roth told the merchants, "will cost \$500 for each 15 feet of frontage. The bank will lend the money on a five-year basis. Who will sign up?"

Everybody signed up So far, so good But Roth sees things through A committee went to the big manufacturers. A glass company agreed to handle the job as a unit, at low rates. Companies making building materials and store fixtures sent experts to a series of discussions.

"And there s no use sewing a clean collar on a duty shirt—said banker Roth, pointing out that a handsome front deserves a handsome interior

That was last summer The effort was aimed at postwir days, and as such won the approval of the Committee for Economic Development But one shopkeeper had a fire, and rebuilt on the new lines Another couldn't wait, and decked out his store accordingly Both agree that the change has been good for business

This is only one of a score of refreshing deeds of the bank. The Purchase Club, for example—"Your personal postwar plan,' the bank calls it—actually displays the things people might want to buy after the war Allied economic wariare specialists slowly straigled the Nazi war machine with a paper noose

♣How We Blockaded Germany

Condensed from Harper's Magazine

David Gordon

Acting Chief of Blockade Division Foreign Economic Administration

has been strangled by a paper blockade. It was the first blockade in history carried out virtually without ships — and it was one of the most effective

This unseen blockade not only cut off German supplies of food and oil and metals from overseas, it also reached *inside* Fortress Europe and rigidly limited the amount of war materials the Nazis have been able to get from neutral countries Finally, our economic waifare specialists have procured for the United Nations a small but critically important tonnage of vitally needed goods. Some items have been smuggled through the German lines Others have been shipped to us openly, through enemy ports, with official German permits — part of a fantistic trade across enemy borders

When the war broke out, Great Britain immediately threw into gear an old fashioned blockade, like that used against Napoleon and the Kaiser After Norway and France had been overrun, however, that kind of blockade would no longer work. The British Navy could not patrol 7000 miles of coast line, from Hammerfest to Beiru. It was still possible, how-

ever, to keep most of Germany schipping off the seas. The really serious gap in the blockade was the European neutrals — Sweden, Switzerland, Spain, Portugal and Turkey. How could they be prevented from carrying on unrestricted trade with the out side world, and passing on to Germany all the goods most needed by the Nazi was machine?

British turned to weapons relatively new to waif see the Wai Trade Agreements, the ship's warrant the naviceit and the black list

The War Irade Agreements were informal treaties negotiated by England's Ministry of Economic Warfare with neutral countries. The typical agreement provided that the neutral would not import any more than it needed of a long list of commodities, and that none of these items would be re-exported to the enemy. In return, England promised to permit goods up to this ceiling to flow into the neutral country without interruption

Throughout the war – and especially after the entrince of the United States — these agreements have been continuously revised and tightened As the Allies' military posit on grew stronger we steadily increased our demands Frequently neutrals were asked to limit or halt completely their exports of certain strategic items to Germany, even when these goods were

produced entirely within their own borders For example, Sweden agreed first to restrict and finally to cut off her shipments of strategic types of ball bearings to the Luftwafle's aircraft plants

The Germans, of course, also knew how to use the weapons of economic warfare. If Sweden reduced ball-bearing shipments too sharply, Germiny would threaten to cut off its vital supplies of coal

The neutrals were never quite crushed in the pressure of this economic struggle, because they held strong weapons of their own Germany might have rolled right over Sweden, but such an assault would have tied up perhaps 30 divisions. An even stronger restraint was the paradoxical fact that Germany probably would have got less from a conquered than from a neutral Sweden, since the Swedes would have burned their factorics or turned to sabotage

Even Switzerland — entirely surrounded by German-held territory — managed to carry on trade with the outside world. For if her access to the seas through Genoa were cut off, she could blow up the great railway tun nels through the Alps. The explosives were laid, the switches were guarded by Swiss officers 24 hours a day. Through those tunnels ran the life line between Germany and Italy. They carried a million tons of coal a month, which Italian industry had to have to survive.

One curious result of this situation was that Switzerland was able to buy Italian silk and make it into a special kind of bolting cloth badly needed in one of America's chemical industries. This cloth was then moved in sealed trains over Italian railways, under a

German permit, to Genoa, whence it was shipped by way of Lisbon to the United States There were a good many such deals

Such bargaining would have been impossible if the United Nations had not had some means for imposing a tight control on the sea traffic of the neutrals, and punishing any violation of the trade agreements. At this point the other weapons in the armory of economic warfare were brought into action.

The sharpest was the ship's warrant This is simply a piece of paper, issued by United Nations authorities, which certifies that SS Trader is a well-behaved vessel carrying only those cargos approved by Allied officials Without such a warrant, no neutral ship could get fuel or supplies in any port under Allied control Neither the ship nor its cargo could be insured, since practically all maritime insurance is dominated by London and New York Moreover, every time an unwarranted vessel hove within sight of an Allied war ship of patrol plane, it was fiable to be stopped, shepherded into a control port and searched These searches might take days — especially if the blockade authorities were a little unsympathetic — and often involved the unloading of every ton of cargo, the opening of hundreds of boxes and bales This tedious process was likely to prove ruinously expensive Though theoretically possible, it was extremely hazardous for a ship to try to fuel at a complacent neutral port and slip home through waters where Alhed patrols dared not venture The British economic intelligence service made a special point of finding out about such uncooperative ships and setting Allied navies to witch for them Before the end of 1940 virtually every neutral captain decided it was good business to get a ship's warrant and submit his cargos and routes to Allied approval

A companion weapon was the navicert, another piece of paper which certifies that an individual shipment — whether 10,000 tons of wheat or a half ounce of platinum — has been approved by a United Nations official. It was granted only if the shipment came within the quarterly quota for that particular commodity.

All these devices were strengthened by the black list. Every business firm or individual in a neutral country who sold goods to the enemy or served as cloak for Axis financial transactions was likely to be black listed Such a firm became an economic leper It could not deal with any Allied firm, or move goods across an Allied bound v, or use Allied transport of communications. If it had funds in a United Nations bank or business enterprise they were frozen Any person—even in a neutral country — who dealt with a blacklisted firm might be put on the list himself Most discouraging of all, the black lists may not be torn up at the end of the war, neutral businessmen who have been flagrantly friendly to the Axis may find it difficult to deal with Allied countries for years to come

With these paper tools, the United Nations wove around Germany a blockade far tighter than anything achieved in World War I And in lieu of expensive squadions of warships,

the noose was drawn tight by a few hundred economists and statisticians in the London headquarters of the Ministry of Leonomic Warfare, and in the Washington offices of three agencies—the Board of Leonomic Warfare (later incorporated into the Loreign Economic Administration), the State Department and the Treasury The nerve center of their operation was the Anglo American Blockade Committee, sitting in London

Halting the smuggling of small items was one of the toughest jobs. Fortunately there were only a few such items valuable enough to make the risk of smuggling worth while. The most important were industrial diamonds, essential for jewel bearings in vircraft instruments and for grinding precision machinery, and platinum, which serves is a catalyst in making synthetic oil and is irreplaceable in certain chemical and electrical equipment.

The enemy's need for these precious goods could be gauged by the fantistic prices paid to smu glers. Industrial diamonds of a grade worth less than \$1 a caration the London market were fetching prices of \$30 to \$60 a caratin Langur. The normal commercial price of platinum is about \$1000 a kilogram but at one time in Lisbon the black market price rose to \$11,000

To stop this smuggling, the economic waifare agencies tried to get hold of the entire supply of platinum, industrial diamonds, quartz crystals, and a few simil in items at the source Agreements were negotiated with the producing countries under which they pledged themselves to sell their entire output to the United Nations

To make doubly sure, American purchasing agents often hunted up the original producers and bought their output directly. In the wild Choco region of Colombia, for example, FEA representatives established trading posts on the banks of the little streams where platinum is washed out of the sands.

The second step was to plant intelligence operatives inside the smuggling and black market rings. This led to a few of those rare situations in which the intelligence industry usually as dull and prosaic as doubleentry bookkeeping — actually began to resemble popular spy thrillers. One American agent for instance became a key figure in an important smuggling gang. On the basis of his reports the block ide authorities picked up a shabby fiberboard trunk which was being shipped by a I itin Ameri can dock worker to a relative in Spain It looked innocent enough but the trunk was reinforced with what appeared to be ordinary black painted iron straps. When the paint ws scriped off the estraps turned out to be pure platinum - enough to run 1 German synthetic oil refinery for months

In the early years of the war, we could rot stop the flow from the neutrals inside Europe entirely, because no neutral dated slam the door in Germany's face until Allied victory became certain. However, we could wage an economic offensive with our one superior weapon — money. We could buy up the chief strategic commodities regardless of price.

Consequently both Ingland and America set up corporations to engage in preclusive buying in direct competition with German agents They divided up the market and split the expense of their joint programs

Most important was the battle for wolfiam, the tungsten ore Tungsten is an indispensable alloy for hardening cutting tools, armor plate and gun barrels More than 90 percent of the enemy's supply had to come from Spain and Portugal So American and British businessmen, selected for go-get-it aggressiveness rather than the diplomatic graces, moved in and started buying. Almost at once they cut into the flow of wolfram to Geimany — and they shoved the Span ish and Portuguese economies into one of the gaudiest sprees since the days of Cortez Before the war the normal price of wolfram was under \$200 a ton, and Spain produced about 250 tons a vc ii By 1943 Ger m in and Allied buyers had bid the price up to more than \$20,000 a ton, and production had skyrocketed to 4,00 tons a year Incidentally one reason the Allied governments con tinued to sell oil to Spain was the necessity of getting Spanish currency to fin ince the preclusive-buying pro-

It cost us a lot of money, but the cost to the Germans, in proportion to their resources was even greater. By the end of 1943, they were forced out of the open market completely be cause they had used up all their supply of Spanish currency, and we were able to cut our purchases sharply

Similar picclusive operations were undertaken in Turkey, where we went after copper and chrome and in Sweden, where we cut into the enemy's supply of specialized steels and machinery

These campaigns were child s play, however, in comparison with another sort of purchasing program Before the war certain British aircraft factories had been equipped with Swedish machine tools, for which replacement parts could be obtained only in Sweden Swedish ball bearings were also needed Most urgently of all, we needed jewel bearings from Switzerland The cutting of these tiny diamonds had been a Swiss specialty for many years Dozens of war products - langing from torpedoes to chionometers - could not be made without them

Germany, of course, had no intention of letting such indispensable items out of Sweden and Switzerland so the economic warfare agencies built up a smuggling service \(\Lambda\) lew British ships crammed to the hatches with priceless machinery minaged to slip out of Swedish ports on a stormy night, after a Gestapo waterfront spy had been lured into a drunken party Fast planes took off at night from Swedish airports for the hazardous flight across German occupied Norway to Scotland Deliveries by such means were small and uncertain but they replaced enough worn and bombed-out machinery to keep Lngland's plane factories going

Getting jewel bearings out of Switzerland was a more difficult problem, because the raw material—bort, or rough diamonds about the size of coarse sand—first had to be smuggled in By a variety of secret methods, the bort went into Switzerland regularly, in packets just large enough to cover pending Allied or-

ders The disguised finished product came out through France, Italy and Germany — sometimes carried as priority cargo on German air lines — on its way to Allied war plants Machinery for boring the jewels also was smuggled out, along with a few skilled craftsmen, and in time an adequate jewel bearing industry was established on United Nations soil

The effects of the economic weapons are inducet, long delayed, and frequently disguised. Germany started the war with big stock piles of imported r in materials, and developed the use of substitutes to new catremes Yet in the end blockade born shortages inevitably occurred, and because of the Allies carefully integrated economic and military planning they often have appeared at disastrous times. The conomic pressure which finally choked off the supply of Swedish ball bearings, for example was synchronized with the bombings of Germany's own ball bearing plants. A shortage first of lubricants and later of gasoline gradually hobbled the Nazi mechanized divisions, and eventually the Luftwaffe itself Blockade operations were dovetailed with airraids on the Ploesti refineries and a score of synthetic oil plants to hit the eneniy's economy with maximum impact at just the time of the No mandy invision

In these and countless other fields economic warfare has served the Allied armed forces as a silent but effective junior partner. Its contribution has been indispensable to the final victory.

"He Loved MeTruly'

 $B_{\mathcal{I}}$

on the high front so it of the jolting wigon. She was 31 years old, and, in 1819, that was middleaged, for most pioneer women died early. It was a December day, cold for kentucky, and they were headed north toward forest country. "I reckon it ll be fine weather," she said, for she was the sort to make the best of things.

Yesterday Toni had arrived on horseback, all the way from his Indiana farm, at her house in Elizabeth town. He had come straight to the point "Miss Sally, I have no wife and you no husband. I came a purpose to marry you. I knowed you from a gill and you knowed me from a boy. I ve no time to lose. If you're willin', let it be done straight off."

That morning they had been married at the Methodist paisonage. The preacher wrote down that she, Saiah Bush Johnston, had been three years a widow and Tom's wife had died last winter. The hoises and wagon Tom had borrowed waited outside. The wagon was piled high with her

BIRNADINE BAILEY IS the author of 4be Lincoln's Other Mother, based in part on her interviews with old settlers in the county near I om Lincoln's Illinoi home where the giew up Doroffy Waiworth, fice lance writer wrote the memorable article A Woman to Warm Your Heart By,'

in The Reador's Digest April, 44

household goods, so that there was scarcely room for her three children. From had two children of his own, he hadn't told them he was bringing back a new mother. There was a shadow in Sarah's steady blue-gray eyes when she thought about that Maybe they differ she didn't belong

A raft ferried the wagon across the half-frozen Ohio River The air sharpened, the wheels sink to their hubs in snow After five days they came to a log cabin in a small clearing on Little Pigeon River It had no windows, and the door was only a deerskin covered opening A stick chinney plastered with clay 1 in up the outside

Tom hallooed and a little boy ran out of the door. He was thin as a scarccrow, and wore a ragged shirt and tattered decrskin pants. But it was the look in his eyes that went to Sarah's heart, although it was a look she couldn't put a name to. She got down from the wagon, opened her arms like a couple of wings, and folded him close.

I reckon we'll be good friends," she said "Howdy, Abe Lincoln"

She had never been in the wilderness before, she had known small town comfoit. This was a one room cabin, with no real floor, only packed dirt. The bedstead was a makeshift of boards laid on sticks against the wall, with a mattress of loose corn-

husks The bedcovers were skins and cast-off clothing Ten-year-old Abe and his 12-year-old sister had ilways slept on piles of leaves up in the loft, to which they climbed by pegs fastened to the wall The furniture was some three-legged stools and a table axed smooth on top, bark side under Dennis Hanks, an 18-year-old cousin of Tom's first wife, Nancy Hanks, was living with the family and had been trying to cook with the help of a Dutch oven, one battered pot and a couple of iron spoons Although she must have expected a place far better than this, all Sarah said was fetch me a load of firewood I aim to heat some water "

This new stepmother with the losy face and the bright curly han wasted no time As soon as the water steamed. she brought out of her own belongings a gourd full of homemade soap Then in front of the hot fire, she scrubbed Abe and his sister and combed their matted trair with her own clean shell comb When the wagon was unpicked little Abe, who had not said a word ran his bony fingers over such wonderful things as a walnut burcau, a clothes chest, a loom and real chairs And that night, when he went to bed in the loft, he did not find the leaves she had thrown them out doors He had a feather mattress and a feather pillow, and enough blankets so he was warm all night

In a couple of weeks, a body wouldn't have known the place Sarah had what folks called "faculty", she worked hard and she could make other people work, too Even Tom, ho meant well but was likely to let things slide She never said he must do thus and so, she was too wise

and too gentle But somehow Tom found himself making a real door for the cabin and cutting a window, like she wanted He put down a floor, chinked up the cracks between the logs, whitewashed the inside walls Abe couldn't get over how sightly it was And she wove Abe shuts out of homespun cloth, coloring them with dye she steeped out of roots and banks She made him decrskin breeches that really litted, and moccasins, and a coonskin cap She had a mirror and she rubbed it bright and held it up so's he could see himself — it was the first time he had ever seen himself and he said, 'Land o' Goshen, in that me >"

Sometimes in the early mornings, when Sarah laid a new fire in the ashes, she got to thinking it was queer how things come about When Tom Lincoln had courted her, 14 years ago, she had turned him down for Daniel Johnston Tom had been 12 years married to Nancy Hanks, who died so sudden from the 'milk sick' And now, after all these years Tom and she were together ag un, with his children and her children to feed and do for

The cabin was 18 feet square and there were eight people under its flimsy roof Carah was taking what was left of two households, along with the orphan boy, Dennis Hanks Somehow she must make them into a family of folks who loved each other, she wanted them to feel like they had always been together. There was plenty of chance for trouble, what with the two sets of young uns who had never laid eyes on each other till now, and all the stories Abe and his sister had heard folks tell about stepm th-

ers Those first weeks, Sarah felt mighty anxious Especially about Abe, though he did what she said and never answered her back Once she saw him looking at her real serious when she was putting some johnny-cake into the oven "All my life I'm goin' to like johnnycake best," he said suddenly, and then scooted through the door You couldn't figure Abe out As Dennis said, "There's somethin' peculiarsome about Abe"

Maybe, if it hadn't been for her, he wouldn't have lived to be a man. He had always grown so fast and never had enough to e it But now, when he had enten enough johnnychke and meat and pot itoes that were cooked through and not just burned on top, he stopped looking so pinched and putty-color And he wasn't so quict any more Now he had some flesh on his bones, he wasn t solemn Why, he was fuller of tun than anybody. He learned to tell vains, like his father, but he trud them out on Sarah first, and she laughed in the right places She stood up for him, too, when he'd laugh out loud, all of a sudden, at things nobody else could understand, and from thought he was being sassy "Abe s got a right to his own jokes," Sarah said

Sometimes Sarah thought, all to herself, that she loved Abe more than her own children. But she didn't really It was just that she knew, deep down in her heart where she told nobody but God, that Abe was somebody special, who didn't belong to her but was hers to keep for a while

When Abe was little, 'I om hadn't minded his walking nine miles to the "blab school" where the scholars learned their letters by saying them over and over out loud But now Abe was older and stronger, Tom didn't see why he shouldn't stay home and chop down trees and cradle wheat or hire out to the neighbors for husking corn at 30 cents a day Of course, he felt kind of proud when the neighbors came to have Abe write their letters with the pen he had made out of a buzzard's quill and the brier-root ink But Abe was "reachin' too fur" when he kept reading books instead of clearing swamps, Tom told Abe you didn't need to know so almighty much to get along

If Sarah hadn t taken Abe's part against his father. Abe wouldn't have got as much schooling as he did, though goodness knows it wisn't much. He learned, as the folks said, "by littles." But through the years she held out against Tom, no in itter if Tom said she was plumb crazy.

Abe would rather read than eat He'd read in the morning soons it was light enough to see, he'd read in the evening when the chores were done, he'd read when he plowed while the hoise was resting at the end of the row He wilked 17 miles to borrow books from Lawyer Pitcher at Rockport Aesop's Fables Robinson Crusoe Pilgrim's Progress Shakespeare The Statutes of Indiana When his borrowed Weems' I ife of Washington got rained on, he worked three full days to pay for it Once he gave a man 50 cents for an old barrel and found Blackstone's Commentaries at the bottom of it, and you'd think he'd found a gold mine He began reading late at night by the fire, and when Iom complained, Saiah said, "Leave the boy be "She always let him read until he guit of his own accord, and if he fell askep there on the floor she would get a quilt and wrap it gently around him

He did his ciphering on a board, and when the board got too black, he'd plane it off and start again. If he read something he liked a lot, he'd write it down. He was always writing, and was most always out of paper He d put charcoal marks on a board for a sign of what he wanted to write, and when he got paper he d copy it all down And he diead it out loud to Sarah by the fire, after I om and the rest had gone to bed 'Did I mike it pluin' he ilwavs isked her. It made her real proud when he asked her about his writing, and she answered him as well as anybody could who aidn t know how to icad or write

I her told each other things they told nobody elec He had dies spells when nobody but her could make him hear Spells when he thought it was no use to hope and to plan Abe needed a lot of encouraging

In 1830, I om decided to look for letter farm land in Illinoi, and the family moved to Coles County on Goose Nest Prairie There Abe helped his father build the two-room cabin where Sarah and I om were to spend the rest of their lives. The place was hardly built when the day came that Sarah had foreseen, the day when Abe would leave home He was a man grown, 22 years old, and he had a chance to clerk in Denton Offut's store over in New Salem There was nothing more she could do for Abe, for the last time she had braved out Tom 28 Abe could learn for the last time she had kept the cabin quiet so's Abe could do his reading

At first he came back often, and, later on, after he got to be a lawyer, he visited Goose Nest Prairie twice a year Every time Sarah saw him, it seemed like his mind was bigger Other folks' minds got to a place and then stopped, but Abe's kept on growing He told her about his law cases, and, as time went on, he told her about his going to the state legislature and his mairying Mary Todd After Tom died, in 1851, Abe saw to it that she didn t want for anything

When she heard Abe was going to Charleston for his fourth debate with Stephen A Douglas, she went there, too, without saying a word to Abe It would be enough — it h d always been enough — just to watch him She was one of the crowd on the street is the paride went by There wis a big float driwn by a yoke of oven carrying thee men splitting rails, and a big sign, 'Honest Abethe Rail Splitter, the Ox Driver the Giant Killer" Was that her Abe And now here he came, riding in a shiny black carriage, and tipping his tall black hat right and left. Was that her Abc? She trud to make herself small, but he saw her and made the carriage stop Then, right in front of everybody, he got out of the carriage and came over and put his arms around her and kissed her Yes, that was her Abe

She wasn't the crying kind, but she cried when he was elected President Alone, where nobody could see her In the winter of 1861, before he went to Washington, he crossed the state to see her, coming by train and carriage in the mud and slush to say good by He brought her a present a length of black alpaca for a dre

it was really too beautiful to put the scissors into, after Abe went, she'd just take it out and feel of it once in a while

Abe looked tired, and he had a lot on his mind, but they had a fine talk Even when they were silent, they still said things to each other, and he still set store by what she thought When he kissed her good-bye, he said he'd see her soon, but she knew somehow that she would not see him again

Four years later, they came and told her he was dead. The newspapers wrote the longest pieces about his real mother, and that was like it should be, but some folks came and asked her what sort of boy Abe had been. And she wanted to tell them, but it was hard so find the words

"Abe was a good boy," she said "He never gave me a cross word or look His mind and mine, what little I had, seemed to run together" And then she added, "He loved me truly, I think"

Often, during the four years that remained to her, she would sit of an evening and think of Abe Being a mother, she did not think about him as President, as the man about whom they sang, "We are coming, Father Abraham, three hundred thousand strong" She remembered him as a little boy She was baking johnny-cake for him, she was weaving him a shirt, she was covering him with a blanket when he had fallen asleep over his books, trying, as long as she could, to keep him safe from the cold

Sarah Bush Lincoln was buried beside her husband in Shiloh Cemetery Her death, on December 10, 1869, passed unnoticed by the nation I or many years she was not even mentioned by historians and biographers. Not until 1924 were the graves of Themas and Sarah Bush Lincoln marked with a suitable stone. More recently, their Goose Nest Prairie home site has been made into a state park, with a reproduction of the two-room cabin which Abraham Lincoln helped to build. And only in the last few years have Americans come to know that, when Abraham Lincoln said, 'All that I am I owe to my angel mother," he was speaking of his stepmother.

The Truth Will Out

>> IT was one of those blistering Alabama days I had called on a student to read aloud a brief paragraph from an essay This he did, laboriously When he finished, I asked him to comment on the significance of the passage which he had just read His earnest reply brought even the sleepiest student to an hilarious awakening For he said, "I am sorry, sir, but I wasn't listening"

- Contributed by John Newton Baker

"THE late Senator William Alden Smith of Michigan used to tell about the introduction he was accorded at a farmers' picnic in his home state "Senator Smith will now talk for an hour," the chairman said, "after which the band will call you together again"

The Ex-Marine Have our schools anything to offer returned veterans? A challenging que tion for educators and parents Returns to High School

Condensed from The Saturday Evening Post

Kenneth H Merrill as told to Oren Arnold

The I DITORS of the Post write Publication of this article does not constitute endorsement by the Post of all the author's criticisms. We feel however, that Mr Merrill is entitled to a hearing and that the state of mind his article manifests is a matter of peneral concern.

witched a fellow student the a string across an aisle, so that when the teacher came along she tripped Months before, another kid of 17 used that same trick on a Guadile and jungle path with the string tied to hind grenades. The man who tripped was leading a Jap patrologuist Culson's Raiders,* and the American voungster saw yellow bodies blown upward in volcanic fury

I was that youngster on Guadal can'd To get in the Muines, I had stretched my age I wanted adventure, and I sure found it I experienced ilmost everything in the way of fighting Sent home because of combat fatigue, I can testify that coming back to high school was a terrific letdown It was a relief to graduate Then I married Elaine and we both worked so that I could have

money to enter the Arizona State Teacher's College at Flagstaff

Sometimes I am amazed at the civilian life around me in which I am expected to resume my part. At recess in high school kids would swarm around for tales of my experiences but under faculty orders I was not allowed to be too realistic. I was not allowed to date so no of the guls because I had bashed in the brains of Tojo's gangsters with a rifle butt, and also because of my disorderly conaduct at a picture show.

On the screen that night two Marines dving on a bloody beachhead were calling on Almighty God in their agony Perhaps the players were overacting but when two men down front laughed something stood me up and I found myself walking down there 'It's not furny brother,' I said and I knocked them both out I am not proud of that episode but it's the way I felt, and still feel, it's part of the gulf between me and other civilians

Maybe I wasn t readjusting properly, maybe I should have slipped back into the old niche of being a gentlemanly high school lad. But I have some new ideas about what a gentleman is and about what school

^{*} Sec Colonel Carlson and His Gung Ho Raiders The Reader's Digest, Decem

should be This process they call education is not what I want or need, and I represent hundreds of thou sands of youths who will soon be streaming back to resume their studies, fellows who are hardened adventurers before their time. We are far too many and, I hope, too valuable to ignore. What is America going to do with us?

Lr Coi Frans I Carlson had sent 25 of us volunteers to investigate" Pistol Pete, a well concealed cinnon which had been shelling Henderson I ield with devistating effect. By careful scouting, we learned that Pete's lan was a case high up a mountain canyon approached through a nation pass. I foin dawn till near dusk we inched toward it on our bellies then sprang on the Japanes. We gunned and slashed in a nightness the sunce and slashed in a nightness than their own technique.

On mother mission we lived on rice and salt pork and danger for ,6 days behind the Jap lines slaving them by the hundreds seeing our own wounded die suffering every privation while we crept through the brush like munals

After I got back in school some study work assigned me included this

Merrily swinging on biter and weed Near to the nest of his little dune, Over the mountain side of incid Robert of I incoln is telling his name Bob o link, bob o link Spink, spank, spink

Further assignments included themes on topics such as 'The Lng lish Essayist I lile best,' and prim little talks on current events Much of the curriculum was pointless and stuffy. The whole atmosphere was often like that of a kindergarten. Yet the school ranks among the best in the nation.

I was the first ex fighter to re-enter high school in my home state of Arizona, but I have since talked, in several states with nearly 100 other returned Marines and sauors and GI Joes They agree in the opinions I express here

We believe that schools, especially high schools, have not advanced sufficiently, but are tradition bound

We believe they are inefficient, wasting time and talent

You say that young people are capable of learning only a little each day, and must have a four year prepency of period. We Maine Raiders crowded that much learning into four months, and loved at Young people a conore intelligent than most teachers and parents like to admit, they are capable of learning and of shouldering responsibility.

I duction is we extighters see it should serve two purposes. It should prepare us to earn a living, and prepare us for God fearing citizenship

I or some boys and guls, the classes may be right on the beam. But why force a classical curriculum on those of us who are not fitted for it and will not respond to it in high school or college or anywhere in life?

Many returning soldiers will want and need intensive courses in practical trades. Arrangements for these courses should be made now, before the boys start pouring home in big numbers. Courses of six weeks to six months duration in such trades as welding, farming carpentering, machine shop work, clerking in stores—even landscaping, barbering should be offered. Then our men can fit into peacetime industry quickly, leaving Longfellow and Shakespeare elective for those who want them.

I recommend more manual classes for those of us who lean toward the "physical" side of life, more direct, practical learning. Why isn't it sensible for western high schools to offer short courses for instance, in cattle ranching applied farming and other vocational subjects? Returned soldiers who learned superior warf are in a few months could also learn ranching in a short season, and few of them can afford four years of college, or can toler ate it emotionally after years of war

Why couldn't a high school offer store clerking and in an agement in a store of its own where the students, could actually sell? Why couldn't we op a step a small school movie theater on a business basis and a restaurant, drugstore, laundry and cleaning shop, bank even beauty parlor?

Are these recommendations too ambitious? When we Raiders talked about life back home and how we hoped to improve it, we didn't think so

You adults cry out about juvenile delinquency. Why then, in the name of common sense, in ay we not have religious teaching and leadership in public schools? Not sectarian, but on

general morals and conduct In the Raiders, we had fellows with all kinds of religious faiths, and we swapped ideas But we all prayed to the same God Colonel Carlson would talk with us about religion and life as he saw it, and ask us to express our views It did us more good than any thing Why can't we have these discussion periods in high school? Why is God so unwelcome in our school rooms?

It may be that I m beating my gums too much about these things, but I had several close friends die in my arms and I made promises to them about what I d work for back home I remember my pal Chauncey

We were finally coming out of the jungle on Guadale and Chaunces and I were seas guards staying back with a machine gun to cover our withdrawal. He and I had already talked things out knowing the slin chance we had of staying alive

If you get back, Mudhole" he said don't you go home and be a PFC [that means poor frightened civilian] You try to be a gung ho citizen. You be a leader in all the good things like the Colonel said.

'Ditto for you, Chaunce," I said

I remember v hat Chauncey—who can never come back—and all of us Raiders used to think and talk about All we ask is that you home folk forgive us if we sometimes seem too cocky, and that you help us realize at least some part of our ideals

We Must Modernize Congress

★ ★ By George E Outland ★ ★
Member of the House of Representatives from California

RITICISM of Congress by the peo ple is not new, but of late Congress has begun to criticize itself Our national legislature has become sharply aware of the need of bringing its machinery up to date More than 50 resolutions calling for reform were introduced in the 78th Congress, which ended in December, and reorganization along modern lines will be one of the chief concerns of the new Congress The public thinks of Congress largely in terms of what happens on the floors of the Senate and the House The real work, however, is done in commit tees, and it is with the committee sys tem that changes must start

It ink knox, lite Secretary of the Navy, was an extremely busy man Yet when Congress decided to investigate a Navy contract, Secretary knox was hilled up to Capitol Hill not once but four different times to tell exactly the same story to four different Congressional committees! Jesse Jones is reported to have ap

Lonc a student of government problems, Ceorge F Outland received his M A from Harvard and his Ph D in education in government from Yale After t.aching seve al years at Yale and at Santa Barbara (Calif) State College he was elected to Congress in 1942 as a Democrat from the 11th District of California he was re elected in 1944

pe incd 18 different times before 18 different Congressional committees—to deliver the same two hour speech

Today there are 47 standing committees in the House and 33 in the Senate, moreover, there are many temporary committees. No wonder the New York Times refers to 'our hydra headed Congress' Senator La Follette told the Senate last year that "hardly a day has gone by during the present long and arduous session of the Congress when I have not had to decide which one of several very important committees I would attend '

The Miloncy-Monioney resolution, adopted at the close of the latest sees sion of Congress, creates a bipartism committee composed of six members from the Senate and six from the House to study the problems of reor gainzation and make definite recommendations at the end of 90 days

There are several possible solutions to the committee problem. One that will appeal to the common sense of the American people calls for ten or a dozen joint or parallel committees of both Houses. Much time now wasted could be saved and such an arrangement would enable the two chambers to work together with greater understanding.

However, reform will make little progress until the American people as

a whole demand greater efficiency of their Congress Reducing the number of committees would mean reducing the number of committee chairmanships The prestige of a committee chairmanship is the climax in the career of a Congressman, there are few who will vote to reduce their own chances for such a position — and few chairmen who will vote to abol ish the position already theirs Moreover, each committee chairman is allowed extra clerical help shorthanded as each Congressmen is, to become a committee chairman is to obtain a more adequate staff

This problem of staff is becoming increasingly serious. One of the keenest students of Congress, Dr. George B Gilloway, chairman of the Committee on Congress of the American Political Science Association, contends that of the 80 standing committees not more than six have staffs. sufficiently expert to cope with and to evaluate the testimony of either administrative officials or lobbyists. My own committee on Binking and Curtency must pass on all legislation concerning the Office of Price Administration, the Lederal Deposit Insurance Corporation, the Federal Housing Administration, the Federal Reserve System, the Commodity Credit Corporation, the Home Owncis Loan Corporation, and the many aspects of the Reconstruction Finance Corporation Yet our committee has no attorneys, no special consultants, no expert to whom we can turn for evaluation of testimony, preparation of material, or legal interpretation

Co gressman Monroney of Oklahoma points out that each of 145 federal departments and bureaus employs more people than there are on the entire Congressional staff For example, the Office of Indian Affairs spends more than twice as much to supervise the nation's Indians as it costs to operate Congress

To meet requirements it would not be necessary for committees to cleate permanent staff additions There is now provided by the Library of Congress a little-known Legislative Reference Service This is composed of experts who are able to render research assistance on questions of importance that arise before various committees Such a service could be greatly enlarged I hus committees which from time to time needed greater staff help might turn to the Service, drawing from a pool of competent students of government problems maintained under impartial auspices

Likewise a Constituents Inquiry Service under the Library of Congress would immediately remove from individual Representatives and Senators the burden of handling incless trifling requests, and demands which overwhelm them in a mass of detail and prevent them from adequately perioriming their major duties

One Representative hurried back to his office to find 96 letters awaiting him, among which were the following requests

A Chamber of Commerce wanted him to get busy "right now to lift gaseline and tire rationing".

A determined young woman demanded that he instruct the Ariny to transfer her boy friend from Africa to a service post she named back home.

A clubwoman wanted some information on world production" A politician wanted a portrait of the President personally autographed 'from Frank to Willie"

I he principal speaker at a political meeting wanted to know how long the war would last and how much it would cost

' Taxpayer" wanted him to put an end 'to lend lease gifts to foreigners and other immoral people.'

American mother" urged him not to vote for postwar cooperation 'unless they do what we say "*

If you think this list is an exaggeration, I hasten to assure you that it is not My own collection of strange requests already fills several folders, and is growing daily I egitimate requests any Congressman is happy to attempt to meet. Those asking him please send me a rock from Chesipeike Biv to idd to my rock garden or demanding that he 'see that sliced bread is restored to the American people or I shall vote for your opponent next time, he time consuming, to put it mildly All icquests for information or moditions, including many that are re isonable, could well be referred to i Constituents Inquiry Service

Other steps are needed, however to reduce the demands now made upon a Congressman's time Placing all post offices under Civil Service would save the worry and energy now spent on nominating postmasters. I uither time could be saved by the transfer of all Annapolis and West Point appointments to Civil Service or to the Academies then selves. The

granting of self government to the District of Columbia would remove a thorn from the side of many a harassed Congressman — and from the side of the city of Washington too!

Under existing procedure the first and third Tuesdays of each month are reserved by the Claims Committees in both House and Senate to hear private claims against the Government Persons who have been injuicd by an Army truck or have some other personal injuity claim against the Government present their cases In the opinion of many Congressmen the Claims Committees might well be abolished and an administrative agency to do its work set up. This would take away, as Senator La Follette points out, "the burdensome task of investigating petty claims and invoking the cumbersome procedure of passing private bills through the House and Senate '

Among the criticisms of Congress heard most often is that there is too little cooperation between our national legislature and the Administration Sometimes the blame is placed on the 'bure increass, sometimes on the New Deal less often on a willful Congress itself. Here, again Congress is aware of a problem to be solved within its own ranks, and the stirrings of solution are already noticeable.

Representative Kelauver of Lennes see suggests amending the rules of the House to provide for a question period at which he ids of executive departments and independent agencies would be requested to appear and answer questions — somewhat like the question hour in the House of Commons

One practical example of cooperation between the legislative and

^{*} Associated Piess article by Frank I Weller in The Hashington Post March 19, 1,944

executive branches has already demonstrated its merit. The House Committee on Public Buildings and Grounds supervises the vast public housing and federal works program in war congested areas The first Tuesday of each month there appear before it John Blandford Ji, NHA administrator General Fleming, FWA administrator, and the key assistants on their respective staffs A mutual give-andtake follows Chanman Lanham 18ks questions about particular complaints or problems that have arisen, and he gets frank answers Such meetings have resulted in better understanding on the part of both Congressmen and administrators potential friction has been averted and governmental efficiency has been increased. The example set by Fritz I anham and his committee might well be followed by other committees in both Houses

There are even plans afoot also by which Congress could improve its public appearance Dr Gilloway suggests that more frank recognition be given of the fact that the important work of Congress is done in committees. I herefore, let the bulk of the calendar be given over to committee meetings, open to the public, and let Congress meet to vote only one night a week Business could be cleared with dignity and decorum Similarly Congressional debate, in Dr Galloway's opinion, could be tele coped into one or two evenings a week, with Congressional leaders dis cussing legislative issues before their own visible audience and the radio audience as well

Neither the problems facing Congress nor the solutions are limited to Congress, both are for the American people as a whole to face We shall never see our national legislative body modernized until the demand has reached the point where Representatives and Schators can no longer afford to ignore it To this end there is much that we as individual citizens can do

We can familiarize ourselves with the problems and proposed solutions. There is more fresh material available in books and publications. Once you have posted yourself, do not hesitate to let your Representative kno v that you are aware of needed changes, and that you are concerned with his awareness to them. It is easy to sit back and dainn "bure jucracy", the essential thing is to help bring about changes which will prevent bure ju cratic domination in the first place.

Our Congress is not composed of supermen, armed with extraordinary powers of vision. Not is it composed of "political panhandlers and trum mers." It is made up of ordinary men who are sincerely interested in doing the job which vou sent them there to do. They work hard at that job. Your encouragement and your suggestions will help them to remode. Congress and enable it to function more efficiently.

Totalitarianism starts with the decline and neglect of the legislative body. The sensitiveness of the people to their Congress is one of the suress guarantees against the failure of democracy.

Condensed from Independent Woman

Hildegarde Dolson

dent recently asked Dorothy Drs, dean of columnists, for advice on how to become a famous newspaperwoman. When Miss Drs pointed out that it was usual to get a job as a reporter, work like an under paid beaver for five or 20 years and then hope for the best, her visitor protested, 'But I d be willing to write those simple little things you do in som column."

Those simple little things 'appear daily in 215 newspapers on three continents and are read by approximately 30,000,000 people. Now in its 49th year her column is the oldest continuous newspaper feature in the United States. And Miss Dix, who has never missed a deadline, shows no sign of being winded.

Skeptics who never read the column think of Dorothy Dix as an arch sentimentalist who lidles out advice to the not quite bright Actually her syndicated talks have touched on every emotional problem fit to print, her mail has included letters from prominent businessmen, thousands of everyday husbands and wives, even a Supreme Court judge

Ministers send her copies of sermons bised on her columns. A professor of mental therapy at Johns Hopkins advised women tortured by doubts and fears to read Dorothy Dix daily. In recognition of her tonic qualities, the Medical Women's National Association made her an honorary member.

In dealing with her vast public, Miss Dix is about as archly sentimental as a mustard plaster. To bickering parents she has stated 'Your domestic spats aren't a parlor game—they re a crime against your children" When a girl wrote, 'On my first date with him I had two cocktails, then wine with dinner and brandy afterward. Did I do wrong?" Miss Dix answered "Probably.' She advised the wife of an unfaithful soldier to hold onto him until after the war.' In case he should be killed you would be entitled to his insurance money."

Even her most devout fans might be introduced to Mrs Elizabeth Gilmer of New Orleans without the foggiest notion that they were meeting America's most famous confidante. She took the pen name of Dorothy Disat a time when it was considered slightly indecent for a lady to sign her

right name in print and winsome al literations like Fanny Farthingale adorned every Woman's Page

Now in her 70 s, Miss Dix complains with complete justice, that magazine and newspaper pictures make her look fat and stuffy Actually, she looks like somebody s favor ite granny four feet ii inches smill, with bright blickberry eyes, and a young, breathless way of talking When she laughs, which is often, she throws back her head and enjoys heiself. In conversation she has an cager listening quality Most of her friends and relatives call her Dorothy, while to the people who write her some 2000 letters each week she is 'Dear Miss Dix -- This is my problem "

In a recent mail these were a few of the problems. A brother quarteling with his sister over an inheritance wrote We have agreed to abide by your decision, whatever it is A 14year-old boy who idolized his father had found a love letter sent to his mother by another man should be talk it over with her or run away from home? A widow of 42 asked if she should man a man of 34 (The answer 'Go ahead Am in of 34 is old enough to know his own mind, and I d guess from your letter he s show ing superior judgment) A wife whose husband had been unfaithful tor years asked if it would be better tor the children's sake to stay with him or get a divorce Often Miss Dix casts her vote for separation. She has bristed frequently against rening children in a home split by bitterness

In letters from women, the two biggest poblems are mother-in-low trouble and 'My husband never shows me any affection" Men com-

plain oftenest about nagging Teenagers are usually conceined with dates One wrote 'Please send me your definition of a respectable woman I must have it by next week-end'

Every mail contains touchingly grateful letters "You saved me from making a horrible mess of my life, or "I thought you d want to know how happily it all turned out, thanks to you" Only rarely does advice backfire, as in the case of the husb ind who said "You advised me to prinse her cooking, but I can trave indefinitely about canned soup? Or the woman who complained I followed your description of a perfect lady. As a result, I sit home every night.

Dorothy Dix was born Elizabeth Meriwether, in 1870. The Meriwethers had a 1500 acre horse breeding firm on the Kentucky Tennessee boundary, but like most lindowning southern families during the Reconstruction period they were desperately poor Schooling was casual offered by genteel spinsters whose only educational qualifications were that their fathers had been colonele with Beauregard Fortunately a neigh bor with a library started Elizabeth off on a diet of Dickens, Fielding and Thacker by "Made me distrust mushy writing,' the columnist says Her mother trught her 'to speak the truth, fear God, and remen ber that gentlefolk don't whine "

At 18 Elizabeth put up her har and married George Gilme, a hand-some gallant-about-town. Within a year he was afflicted by an incurable mental disease, dying long afterward in an asylum. The shock of his illness and worry over how to support him cracked. Elizabeth's health, and she

went to a small resort on the Gulf Here she worked on the theory

When you're in great trouble get interested in something new," and set about writing short stories. The first consisted mostly of idjectives But the fifth had nouns and a plot. When she showed it to her next door neighbor, Mrs. Eliza Nicholson, publisher of the New Orleans Picavune, her ears insided to those exquisite words, "We'll buy it."

Excited by the magnificent payment of three silver dollars she begged for a job on the Picarune Starting at five dollars a week, Mrs. Gilmer jumped cagerly into collecting vital statistics. Gradually she got other assignments and within three years she was writing a theater column and editing the Woman's Page.

In 1896 the Picasune's managing editor, Major Nathaniel Burb ink, decided it would be nice to have a signed column for women, and asked Mrs. Gilmer to write it She chose the name Dorothy because it sounded sensible the Dix came from an old servant named Dick whose wife always addressed him in the plural the Dorothy Dix Lalks first appeared April 6, 1896 headed by an illustration of a prim Gibson gul with high boned collar and 19 inch waist, bearing no resemblance to Miss Dix

Her earliest columns blasted the well-bred theory that tears are a woman's chief weapon. No such thing, Miss Dix announced stoutly men found te as merely damp and triesome. Women had as much right as men to propose, she wrote, 'b' cause ladies are even more interested in marriage." She unged wives to have outside interests and warned

them against 'expecting husbands to act like the heroes in absurd novels' Years liter when someone asked her whether her readers had been shocked by this ultramodern counsel she said, "You know, I think women were just waiting for advice like that"

In 1900 Bruno Lessing of Hearst's New York Imerican, asked her if she d do some editorials on love and in arriage Miss Dix, who never sneezed at a chance to augment her income hurriedly filled the order A week later the American wired her an offer to come to New York She declined Mijor Burbanky as ill, and depended on her But after the Mijor's death the next year, shew as off to New York

In addition to her three Talks a week, He jist had exp usive plans to her the talked for an hour on the fascination of true life murders. As he painted a picture of opportunities for a woman feature writer in this field she fairly panted with anticipation.

The city editor assigned her to cover a minder in New Jersey child killed by its stepmother. Arm ing in Jersev City, she hired a gig and isked the driver to just go around for awhile, In an hours leisurely trot she le uned plenty. The driver it turned out, was a julted sw un of the murderess and was delighted to p ovide the woman's life history. He also dug up a dandy set of the killers family photographs. For a beginner it wasn t bad — the Imerican scoop d every other New York paper. In the next 15 years she became the most famous of the sob sisters and Aithur Busbane called her the greatest living woman reporter '

She has said that those years of murder reporting give her a chance

to see human nature turned inside out. I learned to keep my intuition pared down to the quick so that I could almost read a criminal's mind."

This talent came in handy during a sensational vice trial, when the most important witness, a member of the oldest profession, stubboinly refused to testify against her boss, head of the vice ring. The frantic district attorney sent out an SOS for Dorothy Dix. "Do you think you could make her open up?" he asked. Three hours later Miss Dix had a confession that sent the vice heads up the river. "People tell me things because they know. I'm interested and won't be shocked," she explained

By 1905, subject matter for the Dorothy Dix Talks was falling like manna in letters from readers. Men began to write her almost is many letters as women. Basically, readers' problems were the same then is now mothers in law stingy husbands, drabaness in marriage, je alousy.

As the public showed an increasing tendency to lean on her, she felt a deeper responsibility and resented the gory assignments that took up so much of her time. In 1917, when the Wheeler Syndicate offered her a chance to do the Talks on a full time basis, with no corpses attached, she grabbed it and went back to New Orleans to do her writing. Since then her columns, currently handled by Bell Syndicate, have appeared six times weekly

Each morning she dictates columns and letters in her apartment over-looking New Orleans' Audubon Park Her close friend and chief assistant, Mrs Stanley Arthur, has been with her for 18 years Routine inquiries—

such as "How can I be popular?"—
are answered by printed forms Only
letters of general interest are used for
the column For example, if there are
30 "My husband leaves me alone
every night" letters in a morning's
mail, Miss Dix firmly takes up the
subject of erring husbands Letters
that discuss problems too intimate to
appear in print get a personal reply

The war has brought its own new set of questions When middle-aged women complain that "he is working in a war plant with lots of attractive young girls," Miss Dix answers "Relax Outside of a mon istery he's bound to see pretty guls wherever he goes' Women who take advan tage of service men make her splut tering mad. To a soldier who had been tricked into an engagement, she issued this rousing command "Don t let this girl make you marry her just because she's maneuvered you onto a hot spot Write to ner plainly that you never proposed, and don't worry any more about it" A soldier advised like that could sleep like a haby

Until the war Miss Dix triveled often, and her home is crowded with elaborately carved furniture, tapes tries, Oriental screens, and statuary Displaying a handsome bed reputedly dating back to lusty I ouis XIV, Miss Dix said happily to a visitor, "I'll bet I'm the only respectable woman who ever slept in this bed"

On a recent drive with a friend, Miss Dix waved cheerily to a passing truckload of soldiers. The soldiers all shouted back, "Hiya!"

"Dorothy," her companion chided her, "do you know those boys?"

"Well," said America's most famous confidante, "I ought to"

They specialized in foregoing the impossible

"It Couldn't Be Done' -So the AAF Did It

Condensed from Skyways

Arr Marshal Sir William Welsh

KCB, DSC, R1F

1939 on, we of the Royal An Force have been finding out how to fight an an war Starting virtually from scratch, from those first unrealistic days of showering leaflets through the autumn skies to the 1e cent era of robot bombings, we have had to learn by tital and error But just about the time you think you know it all, along comes a new idea. I his happened to us when the American An Forces came over to join us

American airmen have been generous in saying that they have learned a lot about air fighting from the RAI I would like to tell you of some of the things that we of the RAF have learned from them. We take our has off to AAI performance in this war

The Americ ins have shown a remarkable quality which, for lack of a precise word, I must call "overcoming the impossible" It is a combination of imagination and resource that has helped to save hundreds of thousands of Allied lives We have conic to feel a healthy respect for the AAI attitude toward that word "impossible," which attitude, your fliers in form us, stems strictly from Missouri

Take daylight bombing — the Germans had tried it and failed, so briefly, had we "Very well,' the Americans told us, "you bomb by

night We'll bomb by day That way we can get round the clock continuity!

Their plan was to go directly after the industrial pinpoints representing vital links in German war industry In cooperation with economists and the RAF, the Americans made up a list of these vital links, ranking priori ties by an ingenious system that involved the for want of a nail the battle was lost" principle For example they reasoned that German in dustry could not be profitably bombed so long as German air power (designated as objective No 1) was there to defend it German air power could not function without airfrailes lowever many engines they had. Therefore, if they could climinate fighter autiame assembly factories, the defensive power of the Luftwiffe must rapidly be crippled and leave t whole of German industry expected Similarly, instead of going after individual concentrations of vehicles they calculated that by eliminating fuel a creeping paralysis would be imposed upon the whole of the enemy s fighting power Therefore oil was posted as objective No 2 And so on

As an intellectual flight this was unassailable But as a practical working program we of the RAF viewed this American plan more with hope

than conviction On both sides of the Atlantic, people filled with honest doubt were eager to point out the impossibilities. How could day bombers hope to reach targets deep in Germany through successive belts of enemy fighters? How could they, even if they reached the target and saw it through our misty European weather, hit it from 25,000 feet? And how, with every German fighter squadron sent to attack them, could they expect to run the gantlet home?

Yet they did Never once was an American davlight mission turned back from its objective by enemy action American airmen did fight their way successfully to the vital targets, they did hit them, and they did fight their way back

In the course of this bombing offensive, the AAI overcame not only the obvious difficulties which people had been pointing out to their but countles others When the Luftwaffe pilots, reflecting the alarm of the Nazi High Coinmand, ganged up against the outnumbered and sent American losses soaring, the **AAI** thought up answers fister than the Germans could ruse question marks They installed new turrets and new gun sights, they worked out new and baffling defense formations They turned the tables on German tocket carrying fighters by thinking another "impossibility - the long range fighter plane, which has given Allied air power such an enormous advantage, and which, up to that time, had been regretfully dismissed as a contradiction in terins

It too, time before these long-range jobs came streaming off the assembly lines. While they were waiting for them the Americans accomplished another "impossibility" — installing detachable belly fuel tanks on shortrange fighters that gave their bombers fighter-cover at least halfway to and from their targets

This business of bomber escort brought up still another tough problem There had to be a way of assembling the complex aerial formations I hey could not assemble under the clouds because, with our tradi tional European overcast, there is seldom room to maneuver an armadas sometimes 200 miles long con verging from bases all over southein Fingland The technical difficulties involved in climbing through clouds to rendezvous at 25,000 feet could only be exceeded perhaps, by going out in a London fog to find a street you didn't know from a map you didn't have The Americans say that some credit for overcoming this one goes to Britain's radar inventions, but in RAF circles there is not much doubt where the hon's share of the credit belongs

When you look today at the abun dantly equipped AAI, that smoothly working machine which is helping to eviscerate Germany, don't lose sight of the price that was paid for it in the

AIR MARSHAI WITSH, one of the top men in the Royal An Force was until recently Britains an representative on the Combined Chiefs of Staff in Washing ton Since 1914 he ha flown over most of the world and has served in the RAF

Fighter Command on the Air Council and with General Eisenhower throughout the planning and execution of the North African campaign

blood, sweat and tears of the proneer handful of American bomber crews I or 18 long, tough months these men were thwarted by lack of planes, lack of crews and lack of equipment They wanted at least 1000 heavy bombers for every operation, but their bomb ers were perpetually diverted to other theaters. The crews flew themselves to the breaking point At the end of one long offensive they were so bonetired that they could hardly crawl into their bombers to face another 12 hours of incessant fighting five miles high But they did They outfought and outlasted the German fighter pilots Their quality through these months of discouragement was so compelling that it moved Marshal of the Royal Am Lonce, Lord Trenchaid, to say

They have destroyed hundreds of vital factories. They have penetrated far into Cermany. They have fought great battles, day after day, all the way to their targets, over their targets, and back from their targets, destroying many more enemy aircraft than they have lost themselves. No one who has seen the air photographs can doubt that this daylight bombing is having a most devistating effect on vital work shops. Here this Force doubled what could it not do?

Six months later the whole world found out what it could do In I ebluary 1944 the AAF staged and won a battle that will go down in history. The outlook was grim, the weather at its worst, the air war dropping daily behind schedule. The invasion date, irrevocably committed, was rushing toward us. German plane production was rising. Then came the electrifying event. Without warning, there

arrived six days of good bombing weather in one week — a most unusual sequence in winter — coupled with an unprecedented striking force of some 3000 heavy bombers, newly accumulated in England and Italy to prepare for D Day After all the months of discouragement, the AAF had the planes, the plans, the weather Here was Opportunity It didn t have to knock twice

General Spaatz sailed in with everything he had, bombers, fighters, reserves The RAF Bomber Command simultaneously used the fine spell to make crushing attacks on German centers of production by night And, as Virgil wrote in 30 BC, 'Germany heard a clashing of arms all over the sky, the Alps trembled with uncommon earthquakes, never did lightnings fall in greater quantities from a seiene sky or dire thunders blaze so often'

When the weather broke, after six tremendous days, the back of the German air power had been broken too Smashed all the way from the North Sea to Austria were the carefully dispersed assembly complexes Blown to pieces in the air, on the ground, wherever they could be found, were the best planes of the Luftwaffe, many of them batted out of their hiding places by one huge American daylight attack over Bei lin Their were Americans over Bulin that day with bitter memories of comiades shot down in the outnum beied raids of 1943 They had a score to settle — and they settled it Ger man planes were shot out of the sky at the rate of well over 100 a day, 642 for the whole six div period

German air power was so com-

pletely broken that by D Day, four months later, vast fleets of Allied ships were able to unload on the Normandy beachheads with practically no air opposition. But for this aerial preparation, in the words of General Eisenhower, "the invasion could not logically have been undertaken"

The resultant saving of Allied lives seems to me far the most important contribution of air power to this war It is all very well to say, "Victory shall be outs, whatever the cost!"—but what about the tragic cost in dead, mutilated and missing men? In World War I, the battles of the Somme and Passchendaele alone cost us 1,000,000 men in a few weeks and the only visible result was the gain or loss of a few hundred vards of mud In this war the total Allied

casualties in Western Europe from D Day to the fall of Aachen totaled less than 200,000 — sad enough, but far less than might have been expected considering the enormous amount of death-dealing equipment invented since the last war I am convinced that the new factor which has kept down our casualties is air power

The whole air war has been a tremendous job, a long job. And it is not vet over I should hate to have to think of it without the contribution of the USAA Γ

Together we have sweated out what Thom is Paine called "times that try men's souls" And we'n the RAF set a high value indeed on a partnership that was born in adversity and which, thank God, is maturing in victory

The Gold Bidge of Courage

crop up most frequently these days in all sections of the country is that of the young man in civilian clothes who offers a woman his seat on a crowded bus. She rudely refuses to take his seat, saying he ought to be fighting with her sons in I rance. When you write them, madam, he reforts, ask them to look for the arm. I left over there? This tale typifies the embarrassmen to which hundreds of our returning veterans are being subjected daily—and almost always un necessarily.

One of the stories which

Tor, upon receiving his final honorable discharge, every veteran is awarded the specia gold lapel button illustrated above. This badge of honor is recognized by all too few of us. One young veteran of 18

months of mud and blood in the Europe in The iter continued to wear his uniform for two months after his discharge even though he knew it was illegal to do so 'I don't want to be called a slicker just be cause people don't know what a discharge button looks like he explained

Since the beginning of the war, over 1,000,000 officers and enlisted men have been honorably discharged from the Army alone — and thousands more are returning to civilian life each month. These men deserve recognition for what they have done let is not easy for them to readjust themselves to civilian life. We can help them by recognizing the Honorable Discharge Butto 1 when we see it Remember — any man who wears it has offered his life for his country.

-And the Deaf Shall Hear

Condensed from Hygeia

Lois Mattox Miller

bed listened intently, fascinated by the commonplace sounds that penetrated the heavy bandages swathing her head. The drip drip drip of the lavatory faucet, a murmur of distant voices, the clattering of the trollev car in the street—these sounds were more beguining to her than music from another sphere. For the first time in almost 15 years she could hear. Skillful surgery had opened a tiny oval window in the bony cap sule of her inner ear, readmitting ill the magic of the world of sound.

The daring, delicate fenestration operation already has been performed in more than 2000 cases, some as long as seven years ago. These patients have continued under the surveillance of medical experts who doubted that the cure of deafness would last I or the trick is not only to cut the tiny window but also to prevent stubboin Nature from closing it again I ast year a committee of the American Academy of Ophthalmology and Otolaryngology conducted an exhaustive investigation of the fene tration technique and its long range results Dr Marvin Jones reports "My belief six veais ago was that the ie sults of the fenestration operation, while dramatic, were not permanent Recently I have seen patients whose hearing before operation five years ago, was below the useful range, and

A miraculous operation holds prom use of deliverance from the lonely world of deafness

who now can hear low whispers"

The human hearing apparatus is extremely complex and surrounded by mystery Entering sound waves strike the eardrum — a tiny membrane that separates the outer from the middle ear Attached to the inside of the eardrum is one end of a chain of three tiny bones called (because of their shapes) the hammer the anvil and the stirrup They vibrate in sequence. The footplate of the sturup fits into a window in the bony capsule which separates the middle car from the inner car I hrough this window the vibrations of the stirrup are transmitted to the fluid of the inner car There, impulses touch off a harplike set of auditory nerves and are transmitted fin illy to the hearing area of the brain

Things frequently go havwire somewhere along the line, resulting in the tragedy of deafness. In young children, for instance, an excessive growth of adenoids may block the Eustachian tube. Removal of the adenoids usually restores normal hearing. At the other end of the life span deafness may be caused by degeneration of the auditory nerve. For this there is no cure.

Between these extremes lies the larger percentage of the 15,000,000

AUDITORY CAPIAL

JTIF PUP Bone

Point of

Operation

deaf or partially deaf persons in this country. Their deafness is caused by a disease called otostlerosis. It involves no pain, no middle car infection, and produces no symptom more il it ming than ringing or buzzing in the curs and progressive difficulty in he using. What happens is that a bony growth slowly closes the tiny window around the stirrup until the footplate is held.

fast Thus no vibia tions icach the fluid of the inner ear. The auditory neive inside inavironment perfectly healthy. But sound never gets through to the neive for transmission to the brain.

For the past century in famous can specialists have puzzled over this maddening situation

In 1876 a German surgeon. Ressel made the first attempt to loosen the stirrup from the closed window deaf ness vanished a ninediately but soon the bony window closed again. Holm grea, a Swedish doctor, sought to keep the window open by inscriting a plattic peg, but this set up a foreign body reaction which caused new cell growth and closed the window even more tightly. Surgeons in half a dozen countries tried and discarded one technique after another

Soundille, a I renchman, achieved a surgical miracle by delicately folding a flap of skin, thin as a spiderweb, over the new window to carry vibrations from the cardium to the inner ear, then operated repeatedly to keep the window open until the regenerating process of the bone becomes gradually exhausted."

Other surgeons discovered that the bone growth usually started around microscopic splinters made while drilling the window. Using microscopes and delicate swabs, they located and removed every splinter. Lyon then another factor deleated their efforts the slightest trace of blood encouraged the growth of new tissue. So these proneers developed a

virtually bloodless op crition. But still the tiny window closed.

I or Il practical purposes the fenestration operation was a failure. Then the invitery of the ever closing windowich allenged the imagination of a young New York en surgeon Dr. Julius Lempert After 12 years of study

and clinic il work he was able to report in the July 19,8 issue of the hehrer of Otolary neology a technique that sounded entuely too good to be true. Where Soundille and others had operated from behind the car, Dr. Lemp at made his approach directly into the aural cavity. Besides leading directly to the middle car, this method in volved the cutting of much less tissue. It not only reduced the chances of infection, but caused as inflammation, which was one of the chief causes of the tissue regrowth.

Upon reaching the bony capsule which contains the inner car mechanism, Dr Lempert used a tiny dental buri to caive an oval opening—slightly larger than a grain of rice—just above the old window. Then he used a fine gold burr to smooth and polish the opening—an important

factor in pieventing bone regeneral tion I inally, he cleared away every last fragment of bone splinter

Seeking a protective substance to line and cover the new opening, I em pert found the very thing he needed - right there along the path to the innei car It was a fine, smooth tissuc called Shrapnell's membrane — a part of the cardrum. Lempert lifted up this membrine and fixed it in place so that it served both as a windowprace and frame for the new opening

By 1941, Dr I empert had reported a new location for the little surgical window, and using this better tech nique, by 1913 he had operated on 800 patients. In 70 percent of these cases practical hearing was restored Other doctors trained under Lempert operated on approximately 600 more patients, and likewa e cured deafness in about 70 percent of them

But I empert innounced that 70 percent was not good enough. Involved in the failures were complications which he was sure he could remove inflammation of the labyrinth damage to the hearing nerve and the persistent closing of the window

In the Irchites of Otolaryngology for January 1945 he was able to an nounce to the profession that the last complications had been climinated His report contuned a startling fact in order to keep the window open for hearing you must ictually close it! To do so he has devised a method closely approximating Nature's own A small piece of cartilige, taken from the outer ear, is shaped and inscreed in the new opening, then the thin piece of Shraphell's membrane is drawn over and made fast. The cartilage stoppic scives as a new stirrup, capable of transmitting sound vibrations to the inner call it also prevents bone formation and possible damage to the auditory nerve

The perfected fenestration technique has been applied in about 50 cases with practical hearing restored in all of them. The effects of bringing stone de il people back into the world of sound are dramatic The young woman whose story begins this article is typical. At 14 she became a problem child - sullen, inattentive, disobedient. Her grides at school fell off Framination by the family doctor disclosed that she was hard of hearing. The family sent her from specialist to specialist, until they were forced to accept the diagnosis

Otosclerosis with progressive deafness No effective treatment?

At 24 she was totally deaf in one ear, had only 60 percent hearing in the other Lip reading helped Then a hearing aid was fitted But even these 'crutches fuled to compensate for all the disady intages of the lonely world of the deaf

Then list year, her doctor sug gested the Lempert operation

"You have no idea what a thrill it was to hear the first sound after that magic window was opened! she cx One doesn't realize what a noisy world we live in Sounds in the night, which the normal person ac cepts or ignores, would walen me terrified Then, when I came to my senses, I would lie there gloating over each one

"Out of the hospital, it was even more wonderful At home I heard my little daughters voice for the first time Now I am waiting for in even greater experience when my hus band gets back from overseas I will hear him speak. Our life will be so

much happier!'

During the past seven years, Dr Lempert has trained about 30 surgeons to do the basic operation Recently many of them have inturned to his New York clinic to learn the new technique The operation now is being performed by skilled otolaryngologists at such medical centers as the Mayo Clinic, the Harvard Medical School, Western Reserve Medical School, Cleveland's Crile Clinic, Presbyterian and Michael Recse hospitals in Chicago, Northwestern University, University of Michigan, University of Pittsburgh the Lahey Clinic in Boston, the New York Eye and En Infirmary, the Manhattan Eye, Ear and Throat Hospital and Columbia-Presbyterian Medical Centei in New York

Dr Lempert and his colleagues stress two important facts

First, the fenestration operation is intended only for 'properly selected cases' Careful preoperative examination must determine that the hearing nerve itself is alive and intact Only then will opening the window accomplish the minusele of restored

hearing From the records of several thousand cases, they conclude that 98 percent of cases of deafness caused by otosclerosis can be cured

Second, the operation must be performed only by a surgeon who has great natural surgical ability and who has spent months even years, learning and practicing the technique under competent instruction

In the hands of the expert, how ever, the fenestration operation is a blessing that has been practically purged of all incidental dangers. The chance of infection is negligible. The operation is bloodless and painless Functional hearing is restored usually by the fenestration of one car, thus the patient is left with a space, ear which need be opened only if absolutely necessary.

I or the first time in medical history the doctor no longer needs to inform a patient suffering from otosclerosis that there is no cure no hope but lip reiding or a hearing aid. Just as entariets no longer mean siglitless eves, so otosclerosis ceres to condemn is victims to the world of silence. The inedical profession thus has come a long way nearer to fulfilling the ancient promise that "the blind shall see, and the deat shall hear."

Reverse Logic

>> One of our neighbors, instead of catching up on his sleep on holidays, alwa, s arose at his usual time. Many of us thought he wasted his opportunity, but I reversed my opinion after hearing him greet one sleepy eyed late riser, "A man who won't get up to loaf is too lazy to enjoy it"

I or that diabstructure houses Telephone Lyching (\sum_a secret center which never receives an incoming call but from which pours day and night in endless stream of impassioned and delighted speech to parents and wives and sweethearts in every part of the United States

In it now jamming a square of 20 booths are GIs like the kid, each gripping a telephone with terrific in tensity and talking talking — making their first calls home after landing on American soil. And like him they find it almost too much to take — the sheer joy of hearing the familiar voices of saving at last, 'Hello, Mom! Sure it sime. I in back Yeah, Mom..., They can't disclose where they recalling from, but they can say that they ll be walking in the front door about supportune tonight.

The telephone company admits discrectly that something like 1,000 calls have been made during one 24 hour period. No booth is out of use more than 45 seconds — the time it takes the chief operator to an nounce over a public address system,

"Corporal Smith calling Ashtabula, Ohio, please go to Booth 4," and Corporal Smith to crush the cigarette he's been nervously smoking and dash into Booth 4 Sometimes, because lines are busy, he may have been waiting for hours

Corporal Smith sits down tensely and glues the receiver to his ear. Then he he is the voice — mother, wife or girl friend — ind his face lights up. He speaks with his lips almost touching the mouthpiece, in an intimacy embarrassing to watch. He turns his back to the door and crowds himself into a corner of the booth — squirming, chuckling, laughing aloud, showing his battle helmet back on his head.

If he's like most GIs he won t talk himself out in less than seven min utes and when he finally emerges he ll appear slightly punch drunk. If not red eved he ll grin at everyone he passes or he ll mumble to himself or he ll be silent and dreamy with the peace that comes when you know that everyone is all right at home and rothing has changed

The switchboard guls are witness to all this, and sometimes a little choked up themselves. But none of that comes through to those at the other end of the wire. All you hear is a calm "Is this Mis. William Smith? We have a collect call for you from Corporal John Smith. Will you accept the charges?"

There's a gasp and then a breathless "Where is he? Where is he calling from?"

The regulation answer is a formal "Due to military regulations we are not permitted to give you that information" Then perhaps, because they are human too, the girls weaken and say, "It is not an overseas call, madam," and with that the call goes through

Nine times out of ten the boys are so flustered they don't remember their home telephone numbers. Although the girls warn thein, please, not to talk more than three minutes—"Others are waiting, sir—they will never break in on a soldier no matter how long he stays on the telephone. One taciturn sergeant surprised them by talking for 84 minutes. Most calls are collect, but this was not, and it cost him \$45

The girls are particularly proud of their skill in finding a boy's sweet heart or mother even if they must — to take two actual cases — trail her

to a corner grocery or pluck her off a train 2000 miles across the country. In this latter instance, the girl traced a boy's mother through a neighbor to the railway station, had a redcap search half a dozen coaches to find her, and had her at a telephone half an hour after her son had placed the call

'We wouldn t change our jobs for anything,' the gir's tell you "You see, we always bring good news" One likes to tell her favorite story She placed a call, and reeled off the customary announcement giving the soldier s name, adding, 'Will you accept the charges?'

A voice, dull, hopeless and uncom prehending, replied slowly

'I wish I could, but I received word two months ago that he was killed in action '

"But he wasn't," the girl spoke up
"Why, he s st inding right here beside
me now

And then there was silence, for the woman at the other end had fainted

Marry-Go-Round

When air lines were young and people were wary of flying a promotion man suggested to one of the lines that they permit wives of pusinessmen to accompany their husbands free just to prove that flying was safe. The idea was quickly adopted, and a record kept of the names of those who accepted the proposition. In due time the air line sent a letter to those wives, asking how they er joyed the trip. From 90 percent of them came back a baffled reply, 'It hat airplane trip?''

- Marguerite Lyon And So to Bedlam (Bobbs Merrill)

A COMMITTER was appointed by the magazine Redbook to study the question of how best to hold a wife, and a selected list of husbands was written to The only reply received was from a certain western peniten trary. It stated briefly "I found the best way was around the neck, but it should not be overdone. Please note change of address."

with Glass!

yor 4000 years, glass has been I holding out on us It is one of the strongest and hardest materrals known to man vet, because it has also been so brittle, we have not realized its possibilities

But today, is the result of w in time research, it is doing jobs no other materral could do And tomorrow it will add immicasurably to the conven-

iences and comfort of living

In the laboratories and shops of the big glass companies, I have seen glis that can be sawed and nailed like lumber | £l iss that will float, gl iss that bounces, glass that can be bent like rubber, twisted into yarn, tied into knots and woven like silk

At Wright Lield I saw Air Lechnical Service Command experts flying an amplane partly made of glass not window lass you can take through it. In fact, it looks just like any other BT 15 trainer But the fuselise and tail section are made of glass cloth twice as strong and half as heavy as the conventional aluminum skinned fusclage Pound for pound, it's the toughest airplane ever built — faster, cheaper to produce and longer lived *

Cloth woven of gossimer-fine, bendable glass fibers, and formed with plastic, is one of the most resistant of all materials to penetration by bullets. It is eapable of such flexure that it will actually give to a bullet, taking the sting out of it. In firing tests it was found that many highexplosive shells which did pierce the glass planes fuselage passed through

it without exploding

Already plans are under way to use glass plastic for crumple proof automobile fenders, kitchen and bathroom fixtures streamlined trains and buses for furniture luggige and prefabricated houses. One of its newer experimental uses is for artificial legs The advintages case of molding to the exact contour of the natural leg and lifetime resistance to wear

Surgeons are experimenting with a surgical suture made of glass fibers, because it is nonabsorbent and does not matric the tissues. Strands of special glass y arn have been incorporated in surgical sponges that, it inadvertently left in the wound, may be detected by 🥆 ray

Owens Coming has produced a glass wool made of fibers oooo2 inch in diameter White, fluffy, glass wool, which is 99 percent entrapped air, is used to insulate B 29 Superfortresses, just as it may be used in the walls of homes after the war

In a Toledo office I was offered a chair with an ordinary looking cush-

^{*}Technical data on the glass plane is taken from articles in the May 1944 issue of Modern Plastics and is copyright 1944 Modern Plastics, Inc 122 E 42 St N Y C

ion which was made, nonetheless, of glass wool Only about an inch and a half thick, there seemed to be no end to its softness and resilience Glass wool is now being used for seat cushions and mattresses in warplanes, and later may be used in passenger planes, trains and buses

Glass comes nearer perfect elasticity than any other known substance, up to the point at which it breaks, it will return instantly to its original shape At Owens-Corning I was given a sheet of glass cloth, not woven but matted of very fine fibers. It felt like the soft paper padding at the bottom of a candy box I wadded it up tightly in my fist, then dropped it on the desk. It was uncanny to see it straighten out, not even wrinkled

A coarser, standard form of glass wool, when compressed and faced with smooth, plasticized glass cloth, makes a lightweight insulating 'board' which is now specified by the Navy for instrument boards and interior partitions on all ships Unaffected by sea water and completely fireproof, it absorbs vibration and the noise of gunfire

Glass in this form may be sawed and nailed or bolted. After the war it may be used in soundproof and heatproof automobile floorboards and dashboards, and as insulating walls in prefabricated houses

Portable Army shelters designed for use in remote outposts are heavily insulated with glass wool to save fuel In Iceland, for instance, where there is no wood or fuel of any kind, the fiber glas in a typical shelter saves more than 20,000 pounds a winter in fuel that would otherwise have to be shipped in

Foamglas, made by the Pittsbuigh-Corning Corporation, looks like an extremely porous, coal-black brick One third lighter than cork and far more buoyant, Foamglas can be used in lifebelts, life rafts and submarine net floats, and, in slabs two inches thick, as insulation for the roofs of war plants

The Corning Glass Works, at Corning, N Y, is a fountainhead of research from which most of these modein miracles have come. In each case, Corning has merged its knowledge with the knowledge and facilities of another company which could contribute to rapid production and distribution This accounts for Owens-Corning, formed with the Owens-Illinois Glass Co, which shares the credit for I iberglas, Dow-Coining, in association with the Dow Chemical Co, and Pittsburgh-Corning, with the Pittsburgh Plate Glass Co

Corning researchers, who discovered Pyrex now have a kind of super-Pyrex ware Trade named Vycor, it is as far beyond Pyrex as Pyrex was beyond common glass. Because it will resist heat up to 1650 degrees I ahrenheit and will contain chemicals that would destroy most other materials, it is opening up a new world of electronics and chemistry Without it some of our secret war weapons would have been impossible of achievement

Glass piping was tried several years ago as an answer to the problem of corrosion in food and chemical plants A new tempered glass pipe is resistant to breakage, and new methods of electric welding make it possible for a mechanic to make joints as easily as he would with metal In one chemical plant, pumps with stainless steel

surfaces used to last only 60 days Six glass pumps installed three years ago are still in use, with no signs of wear

Corning researchers now have glass ball bearings which will withstand a pressure at which metal would flow like putty I saw a coil spring made of glass that had been tested by being compressed several million times -with no hint of the fatigue which eventually ifflicts all metals. I was shown a radiant heater - a slab of tempered glass about 18 inches square with a continuous strip of thin metal foil on its back surface. It uses ordin irv house current. Something like it may provide the ideal radiant hou c heating — glass panels in the floors and wills of every room

The new glasses are tough At Owens Illinois. I abbey plant I dropped a newly made glass to the cement floor. Instead of shattering at bounced crazily from side to side, and I picked it up on the fourth bounce, still whole and unseratched.

Even before the wir, I ibbey Owens-Ford produced a tempered gliss, which, in three quater inch slabs, wis tough enough to be hung on hinges and used as doors. I urther toughened through multiple laminations, such glass is long used today as transparent armor plate in auplanes. It will stop armor-piercing bullets up to 50 caliber.

The new glass is equally striking in its resistance to extremes of heat and cold At Libbey Owens-Ford they put a pane of Tuf flex on a cake of ice and poured molten lead over it, without effect The Army uses this glass

as the facing for its 800 million candlepower searchlight, it won't crack even though the thermometer may register below zero

To meet another war need, physicists discovered a way to curve glass with virtually no distortion of vision—something never done before on a mass production basis. Today curved sections of glass are replacing plastic in bomber noses where maximum vision is required. Tomorrow this glass can be used to streamline automobile windshields.

We think of glass as a brittle material that will have a sharp, cutting edge wherever it is broken. But at Corning I thrust my hand deep into a large box of broken bits of glass and didn't set a scratch. This new type of glass is being used in the plobes of runway lights at Army air ports so that if broken and scattered it doesn't cut the tires of planes. Think what this will me in to motorists after the war when he adlights may be made of it

Because of their reputation for doing the impossible with glass, the Corning laboratories have more than their share of freak ideas from volunteer correspondents. At various times it was suggested that they make glass mousetraps, a glass dirigible, glass razor blades, and a glass freight out this last to permit green oranges for example, to be ripened in transit by the sunlight

Yet no idea, however failetched, is dismissed lightly. All are investigated and reported upon. Some of the waiting pipe dreams may one day be come realities.

Shall All 3m Rogs at 18 Have One Year's Military Training?

By

Thomas M Johnson

HIS NATION faces a grave decision
— whether or not to continue in
peacetime the drafting of its
young men for military training. The
proposal concerns not only every boy
and parent but every citizen of this
country. It involves our national postwar security and the world's postwar
peace.

Bills proposing universal training are before Congress now Behind them are leading military and naval authorities. More than two thirds of the GIs, voting in secret polls, approve the idea. All polls show the general public approves it. But some important educational and religious bodies oppose it, or at least favor postponing the decision until after the war. The Army and Navy want action now—while the people are alert to our defense needs and before we backslide into postwar apathy.

A right decision is so important to us all that we should know without embellishment, just what the Army and Navy propose

They do not propose, at the soft extreme, to draft all young men and women for training in a mere glorified CCC

Nor do they propose that every young man shall "serve his time in the Army," like the conscripts of EuThe essentials for America's postwar armed security as our highest imilitary authorities see them were stated in a widely discussed article by Mr Johnson in last December's Digest

Universal military training is the corner stone in the plans of these experts. Mr Johnson here tells authorit itively the precise form of truining they hope for and their reasons. Debate over this question, already increasing throughout the nation, will be more pertinent if the particular project here outlined is kept clearly in found.

rope They do not propose universal service

They do propose universal training They propose to train selected young men (not women) to be ready to serve their country promptly as soldiers, sailors and Marines if an emergency arises — that and nothing els. During the year's training they would not be subject to garrison duty to service outside the country, or to any other duty save training

It is pointed out that enactment of universal military training would not increase the number of men liable for military service. Every male who is physically fit is now liable for service under arms. Universal training merely means that those who are and always have been liable will be pre-

pared to perform their obligation when called upon

The men charged with responsibility for national security deem these truths self evident. That all citizens of a free state are duty-bound to de fend it, and that the state is dutybound to help them do so at least risk to their lives and health and at least cost to the nation They have drawn plans based upon this country's experience since George Washington advocated peacetime universal military training but got instead the poor substitute of a few professionals and a lot of raw militin — a system that wasted our lives and money for gen erations

Here are the main outlines of the plan

The Army and Navy want Selective Service boards to choose all physically and mentally qualified youths as they graduate from high school or reach 18 years. Modern war requires soldiers physically mature and agile, mentally receptive loyal and optimistic. These qualities are at their peak in youth. The services believe the year after high school the best one for the training period, because that will cause the least interruption to education or careers.

So far as possible, boys will be allowed to enter the branch of service they prefer, assuming that aptitude tests show them fitted for it. They will be trained for one year, minus about one month's time for induction, furloughs and discharge. That means a year straight, not dabs of three summer months stippled over four years. Army and Navy believe that a four-summer plan would favor the 15 percent of college boys over the 85 percent.

who would have to leave their jobs three times It takes that long to learn today's varied weapons and tactics well enough to be ready if war comes again Foi if war does come, it will come suddenly, allowing no time for raw recruits to learn what it's all about (One reason universal training is needed is that the air forces have become so important, and aviation requires such highly trained men) Trainees will not be inducted simultaneously, but in four equal batches, three months apart, so that there will be a steady flow of trained reservists, instead of great annual waves

Instructors will be mostly not regulars but reserve officers and noncoms—citizen soldiers like their pupils. Only three or four of the 11 months will be allotted to basic training. The trainee's showing in this carly stage will help determine into what specialty he will fit—aerial photography, electronics, gunnery, and so on

From every thousand men, the Army now needs 101 chauffeurs and mechanics, 45 cooks, bakers and butchers, 34 medical and dental technicians, and dozens of other specialists. Therefore 75 percent of all Army trainees will take some type of technical training. This will not necessarily be taken in camp. Some may learn in factories how to repair jeeps or gyroscopes, others serve on railroads, learning to operate trains. All naval trainees will become specialists, learning radar, fire control and myriad other technicalities.

Today's soldier or sailor is no robot, but a thinking individual fighter who cooperates with others like him He will be trained accordingly, first in small units, then in larger teams, un-

My Mother Breaks Her Pearls Condensed from Good Housekeeping

Marion Sturges-Jones

URING one of the periods when we were quite out of funds, after Tather died, Mother took a position as companion to an elderly Philadelphia lady Mother read aloud beautifully and she was a great success with the wealthy and rheum tic Mrs Liftingham

This rheumatism of Mis Effingham's eventually led her to try the treatment of a New York doctor Mother hadn't been to New York for years and when Mis Effingh im told her that she was to go along and that they would stay at the Hotel Plaza for a week Mother's excitement knew no bounds

She was in the middle of telling me the news when a cloud came over her face. It idnationally about clothes!'s she gasped. What on earth will I wear' Of course I ve got my pearls's she added thoughtfully. A black dress to wear with them would really fix me up."

I had given Mother a string of pearls the previous Christians a good string costing \$3.98 at John Wannmakers, and she had been talking ever since about cetting just the right black frock with which to wear it So now we went to Mr Solomons, and by some miracle he produced a black diess that seemed made for a string of (good) pearls The effect was one of quiet elegance, suggesting the Plaza at teature

It was only after Mother was safely back in Philadelphia that I karned of her adventures with the pearls

They broke in the lobby of the Plaza when Mother and Mrs Effing-ham were coming through from dinner one evening

"Oh, dear! My pearls!" Mother cried, and give a little shrick. There was a momentary sensition, and a gill int Nivy officer came to the rescue and begin githering them up. Then the captain of bellboys appeared sweeping the Commander firmly aside. I beg your pardon, sir, he said 'but I shall take charge of this until the chief detective gets here. Everyone will please step uside so we can describe an a caround the lady and see that no pearls are over looked."

Oh, thank vou!' said Mother She thought it delightful of the hotel to be so assiduous in serving her, and she flattered around murmuring her appreciation until the last pearl had been retrieved

'Shall I scal these in in envelope and put them in the hotel safe until you can have them restrung, madam?" asked the chief detective

"I think that's a splendid idea!" said Mother, and waited lappily at the desk for a receipt

The next day Mother took a walk on Fifth Avenue, and paused to glance at an elegant jeweler's display It suddenly struck her that fate had curried her to just the place for the restringing of her pearls

She went in A tall gentleman in

talls greeted her

'Could I get my pearls restrung in the next day or two?" Mother inquired 'I'm here from Philadelphia and I would like them done immediately if possible "

The gentleman was excessively civil 'I ll find out," he said "Does madam have the pearls with her?"

'No, 'said Mother 'I left them in

the sase at the Plaza"

The gentleman picked up a golden telephone and held a polite conversation with another part of the building 'Ou Mr De Witt could call at the Plaza this afternoon and get them if madam is not otherwise engaged, he said. We would like madam to accompany Mr De Witt and the pearls here, so that she can witness the restringing.'

Mother was a little dizzy from so much attention. How perfectly delightful everyone had been about her pearls! I d love to watch the restringing! 'she said gratefully. My pearls are my very dearest possession."

Picciscly," said the tall gentle man 'Shall we say three o clock?'

Mother had the pearls still sealed in their envelope, in her bag when Mi De Witt appeared at the Plaza He was a handsome man who looked like a United States Senator, and Mother felt herself being envied as she walked through the lobby with him It was quite thrilling, too, to return to the jeweler's in the private limousine provided

When they arrived at the jeweler's, Mi Dc Witt ushered Mother past

all the counters of diamonds and rubies, past the steiling silver and exquisite crystalware into a handsomely furnished room at the far end There Mother was seated at a table, and a cloth of heavy black velvet was put before her

"Our Mi Duprez does the stringing, madam, and will be with us in a

moment said Mr De Witt

Mr Duprez, a sharp-featured little Frenchman with fancy mustaches, soon bowed his way into the 100m Sitting down, he placed a trav of implements on the table, smoothed out the velvet, and reached for the Pluza senvelope They all watched as he opened it with thin careful fingers and let the pearls roll out. He was about to put on a pair of spectacles when he suddenly stiffened. His hand trembled he hesitated, and then he adjusted the glasses hastily over his ears. He took a slow, steady look at the pearls and then he breathed suddenly with a sharp, hissing sound

'Madam has been nobbed! he cried I he police must be sum moned! I hese are not pearls!

Mother blinked "Oh, I m sure I haven t been robbed! she said 'Everyone at the Plaza was so nice—I—I couldn't think such a think of them! She leaned over and stared at the beads 'No," she said, and heaved a sigh of relief "Those are my pearls all right—I remember the clasp quite well You see, it is a fluir de lis design in gold and diamonds—not real diamonds, of course—but it's a charming clasp, don't you think?'

Mother turned to Mr Dupiez, and from him to Mr De Witt Mr De Witt was scarlet of face and looked ready to have a stroke, while the little Frenchman had turned gray white and was grasping the arm of his chair His mouth opened, but no sound came

"Is something the matter? Mother asked in alarm

Mr De Witt was the first to recover the power of speech. Madam "he said, 'you are sitting in a private room of the world's most evalted dealer in gems. On that very chair vou occupy the Aga Khan has say while new designs were drawn for his priceless emeralds. The Prince of Wales has brought rainfly jewels to this very room, to di cuss resetting. In spite of this, we are not too proud to restring the pearls of any American citizen. But, madain, we do not restring beads that have cost 98 cents!

Mother drew herself up I think you are being very rude, she said coldly "These are certainly not 98 cent pearls My daughter gave there

to me for Christmas I never inquired the price — something I dare say you couldn't understand — but I know that they are good pearls even though they arent real pearls If you don't care to restring them, you are at liberty to decline, but I must say I think your manner is far from courteous"

By the time Mother finished speaking, Mr De Witt had pulled him self together and had risen to his feet

"Madam is right, he said, looking like a Senator once more. The error is ours! I apologize for forgetting my self—it was just that in all the 30 years I we been with the firm—but never mind that! The error was ours. Dupicz, you will restring madams—er—madams pearls at once—'

Oh, thank you! 'said Mother, all smiles again

'And there will be no charge!"
Mr De Witt added His expression
was one of pain, but it was of pain
nobly borne

Who Has Pictures to Help the Navy?

As urgent call for pictures and m ps of the Japanese controlled at is in the Pacific, to be used in invasion plan has been issued by the U.S. Nivy. Specific are is of interest are the Japanese mainland, the Japanese mainlands, and I ormosa and the Kuriles. Korea. Manchuria, occupied China, the Nether lands I ast Indies, Indo China, Thailand, Malaya and Burma.

Analysis of ground level photographs adds immeasurably to data gleaned from aerial photographs. In particular, shore line photographs and planners of landings on hostile areas in determining exactly the best zones for invasion, and in estimating the requirements for operations preliminary to the invasion. Photographs may save lives

| The Flag Goes Up Again in the Philippines Royal Arch Gunnison condensed from Collier's

flag go up American and Jap dead were spriwled at the bases of nearby uprooted palm stumps A wounded GI lving 20 feet away, motioned a hospital corpsi ian aside so he could watch

GOT BACK in time to see the first Americ in flag go up in the Philip I pines The boys who hit that tough Red Beach on Leyte Island 30 seconds before H Hour were deter mined to get their bannel up as quickly as it was safe to send a man up a palm But my personal reason for wanting to be on hand dated from a dark muggy day in Janu iiy 1942, when I was a prisoner of the Japs in Manila and watched them drop the red, white and blue bunting from the flagpole in front of the High Commissioner's office and stomp on it

A short dash and a jump carried 20 year old Pic Austin Holder of Chattanooga several steps up the top less palm trunk he had chosen He was wearing a telephone lineman s climbing spikes. He had the flag tied iroui d his waist

There was plenty of ceremonial gunfire that div when the Japs hoisted their rising sun But now there was more purposeful guntire for our Red Beach ceremony All hell was break ing loose

We could hear slugs thumping into the tice trunk but the flag bearer didn't stop. About halfway up he made a grab at his waist to pull the fl g loose As il someone had led them in a cheer, the boys on litters and in fosholes and on the beach cried "Higher higher! Take it up higher!' And he did

A tough seigeant in spotted jungle suit rose up out of his foxhole 'Don t them so and so s know these islands belong to us? he shouted Come on! lets get em out of there!

His helinet had slipped over one eve but he criefully tred the knot on top and the knot on the bottom of the bunting Then, because at that mo ment there was no breeze, Pfc Austin Holder reached over and lifted the end of the flag out straight

I was about to follow the suggeant's men when I heard a GI say, "Well, this is about the time to put it up"

There it was -- all 48 stais and 13 stripes — once more high over Philip pine soil

I turned to see a grimy soldier holding a small American flag and studying the palm stumps for a suitable flagpole

There was another throaty cheer as Holder slid down the palm pole That's all there was to it The wai went on from there

Boatloads of soldiers, landing up and down the beach, hit the sand then rose on their elbows to watch the

Life in These

*ON OUR wedding night our car broke down in upper Michigan 20 miles from nowhere After a long walk we saw a house in which a light was burning My knock was answered by an elderly man and his white haired wife

"Out car stalled down the road," I said, 'and we wondered if we might

spend the night here?"

The old man glanced dubiously at his wife and muttered "Well, young feller, we d sure like to help you but "Just then my wife touched her hair and a few grains of rice fell to the floor

A light beamed in the old I dy's eves and she interrupted her husband 'Of course you children can stay here Just come in and sit down while I get the guest

100m re idi

A few minutes later she ushered us into a room where there was not only a comfortable bed but a tray with tea and cookies. I he old lady closed the door with a cheerful 'Good night.

We rose carly the next morning and were tiptoeing out when my wife touched my arm and whispered 'Look!' There in the gray light of dawn we saw the o'd lady curled up in a red shawl on the sofa, and the old man sprawled uncomfortably in a chair

I t ptoed back to the 'guest' room and added a ten dollar bill to the five dollars I had left — LAI AYLITE STOCK

* DURING a Shriners' convention in Los Angeles one of the downtown boulevards was roped off for a parade Only official cars with large signs such as Potentate and Past Potentate were allowed there, all other traffic was halted or rerouted But one ingenious Californian got by the police blockade and drove nonchalantly down the street His placard read Past Participle'

- MILIORD P JOHNSON

* We didn't realize the pastor of our little New England church had a sense of humor until this pathetic card was mailed to members of his parish

"If absence makes the heart grow fonder, what a lot of folks must love this church!"

* I MET a lumber act named Rocky on the street one day and remarked, "You're out of camp early this year"

"I quit" he replied

'How did you come to do that?"

"Well, I had a hard time deciding what to do I was tired of working and wanted to go on a bingt Still, I felt I should finish the scason in the woods After bothering about it quite a while I decided to have it to chance."

'Chance?

"Yeah I threw my are into the air
If the are came back down I was to
tuit'
-Lon Woodbrum

In a large industrial city of the South there lived a colorful old character, 72 years old but hard as n iils who had lived and worked near the i iilroad tracks all his life Locomotive smoke was perfume to his nostrils. One year, after much persuasion, he agreed to spend a short vacation at a country cottage fair from city smoke. When he returned, I asked him how he liked the country.

"All right' he snapped, "except for the air Weak as pond water No element in it I'll take city smoke any time Real nourishment there"

— FDW RD FLRIER

* LATE one moonlight night in a Florida trailer camp, I was awakened by the sound of newcomers parking in the next lot Eventually the bustle died down and for a time all was serve. Then I heard a rough male voice, evidently out

ited States

side the trailer, calling to someone inside it

"Edith," said the voice No answer
"Edith!" it called louder "Can't you
hear nu?

Silence still prevailed A moment later the exquisitely tranquil night was shat tered with "GOSHDAMMIT, EDITH YOU COME OUT HYAR OR I'LL THRASH YOU!"

Edith apparently he ud and came for the voice suddenly lowered and, hourse with eestasy, croaked "Ldith, jest look at that that moon"

—I LONFING! I RITZ

* All in ND of ours, visiting in Charleston S. C. he ard that an old friend was laid up with theumatism. Remembering that the old lidy always read the newspaper from cover to cover she sent over her copy of the New York Sunday Times, sure her old friend would derive much pleasure from so much reading matter.

A few days later our friend went to call and as she was leaving the old lady handed her the paper, neatly folded and obviously unread 'I hank you, honey, for this paper,' she said But you know — I don't know anyone in New York'

— Mirib E Mossman

* PAYING a business call at a Kansas farm, I found the farmer placing forkfuls of hay along the edge of a shed 100f

"What are you doing that for?" I asked, my curiosity aroused

"Well,' the farmer replied, "this ain't very good hay, and if I put it in the manger the cows won't touch it But if I put it up here where they can just barely reach it they think they're stealing it, and they'll eat every bit of it"

-HAIRY J WILLIAMS

*We were dining in a smart New York restaurant and noticed the utter adora-

tion with which the headwaiter, waiters and bus boys hovered around a pretty girl who was with a young officer. As we left I asked the headwaiter why she received such special service "She's the finest lady I ever knew," he said, and told this story.

Several weeks earlier the girl had been cating a hasty snack before going to the opera A waiter carrying a heavy tray was approaching her table when another patron rose suddenly to greet a lady. In the inevitable crash, soup, grayy and ovsters cascaded over the girl's white evening dress. I he staff scurried to mop her off, while other diners tried to look the other way. I hen the girl's clear voice was heard calm and imused.

It was a horid dress—she said to the frenzied waiter "It bunched in the rear and I never liked it I live near here Keep

my food hot I ll be right back?

"And do you know, sir" continued the headwaiter, when she got back all fresh and pictty in a new frock, she went to the manager. If anything happens to that waiter, she told him 'I'll never come here again and neither will in friends'"

Bootleg Nylons B atch out for the fellow who offers to sell you 'nylon' hostery! There is n't any

Condensed from This Week Magazine

With additions by the author

Frank Brock

▼0 MERE man can fully understand the power of nvlon stockings over women's minds hearts and consciences But a lot of men are busy exploiting this feminine weakness

Foremost example Uncle Sam The only legitimate purchaser of nylon hosiery in the world is the U.S. Government No, the stockings aren t sent to Iceland on lend-lease," as reported in a silly story that was re peated on the floor of Congress They travel a much more devious route

Our secret agents overseas discovered that a half dozen pairs of sheer nylons would buy more information from ce tain mysterious women in Europe and North Misc than a fistful of money After all, what could the ladies buy with money in the enipty shops of the Old World? So several luge hosiery mills, which had made no nalons since Pearl Harbor received substantial orders from Wash ington the necessity viin they were informed, would be available Pleasintly surprised, they turned out the mei chandise the only nylons legitimately in nufactured in years

Nevertheless, enough American women want nylon stockings at any price, in contempt of liw, and with callous indifference to our soldiers' needs for other nylon goods, to supportas able black market It is some

satisfaction to accord that the black market operators give the women a merciless stinging

Thirteen cases of raw nylon en route from the Du Pont factory in-Martinsville, Va to a parachute yarn plant in Winston Salem, N. C., were stolen from a motor freight terminal in Greensboro, N C Accepting the thin story that the nylon was salvage from a warehouse fire, two manufacturers made it up into hosiery It was spread as far as possible by making the feet and tops of cotton But these skimpy makeshift stockings sold readily for \$5 a pair to bootleg gers, who in turn got \$10 a pair from customers, male and female, hexed by athe magic word 'nvlon' The nvlon vain was worth \$7800 at was made into \$140,000 worth of stockings

IBI and OPA agents arrested three men One, a former official of a trucking company, was fined \$5000 and is serving a two-vear prison term The two hosicity mill men were fined \$12,000 each and placed on 18 months probation The Government agents managed to seize 5000 pairs of hose before they could be peddled These, by court order, were sold at the OPA ceiling price of \$1 55 a pair in the office of the U.S. Maishal in Greensboro The sale was to begin at ten o'clock in the morning At 5 a m the queue began to form, when the doors opened, the line of women four abreast, extended four city blocks

Half of them went away disappointed

Much more intricate was another scheme for black market nylons A silk mill in Pennsylvania got a contract to convert raw nylon into thread for glider towropes. Part of the raw nvlon was systematically snitched, and accounted for in reports to the WPB is spoilage" The 'spoiled" nvlon was transported to three hosiery mills whose owners were in the plot When the FBI cracked down, it found to 120 pairs of hylons in one warehouse, 6,00 unfinished pairs in another, enough thread to make 6,ooo puis more loui nich veic indicted

Most pitions of the nylon black market he stung in two ways they pay fintistic prices and they do not get nylon. I nyclers, and even protessional merchandise buyers who should know better, have bought 'Mexean nylons' in quantities Sometimes they have misleading names such as curbonyl." Dozens of pairs have turned up for laboratory analysis at the New York headgunters of the National Association of Hosiciy Manuficturers. They rejust rayon. You can get them at any hosicity counter in the United States - ceiling price, \$1.25

An Omaha store imported 1680 pairs of these 'nylons in good faith and advertised them at \$2.25 plus \$1.85 for customs duty. The Better Business Bureau had a pair analyzed and thus convinced the incichant he had been victimized. The stockings were withdrawn from sale.

The lengths to which the gyps will go is indicated by the troubles of the Van Rhalte Company It is getting a stream of complaints about hosicity bought as nylon, stamped with the Van Raalte name and the nylon trademark and, most convincing, made with the patented Van Raalte toe Some victims bought the counterfeits in Mexico City, some bought them from bootleggers in the United States, but it seems plain the imitations were all made in Mexico

The small amount of honest nylon wastage or spoilage that does occur in war production is allotted to manufacture of underwear, brassieres and girdles — never to hosiery mills I very retailer should know that there just isn t any nylon hosiciy to be had Still, when George M. Toncy wrote to 1000 stores from a post office box address in Washington, D C, offering nylons at \$7 44 a dozen pairs, he got orders with so ne \$2000 cash by ictuin mail. There is no guesswork about the money, because postal authorities opened his mail and counted it

Ruses of the bootleggers show little originality. The driver of a delivery truck, often bearing the name of a well known shop, stops a woman on the street and tells her that some nylons were put on his truck by mistake She can have them at \$5 (or \$10) a p iii Oi a peddlei drifts into a doctor s office on the pretext of making an appointment He casually mentions that the parcel in his hand cont iins nylon stockings — unfortu nately not his wife's size Could any one use them? He is typical of the shifty-eyed, furtive nylon bootleggers who canvass office buildings in the big cities

Perhaps the limit of credulity is reached by the people who buy compounds which, dissolved in water, will "nylonize" rayon stockings One of the big hosiery manufacturers re marked drily, If any chemist has such a formula, he needn't bother with the 25 cent trade I'll give him \$5,000,000 for it in cash"

After the war there will be nylon hosiery, finer, sheerer, stronger, more

beautiful than ever before Designs for the machines to make it are past the bluepiint stage But until the war is over, the Army and Navy need every pound of nylon There won't be any for stockings except what is stolen And there won't be much stolen So, ladies — don't be suckers

Roanoke's Volunteer Lifesavers

Condensed from Public Safety

James J Kilpatrich and Charles Henry Hamilton This citizen emergency squad has saved 200 lives—an idea for your town

N A May ifternoon in 1909, a boy on the bank of the Romoke River witched help-lessly while two men struggled in the witer, trying to reach their over turned cance. By standers shouted house advice, and tossed branches into the stream. The men kept crying for help—then suddenly they were gone.

Memory of the scene hrunted the boy for vens It was a needless tragedy—there should be means of quick rescue for accident victions. Just 19 vens later, in May 1928, Julian S. Wise, the boy grown man, organized with nine other volunteers the Romoke lates wing and larst Aid Crew, the first of its kind in America. As its fainc has spread, other communities have founded lates wing crews on the Romoke, Va., model

The Roanoke crew answers 1500 calls a year In its 16 years, it has saved more than 200 lives. And when the accords say a life was saved, it means that the physician on the scene so attests. People have been saved from death by drowning, gas, attempted suicide, pulled from burning autos, cave ins and live wires, rescued from floods.

There are 25 members now, all business and professional men Membership is a coveted honor. To be

admitted on probation when a vacancy occurs is only the beginning The new member must learn swimming, to meet the Red Cross lifesaving test first aid, techniques of using inhilitor, iron lung, icetylene torch and "hot stick for handling live wires expert canoning, use of diving helinet, grappling iron, under water telephone Members must at tend two hour drills every Wednes day night. They must be on call 24 hours a div Not for two years is a new member permitted to answer calls without the supervision of an older member And yet there is a long waiting list!

At first the crew had a difficult time overcoming public indifference. It was usually called too late to save life, and asked only to help recover a body. But saidually the public learned that crew members knew what they were doing, and would work long hours on the faintest hope of pumping life back into someone apparently dead.

Then the city council contributed \$300 which was spent for an early type of inhalator for gas and smoke victims. A few grappling poles were donated Captain Wise tirelessly promoted the thought of calling the crew promptly. Finally, in 1031, it made a sensational rescue. A 16 year old.

Poison from Europe

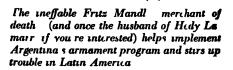

Condensed from The American Mercury

Francis Rufus Bellamy

own in Argentina, behind the smoke screen of diplomatic double-talk, one of the most sinister figures of the Western Hemisphere is at work. His name is Fritz Mandl. He was a munitions maker in Austria, now he is a central figure in Argentina's new armament program. He is Menace No 1 to the peace of the Americas. He is poison from Europe

Fritz Mandl's contradictions are extraordinary. He insists at times that he is a friend of the Allies, yet he boasted after Dunkirk of his excellent relationships with the Nazis. He calls himself a refugee from the Gestapo, but all Buenos Aires saw him bring a Nazi official from Germany to help him set up a munitions plant in Argentina.

Mandl was born rich in 1900 Betore he was 30 his father gave him the
management of the family munitions
plant in Vienna, the great Hirtenberger Works European wars fattened him During the Spanish Civil
War, Franco was in his debt Il
Duce decorated him for help to Italy
in the Abyssinian War Armaments
have netted him over 60 million
dollars As a result, weapons of destruction have always fascinated him

He goes into raptures over new land mines which tear off the feet of advancing soldiers

An Argentine citizen now worth many millions, according to Mandl himself he is still only a poor refugee "I have always followed one direction exclusively," he says, "that of an Austrain patriot Because of it I have lost my country and the greater part of my fortune"

However, the record shows that when danger first threatened Austria, in 1927, the patriot abandoned his country When the Nazis marched in he was running the Hittenberger Works from a villa on the French Riviera The record of the losses he sustained at the hands of the Nazis is similarly dubious

Aligned as early as 1927 with the Austrian fascists, he later armed Prince Starhemberg's Home Guard by a stratagem He sold ammunition to Mussolini for the conquest of Ethiopia By agreement the Italian Government was overcharged 30 per

This ar cle is derived from confidential sources and authentic documents available to the author

cent With this money Mandl bought arms in Italy and smuggled them back into Austria Il Duce thus was trying secretly to balk German ex-

pansion

When Hitler's invasion of Austria as in the making, Mandl was thus ilready on record as having backed the Austrian fascists. Fearing this would not meet with Hitler's approval, Mandl made a secret visit to Austrian Foreign Minister Schmidt, before the German entrance into Vienna, and left Austria with his personal fortune and all the ready cash of the Hirtenberger Works.

To take money out was a criminal offense. One of the first acts of the invading Nazis in 1938, therefore, was to confiscate the Mandl estates for high treachers, and seize the Hirtenberger Works Promptly Mandl selected as his personal agents the firm of Johann Wehili international bankers of Zurich, and sent them to Berlin to bargain.

For a refugee, he got a good bar gain. In exchange for the return of the Hirtenberger cash, he got back his Austrian estates plus a million dollars in pounds sterling and a million and a quarter reichsmarks. His personal funds were not mentioned As late as 1944 he still referred to the Hirtenberger Works as 'inv works in Vienna'"

But there was a typical Nazi joker. The deal was made in behalf of the Nazis by a bureau called the Gustloff I oundation. One clause called for the payment by Mandl of all back taxes on his estates. As soon as the taxes were paid the estates were seized again, this time by the Gestapo When Mandl screamed "fraud,"

the Gustloff Foundation blandly explained that the Gestapo was a different bureau of the Reich over which the Foundation had no control Mandl lost his estates That is the basis for his description of himself as a refugee from the Gestapo

Mandl had taken his first look at Argentina late in 1937 It was not an ordinary investor s trip, the oncoming Nazi storm already darkened the sky But Mandl himself had definite plans transcending mere safety

He was well received in political circles His relationships with Mussolini and Franco were of value, he already knew many Argentine Army officers, and the German Embassy itself recommended him Everything seemed favorable to the project he had in mind

October of 1938 saw him in Buchos Aires again. This time he bought a cattle ranch and a rice plantition, deposited 700 kilos of gold birs in Argentina's Central Bank, a like amount with Lloyd's in London put \$2 000 000 to his credit in New York, and set up in Buenos Aires a personal holding company for his fortune. Included in the list of incorporators wis a leading Argentine Nazi. As usual, Mandl kept his name out of it, he controlled by power of attorney.

He entered into partnership with one of Argentina's leading families. He invested in plastics, cement and textiles, interested himself in artificial silk and synthetic rubber, bought a ship and sold it to the Japanese He carefully cultivated relationships with Argentina's military officers in particular General Basilio Pertine and General Juan Bautista Molina, both highly placed pro Nazis

In October 1939 Mandl arrived in New York for a visit of seven months Included in his large entourage was a Nazi official, a metallurgical expert released by Germany to help Mandl's plans Alicidy his dream had begun to take practical shape—a huge, new and greater Hirtenberger Works rising in Argentina

He purchased machinery and materials for a large bicycle factory—ves, bicycles, but wait!—entered into negotiations for a brass mill and bought machine tools. On the advice of his Nazi metallurgical expert he concluded a contract with a large engineering firm which had built the Hermann Goring Werle and one of Britain's gic it steel plants. He hired this concern to survey the field in Argentina and draw up plans and estimates for a steel plant.

Mandlicturned to Bucnos Aires—
in time to he ir of the tragedy of Dunkirk. Here was an unexpected turn
of events. He laid counted on buying
his materials and equipment in the
United States. But obviously a victo
rious. Germany could meet his needs
better than an isolated America.

Within 48 hours therefore, he changed his plans and cabled his old friend, Austrian Minister Schmidt now in Berlin and director of the Hermann Goring Werke, proposing an all out collaboration in setting up his new steel combine in Argentina He suggested that in return for Schmidt's collaboration he would see to it that the Argentine Government purchased its other steel requirements from the Hermann Goring Werke Receiving a favorable reply, he proinpuls sent to Germany the de-

triled plans and estimates already in hand. What he wanted to obtain was the Krupp process whereby steel is extracted from iron-ore sands such as those which stretch endlessly along Argentina's southern coast. He talked no more about his hatred of the Gestapo. His relation ships with Germany were excellent, he boasted.

However, before the Cermans could act on his proposal, Britain's stubborn defense shook Fritz Mandl's confidence in eventual Nazi victory Cautiously he resumed negotiations with the United States

On August 27, 1941 in least 1rgentina appeared a full page article
describing Cometa the new bicycle
factory Mandl had consistently demied to his American friends my idea
of making munitions, yet tucked
away in the article was the information that the bicycle plant could be
turned to immunition making in 24
hours. The much also isked a most
emburassing question. Precisely what
were the circumstances whereby
Into Mandl had been able to take a
huge fortune out of Austria?

This was only one of several fleathites which were making things uncomfortable for Mandl. The British and American colonies and many Argentine families still ostracized him and German residents had become uncertain of his real relationship with Berlin. When he sought membership in the exclusive Jockey Club he was blackballed. He attributed his rejection to a campugn against him by the German Embissy.

Then another blow fel! Through the New York office of a private banking firm of Buenos Aires, Maidl had sent \$100,000 in currency to a Brooklyn brewery — for "safekeeping" In June 1941 the brewery, obeying the Treasury regulations for reporting foreign funds, revealed the transaction. The firm which had acted for Mandl, although Argentine in name, was partly Swiss — which brought it under Foreign Funds (ontrol as having a European interest.

Various circumstances aroused Washington's suspicions, an investigation was pushed. The upshot was that in October 1942 all Mandl's American resources and activities were blocked by order of the U.S. Ticisury. His company in Argentina soon found it impossible to obtain materials from the United States. Here was real trouble

Mandl talked to every influential North American and Britisher who would listen He loved the Allies, he insisted Confident his negotiations with the Hermann Goring Werke were secret, he proclaimed that he never had any dealings with the Nazis His only chance to regain his Australian estates was by Allied victors. On what possible grounds could such a mistaken action be based? For many months he was a constant visitor at the American and British embassies—to no avail

To his Argentine military friends he confided finally that he had always hated the Allies anyway. He would go it alone, he boasted. All further necessary drawings were on their way from Vienna and Beilin. All necessary machinery could be tooled by Cometa. Agreements had been made for Chilean copper and iron, steel from Sweden was available, see up iron was at hand in great quan-

tity, experts were at his elbow to help him, five fabricating steel plants were already at work All he needed to start up again in the munitions business in a big way was a little clever propaganda among his military friends to make sure of orders, and a chance to buy into Argentine industry so that he would not appear as a foreigner out merely for personal profit

Propaganda he found easy Many of the military clique already half believed that Brazil coveted Argentina's rich Corrientes province and the territory of Misiones Lend-lease, they suspected was merely a Yankee trick whereby Brazil under cover of arming for a European war, could secure aimament for the conquest of Argentina

Such beliefs were fertile ground for Fritz Mandl and he made the most of his opportunity. With the success of the June 1943 revolution in Argentina he tound himself on intimate terms with the new nulitary rulers of a country ripe for aimament at any cost.

In October of that year Mandl bought surreptitiously into an old Argentine concern named Impa Makers of air planes arms and trucks, the firm was directed by Jose Mailo Sueyro, brother of the late Vice-President of Argentina and of the present Minister of Mailine Included in its customers were many black-listed concerns and among its person nel were escaped Italian air pilots from the Italian Lati Line seized by the Brazilian Government

Impa had everything that Cometa lacked — machinery materials, an old Argentine name and above all

an intimate blood relationship through Sueyro with Argentina's military rulers. By November the merger was complete. Mandl changed Cometa over to ammunition making, bought out those stockholders who complained, put in Jose Sueyro as presiden and took control for hims lf

Early in 1944 the Aigentine Government awarded Impa Aimamentos its first contract 56 million pesos for aims, aminunition, mines, trucks and field kitchens — with further contracts for airplancs and waiships to follow

Fritz Mandl is going ahead fist Since January 1944 the production ficilities of Impa Armame tos have been trebled rolling mills are being bought in Brazil, technical processes, drawings and production know how have been secured from a Hearing Going subsidiary in Budapest, land has been purchased outside. Sin Martin for a new briss and copper foundry, and a great new munitions combine is in course of construction in the proud land of the purious

One result is that Fritz M indl has been black listed as an open ene my of the Allies But to many Argentine such a black listing appears as an outright American attempt to subotage Argentina's armament program — one more stride along the long path of Allied coercion

Mandl is also personal adviser to Colonel Peron, Vice President As such he influences not only Argentina's arimament program but her fiscal and industrial policies as well He works closely with the Argentine War Materials Commission and with General Savio head of the Argentine Army arms factories

So powerful is he, in fact, that alaimists insist that all his activities are part of an agreement with the Nazis dating back to 1938, whereby Argentina will eventually be taken over by the Germans precisely as, through Quisling, Norway was acquired

N 121 agent of mere profiteer, however Fritz M andl is in a position now to push his ambitions to the limit

Just what can be done about it is not easy to say In Fritz Mandl's background are decades of he in trigues hatreds and suspicions of Central Lurope, with their deadly flower of armament contracts. The nations of South America are to him increly another series of Balkan states, with the same or greater armament possibilities. Bolivia. Chile Peru, Paraguay — all are on his list of preferred prospects. To drum up business he is cheerfully, looking forward to am mediate trouble with Brazil.

As in Cample of Lurope in poison bio is his to the Western Hemisphere, Mindl is tops. His god is money, war and death his his allies. Price and democracy are unintelligible to him. But he has persuaded the military rulers of Argentina that they need him. He is an Argentine patriot now. He is an increasing menace to the peace of all South America — a menace which sooner or later will have to be faced.

It Pays to Increase Your Word Power wilfred Funk

Each new word you learn opens a new door in your mind Your words are the keys to your thoughts, and the more words you have at your command, the deeper clearer and more accurate will be your thinking, your understanding and your power of expression So become curious about words Look up those that are unfamiliar to you and discover their meanings Make a game of it It's fun And it's a valuable game too

Below is a brief vocabulary test based on 20 words selected from a recent issue of the Reader's Digest. After each word are four other words or phrases. Underline either a b c or d whichever one you think comes nearest in meaning. Check your results against the answers on the following page and find out your vocabulary rating.

- (1) egress a entrance b exit c uild animal d progress
- (2) meticulous a unpleasant b amusing c finicky d helpful
- (3) mundane a mournful b s'ufia c a er age d worldly
- (4) mull a to think o er b to uinne e c to moisten d to sulk
- (5) panoply a a full suit of armor b a tool c great pomp d an inlaid floor
- (6) torque a a turban b a jest c 2 I urlish sash d that which produces a trist
- (7) prototype a a primitive form b print er s type c a photograph d a high disnitary
- (8) palliate a to flatter b to lessen c to ingratia e d to be senerous
- (9) malevolent -a homely b eishing eil c bad tempered d pessimistu
- (10) myopia a deafness b a political phi losophy c near sightedness d a style of criting
- (11) protocol a an act of aggression b a

preliminary agreement between countries c gen erosit; d a ref rence bool

- (12) mulct a to ferment unne b to prepare food for cattle c to deprise of by truler, d to fertile e land
- (13) contrifuge a a type of musical composition b an architecural term c a middle course d a machine for separating by rotation
- (14) clandestine a calm b extremely celd c lept secret d clannish
- (15) fulcinous a or chelming b life soit or smoke c bulging d life a lightning flash
- (16) autonomy a roht to self rule b a dictatorsh p c rule of the majority d rul f a small class
- (17) surreptitious a repetitious b o er generous c c eransious d done by seer t meens
- (18) transmute a transport b translate c carry a cay d change in form
- (19) flagrant a wondering b evil smelling c openly scandalous d absurd
- (20) tentitive a grasping b experimental c intense d leisurely

Answers to What's the Word?

- 1 Use more instead of better
- 2 Do not use aid in place of to, unless two separate acts are implied by the verb
- 3 Use exit An exodus denotes the departure of a large number of people
 - 4 Substitute very for an fully
- 5 Ships are fied to wharve A docl is the slip or waterway stending between two firs or projecting wharves or cut into the land for the reception of ships
- 6 Substitute duerse for duers. Duers

Use ill not bad

Art ugnment occurs in not at court

- 9 If t is used crioncously for libely or liable
- 10 Use the word custom instead of the word habit. The latter is acquired, but the former is followed.
- 11 Use con ole It means to call to gether To come is to come together
 - 12 In in adverbild sense use by and by

Undress Parade

Annot norm his made to naval personnel over public iddress systems customatily begin with 'Attention, all hands' and conclude with That is all "

Sailors attending to their duties at an eastern naval air station were startled recently by the following announcement

"Attention, all hands! The Wayes will report this afternoon on the drill field for inspection at 14 o clock. The Wayes will wear hats and ties. That is all."

— (intiluted by Don Rose

How an American flier lived in the midst of the Germans and escaped capture — an exciting and heart warming story from the war in Italy

JIUSEPPE and the Seigeant

Condensed from St Louis Post-Dispatch + Frederic Sondern, Jr

piciously at the tall, blond, bearded man in his tattered clothes "Incredible," he said "An American flier in these hills for seven months? Right in the middle of the Jeries?" The little Italian farmer who had brought the American in edged up to the captain "But itsa true," he announced in his best Italo American I see him a coine down I take care him a long time We very gooda friends. He grinned bio idly

And it was true For seven months Staff Seigeant Lee Nelson had lived within a few iniles of the gife it German for tress at Cassino — on cheese, crusts of bread, and his wits. The Nazis had almost stumbled over him time and again. From his mount in hide-

SERGI ANT NELSON enlisted in his home town Rockford Ill in June 1941 and asked for assignment to the Air Lorce His hobby was radio. In July 19,2 he was sent with the 12th Medium Bombei Croup to North Minca - one of the list outlits to go After considerable ser ice with the Desert Air Force, he was grounded for sevcial months by malaria. He began to fly again in Sicily and was shot down on his fifth mission Word that he was missing in action is as hed his mother the day after his father had died Sergeant Nelson recently came home, married the girl'in Rockford, and is on duty at a southern air base. When he gets out of the Army, he has been prom ised a job with his father s old firm, the Borg Wainer Corporation

out he had looked down on the vast panorama of the fateful battles for the Hitler Line, until the tide of the Allied advance finally swept past and set him free Savs Sergeant Nelson, very solemnly It was a crazy thing to have happen to a guy "

It was possible only because of Giuseppe, the little Italian faimer Giuseppe had spent years in the United States. When he went back to Italy, to take care of his aged parents he left his heart in America. And when Tate presented him with a chance to help an American soldier, he was overjoved. Let the Sergeant start the story.

"We were swe sting it out to Ponte Gorda that day I was radioman in a B-25 Around Cassino a lot of flak started coming up and the left engine was hit It squared flame, and soon the ship was aftire Over the interphone the pilot said, Abandon ship' so I put on my chute, got over to the hatch, waited my turn, and jumped

"And was that a loony jump! When I reached for the rip-cord handle, it wasn t there The parachute pack had broken loose and was flapping around in the air above me, the shroud lines slapping my face I hauled it down to me, found the handle and pulled So nething had gotten jammed, though and only a

little silk came out I had to feed the rest out with my hands I was falling pretty fast, by then, and doing omersaults like a trapeze artist. When the chute finally did take hold, the body straps almost cut me in half. Then I began to oscillate badly. When you recoming down fast on a mountainside covered with boulders, that s no fun. The ground came up and hit me with a bang.

"The next few hours were a bid dream I knew I was right in the middle of one of the biggest German military concentrations in Italy—with a battered inkle that hurt so much I couldn't wilk. No cigarettes, food, or anything the scramble in the plane had been so sudden I didn't know where the other fellows were I hadn't seen their chutes, I had fallen much faster on account of the delayed release, and apparently in a different direction. I was alone, all right, and I never knew you could feel so lonely

"Suddenly something moved against the horizon. Ankle or no ankle, I hit the ground like a snake—for the first of many, many times. But the four Italians had seen me and came up waving and shouting—its a wonder they didn't bring down the whole German Army on us. I hey half carried, half led me to a stone hut. With what little Italian I had managed to pick up in Sicily, I overheard them a guing in whispers about turning me over to the Nazis. I kept hearing the word 'dangerous'.

"And then this little guy, Churchill, walks in I couldn't ever pronounce his real name, so that's what I called him He has a big grin all over his face, and stretches out his hand

'Hello my friend, he says 'How are you' You gotte nothing to worry about no more I taka care of you' And he meant it!

GIUSEIPI and his two sons had been working nearby Giuseppe had lived on a comfortable little farin in the valley, but he was afraid the Germans would take his sons forforced labor, so they had moved to a shack on the mountain. When our planes came over that day he dropped his hoc and watched, as he always did waving his hands and cheering. He felt more American than Italian. These were his bombers.

When he saw a B 25 burst into flames Giuseppe stamped and cursed Live white parachutes billowed out Four slithered sides as swith the wind and down—right into a German encampment. The firth, after plum meting earthward for breath taking seconds, disappeared behind the mount in We must find him before the Germans do said Giuseppe 'He will be hurt. We must save him.'

From the first, Gruseppe embricassed the Sergeant with the intensity of his feelings. Donta you worry he declared. As a long as I hava crust of bread, this big? — his mobile hands made a microscopic essure — you geta half. You lika my son.

He was is good as his word. He took Nelson to his own shack at first, but it was dangerous to stay there in daytime. The Germans continually sent patrols into the mountains in search of livestock. So, in a well hidden spot, Giuseppe and his sons built a lean to for the Sergeant. It cost them their invaluable hoard of

wood and canvas, and Nelson objected Giuseppe waved him aside Itsa no Statler Hotel," he said "But itsa good and warin"

The Seigeant had narrow escapes Several times they almost stumbled over me," he says Once, uter my ankle was a little better, I had started out on a walk. That was about all I could do I had nothing to read, I d thought about most everything I could think about so I just had to look at the scenery All of a sudden I he aid German voices. I hit a hole in some underbrush — fist Along the trul came two krauts, each with a tominy gun in the crook of his arm. They were beating the bushes with sticks and every few minutes they d yell brain — to attrict the sheep in the neighborhood, I suppose In be tween they were having an agument about something, and of course they had to stop right in front of me to finish it. If one of them had so much is looked down at his feet during those ten awful minutes he couldn't have missed me. But neither of them did and they went on their way still playing sheep

I very evening Churchill would make sure that the coast was clear, then come up to my hide out and take me back to his hut Well—one evening a squad of Nazis appeared on Churchill's place. Somebody must have tipped them off about me Churchill was afraid that I d start out for his hut by myself and run right into an ambush. He did some fast and what must have been bitter thinking, God bless him! He had some sheep hidden away en a little meadow that the kiaut hadn't found. Now he started out up the trail,

pretending he didn t know the Germans were following him, and led them right to the flock While they were busy rounding up the animals he got away and warned me I spent that night in a ditch Churchill was a very solid citizen"

Giuseppe made that sacrifice as cheerfully as he did other things to 'make the Screeant happy" His tiny stock of cigarettes and the bits of food which his wife managed to sinuggle up from the valley were carefully divided Nelson's shoes began to were out Giuseppe found an old tuc, and went down into the valley for some nuls—a very dangerous sortic for him. I hus the Sergeant got new soles for his field boots. When it got cold, Giuseppe produced his highly prized greateout — a relic from the list wir. He wis very angry when Nelson suggested that he maght need it himself

Then the snow came There was danger the Serge int's footprints would be noticed. So the Italian who fortunitely had big feet, would walk theird. Nelson would tread enfolly in his prints. Its nuisince, 'Giu seppe apologized, 'but necessary'."

Time passed slowly for the Sergeant. He had been shot down on October 21, 1943. At first I made a scratch on my watch every day. That was when I thought I might be able to get away. But by the time my ankle was well, more and more Germans had come in The roads in the valley below were crawling with them all the time. Finally I realized that I digust have to wait. I did enough sleeping and thinking to last me the rest of my life. There was no work to do. The me adows where I might have

helped were all too exposed for safety It was Churchill who kept me from

going nuts"

In the evenings Giuseppe and the Sergeant had long conversations. The little Italian had worked all over the United States, in an amazing assortment of jobs — from stonemason to streetcar conductor.

"Itsa wonderful place, America," he would begin one of his dissertations, "itsa got everything! The trouble was, according to Giuseppe, that not enough Americans appreciated what they had "Now you justataka da scenery, for example he would say "You think itsa beautiful here Well, let me tell you In Arizona And Giuseppe was off on a travelogue Fiorello LaGuardia was one of his heroes You bringa him over, let i him run Italy Then you see somethings happen"

Giuseppe was convinced that the American system would work anywhere in the world 'It makes more people happy," was always his concluding argument

The Seigeant listened "Churchill's eves would get all shiny, his accent would get even worse than usual and he d fall all over his own words Every once in a while he d say— 'You understanda what I say' And I cert iinly did He was such a good American that he made me feel kind of ashamed of myself I hadn't ever thought about it very much, sort of took it for granted, I guess, the way most of us do Giuseppe taught me a lesson I'll never forget'

And then, one day, Giuseppe went all mysterious He dispatched one of his sons to tell the Sergeant to stay away for a night and not to come down until the following evening Nelson thought that the Germans were unusually active Actually it was Christmas and Giuseppe had planned a surprise When the Sergeant arrived at the little stone hut, it was decked out with greens Giuseppe had slaughtered a cow Mamma and some trusted relatives had arrived with a bottle of wine for the feast

Nelson was blue at first Christmas at home had always been his fivorite

day of the year

But Churchill was so happy," the Sergeant says, 'that I couldn't stay blue very long 'Some day soon, we have a real Claistinas again,' he d say 'You see Everythinga fix himself and we always be friends' He grinned that terrific grin of his, and the first thing I knew I was enjoying myself. They were all smiling at me By now I could talk to them a little in Italian, and it turned out to be one of the best Christmases I've ever had"

One morning in January, Giuschpe came panting up the mountain, so excited that he was shouting. The Fifth Army was advancing on Cassino But that excitement was short-lived. The sound of cannon-ading died away, the bombers stopped coming over, and the worst months of the war — for the Sergeant — started February, March and April dragged by Even Giuseppe's cheeriness was wearing thin

And then, in early May, the bombers started coming ag iin, this time by the hundred Giuseppe was beside himself with joy "Now we fix 'em! Now we fix 'em!" he would shout, thumping the Sergeant's back

At a new vantage point on the mountain they built a lookout post,

scarcely 75 feet above the main road that led from Cassino over a pass to the rear It commanded a magnificent panoramic view of the valley below. They watched column after column of gray-clad German troops pouring forward through the gap into the valley—reinforcements for the Hitler I ine.

By May 15, however, the rumble of gunfire was becoming louder and louder "Thatsa our artillery," said Giuseppe 'Lotsa guns we got Thisa very good!" The earth trembled as huge gusts of sound bounded from one mountain wall to the other and back again

'All day long," the Sergeant relates, 'he ivy-caliber shells from the Allied batteries whined over our heads, into the communications lines behind us. It almost drove us crazy—wanting to correct their fire. There was one bridge they were trying hard to get. I hey kept missing it by a few yards. Churchill would shout, as though they might hear him, 'Uppa 50 yards! Downa 30 yards! and pound my knee with his fist until it was black and blue. I was yelling too, like a kid at a football game. We certainly had sents on the 50 yard line.

One early drwn brought the pav off We had been in our foshole all night There was a peculiar lull Churchill was restless and kept peering into the dark trying to see something The first light started the guns going again, and suddenly Churchill grabbed me 'Looka there!' Looka there!' he shouted in what was supposed to be a whisper 'They'ra coming back!' And sure enough, on the load below us, the gray columns were going the other way — with the tired, hangdog droop of beaten soldiers. In the valley a dust cloud that spurted flame was coming closer 'That'sa us!' yelled Churchill

'All day the Germans kept pouring back over our road Churchill counted every unit as they passed I was aftend he was going to fall down the cliffinght into them, in his excitement Pretty soon they's alla finished,' he announced And sure enough, the first Allied tank soon nosed around the elbow in the road below us."

They shouted and hugged each other As they went down the trail which the Seigeant knew so well Giuseppe suddenly stopped. My friend, 'he said very solemnly, I always tella you thata we win '

He put his hand on the Scigcant's shoulder You come back next September,' he said Excithing the tipe then We have a big feast!

Vow Farmers Grow Fish

neveropth at addscheap and mater ou arrety to the farm family smeals

Condensed from The Progressive + Holman Harvey

aged by Government experts raised a crop of fish This year, many more will build and stock fish ponds, for the advantages of this new side line in farining are fast gaining recognition in many states. The fariner gets 200 to 300 pounds from each acre of pond. The fish are fat and sweet, sometimes tipping the scales at six or eight pounds, and it costs no more than ten cents a pound to raise them—cheaper than chicken or meat. They add wholesome variety to the diet of farm families.

The astonishing production records attained in fish fairning are based on three discoveries

1 In any given controllable body of water, a ratural, balanced 'food chain' can be set up which automatically provides its fish population with enough food to live, reproduce and grow to usable sizes

2 Any increase in the number of fish, without a corresponding increase in the food supply, simply results in reducing the average size of each fish in the pond

3 By fertilizing the water, the food supply can be stepped up to support larger numbers of fish, just as pasture land can be fertilized to increase the poundage of meat or of milk per acre

It is mpossible to "fish out" a pond that has been correctly stocked

and regularly fertilized No more than half of the fish can ever be caught with hook and line, the remaining half, left with twice their former food supply, simply stop biting for a few months until their number builds up and their food becomes scarce again

I have just made a 1000 mile tour through South Carolina, Georgia and Alabama, visiting scores of farms with fish ponds. Most farmers were outspokenly enthusiastic

O W Coleman works his own 1400 acre general farm in Saluda County S C After his day's work, Coleman often strolls down to his fish pond for relaxation

"I get a big kick out of that little pond 'he said "Maybe I'll only fish her for half an hour, but I can always bring back something tasty for supper She's chock full of fish, the other night I weighed one in at better'n six pounds"

Judge Raymonde Stapleton of Elberton, Ga, has pioneered with a model pond in a region all but bereft of natural fishing waters. Three families living on his farin supply their tables with fresh fish, and Judge Stapleton himself has caught 100 bass and several hundred sunfish in the past year.

A valuable by product of these farm fish ponds is recreation. The family has fun fishing and swimming,

and many a farmer sells fishing privileges to individuals or clubs for a nice cash return Sixty families in Auburn, Ala, pay \$10 a year each to maintain a 12-acre pond Last year they caught 3000 pounds of fish

Two pertinacious scientists at the Alabama State Agricultural Experiment Station are chiefly responsible for removing the guesswork from 'sh farming H S Swingle, fish culturist, and F V Smith, botanist In joint research since 19,5, they have learned that any ordinary chemical fertilizer placed in the pond will almost immediately increase the production of microscopic plants and anim ilcules known collectively as plank ton Insects feed upon the plankton for igo fish feed upon the insects and then luvie, and finally, curaisorous fish feed upon the swirming young of the for ise fish

Within a few days after the first application of fertilizer, the water takes on a delicate sea green opales cence from the myrrads of plankton later on, it should become impossible to see more than ten inches below the suiface. If the farmer can see his hand a foot or more down, it is time to add more fertilizer. No other test as needed. The plankton, by the way, prevents the fish from seeing the fisherman or his boat.

Weed growth largely dies away as plankton-filled water shuts off the infiltration of sunlight. Pond lilies and weeds which send large leafs surfaces to the top must be destroyed by lopping off their tops, for they afford concentration to small fish which throws the ponds food chain out of balance. Incidentally, when there are no weeds, fish devour the

mosquito larvae, thus helping to eliminate the pests

The bluegill sunfish (or bream) is the perfect pond forage fish for the southern states It multiplies fast, and is good to eat A fertilized pond will support a large number of adult sunfish weighing around half a pound, an ideal size for frying From one pond I caught 15 in 30 minutes—about as fast as I could bait the hook

A new pond, after fertilizing, is stocked with exactly 1500 sunfish fingerlings per acre. During the first year each pair of sunfish will produce about 4000 young Unless these new fish were held down in numbers, there would be, within a year, 3 000 000 little sunfish per acre Here the carmivorous fish enters to complete a stable food chain. The choice for the southern regions is the largemouth black bass, a hardy, fighting fish For every 1500 sunfish 100 bass fingerlings are stocked I ewer bass may fail to keep the sunfish population within bounds more may annihilate it entirely

One ve it after stocking, a pond is usually supporting the maximum weight of fish for the available food which means in a well fertilized pond as much as 500 to 600 pounds of fish per cre. Of this total weight, between 130 and 200 pounds per acre will be bass—three to four times as many bass as the best natural lake you ever fished

I entilizing will likewise increase the fish crop in natural waters B W Laylor of the Department of Gaine and Fisheries in Quebec, heard of the Alabama scientists' work and began experiments in 1943 which proved that speckled trout in Canadian lakes

THE READER'S DICEST

would double in weight in a year when fertilizer was scattered in the shallows

Our farmers get fingerlings free or at a nominal charge from state operated hatcheries, or from the U S Fish and Wildlife Service if their applications are endorsed by the U S Soil Conservation Service The SCS gives the farmer advice on the se lection of a site and the best methods of constructing his pond. If the farmer does his own work with his own tractor or mule, he can build a one acre pond for from \$100 to \$200

As more farmers learn that they can produce a cash crop merely by flooding their marginal land, it is expected that thousands of new ponds will be built

The Man's Glossary of Unfamiliar Words and Phranes

As Used by Advertising Writers to Describe Female Apparel and Apparel names

negligee — What she hopes shell have on when the house burns down

The Travel Lure of a 60-Hour World

LREADY thousands of would be travelers are enthusiastically window-shopping for a trip abroad soon after V Day More than 500 requests are on file at the Hollind America line for space on the Nieuw 1msterdam's first postwar sail ing On the day Paris was liberated, the Irench Line's New York office received 400 requests for passage to I rance Pan American Airways estimates that in the typical postwai year 233 500 passengers will go to Furope, and it has a tentative schedule of 36 ti insatlantic departures weekly to handle its share of the rush

It is uncertain how soon after the war we shall be able to go abroad, but the State Department was issuing tourist passports six months after the 1918 armistice. Priorities this time will be given those engaged in urgent postwar reconstruction work, next, businessmen working on rehabilitation projects, and refugees who are anxious to get back to their homes

A preview of your postwar touristor opptunities — the planes you'll take, the places you'll go, and the shrinking cost

Condensed from The Rotarian Deena Clark

Then passage permits will go to naturalized American citizens who may be worried about relatives or property in the old country. These passengers will travel in the same troopships and bucket-seated air transports that bring our boys home.

The most important factor in the prospective postwar travel stampede is of course, the airplane Formerly thousands of Americans were barred from vacationing abroad because ships took five days or more to cross and an equal time to return, thus using up most of their holiday After the war, a stenographer will be able to leave I riday after office hours, spend two weeks shopping on the Rue de la Paix and board a Sunday night plane that will return her to her typewriter on Monday morning Surveys show that trips to England will be most sought by the first postwar travelers, with II ince next and the Mediterrinean countries third

The planes now spanning the Atlantic in routine flights at the average i ite of one every 20 minutes prove that a postwir "commuter service" by air to all countries is practicable. And rates will be so low that a man can take his wife and children to Europe as inexpensively as they formerly traveled at home.

Several air lines have drawn up tentative rates and schedules TWA is even now converting five 36 passenger 'Stratoliners' for peacetime use Pending approval of the Civil Aeronautics Board, they will in au gurate daily flights to I ondon it a fare of \$263 80, in 22 hours and 40 minutes TWA has also ordered 40 Lockheed "Constellations, 57 pissenger transports which will later take us from New York to London in about half that time for \$195

American Airlines expects delivery of thirty 56 passenger Douglas DC 6 s by June 1945 and Pennsylvania Central Airlines is buying fifteen 48 passenger DC 4 transports for New York-to-London flights Pan American Airways expects delivery in 1945 of luxury liners that will enable its timetable ultimately to read Two express flights daily between New York and London at \$267 round trip

Most travel officials expect a post war boom in trips to Russia North east Airlines Northwest Airlines Pennsylvania Central Airlines and Pan American all plan flights to Moscow son e of them for as low as \$290

Hawaii will be among the first tourist targets. Five major air lines are competing for the sky route to the Islands pushing the passage price down to the level of the prewar steam ship fare. Pan American plans two 128-passenger flights daily which will bring Aloha Tower within eight hours of the Golden Gate at a cost of only \$96 per passenger.

Right now you can fly to Alaska, with its magnificent, unexplored will derness and its fishing and hunting possibilities, on a regular PAA sched ule from Seattle to Nome at a fare of \$421 20 round trip IWA plans to take us from Chergo to Nome in 17

hours, for \$232 Northwest Airlines will offer competition at 48 cents a mile

Spending less than a nickel a mile for passage you can fly the Andes to the sportsman's paradise of Chile, where there are streams that yield 27-pound rainbow trout, and 3000 miles of ski runs univaled even in Switzerland. The proposed PAA schedule will cut the present one way fare from New York to Rio from \$489.50 to \$175, and the flight time from 91 hours to 21

Pan American thinks that the demand for passive to Germany will justify two 17 hour flights a day to Berlin, round trip fare \$216 Round trip to Jokyo in 1948 will be equally mexpensive and Jujiyama will be within 30 hours of New York. The flight from San Jainersco to Singa pore will take 29 hours—the fastest seavoyage used to take 29 days.

Complete round the world trips by tourist plane can be an early actuality in new super airships which will compress the whole world into 60 hours of flying time. Three major in lives have applied for globe circling routes Anierie in Export could in rugurate service on V Day plus 1, with two 20 DASSCHEEL Hyme Aces American has scheduled a 30 day, slobe girdling all expense cruise, in cluding hotels and sight seeing, which will cost approximately \$900 Pas sengers will travel at 300 miles an hour in confortable, 153 passenger Clippers, delivery of which is expected in 1946 IWA plans 1 27-day de luxe an cruise with only three days spent in actual flight, the rest of the time will be used for sight seeing

Come peace, it will take only three

to six months to produce the new time-slashing planes. Douglas Aircraft has already received 50 million dollars' worth of orders from three iir lines to be filled as soon as mate rials are released by the War Production Board.

Glenn Martin, president of the company which bears his name, fore-secs 100-passenger planes with private baths and showers, personal ship to-ground communication, a radioom, cocktail bar, gameroom for quoits and table tennis a writing 100m equipped with a ticker tape news service, a library, and on the afterdeck a plexiglass observation lounge Pressure control in the cabins will eliminate discomfort regardless of altitude, while developments of radia will make for great safety in flying and landing

Where time is not a controlling factor, ocean travel will return its allure Floating-mine disaster stories left over from the last war will be no deterrent to the vacation parade. The fact is that there is no case on record in which a tourist ship ran into

a floating mine And our first ships will wear degaussing belts as protection against magnetic mines

An American Express official states that the first seagoing tourists can count on tramp trips in small ships of the Liberty class about eight months after the war is over For the comfort-loving traveler, pleasure cruises to Fingland and the Mediterranean will be ready in approximately a year, to the Continent in 18 months Scandinivian cruises can be resumed practically simultaneously with the close of the war. The Swedish-American I increports that all cabins have been asked for on its first tourist sailing

Attractive plans for buying trips on the installment plan have been worked out Thousands bought deferred payment trips the year before the war on the basis of a 25 percent initial payment and the remainder in 12 monthly installments after the 16 turn home Travel agencies are not yet accepting passage money, but they do keep priority lists, which are increasing in length every day as the dammed up demand for trivel mounts

When Migicians Meet

RECENSEY Dunninger, who likes to be known as "the anister mentalist called on Blackstone, who doesn't mind being known as a plain magician. When Dunninger arrived he found the great magician ran sacking his bedroom for his white the You're the great mind render." Blackstone finally exploded, "Suppose you tell me where I put that the."

Dunninger concentrated "It's in that box, ' he said

Blackstone hurriedly went through the box, found a tie which he held up scornfully "You is a fine mind reader," he said. It's black?

Dunninger shrugged 'If you're any kind of magician, he answered, 'you can change it into a white one"

- Harriet Van Horne in N Y Borll I I gram

e Teach Our Children to Pray

Condensed from Better Homes & Gardens

O K Armstrong

rest on the buffet of our dining 100m They are our "props" for family prayers They help make possible what the children call "God's minutes"

Those minutes are not long — seldom more than five But they are important. They stand for daily recognition that there is a Power greater than we, a heavenly Father who is kind and good to His children.

My wife and I both were reared in homes where prayers were said. When the children came along we thought prayers would be a good thing for them, too, but we couldn't find the right routine. My work at first was teaching and writing, then holding public office. There was il ways something to do at night—meetings to attend, work to finish, social engagements. We taught our children the "Now I lay me" prayer and let it go at that

O K ARMSTRONG is a writer and public official. He has served three terms in the Missouri House of Representatives and he helped organize the Council of State Governments in various states. For ten years Mi Armstrong was chairman of child wel fare for the American Legion of his state Author of several books and numerous magazine articles he is especially well posted in governmental organization interstate cooperation and juvenile delinquency

The first two boys grew into husky lads. The little girl, Sister, was progressing in school. The last two boys were ready for kindergarten. All were dutifully enrolled in Sunday school. Still we weren't getting anywhere with their spiritual training. Half-heartedly we experimented with diavers at various times of the day. It was difficult to find a time when the family was all together. Before school there was the rush of brushing teeth and gathering up books, after school there were music lessons, games and what not. We give up

Then a bolt of lightning brought us suddenly to an intense appreciation of our blessings. The two older boys were doing summer work, packing blackberries in a small community cannely A storm came up Lightning struck the building and stunned everyone there Although no one was seriously injured, the realization of how close the beys had come to death brought to my wife and me an overwhelming sense of thanksgiving that they were spared Perhaps it was just the workings of chance, we found it easier to believe in the hand of Providence We said sonic extra thanks at our evening incal and next day decided to add a bit of Scripture read-

"We sing at church Why not sing

before our pravers?" Sister asked Good idea I dug out some old Homer Rodeheaver records We added other transcriptions "I need Thee every hour" and "Blest be the tie that binds" are favorites

After the song, comes the Scripture Maybe it's only a verse, perhaps a short chapter Then the prayer Sometimes it s the Lord's prayer, all together Sometimes an older boy will lead Or the tiny tieble of one of the little boys will startle us into hidden smiles as he thanks God for "the wichies and taters we got for supper " Whatever the prayer, it's spontaneous, and it makes God a sort of partner for the household. It breaks down barriers that so often keep a father or mother from mentioning the most fundamental fact in any child's life the existence of a Creator

God's minutes take only a tiny fraction of the busy day, but they have brought us a new sense of family closeness. Troubles seein easier to forget Anger cannot outlive a verse of song. Worry fades when we come upon the lines "Seek ye first the king dom of God, and His righte ousness and all these things shall be added unto you"

We ve passed on the idea to numerous friends Professor and Mrs Blank over at the college, with two girls in high school, find breakfast-time the best Mike, widower night watchman, has a good night praver with his six children before he goes to work We'll never know how many have copied our plan A visiting minister was so impressed he went back to his home parish and started a crusade for family devotions

At first we felt some embarrass-

ment when we held prayers with guests present Now it seems like an added note of hospitality Politicians, businessmen, teachers—all pause with us while we recognize the presence of the constant Guest As the phonograph began the hymn "Beulah Land" one evening, our dinner visitor, a noted manufacturer, burst into a roaring baritone "Sing it again!" he shouted on the last note "I haven't heard that since I was a boy!" A criminal-court judge seriously told us "If all families had prayers I wouldn't have much to do"

The brief Scripture reading, we've found, adds up to a lot of Bible knowledge as the days merge into months and veirs. We've learned many favolite passages ' by heart ' — the first Psalm, the shepherd Psalm, the Beatitudes the cighth chapter of Romans, and St Paul's marvelously beautiful words on futh, hope and charity in First Counthians Children, we have discovered are just as interested in Bible stories with their deep spiritual meanings, is in any others. David and Goli 1th, Joseph and his brothers, feeding the five thousand, the lime man at the be jutiful gate — all have new significance for us

Several publishers have brought out helps for family prayers, such as "The Upper Room" with its daily Scripture lesson, comments and prayer, all requiring only a few minutes. The Catholic Church has long provided helps for private devotions A rabbi assured us that Jewish families could secure similar guiding pamphlets. Thus prayer becomes our spiritual common denominator.

Our young people face a future sure to be hard and trying Great

problems will rest upon their shoulders. Not employment alone, nor liberty nor opportunity alone, will see them through. The character and moral strength that are built by communion with God will be essential for the supreme test.

One of our older boys is in the Navy now, and the other plans to grab his high school diploma and rush off to the Army We are glad they have learned to pray They carry with them an ideal that someday they and thousands of their buddies who fight the good fight can return and help build a brotherhood of man so strong and just that wars will be no more And whatever dangers they face, we know there will be with them a Presence, and a Voice saying, "Be of good courage! If God be for us, who can be against us?"

Where to Bury a Dog

This editorial by Ben Hur Lamp nan is one of the most popular which ever appeared in the Portland Overgomian readers have asked a air and again to ha e it reprinted

A SUBSCRIBER of the Ontario 11, us has written to the editor asking 'Where shall a I bury my dog?"

We would say to the Ont irio m in that there are various places in which a dog may be buried. We are thinking now of a se ter whose coat was flunc in the sun shine and who so far as we lie awate never entert uned a me in or an unworthy thought. This setter is buried beneath a cherry tree, under four feet of guden loam, and at its proper season the cherry strews petals on the green lawn of his grave Beneath a cherry tree, or an apple or any flowering shrub is an excellent place to bury a good dog. Beneath such trees, such shrubs, he slept in the drowsy summer, or gnawed at a flavorous bone, or lifted head to challenge some strange intruder. These are good places in life or in death. Yet it is a small matter. For if the dog be well remembered if sometimes he leaps through your dreams actual as in

life cycs kindling laughing, begging it must is not it all where that dog sleeps. On a hill where the wind is unrebuked, and the trees he round, or beside a stream he knew in puppyhood or some where in the flatness of a pasture land where most exhibitating cattle grave. It is all one to the dog and all one to you, and nothing is gained, and nothing lost—if memory lives. But there is one best place to bury a dog.

If you bury him in this spot he will come to you when you call -- come to you over the gram dun frontiers of death. and down the well remembered pa h, and to your side as an And though you call a dozen living dogs to heel they snall not growl at him nor resent his coming, for he belongs there People may scoff at you who see no lightest blade of grass bent by his footfall who hear no whimper, people who may never really I ave had a do. Smile at them for you shall know something that is hidden from them, and which is well worth the knowing. The one best place to bury a good dog is in the heart of his master

- Ben Hur I am min Him (uld I Be I ing thing (Binfords & M rt)

WILD WISDOM Selected by Alan Devoe

Prize Winning Letters - V

THE WISDOM of wild creatures differs from our 'rational intelligence' by being largely intuitive but it has long amazed outdoors men The following observations are selected from hundreds sent in by readers

Teddy-Bear Guide

IN THE Interior of New South Wales I found a baby koala that had been lost by its mother (The koala is a funny, furry little animal that looks like a Teddy bear) I idopted him, fed him, and soon he became my devoted companion on jaints near and far

One day, in the interior, I was caught in a bush fire which came roaring upon me with terrifying speed. I flung myself on the ground, breathing what little oxigen was still left close to the earth. I was sure my last moment had come. Then I became aware of the koala. He would run up to me, nip my clothes, then run off a little way. Dazed as I was, I sensed that he wanted me to follow him. In a few hundred feet we came to a small lake which I had not known existed. I plunged in, the koala riding on my shoulder. During the hours that the fire raged we stayed there. I dunked my self and the koala completely whenever the heat became.

But for the wisdom and the faithfulness of that little bush bear I should not be alive today

Turtle Tactics

NEAR a friend's house in California, in the bed of a dry creek, live two desert turtles which have practically become pets, since my friend feeds them regularly. The turtles special passion is lettuce, and their host's immons them to the feast by beating on a tin pan. The other day he invited me to see them in action

At the sound of binging on the pin the two turtles came forward at what was—for turtles—a racing gallop Neck and neck they diew ne ir the coveted lettuce Suddenly, when they were only a few feet from the prize the larger turtle swerved and with an expert gesture thrust his head underneath his competitor and flipped him neatly over on his back. Then he

came racing on and began devouring the dinner
At least a third of the lettuce was gone before
the outriged victim of this stroke of turtle
genius could kick and roll himself over onto his
feet again

Last Testament

A STRAY CAT that had reverted to the wild, as cats so easily do, stood at my door and mewed. I tried to coax her in, but she continued to look into my eyes, imploringly. She would accept no milk. Mewing, looking back at me, she began to walk away.

I felt a little foolish, but I followed her She led me to the havloft of an old barn where, deep in the hay, four tiny blind kittens were hidden

This seemed very strange — cats usually go to any lengths to conceal the whereabouts of their kittens. So the next day I visited the little family again. The kittens, frantic with hunger, were trying to nurse. But their mother

lay still in death, her cold body flung protectingly beside her babies Then I understood Nature had told the mother that death was coming, and with her last strength she had

made sure that someone would care for her httle ones — Anna Nielson

🖖 👈 Field Operation 🏃 🛪

DURING the Metz offensive, Pvt During N Kinman a 19 year old medical aidman of the Fifth Infantry Division, performed an exceptional feat of battlefield surgery Kinman a former automobile mechanic of College Place, Wish, was with a company attacking Louvigny when he saw a rifleman fall. He rushed to the stricken man, who was thrushing about in great pain and gasping for breath through a windpipe gashed by a shell fragment his face had turined blue, and he apparently was suffociting

Medical aidmentaire not surgeons, but in desperation Kinman decided to perform an operation he had heard described a year before during his basic training. He had no anesthetic and no instruments except his pockethnife. Needing some type of tube to keep the windpipe open after the throat incision had been made, he borrowed his patient's fount in pen

Second I t Edwin M Ebeiling came through the hail of michine gun and mortar fire to hold the rifleman steady while kinman prepared to make the incision. The private tried to quiet his patient who was protesting physically but could not speak, with, I don't like to do this, but it's the only way vou're going to live." Then, while mortar shells crashed on all sides the young medic started an operation that m iny surgeons would hesitate to perform under perfect conditions

It was necessary to make a longitudinal incision, because the slightest slip during a literal incision would have endangered the jugular vein After opening the throat below the wound, Kinman felt for the windpipe, made an incision and slipped in the top end of the fountain pen At once the patient started to breathe freely and color began to return to his face 'Keep that fountain pen in your wind pipe and you li be okay,' Kinman told him. You can the through your nose or mouth but if you keep your wind pipe open you can breathe through the cut I just made.

A lew minutes later the rifleman was on his feet and wilking between the 'surgeon' and anesthetist' to a tank. At the battalion aid station, the surgeon, examining the result of the operation with amazement, said that he could not improve on it. The next stop was a clearing station where the astonished surgeon only removed the fountain pen top and inscrited a tracheotomy tube before the patient was removed to an evacuation hospital

Kinman, who was promoted to a tech nician, fourth grade for his feat has been offered a free incdical education at West crn Reserve University "Golly," the delighted medic said upon hearing of the offer "that's just what I wanted to do all my life — (in Curivan in N) I Image Robert i ichir's UI dij itch

The Perfect Memorial

The Washington Monument --1 Finger Pointing to the Sky

(ondensed from The Kiwanis Magazine

Donald Culross Peattre + +

THE Washington National Mon ument is not only the tallest memorial in the world but one wholly perfect. It is perfect in fulfilling the Greek ideal of beauty, which is strength combined with grace. It is perfect in its proportions, which ie veal the secret of the Egyptian obe lisks, the height, 550 feet being just ten times the base of 55 feet square And it is perfectly appropriate. In its soaring integrity, it is a 'speaking likeness of the man it commemorates It speaks to us of Washington s clear and lofty ideal for his country It speaks of a man, four square and upright who swerved as little in ad versity as would the Monument it self, its 81,120 tons embedded deep in the earth Sii Cecil Spring Rice,

British Ambassador to this country during World War I, called it 'George Wishington's finger

pointing to the sky '

The monument lifts the eyes up, like a shining peak. Its head is lost in the clouds sometimes. when the winter sky comes low, on a fair spring day it flashes like a blade Visible from the White House, the Monument has been the inspiration of harassed Presidents since it was completed in 1884 Cleveland, surrounded by slander and intriguc, testified that he drew courage and faith from

its noble serenity. One

could wish that everybody in the Government daily measured himself and his work by that great standard in stone

Unlike the Great Pyramid of Cheops, built by slave labor at ruthless cost of life to gratify the vanity of a living king, the arrowy Monument was raised, without accident, by a free people in memory of the man who set them fice Over 200 of the blocks inside the hollow shaft are in scribed as specific gifts of the peoples of this nation and of foreign govern ments proud to honor George Washington The stone given by Greece, from the ruins of the Parthenon, com pares him to Pericles The Furkish stone displays, in a strange script, an

ode upon Washington by the Sultan's court poet America's states and towns, lodges and schools gave stones as large as those from the King of Sim and the Emperor of Brazil

Many a patriot with a stout heart muscle has climbed the 898 steps to the lookout win dows at the top But most of the millions of sightseers have pre ferred to ride up and, till the stairs were closed for the duiation, many liked to walk down

Probably few of them know these odd facts about the Monument That it was once a "leaning tower" That hundreds of persons

have stepped over its tip That it some times rains inside when the sky out side is clear. That it ended a danger ous political party and caused in directly the death of a President

The rain is due to the condensation of moisture inside the dank shaft, so that attendints need raincoats and rubbers. The Monument's history explains the other curiosities In Major L'Enfant's plan for the city, a bronze equestrian statue of Washington was to stand on this spot, but the General opposed the cost while he lived Then Chief Jus tice Marshall proposed a muble tomb instead Congress dallied finally George Watterston formed the Wash ington National Monument Society, and Robert Main the architect won a competition with his de ion for an Egyptian obelisk to surmount a come Babylonian shrine which in turn would be balanced on a circular Creek temple. Thanks to George P Marsh distinguished American dip lomat this appalling plan was sunplified into the present cloud pricking ncedle

On Independence Div 1848 the correstone was laid with the same trowel that had comented that of the White House Two veirs later during July Fourth ecremonics at the shadeless foot of the unfinished Monument, President Zachary Taylor drank so many pitchers of ice water that he died five days later

Slowly the Monument climbed

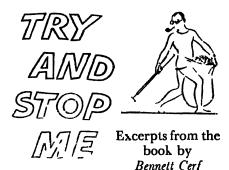

In 1854 Pope Pius IX sent for it a block from the Lemple of Concord in Rome which was smashed, one night, by masked men with sledge hammers. I hese were rabid anti Catholics of the Know-Nothing Party, then so strong they had a candidate slated for the Presidency. Their vandalism caused in international uproar—and helped to bring the Know Nothings to discrace and oblivion.

The Civil Will stopped work on the Monument nd when it was icsumed the next tiers of marble did not exactly match the rest in color, which explains the ring on George Waslangton's frager Army engi neers finding the the Monument had settled out of plumbegot a new concrete slab under it and trued it up. As the work neared completion, a solid iluminum tip was cast, 8**9** inches high and werehing too ounces When this was exhibited in the castcin scaboud cities hundreds of schoolboys bestrode it in order to boast they had stepped over the top of the Washington Monument

In 19,1 the Monument was crubbed for the first time with steel brushes, and and water. During that time, the story goes a departing Republican saw from his train window the large steel scaffolding elected around it mixing in New York he dashed to his party's headquarters.

I hat Man in the White House," he cried, has got the Washington Monument all crated up and is planning to ship it to Hyde Park!"

Fry and Stop Mc is a 371 page collection of incidotes mostly humorous dedicated. Fo all those people whose with or lack of it made this volume possible. Bennett Cerf has always had be says a useless knack for remembering nurelated since dotes about unrelated people. In his book he presents the best that people have ever palmed off as their own.

Many of the items included in the book have appeared in Mr. Cerf's lively column Irade. Winds a weekly feature of The Saturday Review of Literature.

One of the sharpest with in the theater is the property of Beatrice Lillie. The only time her sang froid described her be hind the footlights was at the final per form ince of The Third Little Shou Howard Dietz bought the entire first row or chestra that night and distributed the tickets among mutual friends of Bea Lillie and himself. She was in the middle of a solo number when by prearranged signal everybody in the row bent down and donned long whiskers - bright green, red pink zebra, plaid and polka dot The sight was too much for Bea Lillie She stopped in the middle of a note pointed helplessly at the solumn first row and ran howling to the wings By the time Dietz reached her dressing room she had regained control 'Nobody can appreciate my voice anyhow," she said 'when I sing above a whisker"

When Dietz was publicity chief of Metro Goldwyn Mayer he was once bawled out by his boss, Louis B Mayer, because he got to his desk too late every morning "But you seem to forget, Mr Mayer," said Dietz, "that I also leave early every afternoon" By the time Mayer figured it out, the crisis was over

In London, Liddell Hart said to Ber nard Shaw, "Do you realize that 'sumac' and 'sugar' are the only two words in the English language that begin with 's u' and are pronounced 'shu'?" 'Sure," said Shaw

ග

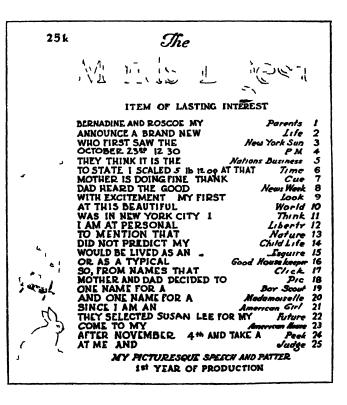

MAYOR LAGUARDIA, of New York, presides occasionally in Police Court One bitter cold day they brought a trembling old man before him, charged with stealing a loaf of bread His family, he said, was starving "I've got to punish you," said LaGuardia "The law makes no exception I sentence you to a fine of \$10" But the Little Flower was reaching into his pocket as he added, "Here's \$10 to pay your fine And now I remit the fine" He tossed the bill into his famous

sombrero "Furthermore" he declared I m going to fine every body in this room 50 cents for living in a town where a man has to steal bread in order to eat. The hat was passed and an incredulous old man with the light of heaven in his eves, left the courtroom with a stake of \$47.50

MIYER LEVIN tells this tory about a little eight year old girl in a Pennsylvania orphan asylum She was a painfully un ittractive child, with annoying man nerisms shunned by the children and actively disliked by the teachers. The head of the institution longed only for a legitimate excuse to get her out of the place

One afternoon it looked as if her opportunity had arrived The girl's roommate reported that she was conducting a clandestine correspondence with somebody outside the grounds "Just a little while ago" she reported, "she took a note out and hid it in a tree" The head of the asylum and her assistant could hardly conce il their elation "We'll get to the bottom of this" they agreed "Show us where she left the note" Sure enough they found it in the branches of the tree To whoever finds this I love It read v ou

A reader tho received the announcement forwarded it to the Digest

ster, aged ten, his black eyes snapping, "I'll tell you how it happened We Youthbuilders were talking about how voting is part of democracy, and then somebody said that there were quite a few grown people in this district who might not be able to vote—"

"Because they couldn't pass the lit er-acy test!" said Sholem, another ten-year old

"So, 'said little dark eved Iclicia, "Demos made some posters'—she pointed to the tallest boy in the excited group around me—"and we put them up in stores and places"

"You see' Demos explained, "at the voting places they ask some funny questions, about the Constitution and things like that — so our posters said, 'Are You Sure You Can Pass the Literacy Tests' If You Want Help Come to Room 105, Public School No 96, Any Day After 3 p m'"

"Did many come?" I asked

"Oh, yes!" said Joel "And we and the teachers coached them, and then they could vote"

Here was young citizenship in action And it wasn't school — it was fun!

Condensed from Future

Webb Waldron

P S 96 is but one of more than 150 New York City schools in which groups of children calling themselves Youthbuilders are reaching out of the classroom into life and proving that the average child has a drive to be a good citizen

At a junior high in lower Manhattan, the Youthbuilders is alred that an alarming number of kids their own age were roaming the streets at night, buying illicit sex literature, getting into dice games and petty theft. With the teachers' help, the Youthbuilders called a community mass meeting. Parents, policemen, social workers and children spoke their minds. Patrolin in Wasselewsky told how he was trying to fix up in unused church as a recreation center for the children on his beat "But I need help," he said.

"Why shouldn't some of us help supervise such places every day?' asked one mother Many parents volunteered So recreation facilities in the district were more than doubled, and the children got off the streets

The spark which set Youthbuilders on its way came from pietty, blueeyed, dynamic Sabra Holbrook, wife of a New York advertising man and mother of two lively young daughters When Sabra was newly graduated from Vassar, she had gone to Bosten to work with underprivileged children A thing that startled her was the sharp division in the minds of children between school and the world outside. Why couldn't school have nore to do with life and thereby give shildren some part in their own education?

When Sabra married and came to New York she had a chance to talk with a group of junior-high school students. They were bubbling over with ideas about democracy, politics, the community, crime, gangs, their parents, their own future, everything!" she sives 'But they seemed to have attle time or encouragement to express these ideas in school, and certainly no chance to put any of them into action."

Mis Holbrook got permission from the Board of Education to organize discussion groups at a few New York schools after hours, with volunteers as leaders. These groups not only talked but sometimes were able to act on their ideas. When the New York City school system decided to let Sabra Holbrook go further, she organized Youthbuilders, Inc., with New bold Morris president of the New York City Council, as chairman of the board of directors.

For a time she operated in a cubbyhole office with one assistant, her expenses paid out of her own pocket and the contributions of a few interested friends. Then a zipper manufacturer, Louis Rabinowitz, turned over to her a large part of one floor of his building. The New York Rotary Club—the Brotherhood of Sleeping Car Porters, John Golden, the theatrical producer, Newbold Morris and others have chipped in to help with expenses She herself has given her energy to the enterprise for six years without pay

Fundamental in Youthbuilders is the teacher-leader for each club Sabra Holbrook picks the leaders carefully they must be interested in children, respect children as individuals, and must be gluttons for work Each Youthbuilder club meets for an hour once a week on school time, but its activity spreads far beyond that hour in time and space, and the leader must go along, advising, directing, encouraging Leaders get no extra pay Their sole reward is the satisfaction of doing a pioneer job

Youthbuilder clubs consist of 25 to 40 children All are volunteers, but the leader attempts to get into a club many divergent elements of race, faith economic status, and intelligence levels so that it will be a true cross-section of its school

At one junior high the Youth-builders were discussing racial and religious discrimination 'Is there any of that in this school?' the leader asked Yes there is!" cried one child 'In the lunchroom, we all sit separate 'It was true Jewish children sat by themselves, and so did Catholics, Negroes, and other special groups

That, the Youthbuilders decided, was wrong They asked the principal's permission to start an Honor Table, at which a student would sit by invitation There were 35 different national backgrounds represented in the school and half a dozen religions, and the club invited a rotation of races and religions to the Honor Table Many friendships formed across

Be Your Own Boss!

Another installment of ideas for new enterprises in the Digest \$25 000 contest

Part-Time Accounting Service A San Francisco woman, Genevieve L Herrill, has built a service for small businesses which might be duplicated by an experienced man or woman accountant in a thousand cities and towns Starting with the idea that many businesses cannot afford a fulltime accountant, and found it difficult to keep up with social-security and income-tax regulations, she rented desk space and offered a part time accounting service. She serves seven clients — a small oil company florist, a geologist, a small steamship line, and three manufacturers

Her fees are from \$25 per month. to \$25 per week depending on the service rendered For the larger fee she spends about an hour every day it the client's office, for the minimum charge she devotes one dry a month, checking the client's books, and an swering inquiries by phone when income-tax or social security problenis arise. Her monthly earnings over four years have averaged between \$500 and \$600 To get husiness, she simply had to ask for it While she could handle four or five more accounts, she prefers to use part of her time to take courses to keep her up-to-date in accounting practice and Government regulations

Fair Machine Shop C J Carlson, owner of a 300 acre farm in Marshall county, Iowa, operates a "back-yard industry' that keeps him his hired man and his neighbors busy on rainy days and during the winter. In his well equipped machine shop on his firm he makes at achiments for farm implements, builds farm machinery of his own invention, and does repair work for farmers who come to him from inites around.

In the winter of 1943, for customers who believe the coin cultivator is easier to watch in front of the tractor than behind it he built 112 cultivator attachments to fit the front end of I ord I orguson tractors. He has orders for many more

Six neighbors are using low, twowheeled trailers, built by Carlson to haul hay, grain bundles, coin fodder or livestock. The trailers are so constructed that they are much e sier to load than the ordinary hayrack. On a rair y day, cars of a dozen farmers often wait in Carlson's yard for machinery repairs.

Carlson may be setting a pattern for many faim boys who will come back from the aimed services with highly developed mechanical skills. Certainly there is plenty for a faim shop machinist to do in a typical rural neighborhood, judging by his experience

— John A Rohlf A citte Editor Farm Journal and I timer's Wife

Bachelor's Laundry Noting that Mrs Anna M Miller, a public stenographer and telegraph operator in a

Kansas City, Mo, hotel, augmented her income by doing mending for male patrons, a customer suggested that she start a laundry serving men only, and take care of their mending and darning She started with one employe and \$50 borrowed from a bank Her "Bachelor's Laundry" grew steadily until today it is a substantial enterprise, handling over 100,-000 bundles yearly, and serving 5500 patrons Service includes turning collars or cuffs, darning, mending, sewing on Luttons Prices are no higher than the average laundry's and there is no extra charge for repairs. While this business now occupies its own building, employs 70 people, and operates three delivery trucks, it is a type of enterprise which might be started at home and built gradually into a well equipped commercial lundry

Food Specially A young man in Chicago whose mother knew southern cooking and could prepare genuine southern lye homins, built a thriving business on that specialty. The hominy was made in a shed packed in partials, loaded into a car, and sold on a 'taste and see basis at 20 cents a jar. The little business developed several hundred customers and netted nearly \$100 per week. Empty jars were collected and used over again.

Trading Post When Floyd Hawthorne, proprietor of an Abbeville S.C., radio shop found that he could get no more merchandise to sell, he opened a novel business which he calls "Noah's Ark." He buss or trades old iceboxes, furniture, rugs, stoves, musical instruments, antiques, plumbing equipment — anything that can be salvaged and used in homes. He has reclaimed thousands of articles that were ready for discard To obtain them he scours the countryside The enterprise is profitable, and dr iws customers from long distances Several times a year he visits New York to buy used equipment Last summer he sold 350 ice refrigerators, and in the past two years 500 bathtubs, many of them from the former I rench liner Normandie Repairing and trading in used equipment promises to be a flourishing business for some time after the war ends, owing to the scute nationwide shortage of household goods

Fireproofing System Thice men in Chicago, starting a ven ago with a capital of less than \$500, built an unusual business known is Airways Lireproofing System They contract with hoters restaurant, deparament stores, etc., to vacuum clean kitchen exhaust systems, in-conditioning systems, elevator shafts, and acoustical wills and coilings. An Airwiys crew consists of a working forem in Inditwo helpers, and is equipped with two \$110 portable vacuums with special attachments. The charge per ciew is \$15 in hour. The firm's average income is \$500 a week per crew

This service has been so welcomed that one client recommends at to mother, no salesmen are needed. The company serves 1,0 Chicago clients and has opened a Malwaukee branch. In the opinion of George L. Candler, one of the partners, this is a good permanent business for many

"At Your Service A Pittsburgh woman with a flair for organizing, skill as a shopper, and a natural spirit of helpfulness, established a business known as "At Your Service, Inc" This bureau takes complete charge of weddings, from addressing invitations to arranging for music, flowers and refreshments, supervising rehearsals, cataloguing the presents, and making travel arrangements for the wedding trip

It also packs and unpacks trunks, opens and closes houses, shops for gifts and wraps and mails them, provides singers, entertainers and orchestras for parties, procures tickets for theaters, concerts and sperting events, and, in normal times operates a travel bure in

Charges vary with the character of service rendered and the time consumed. In some cases a flat ice is charged in some, ten or 1, percent is added to the total bill, in others all or part of the fee is the customary commission allowed by the firms

patronized The business has provided a good income for two people for several years

Such an enterprise can be started in many cities which are not now provided with a similar service. The only investment required is for a desk and typewriter At the outset, desk 100m might be rented in a hotel, office or other central location Possibilities are lamited only by the resourcefulness of the man or woman starting it A sense of humor, a desire to serve people, ability and a wide acquaintance are musts "The chief problem is to work out a fur method of charging, and to be genuinely helpful without doing too much for nothing

The Contest for Ideas for Small Businesses closes I ebruary i Thus far over 37,000 suggestions have been received Awards to 175 prize winners will be completed as soon as possible—probably early in April

TANUARY 25 1787 was low water mark for America. It was the moment when all our troubles came to a head when it seemed possible that our tenth birthday would be our last.

On that day Captain Daniel Shavs led his army of 2000 up the hill at Springfield. He wore his old Continental uniform. The muskets his men carried were those they had used against the British and the Hessians. Now they were to be fired at the militia of Massachusetts, drawn up above to defend the Arsen il

Shays was a simple m in of the people. He had fought before to right the intolcrable wrongs that wicked men had done him. Now he thought he was fighting again for the same reason. The lawyers and financiers in Boston, the legislature and judges that they owned, were just as wicked as King George and his ministers. They had brought him — and the common people everywhere — to the point of ruin. So he believed

Readers will find an abundance of rich detail on the forgotten years of our history in The Critical Period of American History 1783-1789, by John Fiske (Houghton Mifflin, \$3)

the second of the stened men met The Men of the State the Constitution from the halvestering little republics from the halvestering little republics

Steadily they marched up the slope. The late afternoon sun touched the cannon waiting for them up above. It was bitter coid the worst winter in many years.

When the two armies were 300 yards apart a council came running down the hill. He carried a message from General Shepard, in command of the militia. 'Halt your men or I fue.'

'I cll him that's what we want, growled Shays He led on

A hundred vards to go A command was shouted above and muskets were leveled A volley was fired—then another—but aimed over the heads of the advancing rebels. Some of them wavered But the Continent il veterans were in front, and under their example the others came on

Shays held his fire — too long. The third volley crashed, this time nimed to kill. The front rank was down some writhing in the snow, others lying still.

Shays and his men broke and fled down the hill The threat of the Rebellion was ended

But the musket balls of the militia hadn't cured the troubles or ended the dangers that threatened us

"There are combustibles in every state which a spark might set file to," wrote Washington "I feel infinitely more than I can express for the disorders which have arisen"

For Shavs' Rebellion was only one of many "disorders" In western Massachusetts, in Vermont, elsewhere in New England there were armed clashes In New York the militia of Dutchess and Columbia counties was called out

There had even been the beginnings of actual warfare between states The Wyoming Valley in northcastern Pennsylvania had been settled by men and women from Connecticut One spring the Susquehanna rose and flooded the valley, destroying houses, barns and cattle. The Pennsylvania legislature sent a company of militia, ostensibly to help the settlers. The soldiers behaved as if in enemy territory, stealing and burning The settlers resisted Then the troops turned them out of doors at the point of the bayonet, burned then remaining houses drove them out of the state

Wiser counsel prevailed in Pennsylvania and amends were made—just in time to prevent Connecticut from sending an expeditionary force to retaliate. While the states were contending with each other there was the threat of foreign war. Britain was still hostile, refusing to withdraw her garrisons from the West. Spain was threatening to strangle the western

settlements by closing the mouth of the Mississippi We no longer had an effective army with which to meet these threats

Nor had we a navy to protect our shipping The Barbary pirates, those savage sea-robbers of the North African coast, preyed on all the shipping that entered the Mediterranean Britain, France, Spain were, to some extent, able to protect their vessels We were not So the pirates always welcomed the sight of an American flag American citizens were kidnaped, sold into slavery, murdered This went on vear after year We could do nothing about it

Closer to the average American at home were the economic troubles, those which had driven Shays and his like to rebellion. There was no national currency. Instead there was a confused medley of dollars, shillings, moidores pistareens—all sorts of odd coins. Each state had its own scheme of paper mones, some more bizare than others fluctuating wildly in value but tending steadily toward zero.

Folcign observers commented on our affairs with complacent I-toldyou-so's I or example, the Dean of Gloucester "As to the future gran deur of America, it is one of the idlest and most visionary notions that ever was conceived. The mutual antipathies and clashing interests of the Americans, their difference of governments, habitudes and manners, indicate that they will have no center of union and no common interest A dis united people to the end of time, suspicious and distrustful of each other, they will be divided and subdivided into little commonwealths or princi

palities according to natural bound-

This wasn't really a nation. It was nerely an alliance of 13 independent epublics straggled out on a long seasors. The alliance was held together habily by the Articles of Confederation, drawn up by the Continental longress at the time of the Declara-

ion of Independence, but not accepted by all the tates until 1781 In effect he Articles comprised a reaty by which the 13 tates agreed to act together — as the United Nations igree today

The only machinery for acting together was Congress It was all there was to the Government of the Justed States And Con-

gress was little more than a council of ambassadors. It had, supposedly, ertain powers, such as declaring and haging war and issuing money. But hese powers were illusory.

There was no central executive power There was a President, the president of Congress, but he had no nore authority than any other member. We had 14 Presidents before acorge Washington, between 1774 and 1789, but how many people tolay can remember the name of any of them?

I he alliance had been able to win war But, as usually happens, when he war was over it began to disintegrate. Its members followed their sepirate interests

In 1783 the Continental Congress at in Philadelphia Eighty soldiers, nutinous because they had not been haid, lined up before the state house

where Congress was sitting, passed the grog and began throwing stones at the windows Then, pointing their muskets, they threatened to seize the members, to hold them hostage until the pay was forthcoming

The members appealed to the state government It did nothing They appealed to the city authorities No re-

> sponse So they fled in undignified rout to Princeton, where the college charitably took them in

Congress was weak because it had no effective way of enforcing its laws As Noah Webster said, "A law without a penalty is mere advice" The central government could neither raise money, maintain an aimy and navy, noi estab-

lish trade or other relationships be-

I here were some Americans who saw the remedy Washington was one. He insisted that the only hope was a real union under a single federal government.

But the average American wasn't for it — not yet Washington had said that the people must be willing to sacrifice some of their local interests to the common weal But the states were not willing to surrender any part of their sovereignty to a "superstate" — a word then much in vogue

Rugged Governor Clinton spoke for New York It had everything,—strategic position, a great port, fertile lands, room for expansion Why should it give up its advantages and pool its interests in a union? Rhode Island was even tougher It prided itself on being "the state of the other-

wise minded," the people who had left Massachusetts because they wanted to run their own affairs Should they give up that independence?

Citizens of the different states hardly knew each other They were much farther apart in time than we are from our Russian and Chinese allies From Boston to New York took a week to ten days—a tedious, expensive, uncomfortable trip To go from North to South meant a long ocean voyage, longer in time than going from San 1 rancisco to Australia today

There were no great press associations, newspapers or periodicals to maintain contact between sections Madison wrote to Jefferson "Of the affairs of Georgia I know as little as of those of Kamchatka"

And the most important reason of all for not wanting a strong national union was the healthy Anglo-Savon instinct to get along with the absolute minimum of government. The people had just fought a war to get rid of too much government. Why impose too themselves?

So there was a heavy, mert mass of resistance to the making of a nat on To overcome it required a crusade, as daring and forceful as that which had brought about the Revolution

THE MEN who planned and wrote the Constitution were a remarkable group One or two of them could claim genius

Alexander Hamilton, just turned 30, had shown himself a master in every field he had touched — business, finance, law, military strategy, above all in the science of government The driving force of his life now

was a desire to create a strong central government — a nation Through the critical years 1781-87 he moved steadily toward that goal, together with Washington, James Madison and others

Of that far-seeing group Hamilton was the leading spirit. He directed the strategy of the movement, taking care not to keep too far ahead of public opinion. There was little hope of accomplishing at whing through Congress. Rather the objective was to bring together a new body, a convention which should write a constitution, build the structure of a nation

That purpose could not be avowed—the people weren't ready for at Hamilton and his group moved and rectly. In 1786 they proposed that Concress give its sanction to a convention of delegates from all the states to make certain revisions in the existing Articles of Confederation—no more than that I ve iso, Congress balked at first. So d d the state governments

But Washington favored the convention Influenced by his prestige and by the persuasions of Hamilton and Madison, Congress reluctantly came iround It passed a resolution inviting the state legislatures to send delegates to Philadelphia

The legislatures received the proposal without enthusiasm. They were dilatory in acting on it. But in the encite states did appoint delegates. Rhode Island decided to have nothing to do with the affair.

Fifty-five delegates assembled in Philadelphia in May 1787 They were well chosen. Of the men who had risen to greatness through the years of the Revolution few were absent. WashER HAMILTON

ington was there, Benjamin Franklin, Madison Hamilton Thomas Jefferson and John Adams were in Europe Samuel Adams, Patrick Henry, Rich ard Henry I ce stayed dis approvingly at home

When the delegates met in Independence Hall they elected Washington chairman and got down to

business. At once they were faced with the fundamental decision that had to be made. Why were they there? To revise the Articles of Confederation? Of to tear up the Articles write a new constitution make a truly national government?

Now Humilton, Madison and their group came out in the open With all

the force of their genius they urged their case. Slowly, reluctantly the convention came in line. At last the decision was made a new constitution a strong central government.

When the decision was apparent some of the delegates went home. I hey said that their people wouldn't stand for giving up any essential part of their state sovereignty. Others stayed only to oppose And many wavered in their conviction. They would trim and weaken the proposed government so as to make it acceptable to the people.

Washington held them in line with his famous words "If, to please the people, we offer what we ourselves disapprove, how can we afterward defend our work? I et us raise a standard to which the wise and the honest can repair"

There still remained a difference

of opinion as to how far to go Granted that state sovereignty must be surrendered to the national government But how much of it?

Hamilton would cut the states into small units like the present French departments. He would have the President appoint the governors

I his went too far for the majority

As his plan was rejected Himilton dropped into the background of the convention James Madison came forward as the effective leader He was a shy primilittle man who blushed easily and had no relish for rough and-tumble debate But, like Hamilton, he was a profound student of government He could analyze the faults and yietues of the

Amphictyonic I cague of the Creeks of any other system of government, incient or modern. At the same time, he knew the grass roots of politics

The delegates moved from step to step, sometimes a little shocked at the novelty of whit they were doing When it was first suggested that the executive power be intrusted to one man, there was a profound silence. Then old Mr Franklin got up said brightly that it was an interesting subject and he'd like to hear what the delegates had to say That got them started Whenever they seemed at a deadlock a compromise was found

One fundamental issue nearly wrecked the convention It was the question that always plagues an alliance shall the big states run it or shall all, big and little, have equal powers?

The fight centered on the proposed

national legislature Viiginia, speaking for the big states, presented its plan a lower house elected on the basis of population, an upper house selected by the lower out of persons nominated by the state legislatures

The smaller states rose against the proposal, and New Jersey offered an opposing plan a legislature of one house, representing the states — not the people — each state with an equal vote

That in turn was attacked by the big states The fight grew bitter There seemed to be no middle ground

Then the Connecticut delegation came forward with its plan the fa mous Connecticut Compromise Two houses the lower elected by the peo ple, on the basis of population the upper by the state legislatures two votes to each state. The chief advocate of this compromise was Roger Sher m in He was a deacon of the church, a typical Connecticut Yankee who combined picty with a gight desire to succeed in practical affairs? He had succeeded — first as a cobbler, then as an almanac maker, then as a man of business. He shrewdly urged Connecticut's combination of the Virginia and Jersev plans

He was supported by another almanac maker, Franklin 'Yes, when a joiner wishes to fit two boards, he sometimes pares off a bit from both'

The compromise was scrutinized in every detail. Somebody suggested that with the growth of population the House would be an unwieldy body in 150 years. But Gorham of Massachusette laughed to scorn the idea that any government which they might contrive would last 150 years.

So by fitting together their differ-

ent concepts they worked steadily toward then goal — a national government which should be strong and centralized, yet in which the states should not be submerged worked in an atmosphere of excitement and grim determination. There were hurried conferences of different factions, long sessions in lodgings. It was the hottest weather in years and sometunes tempers wore thin When a delegate grew p gheaded, refused to hear any point of view but his own, Mr Franklin came out with his favorite story — about the French lady who, in a dispute with her sister, said "I don't know how it happens sister but I meet with nobody but myself who is always in the right

Slowly but steadily the structure of government rose under the hands of the builders. They nicely balanced the three branches executive, legislative and judicial

The work was done it last. The Constitution was written down. They began it — perhaps with a little wry self-questioning — We the people of the United States.

AND so the Constitution was submitted to us, the people On the whole we didn't like the looks of it Historians are generally agreed that at the start there was a clear majority in the country against its adoption

The common man felt that something had been put over on him. He had been reconciled to the necessity of giving up some small part of the sovereignty of the states, of his own freedom. But this went too far. Here it was, the dreaded superstate. He saw tyranny ahead. Tyranny of Congress, which could control elections.

Ispecially tyranny of the President The Constitution was called a conspiracy of the well-boin against the common people

Then Hamilton entered the fight in

New York Therein he showed his greatness, since the Constitution was a disappointment to him For him it was a halfway measure of the most

doubtful value, though an improvement on the existing oider With all his matchless eloquence he urged its adoption Adroitly he mancuvered the different factions to its support He formulated the case for a federal union in the great scries of the Federalist pa pers, of which he wrote the

larger part

I hrough all the 13 states the contest developed. It was our first national political campaign one of our hottest. In general it was up state against down state, town against country The firmers and small town mechanics were mostly against the Constitution the commercial classes in the cities were for it

All the devices of electioncering were used. There were stump speeches parades, torchlight processions, bonfires One parade in New York lasted from 8 1 m to 5 p in Its scature was a great float that rumbled through the streets, the Good Ship Constitution in full sail

The newspapers were full of unpassioned letters to the editor. There was a flood of anonymous pamphlets, most of which were sold for a small sum "Plain Truth," "Brutus,' "An Old Whig," 'Rough Hewn," "Rough Hewn, Jr," had then say An antiFederalist pamphleteer called the proposed Constitution "a beast, dreadful and terrible and strong exceedingly, having great iron teeth"

There were outbreaks of violence Very early in the campaign the voters of Pennsylvania came to the boiling point The majority of the legislature was pro Constitution They were

> about to vote to submit it to the electorate of the state The minority members tried to block the vote They stayed at home, preventing a quorum But a mob of pro-Federalists routed them out of their lodgings, carried them struggling through the sticcts to the state house, held them forcibly in their seats until the vote was

taken Federalist and anti Federalist meetings were broken up. Copies of the Constitution were burned In Albany a Federalist parade encountered a paride of the anti-Federalists There was a pitched battle in which swords and bayonets were used. One person was killed, 18 wounded

SLOWLY the tide turned in favor of the Constitution It turned not only because the arguments of Hamilton and the other Federalists were effect tive Rather it was because the aver age man came to see the alternatives more clearly for himself. On the one hand, increasing chaos On the other a strong central government As one Jonathan Smith, a plain farmer of the Berkshires, said "Would it not be bet ter to put up a fence that did not pk asc everyone's fancy, rather than keep

· JAMES MADISON

disputing about it until the wild beasts came in and devoured the crop?

The popular will was expressed in state conventions. Delaware was the first to ratify, on December 6, 1787. Pennsylvania and New Jersey ratified that same month. Six were in by February 6. Then those who still hear tated began to feel the threat of

being left out By June 21 nine had joined—the number required to ratify Rhode Island and North Carolina held out until after the new government had begun to function Rhode Island was last to 1 atify, on May 29, 1790—"otherwise minded" to the end

So we the people took the Constitution -- a little uncertain whether we had a bargain or not Then we proceeded to make alterations I rom the day it was adopted the Constitution begin to change in certain important respects — by amendment by interpretation, by usage Jefferson summed it up when he said that the Constitution was a good canvas, only in want of some retouching. The first job of retouching was the addition of ten amendments, the Bill of Rights The absence of such a bill had been the point on which the common prople everywhere had attacked the

Constitution They demanded that certain specific liberties be guaranteed them under the new government, among them religious liberty, freedom of speech and of the press, the right to assemble peacefully, the certainty that no man be deprived of life, liberty or property without due process of law

At first some states refused to ratify unless amendments were made covering those liberties. Finally they compromised on a sort of gentlemen's agreement that the amendments be made as soon as the first Congress assembled.

The agreement was carried out The Bill of Rights, its wording largely influenced by Jefferson, was

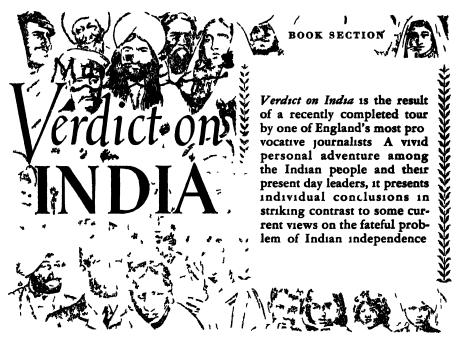

voted by the first Congress and 1 stified by the states

Our Constitution has been a model for other new nations in creeting their structures of government. It may be a model for greater structures of the future

Nearly 60 years ago John Fiske wrote "In some future still grander convention we trust the same thing will be done between states that have been wholly sovereign, where by peace may gain and violence be diminished over other lands than this which has set the example"

York, says that this proverb of Confucius has been the golden text of his life
"It is better to light one small candle than to curse the darkness"

A CONDENSATION FROM THE BOOK BY BEVERLEY NICHOLS

HFN an infected foot landed me in an Indian hospital the first thing I learned was that there is only one trained nurse to every 65 000 inhabitants of India This figure corresponds roughly, with 200 nurses for the whole Dominion of Canada In the city of Peshawar, where I was confined, there are 60,000 cases of tuberculosis alone If we allotted only one nurse to every ten of these unfortunates, it e would need to employ the entire nursing community of India in this one comparatively small city

In India, nursing is still regarded as a dishonorable profession by the vast majority of Indian women. The projudices of Victorian England, which

Florence Nightingale had to fight, are mere whims and fancies compared with the hidebound rules of caste and custom which govern Hindu womanhood

That is why so large a proportion of the tiny corps of nurses is composed of Anglo Indian girls, most of whom are Christians. The humiliations which these girls often have to suffer are past belief, particularly when they go on private cases. One girl, of high culture and intelligence, told me that she was expected to eat with the sweepers, and that after bathing her patient with antiseptic the patient always insisted on bathing ag in in order to wash off the 'pollution' of her touch

And those 60,000 cases of tuberculosis?

One reason is the institution of Purdah If you walk through the streets of Peshawar you will never see a female face. The few women you meet are covered from head to foot, two narrow slits for the eyes and a tiny hole for the mouth — that is all the fresh air they ever get

"If anybody had tried to invent a costume that was quite ideal for the incubation of microbes" said the doctor in my ward, "he could not have done better than Purdah We fight it year in and year out, but we can't fight it too openly for fear of offending the religious susceptibilities of the people"

"There's trouble in one of the wards in the next wing," said my nurse one Monday morning

'A little boy's just arrived with 18 relations who insist on sleeping by his bed"

"Eighteen";

"Yes Pirents, grandparents, aunts, uncles, brothers, sisters, cousins, to say nothing of three babies howling their heads off And he has to have absolute quiet"

"Why don't you get rid of them?"
"We can't If we asked even one
of them to go they d take the bov
away, and he'd be dead before morning"

The explanation is the Hindu joint-family system, under which families of 20 or more are required to live under one root. When I was well enough to explore the quarters of the other patients in a wheel chair I found many of the rooms to be miniature. Bedlams Every inch of floor space was occupied by some

member of the family, from aged crones to screaming babies

Searchlight on Hinduism

OF THE hundreds, of writers who have called attention to India's "religiosity" I do not recall a single one who has faced up to its implications in the modern world — who has shown how religious fanaticism today is sweeping its way into every phase of Indian life. Hinduism in its most extreme form is a turbulent force. Its voice rises above the roar of the factories, it dominates the assemblies of politicians and students.

In its very early origins, Hinduism was a mystical way of life of exceptional difficulty and extreme abstraction, which was immortalized in a few great vorks of art such as the Gita and the Upanishads This "religion" — which in any case, would be totally beyond the comprehension ◆of any large body of men — has become perverted beyond all recognition it has borrowed here, there and everywhere, accumulating a miss of superstitions, deifying instinct, sanctifying convenience, and giving divine authority to human passion, till it found itself saddled with several thous and "gods," some of the m of the most disreputable character, "gods" of greed and 'gods' of lust

The religious fervor with which so monstrous a custom as child-marriage was defended by the Hindus in their fight against the Child Marriage Act will come as a revelat on to the average Westerner Even today, the law is openly flouted

I myself have stood in the Monkey Temple at Benaics while streams of little girls, who could not have been more than 12 years old, were dragged toward the idols to implore the "blessings" of fertility They cringed, as though in shame because they had not yet fulfilled the divine duty of maternity

Suttee, the custom of burning widows alive, thugee, the use of professional religious assassins — these were part of the Hindu religion. They were abolished by the Christian British, and their abolition was fiercely contested by the Hindus in the name of their religion.

It was the same with the devadasis, the temple prostitutes who are dedicated from childhood to minister to the pilgrims and the priests. They are not so conspicuous as they were in the big cities, but you have only to go a little way off the beaten track to see them sitting at dusk in the doorways of the little houses that are grouped around the temple area.

"The idea of allowing the young girls of the prostitute class to grow up in the atmosphere of the temples," writes a leading Hindu apologist, "is to instill into them some religion, some fear of God, so that when they come of age they may not indulge in promiscuity The prostitutes of India are, therefore, one of the most God fearing and loyal class of mistresses known to that unfortunate profession"

Mumbo Jumbo

If the average British or American citizen were told that syphilis could be cured by drinking a cup of tea, he would be skeptical, if he were told further that this same cip of tea would also cure tuberculosis, brain fever, malaria, gonorrhea, and bronchitis—he would be inclined to

throw the cup of tea into the face of its inventor

The cup of tea—or rather, a small tin of it—stands before me as I write It has just come back from the analyst's It is quite harmless, and, of course, utterly useless for any of the discases for which it is recommended. Its basis is an herb that resembles the South American maté, it also contains thyme, cardamoms, cloves and the dried petals of a few common flowers. It might perhaps have slight digestive properties, but that is all

This stuff was presented to me by one of the leading lights of Hindu medicine, a system of Mumbo Jumbo which goes under the name of Ayurveda I he Ayurvedic system, with its blend of astrology, witchcraft, and religion, and its claims to have rediscovered ancient secrets which are far in advance of Western medicine, is spreading throughout modern India, students are being enrolled by the thousands, in many parts of India the number of Jyurvedic doctors is between 20 and 30 percent greater than the number of allopathic or Western' doctors

The main impetus for the growth of this gigantic quackery is, quite simply, Hindu nationalism, of which it is the medical expression

The things Ayurveda does not attempt to do are even more significant than the things it does It disdains the microscope and ignores the whole field of bacteriology It rejects surgery, and gives the cancer patient a pill It has no disinfectants adequate to deal with any but the simplest cases of sepsis, to prevent the spread of cholera it hangs a bunch of flowers over the doorway It delib

erately rejects countless remedies that have unquestionably proved their worth in Western medicine, such as sulphonamide preparations for pneumonia or insulin for diabetes

On the other hand, one branch of this "science" has shown remarkable progress. In the manufacture of aphrodisiacs, Ayurvedia reigns supreme Firms of Ayurvedia chemists are legion, they have a huge mail-order business with catalogues setting forth in lurid language their claims to stimulate the sexual appetite

Such is the system which in the name of nationalism is attempting to assume responsibility for the health of nearly one fifth of the human race

The Other India

It has always seemed to me quite futile to plunge into Indian politics before making any attempt to understand the Indian people. The lack of fictual and atmospheric background is the cause of the unreality of so many debates about India, whether they are in the House of Commons or the columns of the American press.

A number of commentators, for example, write as though the India of the Princes did not exist Actually, of course, the Princes exist to the extent of ruling over nearly two fifths of the entire territory of India and their subjects number no less than 80 millions Moreover, their States, which number over 600, are sewn so firmly into the main fabric by the threads of history and of selfinterest that any attempt to tear them out might cause the whole thing to fall apart Some of these States, of course, are very small, they shine on India's quilt like tiny specks

of gold, but others are nearly the size of France, governed by rulers with wide powers and lusty ambitions, who have not the faintest intention of retiring

The Elusive Indian

66 Have you ever met an Indian?"

This startling question was put to me by a friend when I had been in India for nearly a year, and had traveled thousands of miles—from the snows of the Northwest Frontier to the markets of Madras

Met an Indian?

What did the man mean? I had, of course, met many To speak to at least a thousand But supposing we looked at India from a more general viewpoint?

First, the 180 million caste Hindus They were Indians all right, the very core of India But wait a minute were they? What about the 60 inillion noncaste Hindus who were groveling in their dust? Weie they Indians too? According to the caste Handus, they were not even men and women! They were "untouchable" To drink from the same cup would be spiritual poison, their very shidow was pollution Could these 60 million — regarded by their own brethren as a good deal lower than the lowest animals - be described, by a Westerner, as "Indians"?

Or, if the Hindus were "Incians," what of the Muslims — nearly 92 million of them — with their dream of Pakistan, a separate Indian empire of their own? I have vast bodies of men, the Hindus and the Muslims, are so acutely conscious of their differences that they not only refuse to eat together or think together, or pray

together, they refuse even to live in the same unit of territory

To begin at the other end, with India's smallest community, the Parsees, was no better Although there are less than 115 000 of them, judged by their achievements the Parsees assume a position of importance out of all proportion to their numbers Wherever there are tiches in India you will find the Parsees To give only one example the vast network of Tata industries is entirely Parsec, in conception, in execution, and in present day direction The firm of Tata's is industrial India Its steel works at Tamshedpur, employing 30,000 pcople, are the largest in the British Empire Its hydro electric system is the largest unit in the country. Its aircraft industry in time may chillenge the biggest combines of the West

India without the Paisees would be like an egg without salt. And without a good deal of its volk too

But — and it is a very big 'but" — we cannot really call them "Indians" Even if they themselves claimed the title — (and a large number of them do not, preferring to regard themselves as a separate community, living on tolerance) — the vast majority of Indians would denvit to them They say that the Parsees are really Persians, as their name implies And they say it in terms which are by no means polite For the Parsees have aroused great envy, thousands of fingers are itching to get at their gold

Then there are still other large communities, running into many millions — the Sikhs, the Jains, the Buddhists The five inillion Sikhs, for example, are among the true aristocrats of India, they are virile and clean-

living, swift of brain and body They are also implacable enemies of the Muslims If the Muslim dream of Pakistan should ever be realized, the Sikhs, who nearly all live in the Punjab, where the Muslims hopelessly outnumber them, threaten to set up a separate Sikh state of their own and call it Khalistan

Where, then, is the man who can say with real sincerity, without hypocrisy and without any thought of self-interest, "I am an Indian"?

Below the Bottom Rung

A man of about 50 Waiting for me in a wuker chair on the veranda of his house Bulky, dynamic Very charming manners, but nervous, inclined to fiddle with his shoelaies Seemed to be on his guard, as though ready to parry taunts from all directions

So runs an extract from my dirry. The man is Dr. Ambedkar, labor member in the Government of India, and one of the best brains in India. Then why this nervousness, this suggestion that he would be ready to take offense?

Because Dr Ambedkaı (M A I ondon, high honors at Columbia University, special distinction at Heidelberg) is, in the eyes of oithodox caste Hindus, "untouchable 'A person to bring pollution if his Mayfair dinner jacket should happen to brush against their dhotis

A large number of people in England and America seem to imagine that untouchability is on the wane. They have read with approval Gandhi's denunciations of it, they have seen photographs of him with his aim round the shoulders of the outcasts "Surely," they say to themselves,

"such a powerful example, in these enlightened days, must be having some effect?" It is not

Admittedly, one or two dramatic gestures have been made in the past few years. Certain temples, for example, have been thrown open to the untouchables. But what happens? As soon as the untouchables flock in, the orthodox flock out. The temple becomes an "untouchable' temple, it is tainted, unholy, and as such it ceases to be an object of reverence even to the untouchables themselves.

The life of the untouchables is largely a matter of negatives. They may not use the public wells which means that they are often condemned to drink impure water. Their children may not enter the schools they must sit outside. They may not go near the bathing places. Hence they are usually filthy

One evening I was talking with a British subaltern in charge of a training camp for young Indian engineers who was having trouble with recruiting

They come in fist enough," he said "But I have to send 'cm awiy again Look over there"

We saw two fine-looking young Indians standing in the shadow of a eucalyptus tree, staring at the dust

"Those chaps are two of the best who've ever come my way, physically and mentally They want to join my lot, I want to have them, and I can't"

'Why on earth not?"

"Untouchable Sweeper class"

"But that's preposterous!"

"Of course it is But it's India My men would just down tools if I took 'em on'"

As for Gandhi being the untouchables' friend, let us listen to Dr Ambedkar who is their undisputed leader

"Gandhi," he said to me, "is the greatest enemy the untouchables have ever had in India"

This will come as a violent shock to most people Gandhi has ceaselessly proclaimed his detestation of un touchability. He has untouchables in his ashram and has even adopted an untouchable child. What most people, however, do not know is that Gandhi has fiercely opposed any attempt to give the untouchables an independent voice in Indian affairs.

Give the untouchables separate electorates, he said 'and vou only perpetuate their status for all time'. It is a queer argument, and those who are not bemused by the Mahatma's chaim consider it a phony one. They suspect that Gandhi is a little afraid that 60 million untouchables may join up with the 92 million Muslims— (as they nearly did)— and challenge the dictatorship of the 180 million orthodox Hindus.

The st ture of the untouchables depends largely on the British To leave their sate in the hands of a Congress dominated by the Brahmins, as we would have under the Cripps proposals, Ambedkar declared, "would deal a death blow to our interests"

Some people challenge Ambedkar's right to leadership I hey would not do so if they had ever attended any of his meetings, such as the great rally at Nagpur where 15,000 untouchables acclaimed him with a fervor that even Gandhi might have envied

"The keynote of my policy,' said

Ambedkar, "is that we are not a subsection of the Hindus but a separate element in the national life. In every village there is a tiny minority of untouchables. I want to gather those minorities together and make them into majorities. This means a tremendous work of organization — transferring populations, building new villages. But we can do it, if only we are illowed.

"We are as staunchly nationalist as in, of the Congress But we do not want the British to quit India till our rights are safeguarded. If they do, our fate will be more terrible than the fate of any of the oppressed peoples of Lurope."

The Stormy North

TRADITIONALLY, the Northwest Frontice is the most volcinic near to be found in the whole of India Even when the various tribes are not shooting at us, they we shooting it each other

How thin the veneer of civilization is in those parts is apparent as soon as you leave Peshawir, the provincial capital You lunch in a country club surrounded by pretty women in gay dresses while a smart little orchestra plays prewar jazz. An hour later you are far off in the mountains, in the world's grimmest country, jagged and treacherous. The road over which you are speeding is a thin ribbon of safety threaded through a blood soaked fabric of danger and death. And before teatime you are at the Khyber Pass itself.

My guide up the Khyber was a young officer who had seen four years service in the tribal area, where there is a babel of tongues but where the

tribesman's chief means of self-expression is his rifle

121

"May I have a month's leave, sir, to go and murder my cousin?"

Perhaps the question is not phrased quite so bluntly, but that is the gist of many earnest requests which are put to British officers by their Pathan troops in these parts

"If I refuse," said my guide, "the man just deserts, taking his rifle with him And that means another good man gone, and another sniper to worry about on dark evenings"

To be sure, economics also plays a part

As we stood there we saw, far below us down in the valley the dust of camels and can wans moving in a long procession

I ook down there," said 1 my guide "There's wealth for you — bags of it, waiting to be seized in a single raid. In those caravans there'll be silks from Bokhara and Turkoman carpets and plenty of precious metal for the goldsmiths of Peshawar.

And now look round you," he continued "What is there up here? Rocks and dust and thorn and scrub No water A handful of goats And a hole in the rock for your home. Can you wonder that when they see a target like that the temptation's too much for a band of hungry men?"

Here was a land of wild tribesmen kept in comparative order only by the constant vigilance of a few British

I found myself thinking how extremely difficult it would be to explain the situation to an audience of enlightened liberals at home who are so convinced that the British have only to march out of India for the whole country to blossom overnight

with the benefits of representative democratic institutions

The Congress Party

It is a strange paradox that the Congress Party of India should be the darling of warmhearted Western liberals The Congress Party is, to begin with, a 100 percent Gandhi dictatorship Not that Gandhi rules openly Instead, he dominates through Sardar Patel, whom John Gunther described as "Congress's Jim Farley, the ruthless party fixer and organizer"

During the whole of my stay in India, Gandhi was in jail The phrase "in jail" is somewhat misleading, because the jail was one of the Aga Khan's palaces, and he could have walked out of it at any moment he chose, by signing, on a half-sheet of notepaper, a guarantee not to sabotage the war effort. He preferred to stay in jail

At no time, to be sure, did Gandhi come out openly for Japan He always speaks with one eve on America, and if America had caught him in an overt flirtation with Japan, the consequences to his prestige would have been catastrophic But he went as far as he could He suggested that the Japanese were only too anxious for peace but that they were reluctantly compelled to aggression because India was defended by the British

It is almost impossible for even the most skilled observer to discover when Gandhi is sincere and when he is not Consider his economic policy. It begins, ends, and has its entire being in the charkha——the spinning wheel If only the peasants will weave their own cloth, in their own homes, and go on weaving it, then the economic

evils of India will disappear. The doctrine of *charkha* is about as practical as the suggestion that uneinployment would disappear in the United States if only the American housewife knitted her husband's socks.

The other great plank in Gandhi's program, his so-called "nonviolence," has, in practice, invariably led to violence

"What may be permitted for disorganizing government within the limit of nonviolence" queried a subscriber in Gandhi's newspaper, Harijan

"I can give my personal opinion only," ran the reply "It will be non violence without blemish"

So far so good And the next sentence?

"Cutting wires, removing rails, de stroying small bridges cannot be objected to in a struggle like this"

In Congress bulletins theft, arson, riot and every form of sabotage were openly advocated, all in the name of "nonviolence"

It seems true that Gandhi's practical influence is sharply on the wane and is not likely to leassert itself. Gandhi is now 75 and he has stepped out of jail to find a very different would from the would he left behind. Britain is no longer struggling with her back to the wall, the Japanese are no longer advancing upon India.

Most important of all, the tremendous gap between his mystic Mumbo Jumbo and the hard but exciting realities of the modern world is more than ever apparent Every day that Gandhi has been in jail has seen a rapid increase in the number of young Indians who are being brought into the orbit of the war effort, which means into the orbit of the 20th cen-

tury From thousands of villages young men are flocking to the army centers where, for the first time in their lives, they are taught the rudiments of hygiene and discipline, and are given their first sight of the magic of modern machinery

One of the most brilliant pieces of organization which Britain has achieved during the present war is the War Exhibition which has been moved from center to center in an effort to teach India the issues of the war and the manner in which it is being waged The Exhibition is not merely a collection of tanks and propaganda posters, it is a complete and self-sufficient picture, on an enormous scale, of modern engineering, aviation, transport, agriculture, 1 idio, cookery, social service, botany, medicine

In spite of the frenzied efforts of Congress to boycott it, the Exhibition has been an unqualified success, particularly with the younger men It has marked a turning point in their lives They have come from sleepy villages which if Gandhi had his way, would go on sleeping, and suddenly the whole wonder box of modern science is thrown open before them They state in aniazement and growing delight and soon they are walking in a new world from which even Gandhi s hypnotic voice can never recall them I or into this new world he does not fit

Pakistan

THE MOST important Muslim in India is 68, tall, thin and clegant, with a monocle on a gray silk cord, and a stiff white collar which he wears in the hottest weather He suggests a

12a ...

gentleman of Spain, a diplomat of the old school such as one used to see sitting in the window of the St James's Club 1

Mr Jinnah is a man to watch because he is in a position of unique strategic importance. Not only is he president of the Muslim League, a compact and fighting organization which commands the allegiance of at least 85 percent of India's Muslims, but he is potentially the ruler of a vast new empire, Pakistan

True, at the moment, Pakistan is only an empire of dreams, but in the minds of the Muslim it is none the less real for all that

Literally it means Land of the Pure In geographical terms it means a great block of land in the Northwest of India, consisting of Baluchistan, Sind, the Punjab and the Northwest Frontier, together with a block in the east, consisting of the greater part of Beng il

It is proposed that these areas, which are predominantly Muslim, should be separated once and for all from the rest of India, which is predominantly Hindu, and should proclaim themselves an independent state I am one of those who believe not only that this will happen but that it must happen If it does, in entirely new situation will have arisen in Asia, which will shatter the existing balances of power, and drastically modify the policies of every country in the world

It is often asserted that Pakistan is a mushroom growth, that hitherto Mushims and Hindus have managed to live together, however uneasily, and that therefore the summary divoice is too drastic a measure. This argument ignores the fact that Brit ain has up till now been responsible for law and order But with the up proach of national independence, communalism has flared up in a spec tacular manner

When by the act of 1935 repre sentative self-government was established in 11 provinces, Congress found itself in a large majority in seven out of the 11 provinces in the first elec tion Instead of inviting the Muslims to share the fruits of office, instead of attempting any form of coalition it rigidly excluded them from all responsibility In schools, Muslim chil dren were compelled to stand up and salute Gandhi s picture The Congress flag was treated as the flag of the whole nation and in business matters the discrimination against Muslims, from the great landowners and merchants to the humblest tillers of the soil, was persistent

The best proof of these allegations is the fact that, when war broke out and the Congress ministries resigned the Muslim League called for a Day of National Thanksgiving to mark the end of the tyranny

What is strange, in the whole Pakistan controversy, is the opposition which it still evokes from sincere well wishers of India. This is due to the strength of Congress propaganda. The Hindus, by persistent suggestion, have managed to persuade the world that they are "India,' and that any attempt to divide "India" is a wicked "plot on the part of the British,' act ing on the well established principle of "divide and rule."

Most liberals of the West have fallen for this propaganda, hook, line and sinker Consequently we have

the extraordinary spectacle of British politicians pleading in the House of Commons the cause of Indian "unity" in the joint cause of Indian independence — sublimely ignorant of the fact that their insistence on this so called unity is the one and only thing that keeps the British in the saddle!

Jinnah's own testimony on this point is explicit "The one thing which keeps the British in India is the false idea of a United India, as preached by Gandhi, Irepeat, is a British creation — a myth, and a very dangerous myth, which will cause endless strife As long as that strife exists the British have an excuse for remaining "

White and Off-White

PERHAPS the most singular feature of British rule is the fact it is the rule of a mere handful. In peacetime (apart from the tiny standing army) the ritio was about ten thousand British subjects to 400 million Indians.

Minv persons seem to think of a British withdrawal as a mass evodus a sort of transfer of population, spread over many months and involving an immense disruption of transport Actually it could all be accomplished over a week end ind every man, woman and child could be removed from the country in a single convoy of modest proportions

What if we attempt to as ess the British as frankly as we have assessed the Indians, to inquire what sort of people they really are and how far they are worthy of their responsibilities?

Those ancient figures of comedy—the pucka sahib and his men sahib—

do they really exist? Do they vell for chota pegs at sundown, in the manner of E M Forster? Do they "go out in the midday sun," in the manner of Noel Coward? Do they indulge in illicit passions against a background of tamarind and sandalwood, in the manner of Somerset Maugham?

In some of the larger cities, yes Fortunately they are by no means typical The average British men and women are a "pretty decent lot," particularly those who live in remote districts

Whatever else you may deny to this tiny handful, scattered over the country like a pinch of alien dust on a gigantic desert, you must grant them courage You must grant it to the little gairisons of the Northwest Frontier, living in the perpetual shadow of the sniper, to the judges, steering a straight furrow through a jungle of falsehood, trickery and vituperation to the doctors, sticking to their principles in an encivating at mosphere of superstition and hostility, above all, to the women, nuises, missionaries, wives of country offi cials, to whom such things as the sound of music and laughter and the swish of crepe de Chine are to be found only in the pages of a magazine

Yet we cannot d'ny that there are a number of criticisms to be made of the British in India, if we consider them as individuals rather than as cogs in the Imperial machine

Riding in my first Indian train, from Gwalior to Delhi, I asked a very red-faced colonel the Indian for "thank you' The coolies who had carried the luggage were waiting to be paid, it was very hot and they had

worked quickly and well, it seemed ungracious merely to tip them and send them off

"Thank you?" ejaculated the colo-

nel "Thank you?'

"Yes," I repeated "Thank you"
"But, my dear fellah," he spluttered, "you don't'

"Don't say thank you?"

"Certainly not Nevah It isn't

The British have got a lot out of India, but they have never said "thank you" It is a pity, these things do help

Again, it sometimes seems that the British who live in India do not live in India at all Their heart is in the Highlands — or in Kensington High Street What can you know about India, if after 20 or 30 years you have never seen an Indian film, never heard of the Bhagavad Gita (which is as though an Indian coming to England had never heard of the New Testament), never spent even one night in an Indian village?

Admittedly, I did not do it often, but even a short experience taught me more than a dozen books learned, for instance, the strange sense of oneness which the Indians have with the animals, it seemed quite natural that four little goats should be sleeping in one corner of the hut, that a cluster of hens should be brooding in another, and that from time to time a bullock should push a solemn head through the door It was not possible to get much sleep, and the bites were legion, but there were many compensations The wail of the flute as the dusk was falling, the lovely silhouettes of the women at the well, charcoal black

against a jade-green sky, the bowl of curds and fresh fruit which they brought me before going to bed, and the wreath of frangipani that they placed around my neck

And then — the sudden dawn, very rich and red, a regular blood orange of a dawn, and the singing of the peasants, as they set off to the paddy fields There are few things more beautiful than a paddy field in the early light, it is like a quilt embroidered in many shades of green, from the pale stretches of the outplantings, thinly sown against the red earth, to the vivid squares of glowing emerald which mark the crop to come

"Have you any real Indian friends?" I asked Englishmen again and again The answer was always the same

"Friends" Well — I know some very decent Indians But I wouldn't exactly call them friends "

That is perhaps the major tragedy And it is not all the fault of the British Here is an example Most of the clubs in the hill stations are mixed, members meet on terms of perfect equality, provided that they pay their subscriptions, no questions are asked, no privileges given

So far, so good — in theory But in practice, what happens? The Indian men refuse to allow their wives and daughters to come to the club They come themselves, night after night, they dance with the wives of British officers, but their womentalk stav at home

One of the unhappiest consequences of this lingering color prejudice is to be seen in the lot of the 140,000 Anglo-Indians, who in many ways are perhaps the most luckless com munity in the world Not only are

they equally despised by both their half-brothers, the British and the Indians, they despise themselves

Their one idea, which amounts to an obsession, is to deny their colored blood

It would be funny if it were not tragic I once knew an Anglo-Indian nurse She was a nice girl, patient, efficient, and pietty in her dusky way There could not be a moment's doubt about her origin, but to hear her talk you would think she could trace her pedigree back to the Plantagenets

"These Indians" she would cry, in contempt, when the bearer brought the wrong medicine of the sweeper was lazy in his work "Really these Indians! One can do nothing

with such people!"

'I have been out here far too long" That is another favorite phrase of the Anglo-Indian girl "I've absolutely lost touch with home "They have never been "home at all, poor creatures, but they would die rather than admit it

The great ambition of these girls is to marry an Englishman, to be taken out of the country, and so to escape from the dubious halfwayhouse in which life has cast them

For Anglo-Indian men the situation is not so bad. A fair proportion of posts is reserved for them in the public services, particularly in the police and on the railways Some of them, by exceptional merit, have risen to positions of eminence and wealth

For the greater part of the Anglo-Indian community, however, the future is none too bright, with the tide of British power ebbing fast, they are left stranded on the beach, scanning the empty seas fo a friendly sail a sail which will never

Shaming the Volcano

• It is astounding, in retrospect, how soon India gets into your system, how rapidly the initial shocks wear off. The flaming blossoms of the golden mohur trees, which scorched your eyes when you first saw them, soon lose their glory, today you do not even turn your head whereas yesterday you stated and stared

It is the same with the horrors I had not been in India ten minutes before I had seen a typical skelcton horse, limping and staggering down the road, a quivering mass of pain and sores A visit to a railway station the favorite rendezvous of India's beggars, is like a trip through the galleries of waven monsters. Here are lepers, and tertiary syphilities, and blind children—not born blind, but blinded by their parents so that they may prove a source of future income in the beggar market

In the beginning, you extended vour charity But the flock of dreadful beings that were attracted by the clink of coins was too great, they seemed to appear froin nowhere, gibbering, spitting, moaning, screaming, and pointing to their sores You gave it up You learned that the Hindi for "go away" is "jao", you said it reluctantly, you said it louder, and still louder, till at last you found yourself shouting it

A year ago, at New Delhi however, I had experienced a very different kind of shock This had been my first big Indian city, a very grand car was waiting for us at the station, driven by a giant in white and gold, with another giant sitting by his side, for we were going to stay with the Viceroy We turned to say a word of thanks to a coolie who had been unusually efficient with the bags. As we did so, the words died on our lips. We had seen something in letters a foot high, chalked on the wall a few yirds away. QUIT INDIA

I blinked at it, growing rather red in the face, not through anger, but through a sort of social embarrassment—as though one had been found gate-crashing

Out of the corner of my eye I scanned the enormous chauffeur Supposing he saw it too, and turned and barked, 'Well, you know what to do about it don't you' Get out and go home!' But the giant stated impassively ahead

Really this was a very extraordinary situation. Here was a flaming insult, an incitement to revolt, flaunted before the eyes of hundreds of people. But nobody was taking any notice of it. Passengers hurried past, British soldiers with rifles on their sweating backs, businessmen carrying attache cases, Indian women in sarees of green and silver, Brahman priests, peasants carrying hens by the legs. Indian sailors lugging kit bags. None paid the least attention.

And then I thought of another scene, far away Gray trees, November musts, sooty railings Hyde Park and mob or itors shouting "Quit!" They were shouting it to the King and Queen, to the lords and ladies of Fingland, to all those who dwelt in gilded palaces And nobody paid any attention The policemen grinned, the mob chimed in with coarse but affectionate interjections

Had England, in India, performed another of her unconscious miracles? Was she once again shaming the volcano by ignoring its eruptions? It looked very like it

To Quit or Not to Quit

THERE IS no doubt that most of the British electorate, when they think of India at all, which is seldom, have a vague and generous feeling that we should quit, and they would probably vote accordingly even though they knew that they were voting against their own interests

On moral grounds there can be no other choice Yet, equally on moral grounds, our quitting must be conditional on the recognition of the equal sovereignty and independence of the two great Indian nations — the Muslims and the Hindus Otherwise, we shall be in danger of giving freedom with one hand and taking it away with the other, of letting 250 million Hindus out of what they are ple ised to regard as jail in the morning and shutting up 92 million Muslims in what they are quite certain is jail in the afternoon

Only a wildly irresponsible person, however, would suggest that we can quit overnight, India would be left almost completely defenseless from aggression

This quite fundamental matter of defense has received scant consideration from those who claim that 'India is eager to defend herself, if only she gains her freedom"

"Defend herself with what?" one may reasonably inquire. There is, for example practically no such thing as an Indian navy. At the beginning of the war the entire Indian navy consisted of a few small patrol ships This toy navy would have been totally inadequate for a country the size of Denmark, let alone an area the size of England, France, Germany, Scandinavia, Italy, the Balkans, and then some Even the craziest optimist would hardly suggest that a navy could be built in much less than 20 years

The same argument applies to the Indian army Nobody will deny the bravery which Indian troops have displayed in the present war, but it would be ludicrous to suggest that these same troops are capable of undertaking, on their own, the defense of India There is only a handful of Indian officers who have ever been entrusted with any wide powers

And yet — presumably — in one way or another, we shall quit Maybe in haste, which would be an unredeemed tragedy maybe in comparative leisure, which would at least give ourselves and the world a chance to adjust itself to the immense changes — racial, strategic and economic — which our withdrawal will entail

But whether it is tomorrow or a day a little more remote there will be one sense in which the British will never quit India and that is a spiritual sense With all our faults of omission and commission, our occasional outbursts of temper, our frequent lack of imagination, we gave India peace, and it was not the peace of the desert, we gave India law, and it was not the law of the strong, and — in the final judgment, we gave India liberty, for it was the ideals of Milton, of Locke, of Wilberforce, Mill, Bright and Gladstone that first kindled the Indian mind to an understanding of what liberty really is

The READER'S DIGEST An article a day of enturing significance, in condensed permanent booklet form March 1945 The Cause Condensed from an editorial in The New York Times **New York Times**

"For the holy love of God, let's listen to the dead Let's learn from the living Let's join ranks against the foe The bugles of battle are heard again above the bickering'

The quotation is from Stars and Stripes We might well listen to the soldiers

DÉCAUSE Russia made a unilateral settlement in Poland, because Britain "interfered" in Greece, because a Prime Minister in London turned thumbs down on a Foreign Minister in Rome, because France made an alliance with Russia which does not speak of Dumbarton Oaks, because misery and unemployment dominate parts of Europe as aftermaths of a still unfinished war, because nations stirred to their very depths by years of torture and humil-12tion do not settle down as quickly as we wish, civilian voices are beginning to be heard on our side of the Atlantic, proclaiming mournfully that all is lost

The chant becomes familiar We are told that "we are not liked" in Europe We are told that "power politics" are once more master of the scene We are told that lasting peace is an illusion, and that plans to

achieve it are a snare. We are told that the brave new world has died a-borning. We are told that even before the fighting ends we have lost the cause for which we fight.

If this is a true picture of the situation, then there is nothing to be said to Stars and Stripes But if it is not a true picture, if it is distorted by wrong emphasis or mistaken judgment, then this flurry about "losing the war before it is won" is uncalled for and harmful It is harmful to our own morale It is exasperating to our allies It must be bitter to our troops

It cannot give much encouragement to a soldier in the field to be told that the cause for which he is about to die is already lost

If the criticism of events in Europe is examined at all closely, it will be found to carry contradictions. Observer A wrings his hands in despair

because Mr Churchill "tried to force settlement on Greece," but he isperfectly ready to have Mr Churchill try to force a settlement on Poland Mahserver B, on the other hand, approves of Mr Churchill's policy in Greece, but accuses him of betraying the Poles in whose behalf the British originally made war on Hitler It must be evident, therefore, that we have not all been asking Mr Churchall to do the same thing Each of us is taking a perfectionist view of what we think ought to happen in Europe, according to our own standards And it is largely on the basis of such frequently contradictory and always perfectionist opinions that we are told, by the mourners chorus, that the cause for which we fight is lost

Let us remember that we went to war to defend ourselves against aggression

We did not tell our boys, when they were drafted, that they were being taken from schools and farms and workshops to maintain a parucular frontier in Europe

We went to war because two savage

enemies had made war on us

We went to war to preserve a large enough part of the world, intact against aggression, for our own de-

mocracy to live and prosper

The die was cast from the moment Nazi Germany, sworn openly to eternal war upon the democratic system, struck an alliance with imperial Japan, bent upon a conquest of the Pacific which would bring her predatory power close to our own shores

We know now that by midsummer # 1940 the issue was crystal clear The historic strongholds of democto Europe — France, Belgium,

Holland, most of Scandalavia - had been overrun Germannies were at the English Channel South America lay wide open to blakmail or invasion The prospect of Nail bases within stry ing distance of the P ama Can'tl was immediate and unmi talable Japan was on the march into Indo-China, on the way to her

attack upon Pearl Harbor

It was in those circumstances that both political parties in the United States, suddenly aware that the world we knew before had exploded, resolved at their national conventions to give American aid to nations which were still fighting in defense of freedom It was in these same circumstances that lend-lease took shape It was our right, and our duty, to take defensive measures to protect our very life against an alliance aimed at the destruction of every friend and potential friend we had

It was by the choice of Germany and Japan that the answer to our defensive

measures was open war

IT is preposterous to say that by winning this war, regardless of anything that may come afterward, we shall not have accomplished a great and good purpose, commensurate with whatever cost it may entail

We shall have preserved our inde-

pendence as a nation

We shall have kept our friends, and helped to keep our friends alive

We shall have preserved a world in

which democracy can live

We shall have turned back the greatest threat that has ever arisen to the spiritual and moral values of Western civilization

All is not lost when this is true All

is not lost when Britain and the democratic commonwealths of Canada, Australia, New Zealand and South Africa can defend themselves so successfully that their free instituthes show the struggle. All is not lost when democracy can begin again, with frush hope and courage, whe only duntries on the continent of Europe — France, the Low Countries and Scandinavia — where democracy has ever really prospered All is not lost when South America is spared invasion. All is not lost when a new League of Nations offers us a chance to prove that we can help accomplish this time what was never tried with our assistance at Geneva

To say these things is neither to pretend that there are no differences of opinion between the major Powers nor to counsel drifting into a defeate acceptance of some second-best solid tion

We owe it to the men who attaching for us to do all we can to help make a wise and lasting peace we it to them to come out of the ivory tower of our own perfectionism, when compromise is necessary we shall need patience for the task ahead Patience and perseverance, and willingness to try to understand other peoples' point of view — and faith, above all else

And because we shall need farth let us be done with this talk that we have lost the cause for which we fight We are winning that cause, winning it splendidly and for the benefit of generations still to come, with every step that brings us closer to Berlin and Tokyo

- Contributed by Watson B Berry

Caustic Comments

>> To a new Supreme Court judge who had just relinquished a very luctative practice in New York to go on the bench, a rich clubman said "I can't understand how you can give up your practice for the salary of a Supreme Court judge Why, it costs me twice that to live "I wouldn't pay it, Harry It isn't worth it," replied the judge

>> VISITING a newly rich friend in the country, Wolcott Gibbs refused to be impressed by tennis courts, swimming pools, stables, and other forms of luxury Finally, returning to the house, the owner pointed to a magnificent elm growing just outside the library window and boasted "That tree stood for 50 years on top of the hill I had it moved down here so on

pleasant mornings I can do my work in its shade"

Said Gibbs "That just goes to show what God could do if he had money"

—Frank Case, Do Not Disturb (Lappincott)

Report on Argentina

Condensed from The Saturday Evening Post + John I ear

lick anybody, just because he is Argentine And his personal rights come first. This applies not only to An Argentine is Somebody. Else, but to One Argentine is Another Argentine On the streets of Buenos Aires, people continually bump into one another rather than concede one inch of space. Frequently an automobile driver whose fender has been bumped chases the car that bumped him until he can bump it harder.

This seeming nonsense springs from the national fear of being taken for a zonzo—a fool. It is not so important whether a man actually is a zonzo. But to be made to look like one is a

fate worse than death

We Yankees are almost as touchy about our personal rights as the Argentines The trouble between the Argentines and us is that they believe we are trying to make them look like zonzos, while we are convinced they are trying to make zonzos of us

This antagonism has spread the notion that the Argentine revolution of June 4, 1943, which overthrew President Ramon Castillo, was directed against us in some way Nothing could be further from the truth It was strictly Argentine

When it happened it had the full support of the people. To them it was a promise of change in the feudal economy that has held the mass of the Argentine population in peonage to the Select Minority, a handful of rich men — some 2000 or 3000 families — who long have ruled 13,500,000 Argentines through ownership of the fabulously fertile pampas

After more than a year of the revolution, the people still hope the change will come, but they have lost faith in the men in power. The present government is nothing more nor less than a band of soldiers quarreling among themselves over what they should do and who should get credit. They have no interest in world affairs, except as those affairs affect their personal futures in the army

For all practical purposes in this strange government, rank runs back ward President Edelmiro J Farrell's limitations are aptly described in a story they tell On a visit to San Juan General Farrell dropped his hand-kerchief and a woman picked it up as a souvenir General Farrell asked her to return it, explaining, "That handkerchief is the only place I can stick my nose without catching hell from Perón"

Juan Peron is Vice-President,

known as the Colonel." And the Colonel tells the General what to do He has a colossal ambition, and his boundless energy enables him to handle the jobs of remister of war and warranty of labora and social welfare an addition to the Vice-Presidency Yet he is not to be besself the takes orders from a clique of majors, captains and lieutenants—the immediate commanders of the troops who made the revolution

There is nothing mysterious in the power of this soldier group. It is pure force They are members of the Campo de Mayo, a garrison inade up of model units of every branch of the army, with the best arms and equipment No other garrison is close enough and strong enough to stop the Campo de Mayo troops once they start moving on the Cisa Posada, the rose-tinted old Spinish counterpart of the White House Its power is a silent but constant threat There have been three presidents, three vice-presidents and ilmost three dozen cabinet ministers since the revolution. I hrough all the changes the Campo de Mayo commander, Colonel Eduardo J Avilos, has sat poker-faced in the cabinet, without portfolio or responsibility — but with a veto always in his pocket

Outside Argentina there is a popular belief that Cast ilo fell because the Argentine people opposed his policy of neutrality Few Argentines have any desire to change their country's profitable status as a neutral. The mistaken impression rises mainly from the fact that Castillo had gagged his opposition — a move the opposition branded pro-Hitler Actually this gag policy was merely a part of

Castillo's efforts to make permanent the regime of the Select Mindrity, acting through the Conservative, Party

The masses of the Argentine people have a different political faith from that of the Select Minority Although it would be considered only mildly liberal in the United States, they call their faith Radical These Radicals fought the Conservatives for a quarter century, and in 1916 finally elected a president The next 14 years were the only period in Argentine history when the country really had a democratic government The Radicals carried out a program which included a minimum-wage law, an eight-hourday law, low-cost nousing, and abolition of the scrip the land barons had used for money to keep their workers in absolute bondage. But the Radicals ian into a phase of shady politics With that as an alibi a politically ambitious general persuaded the army to enter politics and seized the government by force in 1930 The discredited Conservatives, put back in power, held their grip for 13 years through election frauds and a split among the Radicals They were more firmly in the saddle than ever with Castillo as President in 1943 He tolerated frauds of all kinds, muzzled the press, gagged opposition

When Castillo chose another Conservative to succeed himself as President, the Aigentine people were fed up But the Radicals, although they controlled 60 to 80 percent of the vote, lacked a strong leader This was the opportunity the ambitious army officers had waited for Their troops marched gaily into the Casa Rosada, joking and singing, while the city

police detoured street traffic out of

their way The soldiers' program of governament is to clean out fraud, end opecession of the poor, industrialize atural resources with Argentine they under Argentine management, and expropriate foreign-owned public **limities, grain elevators and flour** mills to bring down the cost of living This program is popular with the people But the army has few men acquainted with the practical difficulties of everyday government, and has been unwilling to entrust power to civilians who do know As a result. the program has been 1 crazy-quilt patchwork, carried out with childish disregard for normal processes of law and a technical nonchalance that floors even the most casual observer

In the chaos, one thing is clear—the militarists are determined to plant Argentina firmly on her own feet as a nation. During the war the national industrial output has passed agricultural production in value for the first time. The war also has given Argentina her own merchant fleet through seizure of Axis ships. Now Argentina is ready to push on to real independence—that is, freedom from England.

The country has been an economic dominion of the British Empire for a half century Intensive development of the pampas did not occur until after the British moved in and built railroads, packing houses and port facilities to gather, store and thip overseas Argentina's grains, meat, wool and hides English factories turned these raw stuffs into products for sale to the rest of the world. The British investment today

18 5,439,084,000 pesos, ree fourths of the total foreign inversent in the Argentine

This has political imporations Many British perchants, to held the vast market for themselves, Law encouraged Argentina to ar the United States They have done more than the Germans to create contraction, that enables the land barons to hold their power As long as Argentine raw stuffs are manufactured in England, it is prosperous for the landholders to do nothing but breed and plant fatten and harvest That keeps costs down

Argentina's battle for independence through industrialization has been obscured by the military government's more spectacular nationalistic policy While waving the flag, the soldiers have abolished freedom of expression Hundreds of schoolteachers have been summarily removed - some because they are Jews, some because they are not Catholics, and some because they are Catholics who believe in freedom of the mind One hundred and fifty of Argentina's foremost intellectuals have lost their jobs for signing a manifesto asking a return of democratic rights. The few courageous political leaders are either in fail of under surveillance Labor unions have been dissolved Newspapers and radio stations are bound hand and foot by a censorship of ridiculous extremes

The prestige of the military is today the military government's first thought The ordinary war budget for 1944 was almost one and a half times that of 1943 Creation of at least two new army divisions has been announced, and 60 new barracks are going up in different parts of the councry Machine shops and iron foundries are up to their necks in military jobs. Iron and copper miles are up to their necks in military jobs. Iron and copper miles are utility been formed to produce chrome, aluminum, zinc, tu metal cubide, heavy chemicals and artificial rubber.

The Argentine people are solidly behind those parts of the program that promise to add to Argentine stature in world affairs. And they are behind the government, even when they think it is wrong, if an attack is made on it from abroad, especially from the United States.

Although the Argentines have helped us in the war in many way, we have fussed and funed at them for not doing all we wanted. Me inwhile, the British have said nothing and have gone along treating. Argentina is though it had a right to do things its own way. As a result, the Argentines have done all the British wanted throughout the war, even opening their ports to Allied warships and planes.

Unhappy as they are under the oppressions of their military governors, the Argentine people are living too comfortably to be bothered, and they have never had any desire to enter the war on either side. They have unrationed beefsteaks and but ter, all the vegetables they can eat, all the wine they can drink. They think that after the war is over their country's economic dilemma.

will prove too much for untrained soldiers' minds, and that civilians expert in finance and business must be called in

Unless we intend to go to war to drive the Argentine people our way against their own wishes, the only weapon we could possibly use would be economic sanctions Sanctions cannot work without England England does not wint sanctions, for fear of crippling her vast Argentine market after the war

Suppose, with or without Britain, we could force a new government in Aigentina. Under prevailing circumstances, it could be only another military clique, perhaps disguised Anything else must have time to grow

Suppose, on the other hand we took the practical view and left the Argentine Government up to the Argentine people? At the end of the wir Argentina will have at least \$750 000 000 to spend, she has accumulated that much in credits abroad from sales of war supplies to the Alhes Argentina wants to spend a lot of that money to buy machines to build her own industries. The United States wants to sell machines after the war to keep factories going and people at work. If we could get together, Argentines would come to the States to buy those machines Experience shows that Argentines arrive here in an anti-Yankee state of mind but leave thinking we are swell people We might win them over to our side faster that way

en Men and a Vest from a B 29 cow in India

Mrs Jones sewed podkets m a vestin Kansas --- and

Condensed from Cosmopolitan

HIS is the story of a vest — an ordinary wool vest that belonged to Lieutenant Jones, and the story begins in a small apartment back in Kansas, with Lieutenant Jones's wife perched on the edge of the bed amid half packed suitcases as she hurried to finish the vest, sewing the little compartments to hold firstaid supplies and food, never dreaming that she would save the lives of ten men half a year later on the other side of the world

The ten men told the story at their base in India, sitting around a wooden table in the Intelligence Room Their brand-new million-dollar Superfortress had dropped its bombs over Bangkok and was heading back across the Bay of Bengal to India when their fuel transfer system burned out This meant they could not get at their auxiliary supply of gas. One by one the engines cut out, and at last, an hour off the coast of India, the pilot calmly told the engineer to wire him into his seat. He ordered the bombbay tanks emptied, and fumes from the leaking gas filled the ship

Ten minutes later Number Four engine cut out, and the plane started The tail touched slightly, bounced, touched again Then the nose of the plane hit the water solidly like hitting a concrete wall, and the **60-ton gas-filled ship blew up**

"I* was like a million express trains loaded with dynamite all meeting had-a at once," they s' d "We never saw the pilot again"

"The men were floating all around me in the water dazed, like dynamited fish," said Second Lieutenant Joseph Phalon, the engineer "I guess what really pulled us through was

Lieutenant Jones's vest "

Lieutenant Louis Jones of New Orleans is assistant intelligence officer with the group Before he left the United States he had read in Intelligence reports that half the men who bal out of planes either forget or lose their first-ind equipment, and he had urged the need for a one-piece gar ment that would be right there with you if you jumped or had to ditc't When he could not arouse official encour igement, he decided to work out a sample one himself

He got together various first-aid items, like sulfa drugs and bandages and a morphine syrctte, and he put all the medicines in aspirin tins and enclosed each tin in rubber tissue to keep it watertight. He included a pocketknife, food tablets, fishing line with hooks and lures, flashlight, maps even a book on survival His wife sewed a score of pockets for the equip ment on a vest The whole thing weighed less than five pounds, and Jones put it in his bag when his group headed overseas to India

Lieutenant Jones did not go along on that first mission But he handed the vest to Lieutenant Phalon just heigre the take-off "Wear this," he said, "in case anything happens"

Phalon granned "Sure, I even bet you'd like it to happen so you could

find out if it works"

It was the copilot, Second Lieutenant A I are Briggs, who pulled the life rafts after the ship hit He gave the first one to Phalon, the engineer, and told him to pick up the crew "I was having a hard time getting the second raft clear of the airplane," he said "I tried to untie the paddles, but the tope was knotted The plane was beginning to sink, so I chewed the rope in two with my teeth

"I picked up three men in my dinghy, and Phalon had three in his We fastened the two boats together and began looking for other survivors. Finally we sighted two men swimming a quarter-mile away. We tried to row toward them, but in the heavy running sea it was hopeless.

"We settled down for the night We had five cans of water, two tins of hard candy, and an E-3 kit Everything else had been lost in the explo-

sion everything but the vest

'There were two sharp squalls during the night Fverybody was sick
from the 'alt water they had swallowed, the right gunner was vomiting
blood Afterward they all slept as best
they could except myself I sat up
and prayed"

He said it very simply, looking at you with level unembarrassed eyes

"The next morning was dead calm. The hot sun and the rowing made us very thirsty, and our water supply was almost gone. As we rested the oars, somebody noticed a couple of objects bobbing in the water. We thought they might be coconuts.

Then I saw it was Sergeant Wiseman, the left gunner, and the radio operator, Lieutenant Beal It was what I'd been praying for "

Wiseman was treading water holding Beal's head up, he had kept Beal afloat that way for 24 hours Wise, man weighed only 120 pounds, and Beal was at least 160 Briggs said, "I'd like to go on record that what Sergeant Wiseman did was as fine an act of courage as I've ever heard of "

There was a pause, and Sergeant Wiseman picked industriously at his knuckles "All I did," he said in a shy Georgia drawl, "I just swam around

until they found me, is all "

Both of Beal's legs and his right arm had been broken in the crash, he couldn't swim and he was in terrible pain. He had found an oxygen bottle floating in the water and was hanging on to it when Wiseman reached him and tried to help hold him up

"I couldn't hold him up very long at a time, 'Wiseman said, "because the waves were breaking over me so fast I couldn't get my breath He would start screaming with pain and I would lift him up again After we'd been in the water a few hours the crabs began eating on my neck and arms, and on Lieutenant Beal's broken legs I could brush them off, but he couldn't move his legs

"Finally he seemed suddenly to go out of his mind He pulled out his knife and wanted to kill us both I was scared stiff, but I managed to get the kn fe away My own strength was almost gone, and if he hadn't passed out just then I think it would have

been good-bye for us both

"I guess I was pretty groggy by now I closed my eyes, and when I opened them the dinghies were coming"

Wiseman had three deep cuts in his neck and his left arm was gashed to the bone. The broken bones of Lieutenant Beal's left leg stuck through the calf, and his shattered right ankle hkewise protruded from the flesh. He was delirious from the pain

Phalon opened the vest They poured the sulfanilamide powder into the open wounds. They bound them with the compresses and bandages. Lieutenant Jones's wife had sewed into the little pockets. They made a splint out of one set of ours to keep the broken bones from sinding together, and they gave Beal a sylette of morphine.

'About midnight a north vest wind came up," Briggs communed, so we put up sail and tried to make land I could hear the waves beating on the mudbanks. As we drew nearer we saw the banks were eight or ten feet high. This time everybody prayed we would wash over the banks on the crest of a high wave so our boat would not be overturned. We floated up high and dry on the beach."

The effect of the morphine wore off and Beal was delirious again, begging for water Everyone was suffering terribly from thirst 'The vest helped us again," Briggs said 'The book on survival had a paragraph on distilling salt water. We took the rubber hose off a Mae West, and attached it to the oxygen bottle which we had filled with salt water. Then we boiled the water, ca ching the steam as it came through the hose in a plastic water bottle. We poured cool sea water on the container to help condense the steam. It was hot work, but we man-

aged after a few hours to get half a pint of water, and we gave it to Lieutenant Beal. Then we laid Beal and Wiseman under a tent we made out of the sail, and kept them cool by wetting some maps we fearth in the vest and putting them on a cerr iore-heads."

The next morning Brigg Phalon set out to find help Five miles down the beach they sighted a native He led them to a small village, where they were given water to carry back to the injured men. They made a stretcher out of the life raft and carried Beal 12 miles to the village, where a native doctor dressed his wounds Two days later they were picked up by a PBY, summoned by native runners, and flown to a base hospital The native doctor refused to accept any money So the gave him i present that meant more than anything else they could offer They give him the vest

The story ends in Greensboro, with I icutement Jones's wife rending two letters. One is from I reutenant Jones telling her that Prigadier General In Verne Saunders has transferred hun to he idquitters to develop the ide i of his vest for submission to Washington The other is written on a piece of scratchpad in a big masculine scriwl, signed by ten names 'This is just a note from the boys in the crew to try to thank " Lieutenant Jones s wife, reading the letter, is thinking of I ieu tenant Jones goading her on to finish the vest by telling her that maybe it would save a life someday. She is thinking that the idea of the vest may go on to save other lives, and bring other fliers safely home again

STETTINIUS – Dynamo in the State Department;

Condensed from The Washington Post

Bob Considine
International News Service
Staff Correspondent

ment which came out of the meetings at Dumbarton Oaks *

He believes that the world can live in peace by bringing heavy pressure on the first nation that gets truculent (political pressure at first, then diplomatic, then economic sanctions and finally force) He is certain that, if the richer nations have the guts and humanity to help the poorer nations, the very cause of wars can be exterminated, that the American people deserve to know exactly what their State Department is up to, and that when this mess is cleared up Edward Reilly Stettinius, Ji, is going to get out of Washington and find another 10b

He has less chance of achieving this last goal than any of the others. There will be things for Stettinius to do for a long time after the war is finished, and his missionary's zeal can usually be appealed to

Stettinius is a cui ious blend of businessman and world social worker—the ohysical and mental opposite of the traditional elderly, grave Secretary of State The chief rap against

dward Reilly Steitinii (Ir , the youngest Secretary of State ✓ since George Washington's Edmund Randolph is the most-talkedibout man in Washington When he succeeded Cordell Hull he was rearded as an amiable, good-looking ligurehead — a kind of glamorous yesman But in the short time he has been in office the 44-year-old, white haned, black-browed former chanman of U S Steel has given the traditionally static State Depirtment its most violent shake-up in a hundred vears, and has served warning on Washington's windy diplomatic corps that there will be less bowing from the waist and more rapid fire redtape cutting

He has a young man's outlook on the world He believes we should 'rain diplomats and foreign-service men as we train midshipmen and cadets, and he will recruit young blood until such a school develops He will hasten the end of the League of Nations in order to make way for the stronger United Nations agree-

* See "What the Dumbarton Oaks Peace Plan Means," by Edward R Stettmus Jr, The Reader's Digest, February, '45 him has been the suspicion that he might be a secret quarterback of Wall Street and big business "When I came to Washington I realized how vulnerable I was, with my U S Steel and General Motors background," he told me "So I resigned from U S Steel, turned all my stocks into Government bonds, and cut all my business ties 'He now makes \$15,000 is year as Secretary of State — as compared to his \$100 000-a year job with U S Steel

One of the great illusions about Stettinius is that his father's wealth got him one big job after another His father, an orphan brought up in St. I outs by Jesuits, became a Morgan partner, and worked himself to death as Newton D. Baker's Assistant Secretary of War Young Stettinius was launched into his precocious earer by John I ee Pratt, a vice president of General Motors and an alumnus of Stet's school, the University of Virginia.

Young Stet was an oddity at the University. He didn't drink, didn't smoke, spoke with a dam'. Yinkee accent (it was hard for fellow students to recognize that his mother was a Richmond gul), didn't go in for sports, didn't have a Stutz Beare it though he had money enough to buy a stable of them, taught a Sunday-school class, and interested himself in the work of the school's YMCA and in setting up a bureau to find jobs in Charlottesville for hard pressed students

Stet had the inexplicable habit of going for a horseback ride, a swim or a long hike instead of sitting in a grandstand and watching other athletes work their muscles (He still

would not walk across the street to see a world series or an Aimy-Navy football game.) Yet he wasn't as unpopular as might be supposed, because he had an easy grin and unfailing amiability. The University extended him a grudging respect. When he left in 1924 we hout a diploma (he fell ill while a serior) the Alumni News wrote up his good works and concluded that he wasn't such a bad egg after all—just uncollege.

He had decid d to become an Episcopal minister, but Pratt's unexpected offer of a job at General Mo tors changed his mind Pratt said in effect "You seem to have a lot of fresh ideas on people's rights Look around and let me know if you think we can do any more for our people than we're doing now"

The young in in worked three years as a stock room attendant in GM's Hy itt Roller Beiring Works it 44 cents an hour and worked hard. He learned much about the lot of the workinginan and in 1926 when Pratt appointed him a special assistant he put through a group-insurance plan for (M's quarter of a million em ployes a policy impounting to \$450 000 000 He set up clinics for em ploy s, cle incd out washrooms and commissancs, in jugurated the plan of institutional advertising now so popular. In 1931, when he was 31, he was made vice president in charge of in dustrial and public relations. Incidentally, he was already laterally as well as figuratively the white-haired boy

The country was groggy with de pression in 1932 when Stettinius volunteered to work for the share-the work plan in New York. The plan needed an endorsement from Government.

nor Roosevelt and he was picked to get it He borrowed a Cadillac from the GM showroom and drove up to Hyde Park Roosevelt and his mother were having tea and Mrs Roosevelt intended the slightly harried young man to have a cup He dropped the cup with a clatter — but he got the endorsevient

Stettinius served for a year with the late General Hugh Johnson on NIRA, and then was taken into U S Steel by his friend Myron Taylor He helped reorganize that vast empire and, to the discomfiture of older men, was voted Chairman of the Board when Taylor retired He was 38 and the old guard considered him too big for his breeches. Had he not come to terms with the CIO, Did he not successfully oppose a reduction of wages in keeping with the reduced price of steel? He did, and Franklin Roosevelt, who has a long memory, began making inquiries about him There followed jobs with the Council of National Defense and the Office of Production Management, as chairman of the War Resources Board and Administrator of Lend-Lease

As head of Lend-Lease he was charged with giving away some 15 billion dollars' worth of goods "But Stet was almost tight fisted," an old State Department hand says 'He made certain that what the Allies wanted they absolutely needed and had no way of building for themselves"

With a good hardheaded background in the most fundamental kind of international relations, Stettimus was brought into the Sta e Department as Under Secretary in September 1943. He worked very well with

Cordell Hull, who, in poor health, began to place more and more of the burden on his assistant's strong and willing back Last November 27 the President told him that he was Hull's successor

The new Secretary wasted no time After telephoning his pretty wife, the former Virginia Wallace of Richmond, he called an immediate meeting of State Department heads and began to reorganize the Department When he moved to the Secretary's office, out went Hull s dust-gathering rubber plant, the heavy old desk, the overstuffed furniture the glass-door bookcases filled with tariff hearings and Pan-American tracts In came painters to brighten up the room In came new furnishings, a long clean table, which Stettinius uses instead of a desk, and his two telephones, a black one for regular calls and 1 white one which connects with the White House switchboard

Then Stettimus bounced out to see Mr Hull at the Naval Hospital at Bethesda, Md and had a long chat with the wise old man who is his friend and booster

"I think he'll approve of the changes I've made and the changes I have in mind," he says "When I took my problems to him he was more than generous in helping me He s a great old man"

Nobody in Washington works harder than Stettinius. He gets up at seven and makes his own coffee. While he sips it he scribbles notes in a little black book ("my mind s clear then—it s a good time for thinking") After that he reads the New York, Washington Baltimore and Philadelphia newspapers, and has breakfast with

his wife and three sons By the time he has finished, his waiting room is half-filled with his battery of young assistants and secretaries. He dictates for about 20 minutes, hands out some scribbled notes and rushes to his office. There he goes through a digest of the overnight cables and begins to dictate to two stenographers.

He meets with his staff, sees a stream of visitors, mostly diplomatic, then has a press conference before lunch At 2 30 a rush period of interviews with Department heads begins. The Ambassadors start to come in at three "All of them want to be seen 'immediately,' "he says. At five o'clock he begins signing official mull and cables. After dinner until midnight he dict ites, discusses reorganization plans with his associates, talks with the President, and fills his pockets and the pockets of his young men with more notes.

The Secretary is a muscular, vigorous man, but about the only exercise he now gets is passive. He is a great booster of osteopathy, brought his own osteopath to Washington, and calls on him whenever time permit. He has a swimming pool and several riding horses at his 580-acre Virginia estate and he wishes he could get down there, but it's hopeless."

At his first reception Secretary Stettinius gave a sample of how he is going to speed up protocol. A large number of diplomits wanted to present their respects. He threw a cocktail party for them in a house across the street from the State Department. When the mob got together Stettinius stood up and said he was glad they came, and thanks for the congratulations. He got one of them to respond in the name of all the others.

Then he wilked back across the street and went to work

Dark Dark O

A LADY trustee of a home for delinquent girls approached the director recently with something on her mind. She really thought, she said that the time had come to try to have a Letter class of girls in the institution. Wasn't there something that could be done about it?

- The Heasures of Iul! ning (Columbia University I ress)

A woman customer asked the salesgirl for a Ouija board Obliv ous to the other customers' curious states, she placed her hands on the planchette and concentrated deeply until it had moved to the corner marked yes." At that point, the salesgirl inquired if she should have it wrapped

"No, thanks," said the customer, pushing the board away "I just wanted to ask it a question"—Lleanor (larage in Cleveland Plain Dealer

MARCHIE BLOOM, U S Weather Bureau for ccaster at the Washington National Airport, reports that a woman called up one day in March to ask what the exact weather would be on June 18 She was planning a bang up outdoor wedding for her daughter

'We can't look that far ahead," the weatherman told her

"What's the matter with you people" she snapped Haven't you got an a nanac? -- Frank Carey AP dispatch

Your man, home from the wars, doesn't want to be treated like a problem child

The Soldiers Say Don't Do It!

Condensed from Common Sense + Don Wharton

His is urgent advice to the wives, sweethearts, parents, relatives and friends of the veterans who are coming back from war. The advice is stop trying to practice amateur psychiatry on them, don't be misguided by the widely published attempts to tell you 'how to handle' these "changed men" Instead, welcome the boys home naturally as what they are—that is, fundamentally the same boys who went away

This bit of advice is not the writer's idea, not an editor's idea, not the idea of the War or Navy Department. It is the idea of a bunch of combat veterans back from action overseas

They brought up the subject, and asked that something be written to prevent other homecoming soldiers from having to undergo the patronizing, oversympathetic, kid-glove treatment they had encountered on their own return. They were disgusted with the impression created among their home folks that most returned soldiers were strange neurotics who didn't want to talk about what they'd been through, who had to be handled with care They wanted everyone to know that returned soldiers asked only to be treated like normal human beings without any of the pampering advocated in most "When-He-Comes-Home' articles

It began in a hotel room in Richmond, Va, where ten returned soldiers were sitting around "shooting the breeze," mostly about how it seemed to be home. One of them mentioned the campaign in the American press telling people how to act when Joe comes home. That set them going

"My wife had been reading a lot of that tripe," said one infantryman, wounded in Italy "It damn' near spoiled my leave Here I was, full of the war, wanting to tell her what I'd seen, and how I got nicked — all the things I couldn't put into letters She'd just listen, never say a word, never ask a question It seems she d swallowed some article telling wives they mustn't talk about the war, mustn't show any interest, my God, in the thing which has completely absorbed their husbands' lives for two years and more!"

"It's stupid," another boy said "Crack down on it! We heard about it over there from replacements, heard they were treating us queer Same propaganda in magazine fiction, too Do they think we can't read?"

One boy with a cast on his keg said his mother went through the most extraordinary performance, never even asking how he was hurt, never mentioning the cast, pretending not to see it — but all the time, he said, "treating me as if I were her pregnant

daughter "

"Yeah, I know," said an ordnance sergeant "Ma kept watching me all the time, trying 'not to do anything that would make me nervous' Of course that just made me nervous as hell'

A gunner chimed in "I was visiting my brother, and everything was going fine until his wife piped up, 'Don't ask him any questions' Why don't you write a piece telling people to forget all that nonsense and be natural!

All this is in sharp contrast to the recent spate of articles and advertisements purporting to help relatives 'help" veterans in their "punful readjustment' to civili in life A program book of the Office of War Information admonishes, "Avoid ques tions of combat experience', similar warnings have appeared not only in books and magazines but even in idvertisements Writers of such non sense should have been at St. Albans Nav il Hospital and he ird four sailors laughing at this one lo 3°k hun about the new lands he has visited and the folkways of the people is quite in order "

No man likes to be prodded into talking about his combat expensences unless he is in the mood for it. Some men never want to But, given a little time and sympathetic listeners, the normal service man wants to talk. Why not? They are the most exciting, the most terrible, the most important, the most interesting things that have ever happened to him in his life, or probably ever will. What else would be talk about?

He has been writing home He imagines you have read his letters over and over, as carefully as he read yours — that you tried to read between the lines, figure out things he tried to get across to you without violating the rules of security "Now what happened that made you break off such and such a letter so suddenly?" "What ever became of Sergeant Valetti you mentioned once?" — Such questions show your genuine interest and understanding

A naval officer put it this way "I was at a dinner party the other evening, and the hostess turned to me and said, 'You were on an aircraft carrier, weren't you? Tell us some of your experiences' Like everybody else in the service I resented being put on the stage as a trained seal But my little girl asked me, 'Daddy what's it like when a bomb goes off on a ship?' Now that started me talking! You see, she's only eight, and she never read any propaganda on how

to treat papa "

One piece of guidance which spread into millions of homes says "If he chooses to talk about these things, it will help him if you listen This patronizing tone would insult a boy home from prep echool, let alone a man home from war Its implication is that mother or dad or wife actually has no real interest in what the veteran has to say but out of some the apeutic concern for his welfare can be persuaded to "listen well " A sailor, back from Antwerp, read this gem and shook his head when he found that its source was a mental hygiene organization

"So we're all mental cases, huh?"

he said

My own friends have come back from overseas after plenty of rough experiences. They're the same men who went away. More mature, of course But the convivial ones are still convivial, the reticent ones still shy. Common sense tells you that would be true — and common sense plus your natural tact would cause you instinctively to encourage one man to talk and let the other sit quietly and take it casy.

Yet some psychiatrists write didactic generalities Says one magazine article "Not only will your Joc come back changed, he is changed already " Certainly combat has had its effect on him, but basically he is the same man What he needs most is intelligent handling and time to adjust himself to civilian life. Throughout human history many men have gone through horrois, hardships and suffering without emerging as psychopathic changelings They are matured by the experience, and when their personality is changed, it is often for the better Hardship sometimes tempers a man

The words of a Marine officer, back from South Pressic duty, blow through the inists like a clean breeze

"The whole thing is wrong — trying to set up rules on how to treat men back from war. I here are no rules Every man is different. People draw up plans about just how they're going to act when Johnnie comes through the front door. Then Johnnie comes in through the back door, and they re all upset."

There's been a lot of advice printed telling wives to make allowances for this strange man who has come home, and for his strange new habits Some of this advice is wise, some of it seems downright petty It would be just as valid to remind wives that, except in the front lines, he's used to very tidy housekeeping, and he's used to having his chow on the dot — and plenty of it And he is not used to having the mess sergeant regale him with stories about the troubles he has getting this or that, or how tired he is from standing over the stove Maybe he has as many allowances to make as she

More serious is the letdown from tension and excitement Civilian life, after the novelty wears off, may seem pretty dull to the veteran But there's no recipe for dealing with that, other than the good old formula of common sense. He has to face it, and nobody helps any by treating him as a "case". However, as one of the boys said. "If I could adjust myself to the sudden hell of jungle fighting why can't I easily adjust back to the simple and familiar ways of civilized life.""

Major General Norman T. Kirk, Surgeon General of the Army, says, "The average soldier returning to civilian life is basically the same man he was when he went away True the rigid training, the disciplined life, the experiences far from home have ma tured him But to feel that each re turned soldier is a 'problem child' is to underestimate the character of American inanhood The large majority of these men can take their experiences in stride and can return to their homes, their families, and their jobs finer citizens, ready and able to shoulder their share of responsibility in the civilian world "

Maybe it's we civilians who have been getting neurotic about this, losing our perspective Certainly we ought to remember that after the last war the great majority of veterans were simply their own normal selves when they came back, and often went on in matter-of-fact civilian life to achieve great success and distinction — which would hardly have been possible if they'd all come back with strangely shattered personalities

Major General David N W Grant, head of the Army Air Forces medical services, deals with men who are, by and large, the most highly strung bunch of youngsters ever assembled If any veterans needed to be regarded as "special" it would be they But General Grant says flatly, "Much of the stuff that s being printed is nonsense 'He adds

"This is the challenge we face each time a war veteran returns home to see that he has full opportunity to spring back to his original personality curve Given a little time and a little help most of them will Removal of abnormal stress and tension is cure enough in most cases But the change from an environment of tension to one of relaxation is a radical one and, in instances in which the fatigue of the personality has been great, special help must be given in making the adjustment"

And for a calm bit of wisdom, hear Major General William R Arnold, Chief of Chaplains, U S Army "Let's not underestimate the courage and common sense of returned service men Be natural, friendly, and normally glad to see them Welcome them home Encourage them to talk about their experiences Genuine respect and affection will do more than all studied efforts to heal the hurts of the human spirit"

- THOMAS R MARSHALL, Vice President under Wilson, was a great admirer of the President One of the books Maishall wrote was dedicated "To President Woodrow Wilson from his only Vice"

 —E L Edgar
 - MAN ARMY LIEUTENANT and his bride vere toasted by friends before the officer sailed I ifting his glass to his pretty wife, the officer smiled, 'This is the only time I am leaving my future behind me"—Sid Ascher in Caretan
- > When the late Cardinal Gibbons and Jacob Epstein, merchant and philanthropist, met one evening Mr Epstein beamed, "How are you, Your Eminence?" "As well as can be expected, the Cardinal replied, but I'm 80, you know, and my Heavenly Father may call me any time"

"Don't worry about that," the merchant replied 'Our Heavenly Father is a good businessman, He isn't going to call any gilt-edged bond at 80"

* The Desperate Need for Faith *

Condensed from the book "The Predicament of Modern Man"

D Elton Trueblood

Professor of the Philosophy of Religion Stanford University

day are not the problems of the war, great as these are The war is only a symptom of the sickness of our civilization

The most urgent problem of our time is the spiritual problem, and unless it is solved, civilization will fail, indeed, we already have a fore tiste of that failure in many parts of the world

The Nazi creed presents a new conception of civilization. It is the supposition, advanced with fanatic zeil, that civilization consists primarily in material achievements and can reach its goal without ethical considerations. It accents power, authority and obedience, denies human equality, and the worth of the individual

As he faces this assumption, the ordinary American is curiously help less. He does not like Hitler's creed, but he has very little notion of what to do about it, except in a military way. He mumbles something about democracy, but he seldom examines the moral grounds that make democracy possible. He has no living faith to put in the place of the heretical one that the Nazis so vigorously preach.

In Western society we believe the right things - but with no cothusiasm. The Nazis believe all the wrong things with terrificzed.

It is generally agreed throughout most of the Western World that human individuality is precious and that things must be used for the sake of man rather than man for the sake of things. We hold that there is no favored race and no nation which ought to be dominant. It is generally agreed among us that war is a sorry necessity at best, always a means to an end, and that the end is peace. This cluster of beliefs is our ethic

Yet the fearful aspect of the present situation is that those who have inherited the major tradition of the West now have an ethic without a religion, whereas they are challenged by millions who have a religion without an ethic We shall win the war, because we have the preponderance of men and resources, but we should be gullible indeed if we supposed that mere military victory would end the powerful threat of the faith which is proposed as a successor to the religion of the West

The only practical alternative to an evil faith is a better faith. Though this is the lesson of history, we are now trying the utterly precarious experiment of attempting to maintain our culture by loyalty to the Christian ethic without a corresponding faith in the Christian religion that produced it

In a word, ours is a cut-flower civilization Beautiful as cut flowers may be, they will eventually die because they are severed from their sustaining roots. We are trying to maintain the dignity of the individual apart from the deep faith that every man is made in God's image.

In our public schools we teach children about our system of distribution, but we make almost no effort to give them a living knowledge of the spiritual sources of our civilization. The teacher may tell about Nero, but she must not tell about his distinguished contemporary, St. Paul In our universities hundreds of young men devote themselves to engineering as against one devoting himself to theology.

Distinguished men of letters have recently asserted their conviction that the only thing which can save our sagging culture is a revival of religious faith Yet many of these men make no contact whatever with organizations in their own communities dedicated to the nourishment of that faith Countless others who would resent being considered irreligious reject the practice of group religion. I have my own religion," they say

When we think of the awful need of humanity at this hour, indeed it may seem almost grotesque to turn to the church for help, for most of the popular criticisms of the church are justified. It has hypocrites, and it is weak when it ought to be strong. But vague religiosity is really the only alternative to the church that our present culture offers. Loyal identification with the church may have difficulties, but the alternative position may have more

Theoretically it is possible to be a good man without participating in the life of a religious community, but the difficulties are enormous We know what we ought to do, but we need reminders, we believe in a moral order, but we need inspiration and fellowship We need to participate in something bigger than we are The person who says so proudly that he has his own religion and consequently has no need of the church is committing what has been well called "the angelic fallacy" If we were angels, we might not need artificial help, but, being men, we normally do need it

By participation, an isolated individual is partly lifted above himself, not only because he may, in a group, be more recipient of God's help, but also because he there shares in the distilled wisdom of our race. Week after week he hears the reading of great classics, such as the Psalms or the parables — and the reading can hardly be so poor as to spoil utterly the noble words. He shares in ancient hymns that weak men like himself have used for generations. He may still find that his highest experiences come to him as he walks alone with his dog, but these experiences are the more likely if he walks with the richness of memory that participation in the icligious community makes possible

Poor and weak as it is the church makes vital contributions that otherwise the world may lose and that men have actually lost in some areas. The great testimonies, which it is the mission of the church to make and without which human life would be even more savage and degraded than it now is, are many, but four are of

paramount importance in the reconstruction of civilization

The first is that of equality before God Because every man, whatever his color, his knowledge or his financial standing, is a child of God, there is a profound level at which men are equal They are not equal in that they have the same powers, but they are requal in that each is equally accountable each is equally subject to the moral law

The second great testimony is the testimony for peace It is sad truth that wais have raged intermittently in Christendom, but the Christian faith has never failed to deplore them Given the inventions of our day, life might be even worse if there were not the leavening influence for peace which shows itself in the renewed determination, on the part of millions, to try to make a world in which war is no longer recurrent The point to remember is that these millions are voicing a conviction which it has been the role of the church to foster for centuries I he world is bad enough with the leaven it is frightening to contemplate what it might become without the leaven

The third great testimony of the church is that of universality Man is naturally divisive and would be more so were there not a conscious fostering of the principle of essential oneness. Our faith has never fully succeeded in bringing together men of various nations and races as one family conscious of their common origin and destiny, but it has never ceased to preach that this is the true way. We have denied this in practice by racial discrimination, and in other ways, but the Christian faith has been

always at work, so that we cannot contemplate these things with com-

placency

The fourth great testimony is that of renunciation of worldly pride. The church has sometimes aped the world in the honor it gives to its "dignitaries". But the fact remains that the Gospel continues to be the chief antidote to the cult of power which has been the worst scourge of our distriaught century. If it did nothing else but keep alive in the world the notion that humble service is better than strutting power, wise men would support and foster the church with all the strength at their command.

The admitted imperfection of our present churches does not absolve a man who cares about civilization from seeking to join in the kind of group action that will help to conserve what cannot be conserved in any other way. It is not enough to oppose the Nizis' new paganism by mere individual moralizing about liberty and humanity Such moralizing is almost as ineffective as an umbiella in a tornado. The only way we can overcome the Nazi challenge is by the discovery of a sufficient faith, something that can set our souls on fire What, in historical experience, has most often been able to do this? It is that often criticized organization we call the church Without it we might long ago have been submerged With it we may yet save civilization The rock on which the church is built often appears to be weather-beaten rubble, because it is all mixed with human frailty, but the lesson of history is a continual verification of the judgment that the gates of hell cannot prevail against it

Americans don't like cartels — but other nations do, and we shall have to adjust our thinking to the facts

WAT ARE: and What Shall We CARTELS Do About Them?

Milo Perkins

Condensed from Harper's Magazine

Former Executive Director of the Board of Economic Warfare

USINESSMEN of several foreign nations have already decided that competition in international trade is dead and that they will conduct a large part of their foreign trade after the war through cartels. Their governments will support them. This fact will not only affect every American who does business abroad but will deeply influence the domestic economy of the United States.

Most Americans don't like it President Roosevelt, former Secretary Hull and Eric Johnston, among other leaders. have denounced cartels We Americans still believe in free markets, and distrust big combinations of industrial power which parcel out countries to their members on a monopoly basis But it will do us little good simply to wave our arms in righteous indignation. If we are not to be outsmarted and outgeneraled we must face the facts as to what cartels are, why they are, and what they do Then we may be able to decide on a workable American policy

An international cartel might be described as a world-wide trust or monopoly It is an agreement among producers in various countries for joint action to achieve stability in a

given industry Sometimes this means raising prices and trying to hold them up, sometimes it means trying to avoid a price collapse All cartels are in business to keep prices at levels which could not be held if free competition existed

In 1939 there were 179 world-wide cartel arrangements American firms participated in 109 There were foreign cartels in which no American firms participated directly but which covered commodities we needed to import, such as rubber, tea, quinine, tin, nickel and industrial diamonds, and there were cartels in which American firms joined, in chemicals, plastics, pharmaceuticals, electric lamps, photographic materials, aluminum, magnesium and other metals

Cartels use many and ingenious devices to stabilize prices Sometimes they do outright price-fixing Sometimes they divide markets into specified sales areas "You let me have Europe to myself and I'll let you have the United States" They may limit each member company's production to keep prices in line (Members have been fined for exceeding their quotas, the amount of the fine being distributed among the other companies The

German steel industry, for example, paid a fine of some \$10,000,000 in one year during the 1930's while it was producing more than its cartel allocation permitted)

Cartel members often swap patents and technical processes. This gives each member a pool of scientific knowledge much bigger than it could command by itself. Moreover, patent arrangements usually protect American companies from foreign competition in the United States market—and frequently from domestic competition too, because their American rivals don't hold the necessary patents.

Such patent agreements can lead to gross abuses An arrangement among American, British and German chemical companies made possible the sale of the same plastic material to commercial molders at 85 cents a pound and to dental laboratories at \$45 a pound International patent agreements may also endanger our military security, as did those which rest icted magnesium production in this country to protect the market for aluminum However, our American bombers over Germany use 100-octane gas, synthetic rubber tires, and synthetic toluene explosives, all based on German patents acquired in a deal made in 1929

We know that if goods moved as freely among countries as they now move among our 48 states the world would have more production, more employment and higher living standards. If all governments encouraged open competition and did away with restrictive trade devices such as export and import quotas and blocked currencies, American business could give a good account of itself in inter-

national trade, despite its higher wage levels. Why, then, shouldn't we simply legislate that no American firm shall have anything to do with a cartel?

The answer is Because American business even at its strongest is relatively helpless against the competition of well-organized foreign businesses supported by the power of their governments

For our government is the only government in the world actively opposed to centralized controls over foreign trade

Take a look at the world scene Obviously the Russian government monopolies are much more at home in a cartelized world than in a world of free competition. And the cartelized control of industry is an easy, stable way of doing business in a semiclosed economy like Britain's Small countries like Belgium and Holland and Switzerland are forced to use cartels once the big powers use them

Even weak nations, if they resort to quotas and blocked currencies, can lick strong American companies operating in their countries on a competitive basis. They can even establish cartels by government decree in which American exporters have to take part unless they pull out of these nations' markets altogether. For instance, several Latin-American and European countries before the wai set up cartels for the oil business Here's how it's done The government sponsors a company of its own, and then calls in the privately owned foreign companies and tells them that it wishes its company to get a certain percentage of the business at what

amounts to a government-approved price It suggests that all these companies agree as to the percentage of the business each will get If the American company doesn't join in such an agreement, it doesn't do

business in that country

Our State Department is unlikely to bring any real pressure to bear to break up such arrangements It probably would regard any such move as interference with the other country's internal policy And no American firm is strong enough to buck such arrangements by itself The only alternative is to pull out — and our need for foreign markets won't allow that to happen very often

The world supply of many goods is bound to exceed the effective demand as soon as we get beyond the "catchup" period after the war New synthetic and substitute products will be competing with natural products Rubber is an outstanding example When heavy surpluses reappear, producing countries will call for stabilized marketing operations to avoid bankruptcy, and the United Nations will be likely to resort to governmentsponsored cartels as one of several stabilizing mechanisms. If by that time we have entered a United Nations organization to keep the peace, there will be large economic areas where we shall want to collaborate with other member nations on worldwide marketing problems To do otherwise would be to engage in economic warfare against our present allies So here again the pressure of curcumstances will tend to make us accept e cartels because other nations accept them

However, American firms have joined cartels in the past less to get foreign business than to keep competitive foreign products out of the rich American market Cartel agreements have frequently fenced in that market more effectively than any tariff For instance, the agreement between Du Pont and Britain's Imperial Chemical Industries has been the equivalent of a prohibitive tariff on a long list of British chemicals in the United States (and vice versa) A sizable part of American business will want to join cartels after the war to protect its domestic market, and popular opinion will back such a move exactly as it has backed the imposition of high American tariffs For as a people we are still under the delusion that the way to be prosperous is to sell as much as we can abroad and to buy as little as we can from abroad

Already we Americans have gone a lot further toward giving up free competition here at home than most of us realize Not only does our tariff shut out foreign goods to prevent price-cutting from abroad in our home markets but our patent laws underwrite monopoly most effectively in the fields where science has made its greatest progress. Under the Miller-Tydings Act, manufacturers and retailers can now act jointly to control sales prices of items such as food and drugs. This is in effect an abrogation of the Sherman Anti-Trust Act in a segment of the economy that affects the cost of living for every consumer Oil is now produced under strict proration to prevent the waste of a vital national resource And our labor and agricultural legislation protects millions of Americans from the strictest competition

Nowhere is the trend clearer than

in agriculture. The same fluid milk sells today in the New York City milkshed at a dozen different prices, all supported by law and all designed to make us pay about twice as much for bottled milk as processors pay for the same milk to manufacture into cheese, butter or ice cream. This is a neat domestic cartel for a selected group of farmers The last OPA act included an extraordinary provision — which won the support of both parties — guaranteeing American farmers 90 percent of "parity price," or more, for most of their crops for two years after the official proclamation of peace Our farmers may thus be spared the rigors of competition for four or five years after the Axis folds — even though this costs the rest of the country several billion dollars a year

We Americans are also parties to international price stabilization agreements on such imported agricultural commodities as sugar and coffee. We promoted the Inter-American Coffee Agreement of 1940 to help the Latin-American countries market one of their main crops at a profit. Incidentally, wholesale prices now are nearly double what they were in 1939.

All this does not mean that the proponents of free enterprise should abandon their battle. But it does mean that it's time to rearrange the line of battle to take account of actual circumstances. It's time for us to make our foreign-trade policy fit the realities of an era which has already gone a long way toward cartelization.

No one can suggest with finality what our eventual policy toward cartels should be If the United Nations build an effective organization for keeping the peace, an atmosphere for genuine international cooperation on economic matters will be created If, however, the world drifts into great regions, more or less self-sufficient, there may be little chance for real collaboration on a world-wide basis

We may, therefore, want our businessmen to work with the businessmen of other nations in certain cartels, or we may be forced to build great combines of our own as offsets to Russian and British combines Events themselves will have to determine our final course

In the meantime, these preliminary steps and principles seem to make sense

1 American business firms should be required by law to register proposed international cartel agreements with our State Department All agreements should be made available to Congress and to the public, unless military security dictates otherwise Such exposure to critical public view would eliminate some of the cartels' more restrictive practices

2 There should be a Board of International Trade within the State Department, empowered to approve or disapprove all cartel registrations Legislation should set up broad principles to guide this board in its decisions, including consideration of our military security, our foreign policy, and the effect of any agreement on the volume of our international trade, on prices, on the status of labor in the industry, and on our domestic economy The Board would have to reach its decisions quickly Most business firms in other countries will not be subject to these restrictions Annual reports on the functioning of the cartels made by American member firms should be required, and the Board itself should review regularly all approved cartel arrangements for their effect in operation It should submit its own annual report to Congress Sometimes it will be necessary to revoke or modify the previous approval of cartel arrangements, but so long as Board approval is in effect, any American firm participating in approved cartels should be granted immunity from prosecution under our antitrust laws, provided they operate within the framework of the specific approval granted them

3 We may want to make, as we have in the past, international agreements to meet problems of chronic oversupply—in wheat, sugar and coffee, for example, or in metals We may also want to use these agreements to conserve, on an international scale, the natural resources of important raw materials. The recent Anglo-American Oil Agreement, which provides for international co operation in the development and marketing of petroleum products, is a good example.

There is no single, easy answer to the cartel problem. Some kinds of foreign trade are best suited to competitive enterprise—like automobiles, textiles, and manufactured consumers' goods in which there is considerable variation in quality. Others can be handled better by cooperation among countries—raw materals like sugar, coffee, petroleum, certain metals and probably rubber.

We should prepare for any eventuality, however International diplomacy, military security, and economic policy are no longer separate, we must integrate them into a vigorous cohesive foreign policy if our leadership in the modern world is to be alert and effective

With our major foreign competitors in world markets already operating as closed economies — or moving rapidly in that direction — we are likely to find free competition in many fields as obsolete after the war as a Model T Ford Where we cannot eliminate cartels, we must gradually perfect ways to make them into instruments which will serve the public interest

To All Friends to Whom I Owe Letters

Affixing a stamp to a letter always thrills me I am sending to someone a small fragment of myself, and commanding my government's coopera tion. Diopping the letter into a postbox is even more stirring, for I know that it is about to ignore space and bridge distance. It may be an ambassador empowered to reach agreements, or an arbiter to dispel misunderstandings, or a confidential messenger to whisper secrets. There is such power in that folded bit of paper that my fingers relax their hold lingeringly, so I may gain the full flavor of the act.

Mailing a letter, in fact, so thrills me that I wish I could ever find the time to write one

— Burges Johnson in The Saturday Review of Literature

onquest of a Killer By Paul de Kruif

A dread heart infection, formerly fatal in 97 out of 100 cases, responds to a treatment pioneered by a group at Brooklyn's Jewish Hospital

DACTERIAL endocarditis, an infection of the heart, has until now been the most surely deadly of all microbic maladies. It has killed 97 out of every 100 persons it attacked, and the few who survived have seemed saved only by some freakish whim of nature It is estimated that endocarditis murders at least 10,000 Americans annually

In the past year certain men of medicine have thrown this death march into reverse, they bring hope of recovery to 80 out of every 100 victims And this death-fighting victory means a better chance for life for nearly 1,000,000 Americans in various stages of rheumatic heart disease, for it is chiefly these people who are threatened by endocarditis rheumatic condition doesn't have to be active, bacterial endocarditis may aim its murderous blow at the scarred valves of hearts that have long ago recovered from rheumatic trouble

While a variety of germs may cause endocarditis, by far the most frequent murderer is the green streptococcus, one of the strangest creatures in the rogues' gallery of the microbe hunters. The green streptococcus is ordinarily a gentle creature It lives innocently in the mouths of nearly all human beings, harmlessly minding its own obscure microbe business Even when it gets into the blood circulation, as it sometimes does after the pulling of a tooth, or from infected tonsils or sinuses, it does not harm at all - if the person's heart is healthy. But let this gentle germ light on the damaged or scarred valves of a rheumatic heart, and it becomes an implacable assassin

The microbe guards itself cleverly from medical attack by burrowing into those valves and covering itself with a cauliflowerlike vegetation of clotted blood In this evil nest it grows and swarms, seemingly out of reach of any curative scrum or chemical Then it sallies out into the blood It not only wrecks the heart by attacking the delicate valves but it causes deadly mischief all over the human body Bits of blood clot from the heart valves detach themselves, swirl through the circulating blood, and lodge in arteries of the brain, the kidneys, the eyes, the skin, the lungs and the heart itself This blocking of the arteries, called embolism, devitalizes one part of the body after another

In the early stages of this inexorable murder the sufferers may simply feel very tired and strangely sleepy They have low fevers and feel grippy, and their doctors may think they're suffering early tuberculosis, or typhoid, or malaria, or rheumatic fever, or any of a dozen different diseases Then little red spots come out on their bodies, and little hemorrhages, looking like splinters, appear under the nails of toes and fingers

Doctors can diagnose the ailment early by testing the blood for the presence of the green streptococcus But — until now — when they have found it, they have been faced with the tragic task of telling the patient's family that the situation is desperate, almost hopeless

More than 30 years ago Dr Emanuel Libman of New York wrote the classic description of this dread sickness After that, death fighters tried every weapon in their medical arsenal—serums, arsenicals, transfusions, fever treatment—all in van In the late 1930's came a hint of hope from the new sulfas A few cures were registered, but not enough to dent the endocarditis death rate

Then in 1943 penicillin entered the battle High hopes were held because this new wonder drug was not only powerful but marvelously safe Yet, after what seemed to be thorough testing, a committee of the National Research Council published gloomy news Of 17 cases of bacterial endocarditis treated with penicillin four were dead, ten showed no appreciable improvement, and two of the three who had seemed to get a bit better relapsed soon after the treatment was discontinued It was officially decided to break off the battle for the time being, because penicillin was still so scarce and so badly needed for saying the wounded of our armed forces

This negative report was published in The Fournal of the American Medical Association on August 28, 1943, and this

is a date to be particularly remembered On August 27, the day before, Dr Leo Loewe and his associates in the Jewish Hospital in Brooklyn stood by the bedside of a 34-year-old man far gone with bacterial endocarditis. For more than six months they had fought a losing battle to save his life They'd tried huge doses of sulfas, and added artificial fever, but in vain Then to the sulfa treatments they'd added the drug heparin, which acts to slow the clotting of the blood They'd hoped that heparin might act upon those blood clot vegetations on the man's heart valves, exposing the green streptococcus to the sulfa-magic Then in June they'd combined moderate doses of penicillin with heparin and still they were baffled

As death-fighters the Brooklyn doctors stood with their backs to the wall And so Dr Loewe took drastic action He had been using what was considered an orthodox daily dose of penicillin, little more than 40,000 units Now, since the patient was so far along the road to death, he decided to risk enormous doses

The Brooklyn physicians began giving the dying man five times the orthodox dose of penicillin—200,000 units daily, combined with heparin injections every other day From a large flask above the man's bed a continuous flow of penicillin dripped for 14 days and nights into a vein in the region of his wrist. The needle inserted in his vein was held in place by a strip of adhesive tape. The man could move his hand freely, and it was remarkable how this continuous injection was no bother to him, waking or sleeping.

The green streptococcus vanished from the patient's blood during this treatment But after the treatment was stopped, the man relapsed Then, after a second course of 200 000 units daily, the evil microbe disappeared for good This man, who'd been marked for death, is alive and in excellent health today

On August 28, 1943, the very day the Government thumbs-down on penicilin for endocarditis was published, a 52-year-old woman was brought to the Jewish Hospital in Brooklyn She was in coma, paralyzed from blood clots blocking blood vessels of her brain She was at the brink of death — moribund is the medical word for her condition

Dr Loewe and his co-workers at once began the massive penicillinplus-heparin treatment, and kept it up for 13 days. The second day this woman sat up in bed. Within two weeks she was free of her infection.

I've just talked to this historic woman A year and a half after she was brought to the hospital, so sure to die, she is alive, strong and working She told me she had read a newspaper statement by a high Government authority that, while penicillin is a remarkable medicine, it couldn t be expected to raise people from the dead "But penicillin made me as good as sit up in my coffin, and I'm resurrected," she said And I wish you could have seen her smile

By the end of 1943, Leo Loewe and his co-workers, Drs Philip Rosenblatt and Harry J Greene and their technical assistant, Mortimer Russell, were ready to make their scientific report of seven consecutive, unselected cases of bacterial endocarditis who

had recovered after the new treatment This was published in The * Journal of the American Medical Association in January 1944 The National Research Council decided to restudy the effect of penicillin upon the disease

Now to the Jewish Hospital in Brooklyn came a parade, in ambulances, on stretchers, of victims of endocarditis Many of them were in pitiful condition. Some were already suffering congestive heart failure, so that it was risking immediate death even to begin to treat them.

Dr Loewe and his co-workers turned none of them away They knew that the inevitable deaths of some of the far gone might tend to discredit their work, but they tried their new method anyway In his report in The Canadian Medical Association Journal, in January 1945, Di Loewe thus defended his boldness "Despite the precarious manifestations of many of the afflicted we had no choice since refusal was tantamount to the imposition of a death sentence"

Io put it bluntly, he didn't care about a fine show of statistics, he just wanted to save lives

From the very start of this life-saving adventure the Brooklyn doctors had a nonmedical co-worker without whom they would have been helpless. This was John L. Smith, vice-president of the Charles Pfizer Company of Brooklyn. This firm was one of the first to engage in penicillin research in America and to pioneer large-scale production in fermentation vats. Smith furnished the penicillin for the new treatment. After the report of the recovery of those first seven cases, the National Research

Council added a certain amount of penicillin to the quantities the Pfizer Company was giving — free — to Dr Loewe and his co-workers, as well as to other doctors who were now beginning to join the hopeful battle

Mr Smith stood at the bedside of virtually every one of these victims whose lives had been saved by the new treatment Day after day he went back and told the Pfizer scientists, engineers and workmen of the lives their skill and devotion had saved "They were all thrilled, and their knowing they were saving those lives has been a major factor in our tremendous increase in penicillin production' reports Mr Smith

When you remember the large proportion of the far-gone forlorn who came to the Jewish Hospital grasping at a straw for life, it's no wonder that Dr Loewe and his associates had to record failures among their growing number of fantastic penicillin-heparin successes In their second report, to taling 54 cases, the Brooklyn deathfighters recorded 13 fatal treatment failures, one reinfection, and three deaths from heart failure after the victims had been absolutely sterilized of all trace of the green struptococcus, as proved by autopsy Of the 13 people who died in spite of the treatment, ten could not be saved because their hearts were too far gone, or the blood vessels of their brains were blocked by embolisms, or there was a profound wasting of their tissues, or terminal pneumonia. Only three deaths were due to infection with a green streptococcus resistant to penıcıllın

Dr I newe and his associates found that the longer the evil green strep-

tococcus had been gnawing at the heart valves of the victims, the longer they had to treat them, and the larger they had to make the doses As of today, when the recovery rate for unse lected cases (from early to far-gone desperate) is exceeding 80 out of every 100, most patients are treated continuously for at least five weeks with as much as 1,000,000 or more units of penicillin daily, plus heparin

Heparin, unlike penicillin, is a two-edged sword, if it is given in excessive doses, hemorrhages and even deaths may occur However Drs Loewe and Rosenblatt, with the cooperation of E H Bobst and Dr R D Shaner, of Roche-Organon, Inc, another pharmaccutical concern, have developed a safe way of administering the drug I hey dissolve it in gelatin, acetic acid and deverose, a medium invented by Dr George Pitkin Injected in this form it is absorbed very slowly and safely

Dr Walter S Priest and his asso ciates at Wesley Hospital, Chicago, Dr M H Dawson and his co work ers at Presbyterian Hospital, New York, and Dr Ward J MacNeal and his co workers at Post Graduate Hospital, New York, have all confirmed penicillin's power against this most dread of all infections of the heart Tests of massive doses of penicillin with and without heparin, are being conducted in a growing number of hospitals

On December 1, 1944, the Na tional Research Council included subacute bacterial endocarditis in the list of diseases to be treated by peni cillin when the infection is due to sus ceptible microbes — which includes the vast majority of all endocarditis

cases And now our death-fighters have the weapons with which to work Nearly a score of chemical and pharmaceutical manufacturers have succeeded in increasing production of penicillin so sharply that the price to the Government per 100,000 units has tumbled in the past year from \$20 to 85 cents

Now that the power of the new treatment for bacterial endocarditis has been established, physicians will be more alert to detect the affliction, by taking blood cultures when it first hits. They can feel confident that when bacterial endocarditis is detected within three months of its onset and before the heart valves are too grievously damaged, and if the microbes are sensitive to penicillin, as the great majority of them are, then recovery may be expected in virtually every case.

Two years ago victims of this disease had only three chances out of

Coping with the Public

THE BLIZZARD had turned Chicago's Michigan Avenue into a pedestrian hazard of churned-up slush. A pretty young thing, standing irresolutely at the crossing, extended a dainty foot and as hastily withdrew it. The big Irish traffic cop regarded her sympathetically. It took but a minute to blow his whistle, stride to the curb, gather her up in his arms, and deposit her carefully on the other side. Whereupon the young lady, her eyes blazing, slapped him—hard. Without a word he once more swept her from her feet and bore her, kicking, back to her original position. Then he released the traffic.—Contributed by J. C. Graham.

IT HAPPENED on New York's Fifth Avenue A girl with her arms full of bundles went up to a cop and said a few words to him He promptly took her packages, and while he held them, she straightened the seams of her stockings Taking back her bundles, she thanked the cop and departed When she was a few paces away, he said, 'Yep, that's better 'Then he blew his whistle, and traffic rolled again — W D in College's

The Last

Condensed from Life

David Cort

ERAL Karl Rudolf Gerd von Rundstedt, commander of the German armies in the west, is the last and by far the greatest of the

Prussian masters who almost won the world for Hitler. He is as cold, functional and misked as a pillbox. And he knots in his own person all the crucial clues to the German Army, the Nazi state and the present undercover fight for power in Germany as well as an omen of the next war. He is a useful man to examine

In June, when the invasion struck, he was in command on the western front. When St. I o and Chen were falling, he advised withdrawal to the line of the Seine Hitler overruled him. Von Rundstedt was dismissed for 'special duties' away from the front Rumors of a plot against Hitler promptly filled the air and behind them, even more faintly, was breathed the name of von Rundstedt. Suddenly there came the story of the bomb explosion at Berchtesgaden.

But von Rundstedt was not arrested Instead, he was named cochairman of the Wehrmacht Court of Honor which handed the plotters over to a Nazi people's court to be tried for treason. The plotters in-

Prussian

To understand German plans for World War III, consider von Rundstedt, who almost won World War II for Hitler

cluded at least two or his old friends, Field Mar shal von Witzleben and Colonel General Ludwig Beck chief of staff until 1938 Thus there came about the unprecedented

and, to Germans, shocking spectacle of a Prussian field marshal being garroted in civilian clothes in public

No break appeared then in the inscrutability of Gerd von Rund stedt. The dead men nad broken the sacred law of the Paussian officer corps, they had failed, they had been caught The army washed them out and they understood But they had not died for nothing They had blasted into the open the enormous schism between Hitler and the Prussian offi cers who own the German Army Had they succeeded, their course probably would have been to seek a negotiated peace that would leave Germany and their caste strong enough for another comeback Since they failed, their purpose became as von Rundstedt's behavior showed — to pin the coming defeat on the Nazis Thus the honor of the army (meaning its officer corps) would be preserved for the next war The Prussians certainly do not plan to destroy Germany by an endless guer rilla warfare And if they try again

to take power from the Nazis, the falling finger to give the signal will probably be that of the mysterious Field Marshal von Rundstedt

The mystery surrounding von Rundstedt and the other generals of his caste comes from the tribal taboo among the aristocratic Prussians against being conspicuous compressed lips and harsh, asceticlooking faces come from their unremitting effort to maintain this aloofness, to suppress emotion They walk slowly and, despite the stiff backed posture, with relaxation It is almost unheard-of for them to be involved in public scandal, to marry for love out of their class or to do anything spontaneous They always wear gloves, wear their hair short, never carry packages and seem to hold their monocles in place without effort, even when mounting a horse. They are all agreed on a morality of solidiscipline, silence, toughness and of constant planning for war

The result has been the ablest and most exclusive military caste that the world has lately seen, numbering perhaps 5000 aristocrats from the northeastern corner of Germany They regard with disguised contempt the Nazis, most of the rest of Germany and civilians everywhere

Von Pundstedt's importance is in direct proportion to his personal obscurity In 69 years there seem to have issued from the field marshal a great deal of silence and certain acts

Of these latter the most spectacular were three The first was his direction of the invasion of Poland, when his southern army group enveloped the Poles' main armies west of Warsaw The second was the invasion of

France by his central army group, which tore through to the Channel in 11 days and forced the Belgian suriender and the British Dunkirk This was the maneuver that seemed at the time to have won the war

Yet of von Rundstedt's activities during its execution, only a few moments have been reported. He was seen standing on the bank of the Meuse, exposed to French machinegun fire, watching German detachments drowning in their rubber boats, but at last making good the crossing. He stood there for some time, not speaking, watching the one all-essential operation, not liking the risk of the blitzkrieg but taking it coldly and precisely. When the crossing was made he went away

In the third act, in the war against Russin, von Rundstedt commanded the southern aimy group, trapped half an aimy at Uman then swung around Kiev and destroyed most of another army

On the record, he is a deadlier foe than any other German seneral In personality he has a certain gloomy integrity. His eyes appear to be always wide open, like a turtle's, his mouth is long, grim, controlled. It is evident that you Rundstedt has no sense of guilt about anything, he is merely carrying to their apotheosis the triumph or tragedy of forces greater than himself, and does not especially care whether he himself is killed in course.

Gerd von Rundstedt's family, originally Swedish, can trace itself back to the 12th century and appeared five centuries later in what we now know as East Prussia, where the Slavs and Balts who survive as peasants still kiss the sleeves of the lords and take off their shoes when they enter the great houses. Von Rundstedts served in the army of Frederick the Great, and fought Napoleon Gerd's father fought France in 1870 and was commander at the crucial battle of Sedan His son, a corporal, was captured last year in Italy

At the age of 12, Gerd enrolled in the savige, anistocratic codets' school at Grossichterfelde in 1887. Unlike military schools elsewhere, I ichterfelde did not train boys for the army, it trained them for war. They were taught primarily to endure pain, to learn self control, to root out self pity, to remain calm always. Gord learned his lessons so well that in 1940, reproached for his cold heart, he said, 'Cert unly we think carnestly of the dead, but we do not mourn.'

In World Wai I, von Rundstedt and his regunent distinguished themselves in battle. He won the Iron ... Cross and ended the war is a major

When the German mass arms was wiped out, the General Staff Corps was abolished and the cadet schools were closed all by order of the Allies, von Rundstedt was among the Prussians who began conspiring for the next war Ordy among these barons from no theastern Germany is this done thoroughly between wars

The problem was not too difficult. The victors were psychologically disarmed by the "democratic" Weimar Republic. The power in Germany was kept, secretly, in the hands of the army as always. What the army needed was a base of war spirit in the German people, to be drummed up by a political party. This the Nazis provided.

By 1931, now a lieutenant general, von Rundstedt had become commander of the all-important Third Military District of Berlin. At the critical point in modern German politics he sat at the center of action, holding all the real power.

Chancellot Bruning of the Weimar Republic had two fatal plans at this moment. One was to break up the estates of the Prussian aristocrats and give them to the peasants. The other was to demolish the Storm Trooper formations of the Nazis. In stead, the urmy and the Nazis broke Bruning.

Before the dismissal of Bruning by President von Hindenburg, von R ind stedt was the go between who brought together the great political intriguer of the army General von Schleicher, and the next chancellor von Papen Thereupon von Rundstedt took the last step up and became commande in chief of Group I, which controlled

the heart of Germany

Soon life: Hitler came into power Von Rundstedt, as limy chief in the Berlin lifer, had the nalitary force to stop the Nazis' seizure of power He did not use it Obviously he and the generals believed they could control Hitler and plud small attention to the Nazi 'aims, which to them were just one more politician's mess of pottage. Von Rund stedt however, declined to accept the Nazi leaders socially

He was busy helping to remake the German Army Calm and resolute among the un-power fanatics and the tank fanatics he judged correctly that the infantry was still the queer of battles. He increased the armament of an infantry company to the

strength of an old-time regiment and increased its mobility

There is silence, then, until January 1938, when the hidden battle between the Nazis and the generals for control of the army came into the open Commander in Chief von I ritsch called in 18 generals and told them about the marriage of Wai Minister von Blomberg to a humble voung woman alleged to have been immoral It was von Rundstedt who moved the dismissal of von Blomberg Since Hitler had been witness at the wedding, this was a pretty clearcut showdown

Hitler answered by firing both von Blomberg and von Fritsch and accepting the resignations of a dozen generals. Von Rundstedt resigned with the others. But he was recalled to duty for the Polish campaign

When the invasion of Russia reached its preliminary climax in October 1941, it was clear that victory had cluded Hitler The Russ an field forces had escaped and the general inobilization had been safely completed The German generals held i meeting in field headquarters. Hitle was not expected, but he showed up with his own chief of staff, Gencial Iodl The generals were cool, correct and ironic toward the two Austrians They had been saddled with one of the greatest flops in history, even as the Nazis' Rabelaisian boasts were echoing in the piess Hitler had a brief case of new and yet more wonderful plans. The generals grew cooler and more ironic At length, however, it was decided to concentrate on Moscow

Von Rundstedt was there, but presently, since he was the one who was always talking about the western front as the major menace, he was assigned to it

And that is where he was when the invasion came on June 6, 1944

A month after the invasion, Hitler dismissed von Rundstedt And then the position of the Prussian officer corps became dramatic Hitler had got rid of one after another of the old Prussian generals, and now, finally, of von Rundstedt But still Der Fuhrer was obliged to call on their Junker blood brothers von Kluge, Zeitzler, von Busch, Kesselring, von Mannstein As fast as he pushed Prussians under, they lose around him, two for one And in his extremity, when the Americans had raced through the Germ in lines in August 1944, he was obliged to recall in mid-September the old man himself, von Rundstedt

I he field maishal has carried military obedience and repression to an extreme point of treachery and class celf destruction. He may be remembered as the ablest general of this war. He is certainly not afraid of Hitler or afraid of death. Yet he has repeatedly carried out Hitler's orders with rigid, turtle eyed composure, just as though he knew that the Prussians could not possibly lose, as though a few or many dead men were of no consequence, as though the von Rundstedts were, in the last hour, omnipotent

To meet von Rundstedt out of uniform you would be disarmed He would seem merely a respectable, church going, hard-faced old gentleman He would look at you evenly, with controlled face and hooded eyes

But he would be thinking about the next war

Here's Something (in) Really New-authors

Condensed from The Rotarian

Harland Manchester

BOUT a year ago a General Electric Company publicist tore A open a pack of cigarettes and threw them into a bowl of water

"Have a smoke, boys," he said to the assembled reporters When they fished out the cigarettes, the water rolled off them in little beads and they weren't even damp

A few months later, Westinghouse engineers took apart a three-horsepower electric motor and rewound it with a secret new type of insulation The motor then delivered ten horsepower

Soon afterward our B-29's swarmed over Tokyo equipped with a rubber like gasket which stood up under in tense heat as no other material would

Then a few weeks ago some fascinating putty like stuff made its appearance It looks like modeling clay, but if you roll it into a wad and drop it on the floor it bounces like a tennis ball

These achievements, and many others equally amazing, are the work of silicones, a new family of synthetic resins — the greatest sensation in plastics in the last 30 years Research men of the Dow Chemical Company. the Corning Glass Works and General Electric are responsible for developing the versatile newcomer

All the silicones are made from the

in Plastics

same basic materials — petroleum, brine and ordinary sand The new material comes in forms all the way from a gas which will vanish in thin air to a solid substance as hard as rock It is a watery liquid, thick oil, pliable rubber. And each shape it takes has unexpected and priceless merits

The cigarettes, both paper and tobacco, were waterproofed with silicone vapor Dr A L Marshall, a pioneer in the development of silicones, gave me a demonstration He held a paper towel over a jar containing a transparent silicone fluid Then he sprinkled some water on the paper Each drop retained its round identity When he tilted the paper the droplets rolled off intact, kaving the paper without a trace of moisture Exposure to silicone vapor, Dr Marshall explained, imparts to the fibers of the paper a coating so thin that it cannot be seen under a microscope, yet so durable that drops of water still roll off samples treated three years ago

This single trick of the new resin opens up numerous possibilities showerproof grocery bags, for example, and water-repellent paper raincapes to be sold at football games for the price of a hot dog The vapor

The Most Unforgettable Character I've Met

Cornelia Stratton Parker
Lecturer and author of
"An American Idyll, etc

NE SUMMER, just before leaving home to lecture at the University of Maine, I received a letter from a Mrs Beulah Akeley She was librarian of the little town of Presque Isle, near the Canadian bor der She had read some of my books and was coming to my lecture even though it meant a journey halfway across the state even though she was pretty busy, what with a job, a hus band and — hold your breath — 18 children Yes, 18, all but five of them her own

As I stood before the audience a few days later my eyes scanned in vain the rows of people before me for a face that might belong to a woman with 18 children When I first saw her after the lecture, plump, and nondescript from her mail order hat to her broad flat shoes, I stupidly wished I had not let the situation get beyond an exchange of letters After six hours of delightful conversition with her, looking into those brown eyes that snapped out of a face without a wrinkle, I knew I was wrong And when I had seen more of her, and learned her story from her own lips, from the pages of a diary she had kept, on and off, over the long rich years, I knew her for what she was, a woman whose depth of humanity, courage, humor and faith in life the whole world might envy

At 15 Beulah Barton married George Akeley, a potato farmer and a widower of 36 He had four children, a hired man and a house-keeper They were all there when the second Mrs Akeley arrived at breakfasttime—all except the house-keeper, who got out the kitchen door just as the newly married couple came in Beulah had never prepared a meal in her life In her desperate searchings she found a white tablecloth and laid it across the kitchen table

An inquisitive neighbor crossed the road before breakfast 'Hm," she sniffed, standing at the door without so much as a good morning "White tablecloth Mrs Akelev's best It's the last time you'll be going to the style of a tablecloth, I should hope" Beulah Akeley made up her mind then and there that she'd lay a white tablecloth on every table she ever set for the rest of her life and she has

Soon after she was married, Beulah lav collapsed in bed, and the doctors gave her six months to live "Consumption," they called it then Her father had died of it. The first Mis Akeley died in that house of it. And now it was Beulah's turn

Six months to live! Yet she lived to bear 13 children

How explain the miracle of it? Her gay eyes looked calmly into mine "I just made up my mind I wouldn't die!" As simple as that Thirty-two years later she had a physical examination The X rays showed serious lung scars, long since

healed And the doctors pronounced her to be in "what would be considered excellent physical condition for a girl of 16"

It takes fortitude of soul, as well as youth of heart, to wring such a verdict from inexorable time. And Beulah had both At the age of 17 she started teaching. She weighed only 100 pounds then. Some of the boys in the school were not only much bigger than she, they were older, too. One day the whole roomful started throwing spitballs. Up to then she had rever believed in corporal punishment. At noon instead of eating her lunch, she walked all the way to town and bought a ruler and a strong leather strap.

That afternoon she announced "All those who did not throw spit-balls can leave the room The others stay" Almost the whole school stayed Then she walked down to the biggest brute in the room "Put out your hand!" she ordered She hadn t the faintest idea what she'd do if he didn't But he did She went down one row, up the next, using ruler or strap on every boy and gil in the room I here was no more trouble

She taught school because she loved children, and because she was so sure her looks would prevent her from ever being married and having children of her own

"Look at me!" she says Oh, dear, if God had only seen his way clear to make me a little easier on the eyes" But a long time ago she stopped crying about how homely she bught she was

"Just before I was married"—
is Beulah talking—"my mother
to me, 'Beulah, with his four,

you oughtn't to have any children of your own 'I answered that I intended to have a dozen And I did With two extra for good measure — one of them adopted "

Eighteen children Thirteen of her own, only the last one born in a hospital And all the inevitable disasters and near tragedies and mischief and illnesses — yet somehow every last one of the children raised to adulthood and alive after 48 years

There was Richard Richard fell over in his high chair onto the kitchen stove, and carries the sears to this day Richard once drank kerosene instead of water Richard was iun over by the double wagon in the bainvard, and had gravel in his face till it wore out with the years High school football put Richard in a plaster east for weeks Richard shot himself through the foot Richard—I could go on for quite a spell about Richard He is now a lieutenant on the USS Idaho

And Gene and Barton They found some dynamite caps in the barn For days no one could tell whether Gene's eves were still there or not Barton lost three fingers of his left hand And Barton was the musician of the family But somehow the doctor saved the fingers up to just below the big joints, and Barton plays the piano now

Not to speak of Russell, who tripped up Emma as she was carrying just about every dish in the brand-new set of white china with a gold band around it

"You must have spanked Russell," I said to Beulah

"Actually," she replied, "I remember spanking him only once That was when he set Elizabeth on fire'

Beulah thinks of her children as a comparatively easy lot to bring up, "perhaps" — her brown eyes twinkle — "because I never asked them to do anything they weren't going to do anyway" Above all, she wanted them to have the courage and determination to do what they wanted to do "Don't say, 'How I wish I could do this or that,' " she'd tell them "Do ut' 'And so, whether they wanted to go barefoot to a church picnic or quit a job and roam California they did it

Barton once told his mother, "You haven t raised a family You ve raised 18 individuals? Maybe it s true," Beulah comments You can't send children out into the world is a family Each has to meet life as an individual Each must have the cour-

age to be himself"

Sometimes Beulah herself scized the rare chance to do something for which Presque Isle would set her down as crazy I like the kind of woman who at 52 suddenly decides to go off with a friend and walk from Presque Isle to Houlton—over 40 miles away "Afoot and light hearted I take to the Open Road, 'she quotes in her diary And four days later she writes "We returned only \$1 out in money and rich in memories for years to come"

But such holidays were rare She was far too busy at home For one thing, those 18 children had close to every disease except smallpox Uncountable were the times that Beulah Akeley nursed a child all night and worked and nursed again all city

They had measles — all 18 of them, all 18 had mumps and chicken pox Eightee 1 had their tonsils out, 11 are minus their appendixes, the number

who had pneumonia cannot rately be recalled

Sally had it the worst of all—at the age of two When the doctor got there, Beulah was on her knees dropping brandy down Sally's throat with a medicine dropper one drop one drop Never

one drop one drop Never had she seen a child so sick

"There's no use," the doctor told her "She's cold to her waist right now and she'll be dead in an hour " Beulah turned on him "You get out of this house!" she shouted "Everybody who thinks she's going to die get out of this house quick!" And she shoved the doctor, and her husband too out the front door. Then she went back to Sally and began dropping brandy again One drop one drop At three in the morning they found her still there on herknees with the medicine dropper, still saying, "She's not going to die Sally lived Every one of the 18 always did get well

The Akeleys were quarantined three times for scallet fever, the last time when Roger, Robert, Richard, Barbara and Olive all had it at once, and O'ive had pneumonia as well Three months without getting out of the house! "I just settled down to enjoy it, and I have," she wrote in her diary "Three wonderful months"

The diary fails to say that she had no nurse or help whatsoever, that her husband was at the same time laid low with rheumatic fever, and that it was Beulah who had to tend the furnace and bring in the wood for the kitchen stove The hot-wate boiler blew up Also, because he firing was not all that a bitter winter demanded, one night the kitche

pipes burst and next morning she practically skated to the stove on ice Wonderful months, indeed!

Just before Gene was born, Beulah got the conviction that there was a good deal in the idea of prenatal influences So she took an armful of the world's best literature from the library and read every night 'This next baby,' she assured herself, "will be a brilliant scholar"

Gene is the only Akeley who never read a book through in his life But Beulah acquired the habit of reading in bed, and it never left her. How in the world did she keep her eyes open, after a day of working for that enormous family? "Often it seemed to me," she said, "that reading rested me as much as sleep"

Larly in her mirried life she determined that she wasn't going to have her children grow up to think of her self as forever hard at work. That's no memory to have of a mother. And she arranged things so that she did all the heavy work after the young children were in bed. By day she could play with them, and do the lighter work, such as cooking. Cooking for eight or ten—light work, you understand.

But she had to give up the garden that she loved 'Since there are many things I cannot have," she wrote in her diary, "I am going to make up for my lack of 'things' by throwing all my powers of soul and body into creating a real home—a place of helpfulness, cheer and courtesy

There were days when even here great spirit flagged. They moved than times—there was nothing that varmed. Papa. Akeley's heart like taking a trade. One of those moves

landed Beulah in a wretchedly inconvenient house with no water at hand

"I am tired," she set down in that old diary, "working 18 hours a day — and tired beyond words to express I cannot go on this way"

One day not long after, when she was at her kitchen sink, with her mind working, working on the subject of the everlasting debts that weighed them down, suddenly she heard a terrific roaring, as of a cyclone, coming from the barn side of the house She opened the door onto a blazing inferno. The house itself soon was a n ass of flaines. In the orchard she watched the crackling blaze of everything tre issued through the years and suddenly the weight of the world fell off her shoulders.

'How,' she asked me, "can I make it sound sensible! It was as if all care and weariness were burning away."

The older children came home from school and found her staring at the smoldering embers of nothing above the ground. All at once they formed hands and began to circle about the trees, singing some crazy sone. Well begin a new life! Beulah kept chanting.

But the Akelevs were wiped out the bun the new car, all the firm machinery even the fertilizer ready for working into the spring soil. There begin a long period when every day was heavy with the builden debt livs on the conscientious

Some years before the fire, Beulah Akeley had taken a momentous step A large farm on Hardy Hill above the town was for sale. She had found an old friend who lent her the sum needed to buy it, and she planned to have it laid out as the finest residen-

tial section of Presque Isle The glories of Aroostook County were spread out at the beholder's feet Three years later she had sold enough lots to enable her to build and sell a house as bait to start further building After the fire she mortgaged her entire equity in the property to get Papa started with his spring potato work — teams, machinery, fertilizer, seed potatoes

But no matter how hard Papa worked, Beulah knew that she too must bring in cold hard money A mere half of the 18 children were then at home Out of the goodness of her limitless heart she had filled in for the aging town librarian so that she might take a much needed vacation, and later on the library trustees asked Beulah Akeley to become the permanent librarian Who else in Presque Isle was so well read, who else so loved books?

She liked the library job, and many a week the cash it put into her hand was all the Akelev family knew. It busied her with books and people, and she loved books and people. She made the library a place for the lonely to find her own friendliness and the friendliness of books.

For years she and Papa Akelev have taken care of the Methodist Church nearby, rising early Sunday morning to go over it with brooms and brushes, mop and dustcloth In

winter Papa Akeley, hale and hearty at 84, tends its furnace. And no matter how low their finances, every Sunday one tenth of what has come in goes into the church envelope. Beulah Akeley has treasured the Good Book all these years. God knows how it has lighted the way for the dark places her feet have had to tread.

On one of their wedding anniversaries Beulah lay ill in bed Papa, knowing the day was something special, came in with roses "Isn't this your birthday?" he asked "Papa!" she reproved "It's our anniversary!" And Papa answered shyly "I knew it was some kind of birthday It's mine, because I just began to live the day I married you"

Of all the entries in Beulah's diary, the one I like best is this "I hursday Papa and I celebrated our 34th anniversary We had chicken supper, the children came in, and when they had gone we thanked God for the years we had been permitted to live together and love each other. It is wonderful that our love has grown until our early love seems as nothing compared with the understanding that is ours now."

One Sunday morning in Presque Isle I sat between the Akeleys in the little Methodist Church It seemed to me that it would be impossible to be near two people of more value, as God judges value

کر سا

wr can appreciate the miracle of life even more when we realize that human embryos a week old are so small that it would take about seven of them to cover the period which closes this sentence

Lest We Forget IV SLAUGHTER OF THE PRISONERS

Condensed from The American Legion Magazine + George Kent

Army vehicles jouncing over a road in eastern Belgium near Malmedy trucks and jeeps filled with artillery GIs and a dozen or so medies with Red Cross arm bands. There was also an ambulance, empty except for the driver and three medical officers. The men sprawled in the trucks, smoking and talking.

As the convoy rolled to a cross-roads there was a flat report and a shell tore through a jeep filling the air with frigments of steel and hu man flesh. Another shell demolished the front which of the lead truck which spun crizily and slumped across the highway. A column of German tanks emerged from behind a row of trees.

The GIs, armed only with carbines, ser imbled out of the trucks and jumped with a splash into the ditch hip deep in water. Others can behind a farmhouse. They fired sporadically—pathetic volleys which pattered harmlessly on the steel tanks. An 88 on one of the tanks blasted the ambulance. Another shell plowed a brown furrow across the load and through the ditch. A man cried out in pain.

The officers, crouching in the ditch, whispered to each other then passed the word down the line. The tanks were moving up to point-blank machine-gun range. The situation was hopeless A lieutenant held up his hand in token of surrender. The

men dropped their guns and climbed up to the highway, those behind the farmhouse came forward, hands locked behind their necks

The tank hatches opened and men with SS (Elite Guard) insignia leaped down and herded the Americans into line. They pulled rings from fingers and searched pockets for money—in violation of the Geneva Convention. Then the German commanding officer ordered the prisoners into a field across the road. Three tanks tocked into the field and lined up facing the group.

High in the first tank a slim German officer of about 25, whose wide eves gave an impression of innocence suddenly raised his Luger and fixed three times. A soldier in the front row sank to his knees and fellower dead. The group broke a little and one of the officers spoke sharply. 'Don't budge — don't do anything!' If the inen attempted to run away, the Germans would have a legitimate excuse for shooting.

They were the officer's last words A smiling man in the lead tink moved a machine gun from left to right, and the entire group of prisoners fell in a heap, the wounded spiliwled over and under the dead In the foreground were two still figures, one a medic, the other a companion whose wound he was bandaging

Men writhed in pain Some prived aloud as another machine gun sprived

46

the pile of bodies, and another Then the tanks began moving out of the field

In a hospital in the Belgian City of Liege I spoke with six survivors of the massacre, and this story has been pieced together from the things they told me "As the tanks moved iway," one boy said "the Germans took shots at us, like shooting at tin cans on a wall Some of them were laughing I was cold and wet, but I kept my face in the mud making out I was dead My buddy was killed and lying over my arm

"Everybody around me was groaning and twisting, he went on 'They were hollering Please help me!" and Medic! Medic!" Lots of us were praying Then

the tanks went away and four men, talking in German, came up with pistols in their hands and whenever a man grouned or moved they shot him An officer gave orders, pointing out those of us who were left alive"

They walked on nie said a thin boy from Indiana ' They sure thought I was dead because they lifted my arm and took off my wrist watch It was a Christmas present from my mother'

'After a while," the first boy went on, "I raised my head a little and looked around and didn't see anybody So I got up and beg in to run" As he talked, his head jerked and his face twitched "The Germans opened fire with machine guns They missed me and I kept on running down the road until I came to a house There were good Belgian people in that

Near Malmedy, Belgium — Two miles beyond Malmedy the men of the 30th Division found, under 18 inches of snow, the inutilated bodies of American artillerymen who were murdered by German SS troops The bodies had been perfectly preserved by the cold Several of the dead had bashed in heads The eyes of others had been gouged out

While the snow was being shoveled away a column of German prisoners came marching down the road. An American lieutenant who spoke German halted the column and shouted at the Germans to look at what their people had done to American prisoners. The science Germans stood trembling, obviously fearing that the angry lieutenant would order the same thing done to their But after a minute he told them to move on

- I u sell Hill in New York Herald Tribune

house, they gave me something to drink, and told me I was only two miles from Malmedy So I started out again and finally I got there"

The others who managed to escape waited until it was dark Most of them, though wounded, had to walk several miles before they reached shelter

I he stories of the men I spoke with, and about 14 other survivors, have been taken down and sworn to The only discrepancy is that the estimates of the number of men present vary from 120 to 170

In the presence of such inhumanity it is hard not to question the validity of the Geneva Convention, signed by 35 nations, including Germany, England and the United States, governing the treatment of prisoners of war The Americans and

the British have conformed strictly to all its provisions. The Germans have violated them both in spirit and in letter

The Convention requires that prisoners be fed as well as soldiers and officers of equal rank in the capter army But while German prisoners in the United States and England have had the same food as our troops, the Germans fed captured Americans and Britons so badly that we were obliged to protest through the International Red Cross In reply we were told to feed them ourselves So 12th er than see our men die of malnutration, the American and British Red Cross had to establish a costly and

complex system of sending weekly food packages for Allied prisoners

Now the Germans have begun to violate the Convention in more violent and bloody ways Even before von Rundstedt's drive into Belgium they had done it, the record is documented in statements sworn to by American, British and Canadian troops and by the killers themselves But since the Battle of the Bulge there are even more witnesses with conclusive testimony When our troops fought then way back they found groups of GIs laid out in neat rows, each man strapped of his uniform, each man with a bullet hole in his head

Life in These United States

* In the Hollywood Canteen a girl sits at a typewriter to take letters from service men to parents, friends and sweethearts. The other day I saw a tall blond sailor, not over 19, waiting in line at her desk. At last he stood shyly in front of the girl, but just as she asked him to sit down, he suddenly seemed to lose heart 'I'll I'll have to think it over!' he said, and walked back to the end of the line

Finally he sat beside the girl I ooking down at his shoes, he dietited hesitat

ingly

"Darling I his is the last night of my leave Tomorrow we are ship ping out ag in I just want to tell you that you ire the most beautiful girl I've ever seen I wish I d mer you before I wonder if you d write to me sometimes. I ll surely apperent I m sure you he wonder ful! I wish you luck and hope you ll write I never siw a girl like you Honest I didn t!"

After giving his name and address, he got up quickly, saving, "I hat's all Thanks!" as he moved away

"Hey, sailor the sirl called after him

"What's her name and address?

I he sailor turned around, swallowed hard, and said I don't know your name." Then he was gone

P 5 The girl told me this was one boy she was surely going to write to

- I FIIR HEIMIRS

NIAR a big Government building a Washington buileaucrat's car was parked in a lot whose sign read 'All day parking 35 cents." At lunchtime he asked the boy at the gate if he could drive his car away to lunch, bring it back after an hour and not pay a second time. The attendant's reply was wholly Washington.

"Suh, each car comes in has to pay 35 cents, and don' argue with me I'se not on the policy inaking level"

- BARBARA C McNamer

Who poined the crowd around a cage containing two brown bears and a pair of raccoons at the San Francisco zoo Beside me was a little foreigner who, like everyone clse, was laughing at one of the bears which sat, arins pread wide, begging for peanuts. When my daughter be gan throwing candied popcorn to one of the 'coons, the bear walked over and pushed the 'coon roughly aside Instantly there were shouts from the crowd "Leave that 'coon alone!' "Go pick on son e body your own size!'

The 'coon, seemingly encouraged, darted forward, sink its teeth in the bear's forepaw and leaped nimbly back. There was another roat from the crowd 'Good for vou!' 'That's showing the

big buin!

I noticed that the little foreigner wasn't laughing with the rest. He seemed to be almost crying. But he wasn't embarrassed by my state. Ach," he said,

that's why I love America so Over here they all cheer for the little fellow — even if it's only an animal '—Lawrin & F. Hint

An ancient gentlewoman in Albemark County, Viiginia, ficquen ly complains about the suffering and damage caused by the war (Of course she is referring, not to the present conflict but to the War between the States")

'We're still paving for that dreadful

war," she exclaimed recently

"But what made you think of that to

day?" she was asked

"I'll tell you wnat made me think of it," she replied with spirit "When those damyankees came through here they broke the hinges off our cellar door, and today the hogs got into the cellar and ate up all my butter "

— Agnes ROTHERY

* Requests from service men to their Commanding Officer for extensions of leave are based generally on one or more, of a half dozen pleas sick family, missed train, wife expecting, tax matters, etc But-lately a bluejacket at Bunker Hill (Indiana) Naval Air Station came up with a new one

"Request ten days' extension for shake-down cruise of new wife"

It was granted — Lr Douglas Camibill

WHILE VISITING an Indian Reservation in New Mexico several years ago, I noticed an old Indian striding back and forth across a plowed field, his hand dipping into the grain sack at his side, and his arm swinging rhythmically as he apparently broadcast the seed in the time honored fashion But to my surprise, the sack was empty no gruin fell from his hand

Mystified, I asked an Indian standing nearby what he was doing

"Him fool crow," was the reply

Then I noticed the large flock of crows following the sower, seeking the grain that wasn't there

The old Indian continued this per formance for three days at the beginning of the planting season every spring Then, when the black robbers gave up and departed for more profitable fields, he sowed his grain without loss — J M Tarrass

IN THE mining country of West Virginia I stopped at a modest restaurant and was astonished by the menu which read

Small, dry, tough steak 60¢
Thin pork chops, mostly bone and
fat 50¢
Tasteless meat loaf 45¢
Fat, greasy spareribs 40¢

"Why do you list the meat like this?"

I asked

'Because that's what it is," the waiter said

"But even if it is, couldn't you make it sound a little more attractive,"

'Look if y'all was reg lar here, y'd know better," he icplied "Our monus always tell ya just what ta expect That's been our policy a long time and we don't reckon on changin' it fer no temp'rary thing like a war" — PVF BERNARD M BOUR

* The sail or had sat in a corner of the Boston Service Men's Center most of the night, looking as though he had lost his best friend, only leaving his seat to enter his nume every time there was a drawing for a free telephone call home. But he had no luck. I tried in vain to cheer him up. I learned that his name was Johnnie Quinn, that this was his first wedding an inversary, and that he hadn't seen his young wife in California for months and didn't know when he would again.

Reminding him that he might still win on the last drawing, I hunted up the man in charge of the phone call raffle and told about Seaman Johnnic Quinn He said he was sorry, but he couldn't fix the drawing A group of service men overheard the story

A few minutes later the las drawing was held — and Johnnie Quinn was the winner From the glow on his face as he went to make his call I'm sure that two hearts a continent apart were thrilled with unexpected happiness that night

Later, when I put away the box used for the drawing, I made a touching discovery Every one of the other soldiers, sailors and Marines had written on his card Seaman Johnnie Quinn

- C LURGE M CARRON

Crossing the Green Mountains near the home of Robert Frost, we fell to discussing poetry My companion was of the opinion that only those of education and wide experience have the background essential to the making of a poet We stopped to ask the way of an old farmer who was plowing with oxen. He must have been 70 years old

"How long have you lived here?" I

asked

"I sprouted here," he told us

"Delightfully warm weather for au-

"Yes The breeze comin' down the valley brushes agin a feller's cheek soft 's a colt's nose"

"And the air is so still at night"

"Ain't it though! This mornin afore sunup it was so still you could almost hear yesterday goin' down the back stairs"

"A comfortable country There is a

look of plenty around here"

"Yes? He took a long look at the meadows and pastures with their haystacks and cattle, the pumpkin dotted cornfields and weathered buildings "Sometimes when the valley looks this way I sort of think of it as bein' a Thanks-givin' basket on the arm of God"

He swung his oxen around and moved away, leaving us convinced that poets still are born and not made —M P ALLEN

The Reader's Digest invites contributions to "Life in These United States"

FOR EACH anecdote published in this department, The Reader's Digest will pay \$200 Contributions must be true, revelatory or humorous unpublished human interest incidents, from your own experience or observation Maximum length 360 words, but the scorter the better Contributions must be typewritten, and cannot be acknowledged or returned All published anecdotes become the property of The Reader's Digest Association, Inc Address 'Life in These United States' Editor, The Reader's Digest, Pleasantville, N Y

"Maybe My Mother Didn't Need to Die!"

An Army sergeant overseas wrote to the American Cancer Society. I read your startling statement that by education alone death from cancer could be cut in half. My mother died of cancer last June. May be she didn't need to die! Here is a month's pay to help keep some other boy's mother alive."

This was one of the thousands of dona tions in response to the appeal made in the October Reader's Digest for funds for a nation-wide fight against cancer. The first two weeks after publication of the article, the few cancer prevention clinics now operating received thousands of inquiries. Appointments were booked as far ahead as June 1945, and hundreds were turned away.

For an enlarged attack on this disease, including the establishment of cancer deter ion clinics in every state, centers for education, scholarships for doctors wanting to specialize, and a coordinated program of research, the American Cancer Society will conduct its first nationwide campaign this April for \$5,000,000 , But it is not necessary to wait until then to send a contribution Thousands of volun cers also are needed to augment the Society's Field Army Force I hose who wish to help in the campaign should write now to the American Cancer Society, 350 Fifth Avenue, New York 1, N Y Give your age and suggest what you can do, such as helping solicit funds giving space for exhibits, manning booths, secre tarial work, or addressing envelopes You will be told where and how you may help through your state campaign headquar-

Every hour we waste, cancer is killing 18 Americans!

Jenius with a Slapstick

Preston Sturges, maestro of the screwball comedy, has given Hollywood a jolt

Condensed from Variety

Frank S Nugent

ingpin of comedy in Hollywood today is Preston Sturges, creator of hilamously off-center stories, who has given the screen its healthiest shaking up since the talkies Gifted with a sense of fantasy that has been compared favorably to Disney's, the only time Sturges comes anywhere near the beaten track is when he jumps across it There's probably a close connection between this and his income — \$250,000 a

Sturges is the man who found Hollywood's old slapstick gathering dust in the closet, polished it up, added wild refinements all his own and in five years whacked out a series of eight zany comedies from The Great Mounty through The Lady Eve and Miracle of Morgan's Greek down to his most recent outburst — Hail the Conquering Hero

The one-man assembly unit who wrote, directed and (in all but name) produced these assaults upon national sanity is a solidly built sixfooter who rides around in an Austin somewhat shorter than his three-year-old son's express wagon When he wants to call his secretary, he dis-

regards the interoffice communication gadget and punches the rubber bulb of an ancient automobile horn His golden Academy-award Oscar stands on a table behind him, while the place of honor on his desk is held by a foot high statuette of a horse's hindquarters

Sturges has probably caused the Hays office — more ils arbiter for the movies — more gray hairs than any other man in Hollywood, but has won battle after battle by the simple device of obeying the letter while violating the spirit of almost every tenet in the code Sin must not be made attractive, says the Hays office, evildoers must be punished and the good must triumph

In The Creat McGinty, Sturges' principal character began a political career by voting 37 times in one election. Ultimately he became governor of the state and, under the influence of love and high office, attempted the first honest deal of his life. For this he was pilloried, discredited, broken The moral, or immoral, of this fable was all too clear, but when the Hays lads protested Sturges cited the code, reminding them that evildoers must be punished. A crook like McGinty couldn't remain in office, could he?

9 A baby is better than a kitten 10 A kiss is better than a baby 11 A prat fall is better than anything

Sturges owes all his success, or nearly all, to strict observance of Law 11

It is obvious that Preston Sturges, at 46, is not the complete screwball he frequently pretends to be Many of his celebrated idiosyncrasies were hatched in the minds of press agents. Some like the midget roadster and the auto horn, have their practical side. He bought the car for his wife three years ago because she was afraid to learn to drive a regular one. She toured it through a line of hedges and gave up. Now with gas rationing

but why explain? He uses the horn because his secretary (who treats him with profound disrespect) once told him he sounded like a mouthful of mush over the loud-speaker

Most of his reputation for eccentricity springs from working methods odd even for Hollywood He habitually arrives at the studio at noon and heads immediately for the commissary, gathering an entourage en route He rarely sits down to lunch with fewer than 12 at his table, never dawdles a minute less than three hours, always picks up the check Back in his office, he dictates a batch of letters, generally tears up half of them after reading. He has tea at six — "tea" being coffee, crackers and cheese Work may begin at eight, nine or ten, often continues well past dawn (His mind, he explains, heats up slowly, it takes him a whole day to get it ready for a night's work)

He dictates his stories, rarely has more than a rough idea of the plot when he begins Inevitably this adlib composing leads him down blind alleys or into situations whose solution may baffle him for days. He regards this as an advantage audiences will be as puzzled as he was, and won't be able to beat him to the punch

A case in point is the poker game in The Lady Eve where Henry Fonda held three queens, Charles Coburn had four crooked aces and Fonda had to win After brooding over that one for ten days, Sturges solved it by having the dealer (Barbara Stanwyck) expose a card from the deck an ace Coburn didn't dare show his hand

In spite of his method — or may be because of it — Sturges turns out his scripts with remarkable speed. He wrote Miracle of Morgan's Creek in three and a half weeks, Hail the Conquering Hero in six — and that included three rewritings.

Basically, in spite of appearances to the contrary, Sturges is a crusader What he is trying to overthrow—using slapstick instead of a lance—is the old Hollywood theory that picture-making is a collective business, that a dozen minds all bumping together are necessarily better than one good one working alone

The chances are that he won't win a lasting victory, but the chances also are that he will continue getting in enough licks with his slapstick to stir up some thinking After all, there's nothing like a swat in the pants to stimulate the mental processes

That's Subdivision A of Preston Sturges' Box Office Law 11

* How the French Fought Starvation

Condensed from Tricolor

Edwin Muller

war one of their long-range objectives was to weaken neighboring countries—weaken people's bodies and break their spirits, so that the right of the Master Race to rule Europe would never be challenged in the future

One of their chief weapons was systematic starvation. Thereby they would lower the birth rate, increase the death rate, reduce those who survived to a state of permanent enfeeblement. Above all they would stunt the children, so that they would never grow up to be healthy adults

In some countries the Nazis have attained this objective. It may be generations before Greece or Poland can fully recover. But in France the Nazis did not succeed. Though they caused suffering and hardship, they failed to starve the people to the point of permanent damage. They failed because the French, fighting for their lives, won the battle of food. It is one of the significant stories of the war that can now be told.

France had always lived well Even the peasants and the workmen had thick soups, long crisp loaves of bread, massive cheeses, red wine No Frenchman will ever forget his shock and despair when, in 1940, the Germans announced the official food ration This ration amounted to 1900 to

Self reliant ingenuity stumped the Germans at every turn – but now it's different and the food situation is again critical

1600 calories per day Nutrition experts estimate 2200 to 2600 calories as the absolute minimum for health

The chief item in an adult's diet now was a loaf of dark bread each week He had about a pound of meat per month, less than half a pound of butter, fat and cheese, about a pound of sugar, and a varying but always unsatisfying ration of potatoes That was all except for such unrationed fruits and vegetables as could be obtained

It was a black winter, 1940 The French nation began slowly to starve to death By 1947 the death rate had 11sen 11 percent above the 1938 figure Adults lost 30 to 40 pounds in weight Malnutrition diseases increased tuberculosis, anemia, rickets Worst was the state of the children They stopped growing Babies had spindly legs, bloated abdomens Infart mortality was appalling

But the people's will to live was not destroyed Eventually they found a way to feed themselves and their children

It wasn't planned and carried out by a central authority—rather * was the sum of the efforts of selfreliant individuals Gradually, over a period of many months there developed a complete undercover method of food production and distribution

Under the Nazi system for the control of agriculture, the mayor of each farming community was reguired to furnish a list of all farms, with acreage and normal production figures German inspectors visited every farm to verify the lists Most of the mayors were patriots and noncollal orationists They started an elaborate balling-up of the records They reported incomplete acieage figures Fields were plowed in irregular shapes to make the acreage harder to compute A field between two farms would be juggled back and forth It is estimated that 250,ooo acres thus "disappeared"

When the Germans found a "mistake, and angrily protested, the mayor would have plausible excuses, the local official in charge of farm records was a prisoner or a deported worker, the mayor was doing his best One gets a picture of the choleric German inspector confronting the blank stupidity of the mayor Many times there'd be blows, imprisonment But violence couldn't bring order out of chaos And the next mayor would be just as stupid At one point the Nazis brought back to France 280 prisoners of wir who were agricultural experts scrambled the figures even more thor-

oughly

There were various ways in which a field could be kept off the record One year, for example, the Germans ordered a large production of oil seeds The seeds were dutifully planted under German supervision when the inspector departed, the farmer deetroyed most of them When the inspector came again and saw

only a few straggling plants, the farmer would complain of the lack of fertilizer and labor, or his unfamiliarity with the crop The inspector would write that field off his list Then the farmer would plant some other crop that could still mature before frost

It was easier to conceal cattle and hogs than acreage Every farmer had two pigstics, one in the barnyard and another hidden in the woods And while the inspectors were going from farm to farm on the main road, cattle would be driven back and forth on lanes in the rear, so that they would never be found

Rabbits have always been raised in large numbers in France but during the occupation their production increased immensely. The rabbit is a prolific animal, requires little care, cats almost anything green Above all, it is easy to conceal After the was the French should erect a colossal statue in honor of the rabbit

And so with guild and courage and unending labor the farmers of Γ r ince supplied the greater part of the deficit in the nation's diet But this was only half the battle. The harder 10b was to establish a workable system of undercover distribution

Wholesaler and retailer carried on two parallel businesses, one legal and aboveboard, the other illegal and clandestine They transported the illegal food from the farms by loading freight cars beyond the stated amounts, and by adding extra cars to freight trains Patriotic railway employes cooperated They also used much truck transport at night

Illegal distribution to the consumer was often on a house-to-house basis The man from the butcher or the grocer would take orders during the day for off-ration food Deliveries would be made after dark, or the customer would call for his order All this, of course, was black market But to the Frenchman it was necessary, patriotic, without reproach

But this system could take care of nly a small part of the undercover distribution Often the customer got the off-ration food himself, traveling into the country by bicycle or by train Bicycless would slip back into town after dark, their baskets loaded with provisions. The trip was more hazardous by train, but thousands of Parisians made a weekly trip to Normandy to buy food Numbers were caught but there weren't enough Germans to inspect more than a fraction of the travelers' luggage. As time went on that became evident and some inspectors only half tried to do a thorough job A Parisian told me that once he arrived at the St. I again station carrying two big suitcases The French inspector, with a German at his elbow, asked what was in them "Oh, a fat pig, of course," replied the traveler. All three laughed as he went on his way. It really was a pig, cut up Many parcels were sent by mail Many Nazi officials were themselves doing a surreptitious business in parcels and didn't want an efficient mail inspection

A town family having a country contact would share it with friends and neighbors A Parisian woman told ine that her contact in the country was an elderly aunt who lived near Avranches Eventually the old lady was riding her bicycle 15 to 20 miles a day, collecting from a num-

ber of farms and supplying six families by mail

The Germans tried to break up the system They took the best labor from the farms They cut the official ration again They increased the volume of food that they carried away to Germany So the people stayed hungry and underweight Yet the undercover system did keep the nation from collapse

The death rate fell so that at the time of liberation it was only about two percent above prewar normal. The rate of some diseases directly affected by malnutrition was still high, however. Worst was tuberculosis, 15 percent above prewar. The inajority of adults are still underweight. Many are not capable of a full day's work.

The children began to grow again, although probably 70 percent are still underweight. But children have great resiliency and restoration of a normal diet will insure their future health.

Aucust 1944 The Allies raced across France, entered Pari Now, thought the man in the street, I ll really eat again. Once more the rich, creamy soup and the fowl stewed in red wine with little onions and the tender beans cooked in plenty of butter, and the big, round, golden cheeses.

He had a shocking disappointment During the full and winter of 1944 France had less to eat than under German occupation

It was inevitable that it should be so The retreating Germans carried away what stocks of food they could, destroyed the rest They took or destroyed locomotives, cars, trucks Allied and German bombing and artillery fire wrecked railroads and bridges, hindering food transportation There was little gasoline for farm machinery or coal to run the beet-sugar factories Fishing in the Channel was prevented by naval operations

To prevent a disaster like that of 1940, the new French Government set up ~ most stringent rationing system But the people went on breaking the law although now it was their own law Fverybody deplores the black market — and everybody patronizes it The grocer's man still makes his off-ration deliveries Black-market restaurants flourish, serving super de luxe meals at \$20 a head Truckloads of illegal butter come into Paris,

food trips to the country still go on

It is difficult for a people thrust into freedom after four years of slavery to throw off instantly the habits of those years But if they can repair their attitude toward rationing, and af the Allies can divert some small effort to help repair the transport system, the French may in the end emerge not only with their physical well being restored but with a more important, intangible betterment Before the war France was a disunited nation, class fighting class. There is evidence that the spirit of sharing which grew up during the occupation may be reflected in the postwar political and economic life of the

Served with Sauce

» Jim Crowder, midwestern book magnate, got a seat in a railroad diner one day Do you like split-pea soup?" asked the waiter 'No," said Jim 'Chicken croquettes' 'No' Prune pie?" No' The waiter took the napkin off the table Good-day,' he said 'You is had your lunch"—Bennett Cerf in The Saturday Review of I werature

>> A WATTER in the diner of a Canadian Pacific train ap proached a regal looking woman and bent over her solicitously Pardon me," he asked, "are you the cold salmon?"

— Rod Mackan in Rob Wagner & Script

>> One or our soldier friend's stories concerns a dining-car waiter who, when asked which breakfast combination was best, said "It doesn't make much difference Nothin's any good"

Our friend ordered a No 3, Spanish omelet and things, and when he'd finished, called the waiter back "Say," he said,

"that was fine What was your idea?"

"I always tell 'em nothin's any good," the waiter said "Then they're pleasantly surprised." And leaning over, he almost whispered, "You see, I'm a psychologist." — PM

Man's Best Friend

America's

Condensed from Woman's Home Companion

Virginia Reid

Jim and Helen Brown are proud of their tiny blue eyed adopted son While Helen discusses formulas with other mothers, Jim is likely to confide a bit boastfully 'He should be a winner—we paid a thousand bucks for him'

The Browns are probably not aware of their part in America's most shameful black market, the baby-selling racket According to estunates by the Children's Bureau of the Department of I abor, three to four percent of all live burths are illegitimate Soaring wartime birth rates have brought a comparable rise in the number of illegitimate babies, and far fewer than half those adopted are placed by professional children's agencies The majority of adoptions are handled by individuals or quack agencies at a substantial profit One woman, for example, who operates an unauthorized adoption agency in an eastern city, boasts of an average annual net income of \$20,000

The quacks flourish despite the fact that every state now has facilities, under its health and welfare departMothers yearning for children they have given up too quickly couples sorrowing over defective children they adopted too hastily—such are the tragedies of the growing adoption racket

ment, to give advice to unmarried mothers and prospective foster parents. These departments will also recommend authorized adoption agencies, public or private, which make careful investigations of both foster parents and child before an adoption is made final. Such investigations may seem like bothersome red tape, but they assure foster parents that their adopted child has potentialities for normal development, and they protect the child from adoption by couples who would not offer him a normal home atmosphere.

Because they don't know of the easy availability of state aid, many frantic unmarried mothers to-be turn to doctors lawyers or relatives for advice and financial help Illegitimate babies are frequently sold to commercial adoption agencies or foster parents before they are born The mothers, who are often little more than children themselves, gladly sign relinquishment papers, relieved that their doctor bills will be paid and the child taken care of If the mother realizes after birth that she wants more than anything else to keep her baby, that is her misfortune It is then too late

A 17-vear-old girl discovered that she was going to have a baby Her soldier-fiance was hundreds of miles away in an Army camp To keep out of sight until the baby came, Joan visited her Aunt Ella in a distant town Aunt Ella, with an eye on the

possible profits, consulted the nearest commercial adoption agency The agency agreed in writing to pay Joan's medical expenses and, in addition, promised the unscrupulous aunt a check for \$500

Joan reluctantly signed the necessary relinquishment papers When the child, a boy, was born, she fell in love with him at once She told her aunt she couldn't give him up But Aunt Ella worked fast The very next day she took the infant to the agency — and got her check

loan went home and at last told her parents all that had happened Her father went to a lawyer but the lawyer was forced to state the truth — Joan had no legal rights to her son Her signature on the relinquishment papers made legal action impossible

Joan's tragedy could not have happened in a state that has a law making approval by its department of health and welfare necessary before adoptions become legal Such laws are urged on all states by the Children's Bureau of the Department of Labor But unfortunately Joan lived in one of the 28 states that have not yet taken action

There is no legal way, in these 28 states, to prosecute the unscrupulous "baby brokers" who conduct quick undercover sales of illegitimate babies In one large city recently, a lawyer who had persuaded an unwed mother to sign relinquishment papers appeared at the hospital a few hours

Sidelights on the Baby Market

BABY BROKERS, offering to pay hospital expenses for pregnant women, are advertising in

the personal columns of newspapers

The Harris County (Houston, Texas) probation office cites two examples of local baby sales A couple bought a baby for \$112 and sold it for \$218 - a profit of \$106 A pregnant 17 year old Alabama girl went to a Houstor abortionist, who gave her house room when her baby was born, and two dresses worth about \$5. then sold the baby for \$350

To halt the growing trade in babies in the District of Columbia, Congress a year ago passed the "Baby Brokers' Bill," which prohibited the placement of babies except by high standard licensed agencies

> after the baby's birth. He demanded the child He had the legal right to do so, and, regardless of the danger involved in putting the infant in inexperienced hands, hospital officials could not prevent his taking it away

> In a large hospital recently twin boys were born A family had arranged in advance to adopt them One of the twins seemed to be a little frail, so the loster parents decided to leave both in the hospital for an extra week The frail twin died and a post mortem examination showed that he was hydrocephalic Doctors then discovered that the seemingly normal brother was similarly afflicted

> The foster parents are trying to arrange for institutional care for the surviving twin, who may live for eight or ten years with an enormous. grotesque head He is their responsibility and they must pay for his care just as if he were their own child

If they had waited for a few months, and put up with the red tape in-, volved in supervised adoptions, the family would have the assurance that the child they adopted was free from disease

Maud Morlock, consultant for the Children's Bureau, advises unmarried mothers, or couples planning to adopt a child, to communicate in confidence with the Council of Social Agencies or the Department of Welfare in their community, or with the Division of Child Welfare in their state's Department of Welfare She suggests a four to six months' waiting period after an illegitimate baby is born before adoption is considered During this time the child would be cared for by a recognized social agency and the mother would have time to make arrangements to keep her child if she wished to do so Tests could be made to determine whether the child is alert and healthy And experts could, during the waiting period, make provision for defective children Under such conditions, the Children's Bureau believes, many tragedies could be averted

Authorities agree that a black market in babies is certain to exist as long as couples are willing to pay surreptitiously for adopted children rather than go to recognized agencies. And there will be "baby brokers" wherever there are unscrupulous people who put personal profits above human welfare and happiness

But there must, at least, be laws under which these brokers can be brought to account

The Male Animal

HENRY and Zoe lived on a chicken ranch near us in Arizona Zoe was a hard worker, she never hesitated to drive a tractor, build a chicken house, or anything else usually considered a man's work, Henry enjoyed nothing so much as visiting with the neighbors. One day my husband and I drove by and saw Zoe working near the barn, with Henry watching. We stopped to visit and after a few minutes' conversation, Zoe returned to her work Henry, deep in a story, stayed with his foot on our running board.

At the sound of a rumble the three of us looked toward the barn Zoe, attempting to move a 50 gallon steel oil drum, was straining at it with all her might With only a pause in the story and without shifting his weight, Henry called out, 'Don't try to lift it, honey Roll it'

>> WHEN I was spending my vacation with a friend in Kentucky, he decided to take me up in the hills to see how the mountaineers lived We came to a farm where a man was lying on the front poich, smoking a corncob pipe, and a woman was digging in a plot of land I approached him and asked, 'Isn't that hard work for your wife?'

He said, "Ye, but we work in shifts"

"Oh, I see, when she gets tired you take over"

"Naw,' he said "When she gets tired out in the garden she shifts to the house chores"

It Pays to Increase Your Word Power wilfred Funk

During our youth we constantly—and almost unconsciously—learn new words Each of us acquires his own vocabulary, his own store of tools for learning and for expressing his ideas But by the time we reach the middle 20's our word development has almost stopped Thereafter it is necessary to make a slight but conscious daily effort to expand our vocabularies. If you make this effort you will derive greater pleasure from reading, steadily increase your own powers of self expression and discover unexpected interests in new fields. Getting out of your word ruts will help you get out of your other ruts

The following test is based on the 20 hardest words in a recent number of this magazine. Underline the italicized word or phrase, a b, c, or d, that you believe to be nearest in meaning to the numbered key word. Compare your results with the answers on page 65, and then — unless you are exceptional indeed — resolve to improve your vocabulary level.

- (1) analogy a susceptibility to disease b separation of anything into its constituent parts c something similar but not quite the sime d a story or parable
- (2) exigency a speed b urgent need c a serious blunder d difficulty or trouble
- (3) megalomania a delusions of persecution b delus ons restricted to one idea c a mental disorder producing grandiose delusions d a mental derangement producing extreme depression
- (4) zany a a fair; h clour or fool c a uitch d an unrul; child
- (5) extirpate a to tipe out a sin b to take out b, the roots c to plunder a country d to punish a criminal
- (6) apposite a appropriate or pertinent b highly unpleasant c on a higher level d self assertion
- (7) fettd a feterish b disease breeding c emitting a foul odor d fretful
- (8) asepsis a absence of fear b absence of memory c absence of blood poisoning d general weakness
- (9) duff a a clumsy fellow b a parasitic plant that grows in swampy land c partially decayed vegetable matter on the forest floor d a small utility bag
- (10) strictures a serious injuries or strains b severe punishments c severe criticisms d serious mistake

- (11) homily a a serious moral discourse b great humility c simplicity d extreme povert,
- (12) antithesis a a marked dislike b a proofreader s term c the direct contrary d an antidote in medicine
- (13) apathetic a extremels sympathetic b usthout emotion or feeling c imitative d causing salress and surrou
- (14) sardonic a hopeless b helpless c unusually rediculous d bitterly sarcastic
- (15) Cajun a someone of Acadian French descent in Louisiana b a member of an Indian tribe in Manitoba c a slang term for Kentucky mountaineers d a native white squatter in the Ilorida Fierglades
- (16) abros ate a to aholish or repeal b to judge unfairly c to override brutally d to subject to question ne
- (17) presidium a a Russian administrative committee b a speaker s platform c a mili tary post d a form of parliamentary procedure
- (18) canalize a to confer a church title upon b to direct into certain channels c to condemn d to move traffic through canals
- (19) spoonerism a a philosophy of a religious cult b art intentional pun c a local dialect d the accidental transposition of letters or syllables of words
- (20) allegory a a fairy story b a prolonged metaphor c a fast movement in music d a positive assertion

How to Swallow [] a Sword

Condensed from Collier's

The Great Zadma As told to Jule Junker Mannix

SHALL never forget the first time I swallowed a lighted, two-foot neon tube. The tube was a bootlegged one, like all neons used by sword swallowers at that time, because the electrical companies wouldn't allow anyone to buy a tube if they knew he intended to swallow it Several sword swallowers had been killed by the tubes breaking inside of them, and the companies felt it was bad publicity

Neon swallowing really has a lovely effect All the lights are turned off except the tube uself, and then the artist, stripped to the waist, swallows it to the hilt Almost instantly the light is glowing out through the body of the artist The effect is indescribably weird Usually several people faint, and this makes the trick very

popular

I wanted desperately to be a neon swallower At the time I was working with a carnival and living in the sideshow's truck with Flamo, the fire eater One night while we were plaving Trenton, N J, he located an electrician who said he would make me up a couple of tubes With neons vou must have an electrical connection at both ends of the tube before the gas inside will light For swallowing, therefore, the tubes are U-shaped and the nds stick out of your mouth

If children scream and women faint. your act is a sure success

Louise I ong Ringling Brith rs Circus performer demonstrates the fine art of gulping a sward with a 24 inch blade

This means swallowing a double tube, which is naturally much harder than swallowing a thin sword blade. and so the tube has to be made as thin as possible. The thin tubes are brittle and likely to break

Flamo and I picked up the tubes one evening after our last show But when we had them lit and ready to

swallow I got nervous

"I'mo, I'm getting scared," I told him

We had just been reading in The Billboard of the death of Prince Noon. the first neon swallower. The tube had broken inside of him The Human Flectric Light Bulb, who had followed him, had got a short circuit somehow and died before he could be carried off the platform. The game hardly seemed worth while

"Well, if you're scared, kid, I wouldn't swallow 'em," Flamo urged "Your throat'll tighten up and snap the tube "

I knew if I were going to swallow them I'd have to do it at once, before they got too hot A hot tube will stick to your insides and you can't withdraw it So I picked up a tube and

wiped it

I stood with my head thrown back and the tube held straight up from my hps with my right hand. With my cupped left I guided it down my throat. The basic principle of sword swallowing is to establish a straight line from the throat to the stomach. As the tube slid down, it was pleasantly warm, unlike the chill of steel, but terribly wide.

I felt it strike my breastbone This is always a creepy feeling. It sends a shudder all through you. Then the tip of the tube slipped off the bone and glided down smoothly until my right hand touched my lips.

I withdrew the tube and turned to Flamo 'Did it shine through my

chest?" I asked eagerly

"Son, you shone like a jack-o'lantern," he assured me respectfully "It's a wonderful act I was darned near taken sick myself"

The next night I performed with the neon tube, and the act was a sensation Two women had to be carried out, and the parents of a child who had been frightened into hysterics sued the show My reputation was made

Most sword swallowers were once "carny punks" — young boys who have run away from home to join a traveling carnival. For a while a punk hangs around the lot, running errands for the performers, helping the joint men set up their concessions. Soon he wants to learn an act. He can't be a freak. He can't afford the elaborate apparatus for an aerial act. He hasn't the ability to be a talker or a gambler. So he becomes a sword swallower.

I have often been asked why any-

wants to be a sword swallower. Well, in a carnival a sword swallower is an artist who is properly respected. It is an art which everyone would like to know but few have the patience to learn

The performer's swords cost him only \$15 or \$20, and if he doesn't like the carnival he can tuck them under his aim and hop a freight to the next show Or he can give shows in barrooms or on street corners for dimes. He is absolutely free and can always get a pocketful of change for a few minutes' work

Learning to be a sword swallower takes about three or four months of hard practice First, find out how long a sword you are able to swallow Swallow a very long sword slowly and carefully until you feel the tip touch the pit of your stomach Stop there Feeling the blade touch is a sensation difficult to describe, but you'll know when it happens. Then mark the blade just above your teeth Withdraw it, cut it off right there, and you have your sword. When you start the sword down your throat for the first time, you will probably be sick. This will keep up for several months until your throat gets used to the feel of cold steel

Naturally a tall man can swallow a longer sword than a short man Being quite tall, I held the American record for the longest sword swallowed (26 inches) for many years. The record was taken from me by a shorter man who resorted to the device of eating a heavy meal just before the test, which weighed down his stomach the additional few inches he needed to win I leave it to the reader to decide whether such a trick is legitimate.

No one knows who was the first to discover he could swallow a sword but he must have been an unusual personality with a flair for experimentation. I raveling jugglers performed the trick for the Pharaohs, and Agrippa mentions seeing it in ancient Rome

Sword swallowing first became famous in America at the Chicago World's Fair in 1893. For years afterward it was being "exposed" in newspapers and magazines. The usual explanation was that the sword folded up into its hilt. I used to carry around a straight blade without a hilt and swallow that to convince people. This blade was finally broken by a young man in his efforts to find something wrong with it. I item I heard him say 'That sword folded up. I could a found out how, but it busted on me.'

There are several variations to the regular routine. One friend of mine swallows red-hot swords by first swallowing an isbestos scabbard. But the presence of the scabbard is a secret and it is surprisingly difficult to walk around with a scabbard inside of you without looking awkward.

In the last few we as there has been an epidemic of female sword swallowcis I don't approve of it Women are likely to take chances I saw a girl who swallowed a sword with a tin blade and then twisted around until the blade was bent inside her before she withdrew it I don't care if she v as drawing down \$20 a week for this act It was dangerous

A girl who featured neon swallowing appeared in Ripley's Believe It or Not show at the New York World's Fair She performed on a revolving stage, and I was surprised that she dired to swallow the tubes, is even slight vibrations of the stage might crack one After going through the usual routine, she produced a tube mounted on the stock of a rifle She swallowed the tube halfway and then fired off the rifle so that the kick of the gun drove the neon the rest of the way down her throat

I rushed out of the hall in a panic while the audience howled with laughter at me As I staggered past the last row a man stopped me 'I guess you think that girl really swallowed them tubes, don't you?' he said. I hen in a low voice he added, 'I ll tell you a secret. Them tubes are faked. They fold up into the handles."

Many Moons Away

JIL first American I ever met was a sweet sad faced nurse. She stayed at our hotel in Rotorua, New Zealand, and to check her up I showed her around the town pointing out the boiling water in drains, geysers spouting in a park, and it arsome pools of boiling mud. Although polite, she remained unenthusiastic, so I showed her native plants and trees. When we reached the hotel again she would not go inside, though it had become dark. With an enraptured expression she stood on the veranda looking at the sky "Gee, 'she murmured, "we got a moor just like that back home"

The "rockets' red glare" now lights the skies over every battle front

Wars Screaming Infant Prodigy

Condensed from Science News Letter Holman Harvey

NLY 27 months ago the war's first battle rockets — American-made, tank-shattering bazookas — were hurled against Rommel in Tunisia. In the short time since, this screaming infant of warfare, the rocket, has become as important in every theater of the war — on land at sea, and in the air — as conventional small arms, artillery or naval guns. Never before has any weapon won such widespread acceptance in so short a time.

As a measure of the crucial importance attached to rocket warfare the Navy has tripled its budget for rocket production for its own and the Army's use to from around \$33,000,000 a month in 1944 to \$100,000,000 a month for this year, and the Army has stepped up its own smaller expenditure 13 times over last year to a total of \$13,000,000 a month The combined U S rocket program, with a total of \$1,350,000,000 for 1945, begins to approximate Army-Navy expenditure for heavy-gun ammunition

I have just talked with Army and Navy officers detailed to rocket development and research. They can't tell you much about the size, or range, or destructive power of weapons yet to come, but they will tell you that experimental models not yet perfected have been put into production and rushed overseas, and that

one model is scarcely in the works before an improved one is awaiting its turn on the assembly lines

A rocket we now use—the 45-inch—is a far cry from the original bazooka rocket of 2 36 inches diameter. It is about twice as long as its 18 inch forebear, instead of a mere three and one-third pounds, it weighs 38 pounds. It packs the punch of a 105-mm howitzer shell.

A single-tube 4 5-inch outfit, mounted on a folding tripod, has been used by our soldiers in jungle warfare Launcher, tripod and rocket weigh only 50 pounds. One man can advance with this, set it up, and let go To avoid the furious wake of dirt and rubble kicked up by the blinding blast of hot gases from the rockets rear vent, the soldier files from a safe distance by means of an electric wire and push button The blast kicks over the tripod and often bends or destroys it, hence the launcher is considered expendable with one firing Scores of 45 launchers can be connected up and fired simultaneously

The bizooka, with its shoulder launcher which can be fired many times, and its lightweight rockets, a plentiful supply of which can be carried by one man, remains—in improved form—a stand-by At 200 yards, because of its famous 'hol

low charge," an American invention which concentrates the blast of the explosion at a single point, it can penetrate six inches of armor plate, filling a tank's interior with flying fragments of molten steel and flaming gases

The Navy's island conquests in the Pacific have shown the terrific striking power of massed battle rockets Troops have to land on heavily fortified beaches and move inland against defenders hidden in dense growth The Navy realized that a short range, powerful weapon was needed to fill in the critical time between the lift ing of the naval gun barrage and the arrival of landing boats at the shore line But landing craft were too light to support an adequate number of large guns, with their heavy mountings The rocket, with its comparatively featherweight launchers and its paralyzing short range wallop, was obviously the answer

LCI and LCI landing boats, converted into rocket beaters, now spearhead our landings. They have a fire power comparable to that of a battleship As they nell the shore their banks of laurchers send a continuous cascade of high explosive rockets crashing onto the beaches, knocking out pillboxes barbed wire, machinegun nests and fortifications in a tornado of destruction. After the troops are ashore the tocket ships cover them is they land their equipment, emplice their guns and dig in then the ships direct a creeping burrage inland ahead of the troops

The rocket ships are so successful that the Navy is arming bigger and bigger v ssels with the new weapon

A rocket is nothing more than a

cylindrical casing of metal with a pointed nose and an open vent or vents at its rear end. The head contains a high explosive charge, as does an artillery shell. The rear section is packed with powder When touched off the powder burns furrously The gases thus produced escape through the vent. What drives the rocket forward is not any push of the gases on the outside air but the pressure the expanding gas within the cylinder exerts against the fo ward end of the rocket. The distinction is important It explains why a rocket travels fister at high altitudes the thinner atmosphere offers less resistance to the progress of the projectile. If the rocket were propelled by the push of its exhaust, it would fly more slowly in thin air, having less to push against

The rocket's light weight makes it of special value as an aircraft weapon. It has little or no recoil and therefore does not deflect a plane from its course as does the discharge of my sizable gun. The Navy has aircraft rockets up to a 5 inch one with the explosive power of a 155-1 im shell.

Army fighter planes mount a battery of six rocket launchers beneath citch wing. Rockets released from a plane in flight are more accurate than those launched from stationary positions, for the plane's speed is added to their own, and speed helps to hold a moving object to its course. Aircraft rockets are more accurate than an equal weight of free falling bombs, up to 400 yards they are as accurate as aircraft machine gun fire.

Rockets do not replace other weapons, they are additional equipment As against a maximum of 12 rocket shots, a plane's machine guns can fire hundreds of rounds Wind resistance created by rockets beneath the wings slows a plane and affects its maneuverability For this reason, they are arranged so that they can be jettisoned by the pilot

The German V-2 is a rocket in that it derives all its motive power from the fuel it carries, and does not depend upon the intake of outside oxygen for combustion as does the V-1, which is classed as a machine. The British Ministry of Information states that the V-2 ascends to a height of 60 miles, attains a speed of 3000 miles an hour (several times faster than sound), and has a maximum range of 200 miles

How important the locket eventually will become depends largely on whether it can be made to achieve better accuracy. Its accuracy has been improved by the piccision in an-

ufacture of parts The bazooka appeared with stabilizing fins, newer rockets have folding fins which spring open after the rocket leaves its launcher For the first time, too, rockets have been given spin by an ingenious arrangement of the tail vents. I his is a pioneering effort to achieve the greater accuracy which a rifled barrel gives a shell

Meanwhile the Army has developed a propelling powder which burns more uniformly, gives increased speed and is less affected by atmospheric conditions than previous rocket fuels

The rocket men never rest Hundreds of square miles of our Mojave Desert thunder these days to the crashing of rockets as American research sends ever newer models to these vast testing grounds. The U.S. Army and Navy are convinced that they can beat the Germans in further developing this appalling new weapon.

Native Intelligence

Ar Jaro on Panay, an American soldier picked some fruit. It looked delicious, but to make sure he strolled over to a Filipino youngster, pointed to his mouth, then to the fruit, and looked inquiringly at the boy. After going through this routine several times without result, he turned in despair to an approaching doughboy. I was tiving to find out if this was good to eat,' he explained.

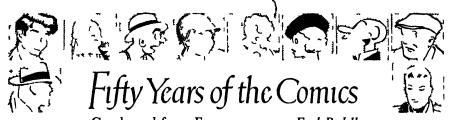

The young Filipino's face brightened "Hell, yes," he said 'It's got

- Walter Simmons in Chicago 711 une

"Shortly after coming to New Guinea, I was out walking one dip when I met a native near a coconut grove Pulling out a florin (32 cents), I pointed to a tail tree and said, "You climb tree, I give you this'

With a big mile, he reached into his pocket, pulled out a half-pound note (\$1 60) and said in perfect English, "Here's a half-pound Let's see you climb it"

How and why 'the funnies' — now Big Business and not funny — make for tunes and influence people

pers and they appeared only on Sunday—to be read by youngsters sprawled on the rug, or by adults who grumbled at having" to read them aloud to children Now they we called comics, though the name is a rank misnomer for most of them And they are big business

Four out of every five of the people who read newspapers, or almost 70, 000,000 citizens in all, shamelessly and regularly read the comics. The huge syndicates that handle them claim that, next to front-page news it's the comics that sell the papers. Sixty percent of the income of the vast Hearst empire is attributed to comics owned by Hearst's King Features Syndicate, and the NEA syndicate spends more on them than on all other editorial features combined.

The weight which comics swing in public affairs is shown by the fact that when Joe Palooka enlisted in the Aimy in 1939—the first comic-strip character to don a uniform—President Roosevelt personally thanked his create, Ham Fisher, for helping put across the draft A Sunday speech

by Flip Coikin in Terry and the Pirates, the cartoon counterpart of real life hero Colonel Philip Cochran, inspired newspaper editorials and was 16 id into the Congressional Record The U S I leasury commandeered the help of comics for the sale of war bonds drives for the Red Cross, for the USO, for scrap collection have been boosted by them

The comics influence people in stringe and various ways "Sadie Hawkins' Day," a sort of annual leapyear day, first celebrated in Lil Abrer's village of Dogpatch, has burgeoned into a national institution with hundreds of colleges, towns and Army posts taking part Blondie has given the nation the mountainous and precatious Digwood sandwich, Bringing Up Father has inspired Dinty Moore restaurants, specializing in corned beef and cabbage, hamburger stands have been christened for Popcye's ever hungry Wimpy

American sling has been enriched by a long list of expressions born in the comics hot dog, thanks for the buggy ride, balones, banana oil, horsefeathers, hotsy totsy sweet mamma, heeby jeebies, goon

Polly and Her Pals, the first of the girl strips, and others like Winnie Winkle, Tillie the Toiler and Dixie Dugan help set feminine styles by

portraying the latest and smarkest to every town and crossroads The glamour-girls-of-the-future who decorate the *Flash Gordon* strip have popularized the upswept hair-do, the baremidriff playsuit and wedgies

Not so harmless is the occasional influence of the comics on the young One boy had to have 16 statches taken in his mouth after trying to bite off the top of a spinach can like Popeye Another fell 30 feet on his head trying to fly like Superman Religious groups, judges and other solemn folk pounce on incidents like these and on juvenile crimes possibly inspired by the "murder, mayhem and arson" strips as evidence of the comic strip menace But child psychologists call the comics a 'type of mental cathusis for normal, well adjusted children, filling a basic eniotional need for adventure and escape from adults "

Adults are as likely as their offspring to take the strips ulti iscriously When Blondie was expecting, artist Chic Young offered \$50 for a name, and along with 400,000 suggestions ('Cookie' won) c ime copious advice on how to real summer babies. Dick Fracy, wounded was showered with notes of sympathy, and also got an offer of blood for transfusion When I ittle Orphan Annie lost her dog a icw years back, artist Harold Gray received this telegram 'Please do ill you can to help Annie find Sandy We are all interested [signed] Henry Ford "

The rare deaths in the comics bring the most revealing personal response When artist Milton Caniff killed off beautiful Raven Sherman of *Ierry* and the Pirates, phone calls tied up newspaper switchboards, flowers were sent for the funeral, and 450 students of Loyola University, Chicago, met together at dawn and faced east for a minute of silent mourning

Many famous men have been comic fans Wendell Willkie read them regularly Justice Holmes thought Milt Gross was a genius and William Lyon Phelps often badgered the syndicates for advance proofs because he couldn't wait to see what happened next When things looked black for England in 1940, King George VI would relay with Otto Soglow's Ittle King

The comics are just half a century old On November 18, 1894, readers of the New York World opened their Sund by supplements to find a six-box series of colored funny pictures about a snake and a dog, which staff artist Richard F Outcault had clauvovantly entitled The Origin of a New Species Borrowing the technique of putting talk in balloons from political cutoonist Opper, Outcault later fathered The Yellow hid for Hearst Puents and preachers protested violently against this yellow journalisin," thus coining a phrase and initiating criticism which has contin ued ever since

Meanwhile Rudolph Dirks created The hat enjammer hids for Hearst's New York Journal, and soon — after a famous legal case, still studied in law schools—transferred the hids to the New York Unid, all but the title Since the hatzies still cavort for Hearst under artist H H kneri and Dirks still draws The Captain and the hids, Hans and Fritz, the oldest living comic-strip characters, are the only ones who lead a double life

Popular since its birth 33 years ago, George McManus & Bringing Up

Father, with its newly rich Irishman, Jiggs, has been published in 71 countries and translated into 27 languages, with Jiggs' pet dish, corned beef and cabbage, becoming tripe and onions in England, rice in China, spaghetti in Italy, and hot tamales in Mexico Another ancient favorite. still going strong, is Bud Fisher's Mutt and Jeff The first of the daily strips, it came to life in the San Francisco Chronicle in 1907 as A Mutt, and changed its name two years later, when Mutt ran across a sawed-off runt in an insane asylum who introduced himself as James J Jeffines, retired heavyweight world champion

In early decades the comics really lived up to their name. But in 1921 Artist Frank King started the trend to straight storytelling when he turned his Gasoline Alley from a funny strip into a pictorial life of Skeezix. Three years later, Little Orphan Annie—who never grows up—began her series of quite unfunny vicissitudes.

The humorless era reached its peak—or, some would say, its nadir—with the sudden, spectacular success of Superman in 1939 Although not the first of the fantastic strips (Tarzan, for one, was earlier), it became a top favorite almost overnight Superman was responsible for the mushroom growth of comic books and magazines Specializing in out-of-thisworld adventure, these now sell over 20,000,000 copies a month

Before the war, foreign circulation of the con ics was tremendous Even today Blondie and Dagwood, as *Pepita y Lorenzo*, have more readers in Buenos Aires than in any other city

The comic-strip industry is built on a remarkably small foundation A

recent list of all syndicated comics includes less than 250 titles and, of these, many are brand-new strips with small circulations. The ten comics of largest circulation are, in this order Joe Palooka, Blonaie, Li'l Abner, I title Orphan Annie, Terry and the Pirates, Dick Tracy, Moon Mullins, Gasoline Alley, Bringing Up Father, The Gumps

Fop-flight comic artists rank financially with movie stars. Some of them make over \$100,000 a year from their strips alone, and add thousands to their incomes from radio, film and other rights. Sidney Smith, who created *The Gumps* had signed a five-year contract for \$150,000 a year on the very day he was killed in an

automobile accident. The average

successful comic artist makes from

\$400 to \$500 a werk

Some strips are mass produced, with perhaps half a dozen people involved — editors, continuity men or gag men, background artists, letterers But in a good strip the ideas and most of the important drawing are the work of the man who signs it The drawing consumes the longest time — particularly for a painstaking artist like Milton Caniff, whose works have been hung in the Metropolitan Museum of Art and who is rated the finest draftsman in the game

Left-wing intellectuals inveigh against comic strips as "distractions from the real problems of our times" Psychologists say people read comics "to feel superior" to puny Jeff or henpecked Jiggs, or "to identify themselves" with Dick Tracy or Superman Others call it all a form of infantilism But the 70,000,000 who read them don't care

An Be Taught Life

The Terrapin's Shell

During one of my childhood visits to the country I found a land terrapin and started to examine him, but the terrapin closed his shell like a vise Seeing me try ing to pry him open with a stick, my un cle said, 'No, no That's not the way '

Then he took the creature inside and set him on the hearth. In a few minutes he began to get warm, stuck out his head and feet, and calmly crawled toward me

"People are sorta like terrapins,' my uncle sud 'Never try to force a fellow into anything Just warm him up with a little human kindness, and more n likely he'll come your way — Rilla I agent

Who's Superior Now?

ONF summer evening my father caught me tearing down the street after another child screaming, Wop, dirty wop!

He stopped me short, and said, Young lady, just uho do you think you are?

He took me into the house, sat me down at a desk, and give me a sheet of paper. He sud, Now, I want you to write down every wis in which you are different or better than the little Italian girl."

Ah, that was easy She was Italian, a wop — but I was of French descent, a 'frog" Besides we were both really Americans I'd better not put that down Well, she was dirty! I looked at my own grimy hands and dirt stained dress I'd better skip that part I was in the fifth grade, and she was only in the fourth! Hmm, but I was ten and she was only eight I was blonde — but she had curly hair

Dinnertime rolled around, and my paper was still blank I took it slowly to my father He smiled and said, "That's a good paper Now until you can create a wonderful human soul, as God can, don't presume to criticize anyone because God chose to have him born a member of any one of His nations or races Remember this paper."

And I always have

Moss and Remorse

MY MOTHER and aunts used to love to go blueberrying I was a lazy child and always carried the smallest pail While the others picked I lolled about One day I filled my pail with moss and topped it off with a thin layer of berries. The pail looked full of berries, and I was highly commended for this unusual industry

The next morning Mother made pies, and there was a 'saucer pie' for me, with bearies peeping through a slit in the crust Imagine my chagiin to find beneath the tempting crust -- moss!

Before I could fly into a tantrum, my mother said, When you cheat others you are cheating yourself most of all You are training your bad impulses soon your good ones will cease to exist"

I have never felt any gain would be mine by cheating since that deceptive pie

-MHL

Bossy and the Saw

My cousin and I continually argued with each other while doing household chores I was older and tried to tell her just how to do everything, and of course she resented it

One day my grandfather took us out to the log pile and gave us a crosscut saw Picking out a sizable log, he said, 'Start sawing" We were both a little bewildered, but obeyed I began to saw as fast as I could, thinking I would show up my cousin But when I pushed the saw back faster than my cousin could pull it, the saw would bind, throwing me off balance Then I realized that the more evenly I pulled without pushing, the easier the saw cut My grandfather, with a twinkle in his eyes, explained the principle of the crosscut saw work together in harmony Whenever you have a job to do, he said, work together and you will find he job goes easily and quickly

Empty Wagons

MY PARENTS earnestly strove to impress upon us children the dignity of courtesy They disliked especially the n terruption of one speaker by another

One morning, when meadow larks were fluting, my father called to me in the yard. Do you hear anything besides the birds?" he asked

I listened a moment Yes? I said, "there s a wayon going down the lane?"

"Yes It's an empty wagon Do you know how I can tell?"

"No," vaguely wondering

'Because it rattles so Empty wagons make the most noise"

That was all, but across the years whenever I hear a clatterer running on and on, my father's voice comes back to me "Empty wagons make the most noise"

- Mary Agnes Felly

Make a Little List

Housebound several days by terrible weather, my brother and I fell to quarreling, and finally complained to Mother about each other's 'mean' traits She listened patiently, then told us to sit in opposite corners of the room for half an hour, facing each other, and each make a list of the good things we could think of the other — with a prize for the longer list

One can't concentrate on a person's virtues and be thinking about his faults, and I have found this an invaluable lesson through life

— I rances Greene

Louisianas Fabulous & Muskrat Marshland

wery winter 20,000 Louisi and folk drop everything to go camping in the vast marshes and trap rats

Carolyn Ramsey

Condensed from The Progressive

wages right in Thibodaux, La, and live in comfort in his tidy little home But, come autumn, Alcee gets restless The marshes call The love of outdoor life is strong in him—and so is the gainbling fever Enfin, one day in late November he tells the boss he's quitting And the boss knows better than to try to dissuade him

With 20,000 other Creoles, Cajuns, Isleños, Dalmatins, Sabines—the mixed folk of south Louisiana—Alcee is going to trap muskrats. For nine months in the year the trappers are loggers, moss gatherers fishermen, oystermen and, nowadays, shipyard workers. Every winter they go camping in the marshes—they and their whole families in a great seasonal interation.

Alcéc's outfit is typical a house-boat—"campboat," he calls it—for himself, another for his married son, a half doz'n skiffs, and two or three pirogues, those tricky little canoes beautifully fashioned from a single log. The boats are piled high with stoves, mattresses, washtubs, pots, pans, all the gear of housekeeping. There are likely to be a crate of squawking hens, a hog in a pen, there may be room even for the family cow. And children, always children, waving

to everyone they pass, gay with the thought of three months' camping, far from the schoolroom

The land into which a "putt-putt" tows the trappers is like no other in all America. It is a subtropical marsh 400 miles long and 15 to 30 miles wide, fringing the Gulf from the mouth of the Mississipp to the Fexas line. Over this watery, treeless wilderness grow luxuriant grasses, shoulder high, which in the winter turn to gold There is no solid ground. A man can walk, stepping from clump to clump of the grass roots but he must be wary or he will sink waist-deep in muck.

This is muskiat pinadise. Here the animals feast on their one food, the sweet roots of the grasses, here they multiply incredibly. From this one area trappers take more than 6,000 000 muskrat pelts a year — about as many as from all the rest of the states combined, and more than Canada and Alaska together produce. This narrow strip of quaking marsh supports the weight of the great American fur industry, for muskrat in its many guises is the staple, the bread and butter, of the fur trade.

The industry can count with leasonable certainty on a supply of pelts that will vary little from year to year,

but the individual trapper has sharp ups and downs Some years he doesn t take in the \$350 he needs to pay for his supplies. Other years he makes a killing Plenty of trappers earned \$3000 last season, some of them \$5000 - big money to a Cajun And he

loves this gambling aspect

The work is arduous. Alcee begins by firing the grass on the tract he has leased It burns down to about ten inches above the water line That will make it easier to get around, and easier to find the traps Next he makes a trainasse by drazging his pirogue several times over the route, breaking down the grass stubble and plowing the soft peat to create a water lane along which the pirogue will float and save him much weary walking. He learned that trick from the muskrat, whose little water paths, three inches wide, crisscross the marsh everywhere

The 70 day season opens December 10 In the trapper's lessed area are thousands of little trails which indicate feeding grounds. In a path where the water is just six inches deep he builds a little mound of mud, lays the trap on it, drops a little more mud on top as camouflage, and marks the spot with a length of cane No bait is needed. The trap is only two inches below the surface of the water, and when an adult muskrat comes along he cannot avoid being caught A little one will swim right over the trap unscathed

The daily routine of trap-tending starts before daybreak, when father and sons rise, gulp down their Louisiana-style coffee ("If she don' leave rings in the cup, she's no good"), don their hip boots, sling 'rat sacks over

their shoulders, pick up the long poles to push the pirogue and "marsh sticks" to help them with the difficult walking, and set out

In a good week the trapper may get 300 large top-grade pelts and 500 smaller ones, in a poor week about 75 'tops' and 150 poorer ones The weather causes these striking fluctuations Muskrats "run" best on cold nights, scurrying ceaselessly down their water trails, intent upon their search for food, their lovemaking, or upon repairing their houses

I he women of Alcee's family skin the 'rats and stretch the pelts on wire frames to dry The fur buyer comes once a week He divides the pel's into five grades, and pays an average price on the whole catch The OPA ceiling ioi a top-grade pelt was \$1 44 last year During the last war, the price was 25 cents. In 1927 it was

\$2 55, the record high

The buyer works for the syndicate from which the trapper subleases his land Five big syndicates control most of the marshes, leasing them from big landholders who bought up enormous tracts years ago at ten to 20 cents an acre The state itself owns large areas which it leases out, and some of the

revenues go to the schools

Agents of the syndicates make annual surveys and apportion the easeholds so that each trapper should catch about 2000 muskrats The usual contract between syndicate and trapper calls for 35 percent of the catch as rental I he division is made not in pelts but in cash, after the company agent has bought the fur This sharecropper system is bitterly resented, but it persists, though a few enterprising trappers are buying their own land, and some others have accumulated enough working capital to pay their rental in cash and sell their pelts in the open market

And what about the little animal that is the cause of all this industry? To begin with, its name is half lie, The muskrat is not a rat at all, but it does secrete a powerful musk as good as any of the expensive musks now imported by the perfume industry, recent experiments seem to prove It is a sturdy creature, about 12 inches long, with a ten inch tail which it uses as an oar and a rudder when swimming It feeds at night With its sharp teeth it cuts a grass root about six inches under water, then comes to the surface, holds the food in its little hands, washes it and nibbles it daintily. The muskrat's beaverlike house, built of grass and mud, is an apartment building of ingenious design, with a central stair well and various rooms, of which the nursery is the largest. It rises two to four feet above the water line and is four to ten feet in diameter at the base Tunnels radiate like spokes of a wheel to underwater entrances

In Louisiana, mushrats breed in any month of the year except August and September Three times a year

mama chases papa out of the house for two weeks, and produces a litter of three to seven "mice" The muskrat population may multiply sixfold in a single year, in spite of hungry mink, alligators, owls, hawks, snakes, garfish and raccoons Were it not for the trappers, the muskrats would soon outrun their food supply

But neither preying beast nor man is the muskrat's worst enemy. In years of drought the marsh dries up, there is no good grass, many 'rats starve, and breeding almost stops. There is a short fur crop the following season.

Flood is as bid, drowning out the muskrat houses, covering the grass clumps until there is no place for the animal to rest. In the great flood of 1927, when water stood deep on the misshes for 108 days, conservation officials, trippers and landowners built rafts, covered them with marsh grisses and set them ailoat. Millions of muskrats climbed aboard these life rafts and rode out the flood.

I here was a time when nobody would have cared what happened to the humble muskrat, but he has made Louisiana the I ading fur producing state of the Union, and I ouisian a is grateful

Backward March

FROM AISACE, New York Itmes correspondent Dana Adams Schmidt reported a strint that beat Goebbels at his best. It ench authorities in the liberated areas discovered a Germ in propaganda movie depicting the expansion of the Reich. They gathered an audience and ran the film backward. The Terrible B-29

No wonder Jap fighters don't like to tackle the Superforts!

Condensed from The New Republic + Bruce Bluen

some of the facts about the B-29 the other day, and I went along to have a look. The B 29 is the most powerful bombing amplane on earth. It flies higher, fuster and futher than any other bomber now in existence. The distance between its wing tips is greater than the total distance the Wiight brothers flew at Kitty Hawk.

Everything about this plane lends itself to supcilitives. More men and more money are being employed on the B 29 than on any other instrument of warfare in the history of the would General Arnold and his aides earmarked three billion dollars before a single B-29 took to the air Seven hundred and fifty engineers worked for two years on her design. Even today, when she seems to be a triumphant success, a thousand engineers are making alterations and already about a thousand new improvements have gone into mass production A B-29 has 55,000 numbered parts They go into a ship with an operational weight of 63,000 pounds, of which as much as 20,000 pounds may be bombs

The big bomber, which flics 3000 miles or more on a single mission, requires a long ordeal in the air for her crew Nobody could fly this distance in a heavy, electrically heated suit, using oxygen, without becoming completely groggy If the gunners had to

curl up in a plastic bubble with a hand-operated machine gun, they would be too tired to hit anything, least of all a Jap Zero coming in at 400 miles per hour

Therefore the designers went to work With a series of mechanisms, they have made it possible for the entire cit w to sit comfortably, in light clothing, in a 'pressurized' cabin where warm fresh air is circula ed constantly at low-altitude pressure, and do their work under conditions which illow maximum freedom from fatigue.

The first of these mechanisms is a system of remote firing control Scattered about the ship are five gun turrets, each mounting two machine guns which can be pointed anywhere in slightly more than a complete hemisphere There are also five plexiglas blisters - sighting stations for the gunners Both turrets and sighting stations are so arranged as to give complete visibility and complete firing range from every point at every moment Indeed, the fire of several turrets can be concentrated upon any enemy fighter, approaching from no matter what angle Although normally each gunner controls only one turret, an electronic device permits him, in a split second, to take over the guns of one or more additional turrets About 30 combinations of gun turrets in series are possible

This is remarkable enough, but it is only the beginning. The B-29 has an unparalleled accuracy in its acrial guns. In the Pacific area 14 bombing missions were completed before the first B-29 was shot down by an enemy lighter plane. On one occasion a single Superfortress fought off 79 fighters in a four-hour running battle, shot down seven, and returned safely home. The shooting is so good that on some recent raids Japanese fighter pilots have been seen to bail out of their planes just before coming within rang.

This record has been achieved as a result of a new mechanism the electronic computer. I mag a machine gun from one rapidly moving implant at another presents complicated problems. With the planes 40 mg in different directions, a bullet fired point blank will obviously miss its target by many yards. The B 29 creates a wind which by itself will deflect the bullet, gravity will pull the bullet down by many feet. Also, bullets act differently in the different temperatures and air densities of low and high altitudes.

All these problems are met by the electrone computer with the utmost accuracy and with, literally, the speed of light. Perhaps I can illustrate the operation with a hypothetical dialogue between the gunner and the machine.

Gunner We are traveling at 31,000 feet, temper iture 40 below. Please take account of these two factors in everything you do

Machine (18 silent)

Gunner We are traveling 300 miles an hour and the enemy is traveling 400 in a

different direction. Take account of these two factors also

Machine (says nothing)

Gunner Take account also of the pull of gravitation, wind resistance on the bullet, and the distance between my eye and the gun turret several vards away

Machine (gulps or it least, I should if I

were in its predicament)

Gunner Make all these calculations simultaneously and instantly, and keep on making them as long as required, so that whenever I fire these guns the bullets will be 99 percent certain to but their mark

Machine (responds only with a slight

whitting noise)

I saw a demonstration of this whole mechanism is the Waldorf Astoria Hotel. They had set up a couple of turiets a sighting device and the electronic computer, which is a black square box the size of a big suite ise, covered with drals and with heavy wrapped cables protruding like the tent icles of an octopus.

The demonstrator from the Cencril Flectric Company which worked out this instrument, sat down behind the sighting device a complicated mass of openwork incentialism rasing about five feet from the floor. His head was lost to view among the cogs In front of him was a ground glass scieen on which appeared a circle of lummous red dots. He had already determined the size of a hypothetical Jap plane he saw approaching and set a duil in accordance with that size Now after feeding the other required data into the machine, he needs only to keep the image of the Japanese plane within the circle of luminous red dots, its greatest horizontal diameter just touching the dots on either side. He presses the trigger and the mechanism does the rest

The sighting device gunner and all, revolves freely in every direction. As it does so, the gun turret, ten feet away, and connected only by wires, moves with it, instantly and perfectly, down to the initiatest fraction of an incl. If two or three turrets are locked into circuit, the turrets swing their heavy black machine gun barrels in absolute synchronization with the sighting mechanism and with the will of the gunner who seems a wisp of frail hum unity, amid these massive and deadly machines.

Perhaps most astonishing of all as to see the gunner draw his own bead on a targe doing his human best with the computer cut out. Then he cuts the computer in Instantly there is a hiccup and jerk as all the turrets simultaneously correct the bad aim of the blundering mortal whose very best seems featfully incompetent by the standards of electronics.

Since each pair of cans has an area of fire greater than a hemisphere some of them ometimes point at a part of the amplane itself. For instance, the appearandships turiet has part of the tail assembly of the Super

fortress within its range But the computer is equal to the occasion Let us suppose the guns are firing (800) bullets a minute) at a plane in the rear, and are swinging from left to right past the tail As they come to a fraction of an inch of the range where they might cut into the fabric of their own ship, they automatically stop firing, the right-hand gun cutting out a finiction of a second carlies than the. left hand one As they come to the fraction of an inch where they can shoot past the tail they start firing ngnin - the right-hand gun resum ing him a fraction of a second before its mate. To swing the guns through 1 180 degree turn reeds only two sec onds so you can amagine how rap idly this process of interrupting the for is carried out

Even in implement iterist can see the tremendous importance of the B 29 and the still give iter ships that are to come. I wish when the Senate comes to debate peace plans, that the facts about the B 29 could be put into the Congressional Record. For it we can build them now so sooner or later can our enemies.

>> BATTIT WORN Maines were moving out of their front, me position, as fresh troops took over. When one griffly Leitherneck climbed out of his foshole, the clean shaven youngster replacing him, isked. What outfit did you relieve when you came?

The Marine rubbed in stubbly chin and pondered 'The Jip infantry,' he replied — 1 Sht Ben Schnitt in Corones

Me a bombing mission over Germany we were flying along in formation when we saw a P 38 from our fighter cover diving down very fast, on his tail was a German Me 109 and coming right after him was a P 51 About that time over the radio we heard the pilot of the P 38 say, "I ock to Lockheed for leadership?"

Man with a Bull-Tongue Scooter

Condensed from The Atlanta Constitution

Harold Martin

ACK GOWDER is just an or-dinary-looking fellow, 61 years old and a little stooped from work. He wears in old felt hat and an old brown coat and the faded blue overalls that many a Georgia farmer wears. He lives in an ordinary house, tin 100led and unpainted, and there is nothing unusual about it except the fact that all the food that s in it—and there is plenty—he raised on his own place. His bain is a log barn and his outbuildings sort of lean against the wind like everybody clses, and there is nothing unusual about them either, except that when nearly everybody else is having to buy feed he has feed to sell

The main thing about Mack Gowder is his larm, for there is no farm like it it Georgia. It sits like a garden of Eden, green and lush among the croded hills of Hall County, and the soil upon it is as deep and rich as if it were virgin soil that had never known a plow. It is as rich as bottom land, though every inch of it is steep and sloping, dropping 15 to 20 feet to the hundred—just like land around it which shows great gullies like open wounds, and huge scalds where sheet erosion has washed the soil away.

At planting time, you'd thinl it was

the sorricst-looking place you ever saw The fields don't lie smooth and bare to the wind and sun and rain like the fields on other farms. They are covered with litter — coinstalks and cottonstalks and stubbly peavines and weeds. They look that way until the crops spring up to cover this trish, and Mack Gowder havests his cotton and coin and grain in quantities three or four times greater than the average for his county. For 30 years, in dry seasons and wet, Gowder has made money

Mack Gowder knows why and he is willing to tell anybody who asks him about it. Throw away your turnplow. Leave excepthing on the land you don't have to take off to eat or sell. And let the lay stay where God Almighty put it.—down under the ground.

Forty years 190, when Mick Gowder was a tenant farmer working the other man sland, he started studying about what it was that caused the land to wash away and wear out. He came to the conclusion that the tumplow was causing it, by burying the latter that lies on the land after a crop is gathered. To keep the land productive, he figured, you had to keep a good mulch on the top of the

ground to hold the water on the soil, and at the same time you had to break up the ground so the water could soak in as it fell You had to keep the plant food up close to the top of the ground where the roots of

the plant could iced on it

Gowder figured these things out to vens before Edward I tulkner wrote his book called Placeman's I aley * But there wasn't much to do about it so long is he worked the other man's lind So he sixed what he made as a ten int until he got enough to buy 100 icres of woodland Stating out from new ground like this he says, I knew I could find out whether I was right or wron-

He started elearing his land, and right there he did the first thing that was different. He didn't buin anything but the biggest brish. The httle limbs and track that were left ifter he took the timber off he left lying on the ground to rot

There was no plow that would handle the soil exactly as he wanted it hindled, so he mide his own. He took in old road scrape blade and hammered a slight curve in a section of it about 14 inches long and 114 inches wide, and put a sharp point on it and fastened it to a two horse turner beam. He tried it out and it went down deep, 12 to 14 inches, just enough to go into the top of the clay It rooted through the earth like a mole, but it left all the trish and litter by ng on top of the ground. He colled his homemade plowpoint a bull tongue scooter '

Then he went over the ground with a disk harrow. The harrow chopped *See 'The I vangelist of Plowman's Folly The Reader's Digest, December, 43

up all the debris and mixed it with an inch or two of dirt

Gowder had cleared about 30 acres, and he plowed it all this way and planted on it. He didn't build any terraces the first few years. He wanted to see if his mulchy topsoil would hold by itself. It did, except in the very heaviest gullywashing rains, though it lay on a 20 degree slope. The hard runs made a few little washes the beginning of trouble so he built his terraces then

If a man s terraces break when the gullywishers come, he says he might is well have no terraces at all The unface of his land ought to able to take up-ill except the he iviest i uns

The crops he made those first few years, and the way his soil stayed on the slopes convinced him that he had lat on the right system. He believes his land as just as deep and 12 h today as it was the day he cleared

About ten ve us ago he had another ide: He figured if what he was doing could sive good lind and keep it from wishing iwiy the same system could be used to build up I and that was worn out and hadly croded. So he bou ht eight or rane acres that joined his place. It was land that had been broken with a turnplow ill the tune that he had furned with his bull tongue scooter, and it had ilmost completely washed away

Right here, he showed me 'was a wish a mule could it cross a gully six or eight feet deep. Over there was another one—But you couldn't tell where these deep washes had been, so completely had he restored the soil

"It will be a long time," he said, "before the accumulation of trash and litter can build up this land to where it is as good as my original land But right now it is making three to four times as much as it was when I took it over, and there is not a wash on it anywhere"

There on top of the eroded hill he had restored to fruitful production he took off his hat and talked about the land with a depth of feeling that

was almost religious

"I love the soil better than any man in the world, I reckon, or just as good," he said "And to my mind a min who abuses it is committing a mortal sin"

Mack Gowder's method of farming is both harder and caster than the turnplow system. It takes a little longer to prepare the soil, for the bull tongue scooter does not take as big a bite as the turnplow. I ater, though it is easier because his crops get such a start they choke out a lot of the grass, and the grass and weeds are easier to kill because the soil is so mellow it breaks away from their roots instead of clodding up when he plows

He makes 50 bushels of outs per

acre against a county average of less than 25, and 25 to 40 bushels of wheat when the county averages about 10 He makes 50 to 75 bushels of corn to the acre, and he has made as high as 90 bushels, which is bottom-land production, on steep upland "I always have enough to do me and some to sell," he says

Gowder differs with Plowman's Folly in one respect. He thinks the land must be broken deep so the water can go down, where Plou man's Folly says the surface mulch is all the water-retainer needed. He does not argue the point. He just believes otherwise from his own experience

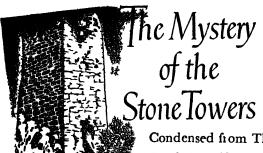

And every year in good seasons and bad, Gowder has made money on his farm. He sees his barn bulging with feed for his steek, and his pantry pecked with food for his family. He climbs his terraces right up on the steepest slope, where you dethink the soil would be thin and bleached out, and picks up a handful of it, black and mellow for eight inches under ground. This pleases him, for, as he says

All I want is to leave the soil here is good as I found it, ready to feed another generation lifter I am gone.

Pat Retort

KLEINILY I was seeing my husband off on a Navv transport plane for duty in the Aleutians Among the passengers was a little black cocker spaniel Bemoaning my fate, I said to the officer in charge 'A fine thing—letting a dog have passage aboard the plane when wives must stay in the United States'

^{&#}x27;After all, madam," replied the officer, "all the men can pat the dog '-Shirley H C wishaw in Corones

Who were these strange people, and who their destrovers?—
An archaeologist s detective story from the New Mexican wilderness

Condensed from The Siturday Evening Post Frank C Hibben

oe Areano found the towers in 1933 when he was searching for gold in a wild, unmapped section of north-central New Mexico And so because a Mexican rancher went gold hunting, we un covered a 700-year old invistery—a thrilling story of violence and blood-shed without a beginning and without an end

Joe brought into Santa Te eight ancient painted potters bowls which he said he had found in the ruins of the stone towers. Now, our south western states are full of pueblo ruins, but no pueblos have stone towers. Here was something different. We fitted out an expedition and went to see Joe Aremo's towers.

Only one small mud road leads into the rough canyon country along the Gallina River, where Joe guided us. We saw the first tower as we came into a canyon walled by jagged sandstone cliffs. It was perched on top of one of these rocky pinnacles. With

FRANK C HIBBEN, former University of New Mexico anthropologist, now a licuten ant in the U S Navy, is the author of Our Search for the Larliest Americans,' The Reader's Digest September, '44

our field glasses we could see other towers singly and in clusters looking like medieval eastles on the cliffs

Who built the towers' Why did these unknown people go back into this unbelievably rough country and perch their stone defensive works in such precurous places' We could not attribute the remains to Navahos or Apaches or my of the so called 'predatory' Indians

We set up camp and spent weeks in an extensive survey. We scaled the cliffs on either side of the canyon and penetrated for miles in every direction. What had at first appeared to be a small cluster of stone towers in one-iso lated canyon turned out to be a whole series of villages made up of towers. In this one section alone we located more than 500 towers, spreading over an area of some 35 by 50 miles.

It took us three months to excavate five of the towers. The first was perfectly typical, as we found la er on Originally 25 or 30 feet high, the walls were built of roughly squared sandstone blocks put up with adobe mortal with rubble in between to form a double will about six feet thick at the base

Part of the roof of this first tower was preserved, showing a stone parapet from which the occupants could fight The only means of entrance and exit was by ladders through a hatchway in the roof We found parts of the ladders in the debris

As we carefully shoveled dust and fallen masonry from the interior of the first tower, the edge of a painted design appeared on the plaster wall that covered the stone on the inside Plants and birds and flowers, interposed with pennantlike flags, ap-

peared one after another

The floor, some 20 by 20 feet, was paved with massive slabs of sindstone Around the 100m were hollow benches of stone and adobe capped with sandstone, these benches also served as bins for storage. Let into the floor at one side was a fire pit with a coping around the edge, and a shaft built in the wall for ventilation -- a sort of chimney which started at floor level

Everywhere in the interior was evidence of life -- and also death The putt of centuries old air that came out of the bins when we opened them was like the breath from an Egyptian tomb The bins were full of intimate things — buckskin bags of ceremonial face powder shell ornaments, painted prayer sticks of wood and feathers, good luck pieces, buckskin clothing feather robes, arrows of cane and flint, and ceremonial masks and horns

But these things that had been left so casually there were not so interesting as the occupants of the tower Scattered about in virious attitudes were 16 people, and their story was with them Everywhere was evidence that this fortification had been attacked, the defenders killed and the tower fired with fire arrows The roof timbers had burned through, and the 100f had collapsed Those fighting on the parapet doubtless had fallen in with the roof 1hc remarkable dryness of the southwestern climate, together with the charring action of the fire, had perfectly preserved the bodies They were better preserved than many Egyptian mummies

Here was the body of a woman sprawled backward over one of the storage bins. She had been crushed by falling stones, but her body was icm irkably preserved, even to a look of intense agony on her face Studded in her breast and stomach were the charied ends of 16 arrows She clutched in her left hand a short, powerful looking oak how with a part of the string still on one end

Another woman, with an airow in her shoulder, was badly crushed But her han do was in perfect shape. She had parted her hair in the middle and swept it down on either side in three braids which were looped up ngnin and fixed with little pieces of painted buckskin into a knot at the back of her head. Her scalp along the part of her hair was painted red

A cluster of warriors lay on the floor One grasped three bows and a bundle of 2/ arrows Evidently he had been passing the amniunition when struck down with an axe. An other man had met the same hash end A stone are with a jagged edge was still embedded in his skull, clear to the middle of the blade

In the chimney opening was the most pathetic sight of all A young boy of 15 or 16, with his hair in long braids, had crawled into the small aperture as far as he could Apparently he was still living when the burning roof fell, for only the lower part of his body was burned An arrow had struck him in the back You could almost read on the dried and mummified face the look of terror that it still held, centuries after the boy had crowded into the hole, trying to escape the heat

We excavated some 17 Gallina towers and each gave us more details of the same terrible story. Each tower had been burned, and each had been defended to the last by men and women whose bodies we found in them. Our scientific thirst for the answer to the question of who built the towers was augmented by an other question. Who destroyed the people that built them?

We are able to date these ruins by specimens of wood found in them The patterns of successive dry and wet periods — as revealed by the tree rings in the roof beams and ladders — indicate that the timbers were cut between 1143 AD 1248 A D. It seems obvious that the Gailina people were not ordina y Pueblo Indians The physical make up of their skeletons is slightly differ ent, and many of their utensils and weapons were radically different. The very fact that they built stone towers distinguishes them from any of the Pueblo peoples that we now know

In one of the towers we found preces of pottery of a type not indigenous to the Southwest at all But it is known in Nebraska, and even farther east in the Mississippi Valley We also found that the inhabitants grew a and of corn and varieties of pumpkins that were known to the

early people in the vicinity of Iowa and the Missouri Valley

Near the stone towers we found round pits, 30 to 50 feet in diameter, dug deep into the ground — apparently early Gallina houses Pit houses were known to Indians on the Great Plains in early times

On this and other evidence we concluded that the Gallina people had come from the plains several hundred years before they were destroyed. It seems that they found the Southwest already populated by others, which possibly explains why they picked the rough but beautiful Gallina country for their home. Where they got the trait of building towers is not known, possibly they invented this type of architecture when the need arose to protect themselves.

But who were those who swept down through the Gallin a country around the year 1250 and burned these stone towers one by one? If any of the bodies of the attackers lie anions the bodies of their victims we have not vet identified them. The only definite clue that we have as to who killed the Gallina people lies in the arrows embedded in the i bodies Both the Navahos and the Apaches habituilly used broad, barbed arrowheads on heavy enafts arrows in the Gallina bodies were compound arrows, mide with a shaft of reed and wood and a small, triangular flint point I hey are threefeathered, and painted with identification marks on the butt end, so that you could add up the score when the fight was over These compound arrows are exactly the type used by the Pueblo Indians

Did some Pueblo group resent the trusion of the Gallina people, and the them out? We are not yet sure. We are only certain that the Gallina towers, perched on inaccessible cliffs and ridges, were picked off one by one by an unknown enemy. Every tower is a part of the same tragedy of 700 years ago.

The other day we got a letter from

Joe Areano He has found a cliff house far back in the Gallina country, in a canyon we have not yet explored In the cave house are several Gallina towers, and everything in them is perfectly preserved by the dryness When the war is over, we shall go again to the tower country, to find the rest of the lost story if we can

Your Hospital Needs More Nurse's Aides

Condensed from The Houston Chronicle Louise Macy Hoplins

any thousands of men return ing home iffer the war will need nursing for months, perhaps years. Hospitals will be even more crowded than they are now. Any woman anywhere may find herself east in the role of emergency aurse. I very woman should be prepared—and in preparing herself she can help her community and her man in the service. Now, as never before our hospitals must have more nurse staides.

I was in France for nine months before that nation's fall By day I worked on a fashion magazine, but at night, when I did my stint at a can teen, I knew that the effort expended there was more satisfying. When the Germans came into Paris, I returned

There never was a better nurse s aide said a Washington hospital official of the author Mrs Harry Hopkins

to New York to continue
my migizine work. But
with Pearl Hirbor came the conviction that I must change to something
more significant than concern over
the width of a skut ruffle or the size
of a hat brim.

Where would I be most useful? What did I have to offer? Not much I feared But where could I get the best training for a new kind of activity. A friend suggested that I become a nurses aide. Every nurse's aide helps to release a more highly trained nurse who can be sent to hospitals for soldiers — and there is a desperate need for nurses for the armed services. A nurse's aide helps the man in uniform by helping hiloved ones back home. There's no better way than that

I enrolled at Memorial Hospital in New York and completed 300 hours of looking after cancer patients. After my marriage I shifted to Washing ton's Columbia Hospital Since then I have completed more than 3000 hours in hospital service and with every hour on duty I have found the work more fascinating, more gratifying

No woman can be at a bedside of pain without getting a renewed up preciation of doctors graduate nurses, and the wonders of medical science. Just learning something of how prin can be eased at childbirth and in operative cases has been worth all the fatigue I have felt after carrying trays rubbing aching backs and scrubbing floors from 9 a m to 3 30 p in

The work is haid It is also frequently distressing particularly when one is trying desperately to help hold back the hand of death. You cannot work in a hospital and bother much about your own troubles. Personal worries are forgotten in watching at a bedside where but for you, there might be no one else to watch.

The appreciation patients show is

touching They are deeply grateful for even the smallest attention — the attractive breakfast tray, the cool hand on the fevered brow at just the right moment Every day I receive thankful letters from former patients

Frequently, too, I find myself a kind of mother confessor, listening to a patient's innermost secrets. A closeness invariably develops between the patient and the nurse's aide, and that too is a gratifying part of the job—the best wartime job any woman can have

At Columbia Hospital about half a dozen nurse saides are on duty each day. There should be at least 20 "If it were not for nurse saides, we couldn't carry on a physician told me the other day. But we need more — many more." The problem is much the same at every other hospital in the country. I hope that every woman and girl who can give up the time will enlist.

For complete information on nurse's aide training courses consult your local Red Cress organization

The Still, Small Voice

Some veius 450 in our rural section of southern California, a Mexican mother died leaving a family of eight children. The oldest girl, not yet 17, was a tiny thing. Upon her frail shoulders fell the burden of caring for the family. I aking up the task with courage, she kept the children clean, well fed, and in school.

One day when I complimented her on her achievement, she replied, I can't take any credit for something I have to do"

But my dear, you don't have to You could get out of it"

She paused for a moment, then replied, "Yes, that's true But what about the hape to that's inside of me?

Russ Nicoll's experience suggests opportunities for many who want to start their own businesses

Bonanza by the Roadside

Condensed from True + Frank J Taylor

"with imagination, enthusiasm for work, and a family to play along with him" can make his own bonanza by the roadside almost anywhere in the U.S.A. Nicoll ought to know Starting with 500 borrowed dollars in 1928, he took in more than \$150,000 at his roadside store near Thermal, Calif, in 1944 Nicoll specializes in selling the neighborhood's top crop—dates and date products

I could have done the same, in other places, with nuts, hams fish, cheese, pottery, wearing, or any local product distinctive enough for my customers to talk about, he declares 'It's a rare part of the country that doesn't produce something better than you can find anywhere else

Itiendly, slow spoken Russell C Nicoll was mustered out of the Army in 1919 Heacturned to the Coachella Valley and for years drove a tractor for faimers. Then, in 1928, he decided to sell dates. He owned some land on Highway 99, and a shack on which he now painted a sign. Dates — Wholesale and Retail." He was all set — except for the dates. And he had no money to buy them

Nicoll induced H A Westerfield of the First National Bank of Coachella to take a ride with him down the highway to where the roadside stand stood at a turn. He pointed out that a motorist approaching from either direction couldn't help seeing his sign. Impressed by his earnestness the banker loaned \$500. Nicoll kept on driving a tractor by night, caught some early morning sleep sold dates by day. His wife and daughter helped tend the stand. That year they made \$,500. Nicoll paid his debt, and gave full time to date selling.

I hen engineers rerouted Highway 99, strughtening the curve. The date shop now stood too far from the 10 ad to lure motorists. Undismiyed, Nicoll bought a new site, then collected old sun bleached bridge timbers and tele phone poles with which he built a descrit structure so distinctive that ritist have come hund eds of miles to photograph and sketch at decorate the new site Nicoll transplanted 40 old pulms from a nearby garden. They give the Vilerie Jean Shop -named after Nicoll's little daughter who could barely over the counter — the atmosphere of in oasis in Mesopotamia From that time business boomed

'In this game," Nicoll explains, "you're selling not only your product, you're selling romance and clamour as well"

Russ Nicoll learned that lesson when he began experimenting with containers for dates, until then marketed in cardboard boxes. Nicoll packaged his in cellophane bags so that customers could see them. Later he sold them also in small steel-bound kegs and in redwood boxes.

One day Nicoll reguled a visitor with facts about date growing how dates thrive in the United States only in the irrigated groves of the Coachella Valley, a blistering desert below sea level where rain seldom falls how the oases of Mesopotamia, Egypt and Arabia had been combed for the best varieties to launch the infint American industry, how all the palms of the Deglet \nor variety the Valley's standard crop had sprung from the transplanted shoots of a single tree grown from seed, how the date grow ers picked their dates one by one is they ripened, instead of is the Aribs did plucking the whole bunch and then pressing the overripe and underripe dates into one unappetizing mass

When Nicoll finished the fiscinated visitor ordered \$1000 worth of choice dates for Christmas gifts 'But I want your story along with the dates, he added So Nicoll had booklets printed and attached to all his date boxes

"That taught me another lesson about roadside marketing," he said "You sell not only the best product of the neighborhood but the story that goes with it"

After that, Nicoll overlooked no opportunity to add glamour to his product and items to his line Reading up on dates, he learned that inthe desert Arabs exist solely on dates and camel's milk He experimented,

and finally perfected a date milk shake It saved his over the-counter business when war restricted motor travel, because soldiers from a nearby training camp consume date milk shakes by the hundreds

Not long ago a traveler stopped in, ordered a date milk shake, drank it with relish, then demanded another "Know where I first heard about that drink?" he asked He had been riding in a train in Siberia when he met another American They fell to tilking about good things to eat back in the States The other man described date milk shakes with such relish that Nicoll's customer had resolved to have one at the first opportunity

I hat's what I mean when I say you want to give people a product so distinctive they II talk about it,' Nicoll comments

When a woman motorist mentioned a date cake she once made, Nicoll put on a cake baking contest. Out of it came a date cake, which Nicoll hunself now bakes — 25,000 pounds for the Christmas rush, 40,000 pounds a year. While perfecting his milk shake he evolved a process for turning dates into a paste. He sells it is date butter, usable as a spread of a flivoring.

Other date merchants had assured him that people would never buy dates in hot weather, they were too sweet Nicoll refrigerated his show-case, and customers liked his chilled fruit Then he put in air conditioning That made visitors linger — and buy more dates

From the start Nicoll kept a guest register. This came in handy when motoring dwindled. He wrote to several thousand former customers Would they like to have some dates by mail? Orders poured in Last year he employed 20 people at the peak season

Russ Nicoll's imagination has turned several of the neighborhood's problem crops into choice business. The Tabirzal, a date as large as a plum, has delicious meat but skin so thin that the fruit proved unaccept able for standardized marketing. One grower had spent 30 years establishing a strace planting, only to find that there was no profitable market for his crop. Nicoll packed those soft, luscious dates enefully, in fancy boxes, and almost overnight Tabirzal became a premium fruit

He pilms that shelter and decorate his own oasis produce a date once considered too soft to be worth havesting. But Nicoll now havests a 5000 pound crop from them aroundly. The fruit is ideal for date milk shakes and date cakes.

Nicoll enjoys talking up products

of other 10adside merchants "There's a fellow on Foothill Boulevard with a couple of old railroad refrigeration cars," he said "He brings down delicious mountain apples and sells them chilled I know a man who started a place uncier some walnut trees and specialized in nuts Now he has one of the busiest eating places in the state. Another man did the same with berries. I send orders regularly to a fellow who specializes in cheeses, and to Massachusetts for fish. I here's a fellow up in the Sierra Nev ida who sells wild honey — at a dollar a pound. There's no limit to the products in this country, especially thinks to cat that can be developed by imagination combined with integrity

Now the Government is ready to currentee up to \$2000, half of any approved loan made to a veteran to set himself up in business. If I were a young fellow making a new start, I d lose no time grabbing off one of these opportunities by the roadside."

Dreams of Home

A young Marine recently returned to the Stat's alice two years over so as indered rights of beer one evening in a well-known but in New York's Times Square. For the next half hour he sat at the table smoking his paper staring off into space dreamily, then staring at the beer

I milly curiosity got the better of the wirer and he isked if anything was wrong with the beer. It is this way, the Marine explained solemnly. Most of the boys in my outfit were New Yorkers, and for two years I ve he aid them talk continually of the day they decome home come to this place, and sit down to a tall cold glass of beer. So I ve die amed of it too

"I understand that," said the writer, but why aren t you drinking the

beu "

'Oh, that would spol my dicam,' said the Marine I can t stand the taste of the stuff - Contributed by Mr. M. J. D. San lis

The Pinnacle of Fame

Condensed from The American Mercury Robert Fontoine

CAME, after many years of fairy tale books and pretending to be Napoleon and Wellington under the apple tree in our back yaid, to yearn for a little more realism in my adventure

From the top of that tree I could see the great lumber yard of M Fairbirn and the other children, including the exciting tomboy, Sally, scampering wildly and yelling with what sounded like joy

I spoke to Maman and Papa

"It is now necessary that I go and play in the Fairbirns back viid like the others. I do not wish to sit always under a tree alone."

"So!' my father exclaimed "Under a tree once sat a scientist and when an apple struck his head he became famous. It is not necessary to go some place else to be famous."

"I do not speak of fimous I wish

to go for the spore?

You are too small for the rough games," my mother said

"I am not small" I insisted "I

only look small

"Let him go, my father shrugged "Where would we be if the mother of Columbus caused him to remain forever in the back yard?"

ROBERT I ONTAINE was boin in Canada but is now a U.S. citizen. He has been a newspaperm in, and a radio and movie ser pt writer. The title of his forthcoming book, to be published by Simon and Schuster, is The Harpy Time. The Story of a Boy.

At the Fanbirns' they regarded me with humor I was too small, they said I was too thin I had too much fear It was necessary for me to buy ice cream for each of them, with my ten cents' allowance, before I secured permission to play Follow the Leader

I could do nothing the others did I was afraid to jump through the hole in the floor to the hay below I would arrive halfway up the pile of lumber and then fall down I took only five steps along the high fence when I landed in the tomatoes of the garden next door

Since I was the worst of the adventurers I had to be punished. They tied me in the stall of a horse named Harry. The horse was of a great size and very gentle, but even the nicest horse does not wish a small boy tied to his tail. Especially in the summer when there are so many flies.

The other children laughed loudly as I tried to avoid Hurry's bumping

me against the boards

In the end I was released, unhaimed in body, damaged badly in spirit

"I will show these cabbages!' I said to myself in my bed that night I praved that the good Lord would send an angel who would help me become strong and brave

At Sunday school I inquired of my teacher how one became brave and "Thrice-armed is he who has faith," said my teacher

"Th bien," I told myself "I will

cet faith"

Every night I spoke to myself in the mirror "You have futh You are brave and strong"

After a month of this in which I was not contradicted, I decided I had enough faith

There came, as there always does, the right moment

I was walking past the church when I met Sally and the others

'Harry the horse is lonesome for you,' said one boy

Did your mother kiss the bruises when you went home inquired another

"Maybe he will grow up and be a midget? Sally said

I clenched my fists and my eves

'Make me [I spoke directly to the Lord] see something to do Make me very wonderful all of a sudden I will be very good and never keep the collection money for ice cic am cones."

Suddenly it was like the white light flashed in the face of Saul on the 10 id to Dam iscus

There it was before me, the steeple of the church with the cross on top, and the ancient sturdy vines which a simil boy could climb easily but which were too slight for the bigger ones.

"Oho!" I said

I climbed slowly up as my scoffers regarded me in imazement

Upward I climbed, he ring but faintly the cries of fear for me from below I came at last to the edge of the steeple. The vines were gone. There was now only smooth slate tile.

I hesitated Then I was filled with the strange feeling that an angel was pushing my posterior and telling me not to lose faith

"So," I noted, "I have an angel It must be that the Lord intends me to go to the top '

I arrived there and, looking down, I saw I had come up over what was almost a smooth sheet of glass

Below, my comrades were waving and shouting I was very proud It was all quite wonderful

Soon, however, I became very hot and very thirsty. I decided to go back down

It was not, alas as easy as all that Going up you could cling to the tiles Coming down you were very likely to slide forced down by your own weight

I was of a sudden in a panic I hung tightly to the cros

Dear I and I maintained are You come to let me fall all the way down and become like beef roulad? Send me a messenger A raven perhaps with a ladder in his beak. Or perhaps an eagle since a raven could not be expected to curve a ladder Send something and I will meriorize in one week, 20 Psalins I promise You?

I hat apparently started something in Heaven I or, far below, the minister Reverend Mckintosh, stuck his head out of the window of the mane

I felt better Here was a special envoy of the Loid Surely the Reverend would find a solution. And soon I heard a great clang of bells and the sound of a stren.

It was the fire department!
In no time the enormous ladder

came sliding up, and before I could think about it, I was being carried down to safety

Back on the ground, but still trembling, I refused to answer questions or speak to anyone except the Reverend Mckintosh

"What' he inquired angrily "is the meaning of this?'

The excitement had weakened my body, but it had also sharpened my mind

"My Shepherd,' I said (this alone impressed him), "there came to me a great desire to come closer to Heaven It was like St Paul Even to the white light Believe me I climbed as high as I could Is such a thing wro ig?'

He looked around nervously. One could see that his reputation was at stake

"No my child" he said, patting me gently on the sweating head "No But coming close to Heaven is a job for the spirit. It is not necessary to take the body along, too."

THE next morning at breakfast is I was devouring the puffed rice my mother made a noise of annoyance

"What a thing,' she said She was

reading the paper "Listen 'Unknown Boy Climbs Church Steeple On Way to Heaven He Tells Minister' Only ten or 11 years old, too"

My father grinned and blew gently on his coffee "Perhaps he is crazy,"

he suggested

"If you ask me," my mother said, "he probably comes from a home where the parents do not show him love or interest and he wished to escape"

'Cest possible' my father agreed

'Such parents," my mother said sternly 'should be in jail'

'What do you think, bibi'' my fither asked "You are about the age of this daredevil'

Mor? Oh I don't know I, myself do not like to climb, since I become dizzy I ell me, Papa, how is the new show at the theater? Do they have any dogs who turn somersaults? Or pretty guls who sing?

My mother went to the kitchen

'The next time' my father whispered you wish to show off, take along with your faith a ladder and some rope Comprends-tu''

'Yes' I said, blushing very red and sticking my nose deep into the

puffed rice

ILKA CHASE I ve finally gotten to the bottom of things
--- Contributed by Ade Kahn

Super-Salesman of Music

Condensed from The Etude + Doron K Antrim
Pat Gilmore, band leader extraordinary
combined 1000 piece orchestris, choruses
of 10,000, and batteries of cannon in the
most colossal musical jamborees ever staged

time 1864 I ouisiana has been returned to the Union, a Union sympathizer has been elected governor, and the Union Army desires a lousing celebration. Massed in La fayette Square are 5000 singers, bands numbering 500 pieces, and a huge drum-and bugle corps. And high on a podium, directing the whole stupendous ensemble, as Patrick Susfield Gilmore, army bandin ister and ace showm in

Bands and chorus swing into Gilmore's own composition dram itizing the occision - When Johnny Comes Marching Home Ig in The crowd goes wild Other songs follow But the knockout number is Hail, Columbia! I or this Gilmore has assembled a row of cannon, one of which booms on each least of a thurderous drum The effect is staggering

This was the first ind mildest of a series of monster musical shows put on by Patrick Gilmore, who knew how to make a band concert as exciting as a circus. With a fire sense of the spectacular, he brought together in the course of his ebullient career orchestras of 10000 and 2000 members, choruses of 10000 and 20,000. I ouring the country with his band after the War Between the

States, he introduced the hinterlands to the bassoon bass horn and Beethoven In his wake amateur bands sprang up, people drove to the towns of a Sunday to hear them Following his footsteps, John Philip Sousa and scores of other band te ideas covered the country with crack concert bands

That so many school kids play in bands today is due largely to Pitrick Gilmore Let the man is almost as uncelebrated now is was the raringto go Irish Ind of 19 who burst on Boston, the cultural hub of the nation, in 1848 As a boy he had mastered the corner and had come to America with a regimental land In Boston he was soon playing coinct in one band, leading another His skill in putting a fine polish on a band was quickly recognized he formed his own Gilmore's Band and rem uned its head until his de ith, save for his Civil W it service first is bandmaster of a Massachusetts regiment and later as chief of army bands

The New Orleans show only whetted Gilmore's appetite for another, even grander, musical festival. The idea of a Nation il Peace Jubilee came to him in a "vision" one Jun. day in 1867. Choirs from every state in the Union singing great music together would foster a friendlier feeling among people sundered by war "A vast structure rose before me," he wrote, "filled with the loyal of the land, through whose lofty arches a chorus of 10,000 voices and the harmony of 1000 instruments rolled their sea of sound, accompanied by the chiming of bells and the booming of cannon"

Aglow with this idea, he hurried home to tell his wife Mrs Gilmore commented "When the hosts of Angel Gabriel sound the last judgment, I know you will be there directing it"

For his Jubilee Gilmore envisioned an auditorium to seat 50 000 persons (Madison Square Garden in New York seats only 18 500) One of Boston's best architects agreed the gargantuan structure could be built and drew up plans But Boston's city fathers thought the Peace Jubilee fantastic New York was likewise cold So was the federal government, when Gilmore asked backing for a festival coinciding with Grant's inauguration Gilmore, his Irish dander up, determined to see the project through himself

Returning to Boston, he canvassed for subscriptions, pleading with merchants, hotel proprietors and railroad heads who might profit by the venture. No one wanted to be first to subscribe. The leader was feeling pretty low the day before Christinas when by chance he bumped into one Josiah Bardwell, to whom he had sent an outline of the festival "You're just the man I'm looking for," boomed Bardwell "I think your Peace Jubilee is a greatidea." And he handed the astonished bandmaster a check for

\$5000 That started the ball rolling

Excitement mounted as the nation's press reported the progress of the Temple of Peace It was to cover two city blocks and was to be illuminated by thousands of star-shaped gas jets Four balconies were to run around the sides Its retiring rooms were to be "completely equipped for every necessity of nature"

Pat Gilmore staged ingenious publicity stunts to fan the nation's interest A specially built bass drum, 25 feet in circumference, was exhibited to goggle-eyed crowds as it was taken from New York to Boston The organ installed in the Temple had pipes the size of factory chimneys Daily excursions disgorged hordes from adjacent cities to witness the colossus taking shape But the feverish nusical activity of people all over the land who were to participate was the best stimulant Picked bands were rehearsing Eight hundred choirs from Maine to California were lifting voices in Mozart's Twelfth Mass, Gounod's Ave Maria and other programmed numbers Gilmore provided thein all with a magazine containing the music to be sung and minute directions for singing it

Days before the opening, a huge and varied crowd, the like of which the city had never seen, began pouring into Boston—lumbermen from the north, southern gentlemen with their ladies, New England's first families Half fares prevailed on all railroads Choice seats for the five-day festival went for \$100 apiece

Came June 15, 1869, the great day At three o'clock the doors were closed to crowds still clamoring to get in A hush settled over the throng as Edward Everett Hale rose in the dim vastness of the stage and offered a prayer Then Gilmore appeared, and the applause shook the building Fifty thousand pairs of eyes now fo cused on this man atop a high stand as he raised his baton When it came down, organ, orchestra and chorus burst with mighty tone into Luther's choral, 4 Mighty Fortress Is Our God

Just as the number drew to a close, the sun broke through clouds and flooded the auditorium as though Gilmore had planned it that way. The effect was overwhelming. Press wires buzzed with the miracle. During the intermission a visitor telegraphed his wife who had felt she could not afford the trip. "Come immediately Will sacrifice anything to have you here. Nothing like it in a lifetime."

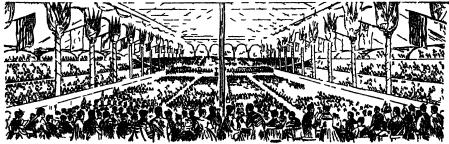

The hit number was Verdis Anul Chorus As a prelude, red-shirted Boston firemen marched out and stood like statues before 50 invils. Soon the sparks were flying is hammers swung in perfect time with the choristers. As the piece proceeded, bells pealed and finally a battery of cannon on the outside—fired electrically from a row of telegraph keys on Gilmore's stand—boomed in awesome clim is. The crowd was almost hysterical

After the first concert a listener described his impressions "There was a mystic quality to the music impossible to analyze It bore you up as on a great tidal wave You felt the beauty of brotherhood, the majesty of America Tears rolled down your cheeks I thought I was in heaven"

The festival continued throughout the week At the second concert President Grant and his cabinet walked down the broad center aisle to the strains of See, the Conquering Hero Comes! One afternoon a visitor from Chicago, overcome with emotion at the singing of Let the Bright Seraphim, quietly expired. It was the only fatality

Gilmore showed resourcefulness at all times in keeping his far-flung co-horts under control. Once the chorus got completely out of hand while singing, significantly, All We Like Sheep Have Gone Istray Gilmore tried strenuously to round them up, shouting orders through speaking tubes to licute nants, throughout the chorus When he saw it was hopeless he turned on his cannon and drowned out the singers. The piece came to a roung halt. Then he begin again

After the festival a grateful Boston citizenry presented a pulse of \$40,000

View of the interior of the great Tenple of Peace in Boston 1869

to the beaming band leader who had "awakened the country to such musical enthusiasm as it had never known before" Gilmore went to Europe to recuperate from his labors

While he was gone a hurricane wrecked the coliseum But he was already dreaming of another, bigger and better Opportunity to build it can e with the ending of the Franco-Prussian War To celebrate this event Gilmore organized the World Peace Jubilee, to be held in Boston in 1872 He promised that it would be twice as large as the National Peace Jubilee, and he made good He got together Europe's top bands, including La Garde Republicaine from France, the Grenadier Guards from England. the Kaiser Franz Grenadicis from Berlin Johann Strauss came at a reputed \$20 000 fee to lead his band in The Waltz of the Blue Danube The festival lasted three weeks and made the leader's name an international byword

The last of Gilmore's big shows was given in Chicago the following year, to celebrate the city's recovery from the great fire Then, having achieved the ultimate in quantity music, Gilmore turned to quality His objective was to build the world s leading concert band. In those days bands were for parades Gilmore envisioned an indoor band of 100 star instrumentalists He believed it could play great music with more spirit than a symphony orchestra, which he considered effeminate, high hat and a foreign importation. The band he felt to be virile and heroic, more in keeping with our inherent energy and itchi g feet

With this ideal in mind, he combed the world for the finest players, and paid them handsomely One of his cornet stars, Jules Levy, received \$750 a week, good money even today The remarkable precision of his hand, however, was due to his own electric enthusiasm

Adept at advertising, Gilmore announced his concerts on circus-size posters. People drove miles to hear them. At the old Madison Square Girden, in New York, he hung up a record that still stands 150 consecutive concerts, packing in 10,000 persons at each concert. Some of his numbers invariably had the audience on its feet cheering.

Gilmore had a trum military figure, and he made a striking picture in a uniform which glutcred with medals, some of them diamond studded given him by kings and potentates. To the end of his life he never showed age

The fill of 1892 found Gilmore playing at the St. I ours Exposition. He was 63, and planning a round-the world tour his third. But one evening an assistant conducted in his place. Gilmore had not been feeling well. Between numbers a note was handed the assistant. In halting tones he read. "Patrick Gilmore died at 7.45 p.m. of a heart artack." There was a stunned silence, then unrestrained sobbing by the men in the band.

When President Harrison received news of the leader's death, he said, "I don't believe it Pat Gilmore couldn't die" And he was right Gilmore's irrepressible spirit lives on today in every American kid who toots a horn

'That's the Man!"

Which would you believe cyewitnesses of a crime or cir cumstantial evidence?

By Anthony Abbot

Author of "About the Murder of Geraldine Foster" The Night Club Lady etc

MAN is on trial for his life. The testimony of honest and conscientious cycwitnesses may doom him to the chair. Yet he imay still be innocent.

Consider three actual cases

Ord Schuyler Runier did not be lieve in banks. For almost all of his 70 vears he had worked hard on his New Jersey farm, and the money he had earned he kept in the little will safe of the farmhouse. Neighbors said he had 25 to 50 thous nd dollars in bills and salver there.

One lifernoon Schuyler Ramer was away on en inds that would keep him out until six o clock. His house-keeper, Jane Nixon dozed in her parlor chair. Careful footsteps approached, the door opened — and Jane awoke to a harsh voice. 'Sit still and keep your mouth shut Standing before her was a tall he avy figure, masked in a red handkerchief, gun in hand. While she watched in horror, this grim figure snatched up a hammer, burst open the tin-pot wall safe and scooped out the treasure.

I crroi kept Jane Nixon frozen to her chair, terror and common sense. There was no need to run after him and risk that gun 'Because," she revealed to the outraged old farmer on his return, "I know who he was'

For while the robber was pillaging the safe the handkerchief had slipped down, and Jane Nixon had seen his face — at a distance of only five feet. It was a face she knew almost as well as that of Schuyler Ramer himself. It was the face, she said of Will Hamilton who worked the neighboring farm.

The same afternoon Will Hamilton was arrested. His guilt was affirmed by three more witnesses. The pastor of the village church had seen Will running with a bag from the Ranier farmhouse, and called to him but received no reply. Next, two hunters had seen Hamilton crouched in the bushes behind the Ramer farm, and they too had called to him, with no unswer

It was bad luck for Wall Hamilton, of course — this man of hitherto impaceable character — that after his careful planning the mask just happened to slip from his face the pastor just happened to be passing by, the hunters just happened to be in the field

Now let us consider a case as surprising as Will Hamilton's, in that the convicted person had an even more sober and respectable history

Nancy Louise Botts was serving a sentence of from two to 14 years in an Indiana prison. She had been married only three months when she was tried and convicted. Obviously she needed money because her husband,

William, was out of work, and she was very much in love with him Rather than keep on at the back-breaking grind of washing and sewing for neighbors, apparently she decided to put to use a certain talent for forging checks

The checks were passed in a score of central Indiana stores According to the detectives, Nancy's handwriting gave her away and finally enabled them to track her down The case was clinched by seven salespeople who identified her without hesitation They had good reason to remember her, of course, for the business of writing out a check—always for more than the amount of the purchase, so that she could obtain the change in cash — takes several minutes of face-to face conversation They had seen her with their own eves endoise checks to which other people's names — it developed — had been forged Her husband s ple is were, in comparison, a pathetic desense

But here is an even more sudden and dramatic turn from respectability to the temptation of easy money two young men now charged with murder The jury will soon retire to consider their verdict But it is a foregone conclusion

One January morning just before nine o'clock, three bandits invade a large motion-picture theater in Lynn, Mass, point guns at ten theater employes who are cleaning up, and herd them into an inner office All unsuspecting, the theater's treasurer is on his way, he alone can open the safe

Meant me, an old billposter comes in through the stage entrance to take away a ladder He is ordered into the inner office, but does not move quickly enough to please the thugs. He is knocked over and then, for no apparent reason but ruthless brutality, a soft-nosed bullet shatters his head

The treasurer arrives and quite willingly opens the safe, because—
"As you can see," he explains, "there's nothing in it" The receipts of the day before had been deposited in a bank's night slot at two that morning The bandits have nothing to show for their exploit but murder

For two and a half hours ten people have been in the same room with these murderers have had excellent opportunity to stare at their faces, to set down indelibly their physical characteristics, the timbre of their voices

One of the bandits, they know, was addressed as Mac Another wore a blue jacket with a brass zipper

The next day a dead man is discovered on the railroad tracks by the Boston police. He is identified as a taxi driver named McMannon Mac'. It is found that he was friendly with two other Boston cabdrivers, Louis Berrett and Clement Molway. They have led eminently respectable lives, but — their stories of what they were doing on the morning of January 2 are confused and contradictory. Berrett, when apprehended by the police, is wearing a blue jacket with a brass zipper.

Berrett and Molway are put in the police line-up with a score of other men One after the other, five of the theater employes who have such good reason to remember the murderers pick them out of the line and posi-

tively identify them Had they not seen them with their own eyes?

So here are the three cases, each as tight as a drum Will Hamilton seen by Jane Nixon, the pastor and two hunters, Nancy Louise identified by the seven salespeople, the theater stiff in the same room with the murderers for two and a half hours

All the cases are similar in that the chief actors turned so suddenly on their earlier lives of sober respectability. All of them are ilso exactly similar in that Will Hamilton and Nancy Louise and Berrett and Mol-

way are perfectly innocent

For while Will Hamilton waited in jul a letter came from a man whose conscience had been bothering him He knew who had broken open old Ramer's safe—it was John Hlsworth, superintendent of the building in which the letter-writer lived and against whom he had a grudge And sure enough, when tracked down by the police, John I llsworth was found to have the money

And while Nancy I ouise entered upon the seventh month of her sentence, reports of bogus checks ag an began to come in A skeptical detective took Nancy spicture and showed it to complaining store people. Of course," they said 'That is the woman!" So Nancy Louise Botts who obviously couldn't pass checks while in a cell, was pardoned by the governor. Three years later the real cuminal confessed.

And while Louis Berrett and Clement Molway wait in the courtioom for the jury to retire, a messenger comes in There is a whispered conference with the district attorney

The trial is halted — and that same day Beirett and Molway are free In New York, two other young men have been arrested What they say leads to a third man in Boston, and from him comes a fabulous story of crime and murder — not only the Lynn theater killing but several others These young killers are the Millen brothers and their confederate is Abraham Faber There was no Mac—they had used false names in addressing one another

If you put a picture of Will Hamilton beside a picture of John Ellsworth, it is difficult to fancy the slightest resemblance

Compare the pictures as I have done of Nancy I ouise and the real forger. It is hard to imagine how the two could be confused.

And finally, as I have also done, line up pictures of the Millen brothers with those of Berictt and Molway, it would be hard to find four more dissimilar men

I hen how in the world could all those witnesses swell so positively that these were the crimicals? In all the cases the opportunity for positive identification was excellent—and glaringly horizbly wrong

It has happened time without number and it can happen to anyone The police will ask the time honored question — 'Where were you on the morning of so and-so" — and because most of us do not keep an hour-by-hour record of our doings, the question may be difficult to inswer Of course, we are implicated in no crime But here is someone who points at you and swears, That is the man!'

Such evidence cannot be entirely

dismissed But it is because the veracity of eyewitness identification is so peculiarly subject to error that police and the FBI place less faith in it than they do in the much-abused "circumstantial evidence"

Will Hamilton, Nancy Louise Botts, Clement Molway and Louis Berrett, four "criminals" in cases most fortuitously cleared up, could tell you why They know, as psychologists, prestidigitators and detectives know, that the eyes and the ears of all of us are fallible and forever inclined to fool us—and maybe some innocent bystander

It's Human Nature

Coming back after two years with the Red Cross in the South Pacific, I was packed into a cabin on the troopship with 17 other women The first night when the order came to "darken ship," we had to close the portholes Our cabin was stifling However, since the ship was not sailing until morning, we were allowed to open our portholes after everyone was in bed I volunteered to do the job It required maneuvering to find my way across the bag,age filled cabin and unscrew and lift the heavy ports But I finally managed it, and was rewarded by sighs of relief

"Now we can sleep!" breathed some-

body

And sleep we did — soundly But when we awoke next morning, we found that I had opened only the inside layer of each porthole, leaving the outside, blackout layer securely shut against both light and air!

THE RECTOR of an Oneonta, New York, church was ordered West by his physician for the summer, on the theory that a change of climate would improve his rose fever. He returned in the fall, cured

The following day he conducted a funeral, standing ne t to a magnificent blanket of American Beauty roses. He could feel his rose fever creeping over him and went home horribly ill. When he recovered sufficiently, he called on the widow of the man whose funeral he had conducted.

"How did you like the roses?" she inquired

I hey were remarkable," he told her, not explaining why

'Would you believe it' — her eyes shone — 'my laughter and I sat up all night before the funeral — making them!"

"A CAPTAIN at a U S bomber base in the Marianas had a truckload of lumber piled near the GI tents Atop the pile he placed a sign, "Government Property" During the night all the lumber, including the sign, disappeared The captain said nothing to the GIs who had used the lumber to floor their tents That's what he had wanted done with it note first place

— Mulpacifican

Here reported in full for the first time is Ensign Richardson's dramatic story of a bidden war against the Japs in the Philippines For two years, without mention in the news, hunted survivors of the disaster of Bataan carried on this heroic underground fight General MacArthur kept it a dark secret because the guerrillas who waged it were radioing him invaluable information about the movements of Jap ships, planes and troobs

IN W L WHITE'S classic, They Were Fxpendable—the saga of the motor torpedo boats in the first Philippine campaign (The Reader's Digest, September, '42)—Lieutenant Robert B Kelly relates how Ensign Iliff David Richardson, on his 24th birthday, was at the wheel of their MTB when they sank a Japanese cruiser after an epic fight Kelly sent Richardson ashore on Cebu in a rowboat to get a doctor for the wounded, while he was gone, Jap planes destroyed the MTB The next day, April 10 1942, Bataan fell

"Ensign Richardson assembled what was left of our men and joined up with our naval forces on Mactan Island, where they would all try to escape to the island of Leyte," said Lieutenant Kelly "It was the last I ever heard of them"

But it was not to be the last the world would hear of this young "expendable" He did escape to Leyte Then he and 11 other Americans bought a small sailboat, stocked it with supplies, including a live pig, and started for Australia They had gone only 200 miles when a sudden storm capsized them eight miles offshore Tive of the men, in an incredible swim of 13 hours, managed to reach shore and the others were picked up by friendly natives

Richardson was hoping to set out again for Australia when an extraordinary opportunity to be of immediate service to

his country presented itself

He got in touch with guerrillas, helped organize them, train them, lead them. There have been other stories of guerrilla warfare, but none ever exceeded in excitement and heart warming courage and loyalty this account of the struggle in the Philippines

The narrative is set down by Ira Wolfert in Ensign Richard-

son sown words, as follows

mer of 1942 [said Richardson] the part of the Phil ippines where I was remained quiet The Japs

weren't there in much force I heir main aimy had rolled on and only dribs and drabs had been left behind My boys and I spent several months around the barrio (village) near where the boat we were trying to sail to Australia had foundered We led a pleasant life — going spear fishing, swimming, and generally lazing about

We were living with Filipino families and would move every now and then — mostly so that the burden of

feeding us would not be 'oo heavy on any one family, but putly on recount of the Japs, who would send out in occasional putrol. But wherever we were, even if in a stringe barro or just passing some farm out in the hills, the people would warn us if Japs approached.

"Oh; sir, yes, sir, the Americans were here, sir, I saw the n with my own eyes, sir, but they left three or four months ago?

That's what the Filipinos would say when maybe we had ducked out five minutes before

There were Americans scattered all around, hiding out And about September 1, a former Arizona cat tleman named Abbott and another American, Tony Heratik, got tired of hading from the enemy These boys had been in the hills near Balingasag They came into town often and everybody knew them On September 1 they walked in as usual and were told that three Japs were there "Let's run them the hell out of town," Abbott said

The boys had Browning automatic rifles The Japs were armed, too, but they were scared They ran into a wooden church and up into the steeple Abbott and Heratik couldn't take time to starve them out So they set the church on fire Nobody protested

One of the Japs jumped out of the steeple and smashed himself dead against the ground. The other two were burned with the church. Then Abbott and Heratik went on about their errands, the people saying, "Good," to them, "a fine accomplishment, sir," although their beloved church was completely destroyed.

The bamboo telegraph carried the news of this event all over the island and the idea caught on "Kill Japs'—a simple idea but nobody had done much about it before Now they began In about two weeks, there were some 50 separate guerrilla bands wandering around the island, each with a proud name and an ambitious leader

It was no trouble to get these bands started The Japs had made a lot of men jobless small boatmen whose craft had been confiscated, former Filipino soldiers The Filipino policy of noncooperation in Jap "co-prosperity" had made more men jobless—schoolteachers, for instance, political servants of one kind or another, bus and truck drivers As guerrillas,

these men had a respectable position in their communities

The wrong people led these bands at the start They would descend on a barro, identify themselves as fighters for freedom, then levv on the people—take clothes, food, guns, whatever they could get Women, too

"This kind of activity is not for us,"

I told the men with me

Before long I heard of an American colonel who had a small guerrilla army at Malitbog, on the south coast of Leyte I managed to get there and found Colonel Morgan, an American formerly in the Philippine Constabulary He had joined up with Colonel Wendell Fertig, USA, who after the surrender had been assigned by General MacArthur to organize guerrilla activities Morgan explained he was now working for Fertig, trying to get the guerrillas everywhere to unify in separate military departments When they did unify they would get recognition from MacArthur, and aid But no recognition as long as the monkey business kept up

This opportunity looked good to me and I threw my lot in with them Colonel Morgan sent me to another guerrilla leader, Colonel Ruperto Kangleon He had been in the Filipino Army for 27 years and was the first native to be made divisional commander by MacArthur After the defeat he had surrendered with his unit Later he had managed to escape to southern Leyte

Kangleon had a clean little house hidden in the hills Nobody could approach it without being stopped by men who hid in the bushes and held you until the Colonel had agreed to see you This was the headquarters of the Leyte guerrillas — such as they were at the time

Colonel Kangleon's band did no looting To get money, he had built a primitive soap factory. This consisted primarily of a wooden wheel and handle which powered a crude scraper used to shred the meat of coconuts. The shreds were boiled and the oil floated to the surface. After the water boiled off an extract of hardwood ash was added to it. It wasn't very good soap, but it was better than none and the people were eager to buy it.

When I visited Colonel Kangleon that first time, a soldier was turning the wheel and the Colonel was holding coconut shells to the juicer I introduced inviself as an ensign in the U.S. Navy. He said he had heard of me from other Americans. We discussed at length the problems of guerrilla organization—how to unify in order to get recognition and aid, how to live until the aid irrived without preving on the people.

I came away from there with a mission. He had sent two people to try to contact Colonel Fertig. They both had disappeared without trace. I offered to be the third to try

N A banca (small native sailboat), with a revolver given me by Colonel Kangleon, I set out for Mindanao My first

job was to find a Colonel McI ish, who would know where Fertig was

I had luck about the Japs, didn't even see any, and found the Colonel very early, just by asking natives When I got to him I saw a real guerrilla outfit There was a whole herd of Americans, both Army and Navy—Major Childress, Ed Dyess, survivor of the death march, Mike Dobervich, who had escaped from Davao penal colony, Mooney, who had been a radioman, Lieutenants Marshall and Spielman, who had also been on the death march, and others who had made their way safely to guerrilla land

Colonel McLish said he would be leaving soon for GHQ, as he called the house in which Fertig hid, and would be glad to take me We put out in the launch Rosalia, a fine mo torboat captured from the Japanese

We re starting, 'the Colonel told me 'all the way back of the goal posts Our present battles are for sup plies. We don't even fight for our lives. That would waste bullets. We just run. But we fight Japs for supplies. Hence the Rosalia."

olonel McLish put me in charge of the launch When I joined the Aimy," he declared, the Navy said, We ll take you there? Okay, boy take me." I checked speed and course and got under way at three in the afternoon

About four o'clock in the morning, we were going along with a good, smooth gush, the two lookouts on the bow looking alert ard satisfactorily dim, when suddenly their black bodies turned bright pearly g 1y As archlight was on them, a b g one, a destroyer searchlight

The light was full on us It made us look a bleached-out kind of bluish green By one of those lucky freaks that happen in war we weren't challenged — to this day I tremble when I think of it We put on full speed —

about six knots - and headed right for the beach. We were off a reef that extends out from shore for a mile At high tide the Rosalia could go over it while a ship couldn't follow us We ran up to the beach and numped ashore

Colonel McLish and I started toward the hills We began working through rice paddies Pretty soon a woman came running toward us down a road 'Japons' 'she cried 'Japons coming'"

A platoon of Jap soldiers passed us while we crouched low They made a scuffling sound as they walked Their equipment creaked and scraped. They padded past us like figures in a dream As we went on we had to hide from

many Jap patrols

We later learned that a short tune before the Japs had landed at minv places all up and down the adjacent coast in a swoop to catch the guerrillas off guard and capture then supplies Aided by fifth columnists the Japs knew exactly where to go I citig had been using widely scittered hill houses as storage dumps. Where these were inaccessible to troops, the Japs sent airplanes The airplanes made few mistakes They'd pick the right house out of a cluster of them and work over it until they had lev-€led it

But they didn't get Fertig When we finally found him, he had established new headquarters in an ordinary hill house on stilts. It was the most mobile headquarters I have ever seen Fertig had a little suitcase in which he kept maps, papers and codes He could jump through a window and be off with it any time of the day or night it became necessary

His records and files were stored in carefully covered holes in the ground

By the time I arrived, Feitig was already in daily contact with "Souwespac," as General MacArthur's southwest Pacific headquarters was called Contact had been made in December 1942 Robert C Ball, an Air Corps man from Indiana, and William F Konko and Stuart Willever, radio operators out of our PT squadron, had escaped the Japs and joined up with Fertig in the hills 'You're my signal corps," Fertig told them They scrounged around and improvised, and finally went on the air Their set was strictly hambone, but it could send and it could receive

They played their key a week, trying to get San Francisco, but got no They thought maybe their set didn't work. Eich night they d take it down and put it together ag un There would still be no answer

Then suddenly dots and dashes communications with San Francisco were established, and Colonel Lertig was satisfactorally identified. Now he was enthusiastic about the possibilitics of setting up a really effective guerrilla intelligence organization for MacArthur We talked for half a day about the problems involved up putting the guerrillas on a sound working basis Then I started back to Leyte

re had to walk through some 300 miles of Japs s before we could get where it would be safe for me to take a bama for

I eyte I had never been fat but I lost

about 30 pounds on that trip Toward the end I could feel my bones rubbing through my skin and hurting it Our party consisted of Colonel McI ish, ten Filipino soldiers and myself We had 2000 rounds of 30-caliber ammunition and five large boxes of medical supplies We had to stop in every town to get volunteer carriers to help us along to the next town

We walked with a Filipino scout going ahead, unarmed and looking as if he were a local boy out on an errand Behind him came an advince party of four soldiers then the main body with packs and equipment, and finally a real guard. In case of anything suspicious, the scout would drop back to the advance party and the advance party would sound a wirning with a bojong—a conch shell with a hole in it. Blowing this produces a long, melancholy, far reaching note

There is a bojong bird that sound, just like it which makes it useful for warnings but every time a bojong bird sounded off we thought, here it is and ducked into the jungles. It slowed us up considerably. We had to send a runner up to contact the advance guard and find out if it was their bojong that we were hiding from or a bojong s bojong.

We tried to average 15 miles 2 day After a while my heart developed a sort of bubbling flutter. Everybody walking the jungles gets it sooner or later from fatigue. You lie down and it feels like 2 pump squishing in your chest. After a rest it goes away. Some times there is a fever with it, but that goes away, too

I'll nev r forget that walk, the nettles and the underbrush lashing arms and legs, the dank musty odor of Jungle, the squishing and squashing of my heart, and sweat and blisters and sweat salting and burning them, the typhoons throwing rain so hard the drops felt like bags of pebbles, and the bojong sounding and a Jap armored column whisking by while we lay in the jungle, wondering sweatily what are we doing here, how did Americans ever get into a world like this?

When I got back to Colonel Kang leon he didn't recognize me at first Bamboo telegraph had brought word to him I was dead

ANCIEON'S first problem was ammunition. His little or my had been using battery separators, battery terminal

lead and other soft metals for bullets With inetal like that you fire a few times and the rifling of the barrel fills up. I hen you get a recoil that throws you ten feet.

The whole ordnance problem became my baby I had made a deal with Colonel McLish for 4000 empty 30 caliber cartridges. We do load them and give him back 1000 loaded car tridges in exchange. I found a kid named Kuizon to organize an ordnance factory. We scrounged around and got a hand forge, some hack saws and a file. That was our small arms factory.

Kuizon was about 21 He had never been in the army before, but I made him a third lieutenant because he was so ingenious and willing

We foraged in schoolhouses for the

bullets to fill the shells The brass curtain rods were made of a good hard metal just about as thick as a 30-caliber bullet We cut the rod up into appropriate lengths, then filed the end down to point it The boys would stick the bullet in an old broken-down Springfield rifle, take a rod and try to ram it through If it went, it fitted If it didn t, they'd file ıt smaller

For the primer we used sulphur mixed with coconut-shell carbon and ntimony Our main source of powder was from Japanese sea mines that we would dismantle We'd mix it with pulverized wood to retard the burn ing, because mine powder is too violent for a rifle bullet. We blew up five rifles to find that out

You'd pour the powder into the cartridge with a little homemade funnel. Then you'd put the piece off the brass curtain rod into the cartridge and crimp the cartridge around

it with a pair of plicis

Getting the right measure for the mixture was Kuizon's business It was all trial-and error When there was an error, the cartridge would blow up in the gun Powder flashes would come out between the bolts and burn his hands. One morning he broke three rifles in succession, burn ing his hands three times and jolting his shoulders so hard his toes ached

'Sir, I do not like to do this work, sir," he admitted finally "I will put the rifle on the table, sir, and test by long distance, sir "

Then we managed to dragoon an apothecary s scales and no more rifles blew up Using this ammunit on was hard on our guns, but it killed Japs

There was even a cannon for the attack on one town It had been made by Filipino Captain Zapanta and his wife The barrel was a piece of threeinch gas pipe, kept from blowing up by metal sleeves and rings reinforced with wedges The firing pin was a tapered marlinspike given tension by rubber bands made from an inner tube The Zapantas had made three shells for their cannon from threeinch brass pipe filled with battery lead and junk they found around The powder charge was in a case about four inches long They filled it nearly to the brim with black powder They wanted to make sure the shell would go

The whole contraption was mounted on wooden wheels. The lanyard was about 30 feet long, because they were pictty sure that if the thing worked at all, there was going to be a recoil

There were 110 Japs in the town's se hoolhouse, which had concrete walls to make it cool

The I ipantas wheeled their cannon into place. They spent all night, with a whole excited growd giving advice, aiming the cannon They waited for dawn to make sure everything was just right. I hen everybody fell back and Mrs Zapanta took the lanyard and pulled it

There was the biggest explosion ever heard on earth The cannon leaped high into the air, turned a complete somersault, landed on its barrel and began to bounce bounced so far back Mrs Zapanta had to run But the shell went right through the concrete wall, banging concrete fragments into the Japs behind it The Japs could be heard moaning all day

THE WAR had made Filipino politics very simple. There was only one party—the 'Drive Out the Japs" party

The Japs were trying to complicate this by winning all the Filipinos to their side But they were trying also to get rich off everybody. These are two horses that are very hard to hitch to the same wagon but the Japs made a try with something they called "The Good Neighbor Association." You work for us and we will be pals

The guerrill is replied by killing one "good neighbor" (Filipino col laborationist) for every querrilla or guerrilla sympathizer killed Kang leon was much distressed by this, but a guerrilla le ider s control over his men is 'clastic He can lead them only where they want to go The guerrill is kept killing Japan's 'good neighbors,' leaving their faces un touched so that they might be recog nized but mincing up their bodies gruesomely, then floating them down stream to their home barrio to serve is an example. It was an ugly kind of politics, but it worked, and the num ber of good neighbors' decreised so radically that the Japs all but stopped executing guerrilla sympithizers for a while

TE VI RE working against time in those days We knew that as soon as we became strong enough really to worry

the Japs they would move in and

crush us We didn't expect to be able to win until MacAithur returned but we did count on killing Japs and above all on keeping alive in the people hope of eventual liberation

Meanwhile, in our area, Kangleon s t up a new anti- ap government Its Proclamation No 1' was drawn up by me It stipulated that on or before September 25, 1943 the following initerials necessary to the prosecution of the war must be delivered by whoceer owned them to the nearest municipal mayor. There were listed paper, tires lubricating oils, fice irms aminunition radios, motors and tools - everything useful all the way down to thread and buttons Payment was to be made by youther. redeemable after victory. Those failing to respond voluitably were subject to confiscation

We got gient misses of stuff mostly junk but usable with a little renovation. Then we added to it by raiding Chinese shops. The Chinese in the Philippines were in part representative of old China in their thinking - the China that was not a nation but a grab bag for with lords To thein all governments were alien and treacherous. The (h nese made only taken offerings of theigoods, so we raided them and made a considcrable haul wherever we struck. The raids created no antagonisms among the Chinese They accepted it as part of the game

We got 2000 gunny sacks from the raids, and Kangle on designed a uniform that could be made from them It consisted of a short-sleeved shirt and trousers. We got 700 uniforms out of the 2000 sack. They were harsh to the skin, but uniform

The establishment of the civil government enabled us to set up a mint With wood blocks we printed paper money It had pictures — a carabao, a nipa hut, local scenery — and looked very official

The mint worked on an assembly-line basis in an old schoolhouse. One man would cut the paper, another would place it in a frame stamp the wood block into a pad of ink, then

press it onto the paper

We did not worry about counterfaters. We had all the paper there was Some of our money was printed on wrapping paper, some on notebook paper, lined and all. We in ide our own ink by taking a caude oil 'imp, putting a hood over it and trapping the soot which we then inved with glycerine.

to have a stiff to
be chief of There
was no signals of

heer no psychological warfare de partment, no medical corps, no transportation corps. We set up Gordon Veloso a former politic in as propagand a chief We gave him a radio as his news somice and he turned the news into ficin words which were distributed by our transportation corps The corps had been started by a yeoman in the U S Navy, who contributed a motorcycle he had picked up somewhere added a station wagon that somebody had hidden in the jungle We got from civilians three light trucks and three sedans. We could not spare paint to make them look like Army cars One truck had "International Coconut Corporation' painted all over it We let it stay

Gasoline was an immediate problem But Frank Laird, an American who had served 15 years in the Army, got us over this hurdle 'You learn how to do anything in the Army," he said and we got him some barrels, galvanized pipe and a wrench and he went into the petrol business distilling alcohol out of tuha, a local kind of palm booze

The fuel was 1 ther treacherous It absorbed water quickly. If you left half 1 bottle around with the cork off, in 2 few hours it would fill right up to the top the tuba alcohol soaking up moisture out of the 21r.

But the cas would get six to eight m les on a gallon of this alcohol, if you opened up the jets on the carburetors to let in more fuel than usual. The boys took to sipping the fuel but they stopped that when one of them went blind temporarily. Land was using galvanized pipe in the distilleries. For a drinking still you have to have copper tubing. We got around to that later when things were well organized using the copper tubing off the gas lines of wiceked automobiles.

I took the signal corps under my special supervision. Kangleon had been getting along with runners who would take anywhere from a week to a month or two to make their round trips.

The population had cut down all the telephone wires soon after the Japs came in It was a patriotic move and also the wire could be shaped into nails—which were extremely scarce I got a supply of wire by send-

ing the army out to take the barbed wire off all the fences Then I put soldiers to work with pliers, taking the barbs off, unwinding the wire and

rolling it on spools

For insulators, I accumulated a supply of old pop bottles Where we could find telegraph poles, we wired the pottles to the top of them But mostly we constructed our communications on palm trees. In a month and a half we were able to put up approximately 140 kilometers of telegraph lines

So we had communications 24 hours a day, which expedited intelligence reports enormously Intelligence was the primary mission of each unit in a Jap area Kangleon wanted to know every time a Jap sneezed, and now the telegraph told him the same day the Jip sneezed,

not two months later

Well then we had the makings of an army. We had communications We had uniforms. The men were being drilled and taken through practice exercises in ambushes maneuvers forced marches and target practice

> n October 27 a message came from Colonel Fertig, summoning some of us to his headquarters We thought it

meant evacuation to Australia We had a fine big launch for the trip Guerrilla Captain Valley had captured it

The launch was seagoing It had come in with 15 Japs, probably direct from Japan They had come ashore to

get coconuts and meat Valley's men, carrying their rifles slung across the backs of their necks with bunches of coconuts hanging from the stocks and barrels, unostentatiously surrounded the Japs as they were making a landing When they got in close, Valley's men dropped the coconuts and opened

fire They killed all the Japs

On arriving at Fertig's headquarters I found that I wasn t going to Australia The Navy had caught up with me I was reduced from chief of the guerrilla staff to ensign in the U S Navv, assigned to construct a radio network to spy on Jap shipping At the time MacArthur didn t so much care whether we killed Japs or not He wanted intelligence

However, the big news was that a submarine was coming in with supplies I citig had delegated about 500 soldiers to help with the unloading He had summoned guerrilla leaders from as far away as Manila, ostensibly to coordinate their activities but actually so that they might see the submarine and the aid America was giving. Then he had got together two truck loads of fresh vegetable and fruits to give to the submarine. He wanted them to bring back word to Souwespac that he had a real organization going

When the submarine vas due we all walked over to a little bay about six miles from headquarters The Japs didn't have enough troops to patrol all the island and this area had been free from their activities About 4 30 a cry went up all along the beach The submarine had broken water

We had two launches to guide her in I was in charge of one of them We even had an orchestra, dressed up in white shirts and white pants, which played Aloha, Anchors Aweigh and The Stars and Stripes Forever

It looks like we made a wrong turn," said one of the sibs crew, and wound up in Hollywood."

I was very proud of the Navy that day in front of all those Filipinos. The submarine looked as big as a battle-ship. She brought us tominy guns, carbines, hand grenades, bazookas, infecengo caliber machine guns, aminunition, jungle camouflage suits, and cigniettes and chocolate wiapped with the slog in I Shall Return—MacArthur

On the submarine they gave me all the cherry pie I could get down with cherries that you could taste the North American climate in and big thick cheese sandwiches, and a razor and blades soap hair oil all the stuff that when you dream about you wake up with a smile on your face

Everything was so well organized by I citig that we got the submarine unloaded and away by midnight I telt all mixed up. I hey were going to be in Australia in less time than it would ake me to get back to Levte. If I had gone I could be back in the Nay, talking United States, fighting I ips with made in-USA power not with pop bottles hung on palm trees.

MONG those present at the submarine was Long Tom Baster His guerrilla career typifies that of many American

fighting men who hid out after it e surrender

Baxter really wasn't very tall, but

he was taller than the Filipinos so they gave him the nickname "Long" Just an average American boy in his early 20 s, Long had been an enlisted m in the Air Corps stationed on Mindanao When the situation looked hopeless he cut loose across the hills After a rough trip he finally made Hinatuan on the coast, but he was in bad shape. The mayor and the chief of police invited him to dinner They gave him a pictty fancy chow to make it list until late at night. Then the mayor took him over to show him something in a coinci and the chief of police put a gun in his back and muched him off to jul They wanted to do that late at night so none of the anti Jap population would interfere Then idea was to ingratiate themselves with the Japs

Turned over to a Jap pairol, he was taken to the jail at Sungao, where a Jap mese captain paid h m a visit. He had two soldiers with him. They carried fixed bayonets

The capt an stood looking at Lorg a minute. Then, without wa ning, he kicked him in the groin, kicked him in the shins, hit him in the face.

He kept tilking is he did it He d knock Long to his knees 'That wasn't so good,' he d say and pick Long up by the front of his shirt "Let's try it this way,' he d say and knock him all the way down 'There that's good That's better,' and kick him as he lay there before picking him up and holding him and knocking him down again. The soldiers stood motionless with fixed bayonets

Finally all three went away. There was no explanation

The next day the captain came again "How are you, I om Baxter",

he asked He was smoking a big cigar and looked pleasant and full, as if he had just eaten

Long was lying on his bunk He swung one foot out of bed to get up He was barefoot. The Jap grabbed the foot and held the cigar against the instep. Long kept lunging back and forth while the Jap rolled the burning cigar over the tender flesh Finally Long, in one of his lunges, hit his head against the stone wall and knocked himself out.

This treatment kept up for two weeks. The Jap concentrated on the shins with his big army boots. Long still had scars there a year later.

Then one Saturday afternoon Long looking out of his cell window, saw work begin on a gallows in a plaza back of the jail Sunday morning the guard told I ong that the following Saturday was a day of fiesta and the Japs intended to celebrate it by executing him

Long waited all day for darkness. Those were as long hours as any body ever has spent. When night finally came, he started to cut through the window bars with a beer-can opener he had found in his cell.

The thick bass were made out of bayong wood, which is the hardest known. He had to knock out two bars. He couldn't work steadily, because two guards walked by outside all night. His hands got blistered in the first two hours of work, but he kept on. He made a mud of dust to stuff into the holes in the bars.

By dawn Tuesday morning he had hollowed out the bottom part of the two bars. The top was going to be much harder. He couldn't get the leverage there and he was all tired out now He was panting as he worked His panting sounded so loud in the quiet night that he was afraid it would give the alarm, but he couldn't hold it in The muscles of his arms were so tired they were trem bling all the time and his hands were all blistered But he kept at it

Thursday night, a typhoon blew up There was a lot of rain with the wind By ten o clock it was over but there had been a failure in the power plant and the street lights were out Long waited two minutes after the guards had passed outside, counting the seconds He figured that would give him 13 minutes' head start. Then he snapped the bars off and climbed out

He sneaked down to the beach and found a small boat the e quarters full of water. There were no paddles. He scurred up and down the beach frantically, before the beach patrol could come back, and finally found a piece of bamboo about six feet long and maybe two inches in diameter.

You can't paddle very well with a round stick. In an hour and a half he d made about a half mile 1 it then luckily ne got into a current that took him down the coast a few miles. At dawn he beached the boat

I ong didn't know what to do His face, pulped up as it was still by the Jap captains fists, was like a flag, marking him wherever he went Then along came an old man who had been out fishing all night. He could not talk any English, but he took Long to his hut, fed him and covered him all over with copra sacks, and Long went right to sleep

Late in the afternoon, Long woke up. The old man was standing over

him with a pistol There was a tenyear-old boy alongside him

"I am my father s son, sir," the child said. The old man had brought the boy along because he spoke English 'My brother, sir in the army Before he surrender, he give my father a pistol, sir Sir, now it is to you."

It was a 32 and there were five iounds of ammunition with it. The old man took Long that night to another family down the coast. Long staved there about two weeks. The whole family worked in the fields all day except for one little girl. She played around the house by herself and I ong slept all day and all night But some fifth columnist found out he was there and the Tips sent two men down to pick him up. They fig med to cover the front and rear exits and holler for him to come out with his hands up but they reckoned without the little girl

She woke I ong up 'Two men she said She spole in a very low tone. They come here sa

I ong had his gun with him He had sler-with it cocked by his side. He want to the windowand saw a man standing there looking it him with mouth open in surprise. As the man reached for his gun. Long shot him between the eves. Then he saw the second man, and shot him.

He got two more guns out of the deal Now Long had three guns and 18 bullets—and with these munitions he started his own guerrilla outfit

Bamboo telegraph usually brought word to one American of the existence of another. In this way, I ong I om Baxter hooked up with Gordon Smith, who had been a cook in the

Army Air Corps, and with Dutch Gevsen, a character not even Joseph Conrad would have dared invent Dutch is dead now I am pretty sure, but in his time he had shipped in sail and steam between Chile and the Orient and had been in every trade from mining to running slaves for rich Chinese.

The thice-man guerrilla army went up to the Mindanio mother lode mine and got a piece of iron tubing about eight inches long, and they groosed it with a file so that it would fragmentate when it exploded. They worked into it too sticks of dynamite that they found in the imine, and added a cap and a fuse

Incorther went down to Malamono where about 20 Jips were using the school is a burricks. Cersen and Smith stayed on a little hill to give protective fire and Bister sneaked through tall griss to an outhouse just behind the school. There he lit the fuse and held it in his hands a second or so listening to the splutter and to the Jips chattering inside the building then he heaved it straight arm in the window.

After that Baster told me "I ran like hell. Then I looked lack. The sides of the building seemed to bulge a little. And then things started flying through the walls.

That's the story of I ong Tom Bayter as far is I know it After the submaine sailed his next mission was to hold a river. There were no jungle paths there and if he could deprive the Japs of the river, they would have to go miles around to keep contact between their garrisons.

The last I saw of him he was slouching along with his men, so

sunburned and wild-haired that he looked like one of them

"So long, kid, ' I called

"Keep bunching," he wo red back at me with his Garand

His mission was very dangerous. The only way he had to patrol the river was by native canoe. There were places for ambush all up and down the whole length of that damned river, and I never heard of Long again. But I sure hope he s alive

I started back to
I syte December to
on a banca, with
enough equip
ment to make
three radio sets
After an excit-

ing trip, dodging Jap patrol boats we landed at Burgos where Licuten int Joe Rifareal a former radioman, and

I put up one radio station

It was the first and only time that any guerrilla enterprise that I had anything to do with worked right off the bat We put the set in a house by the side of the road We stretched the antenna between two coconut trees, hooked it up and we were on the air But Fertig didn't get my messages for two days Something was wrong at the other end They had their own troubles down there

The next day the Japs landed ail over everywhere They took every one of our towns on Leyte, and two on Panaon Island across the bay. The sortnern Leyte guerrillas had begun to itch the hide of them They reached out fingers to squash us

The Japs landing in southern Leyte found no army to oppose them They came charging up the beach, they

fanned out into the hills We watched them staring curiously at our pop bottle telegraph system Their columns converged on nothing

The only action was when the Japs started to use our pop bottle to the line They repaired it. We chopped down the trees They strung the line from other trees. We took down ten kilometers of wire in a single night. They gave up

K ingleon was w ging a canny war He had only 700 mcn, half as many rifles and little amniunition. The Japs hunted them with more than 1000 he wily armed troops But Kangkon knew the Japs would tire of sending their columns on long fruitless forced marches. The force would be too expensive to maintain doing nothing with guerrilly active on other islands. The Japs would start to withdraw it. He could not wait until they withdrew altogether For political reasons there must be a fight the people had supported a gueirilla army It must fight for them Llse, how would hope of liberation be kept alive until MacAthur ai rived? If ho, e of liberation died, hat would MacArthur do for intelligence? What force would there be to aid him when he landed?

No, there must be a fight But not yet — not when the Japs were at their strongest

MEANWH LE Rifareal, Sergeant
Pedro Paturan
and I had gone
to set up the master radio set We
paddled across
the bay at night and the next evening

a guerrilla guide led us four kilometers up a river to a ramshackle hill hut Now all I needed was an engine, a generator, fuel, gasoline, lubricating oil, and wife I diagooned a fine boy, I leutenant Juanito Baybay, to sciounge up stuff for me I remembered an engine and generator unit in Sogod, a Fairbanks-Moise that had provided power for a hair-curling machine A fifth columnist had it Juanito went in at night and took it from him

It required three days to make the round trip. In that time, we went among the Filipinos living in the neighborhood and set up a volunteer guard system, and hared helpers, and then camouflaged the trial to our hut littering the path with stones and underbruth. The camouflage was a work of art

The generator turred out to be to volts. The set needed 220 volts. We worked for five days winding and unwinding, unsuccessfully trying to tep up the voltage. Nothing we did had any luck.

The voluntary guards were green then and very nervous. Once they reported the Japs were coming, and we moved out. It took 12 men to carry the engine on poles. It took 1 to carry a burrel of lubracating oil. There were 50 carriers altogether. We stuck to the jungle, wading down a rocky river. A man would fall a pole would break, but nobody shouted or even talked loud. We moved as salently as we could and all that marked our passing was the cockatoos shricking it us.

It turned out to be a false ilarm I called all the civilian guards together and spoke to them earnestly

"We have lost valuable time," I said "It is necessary to be brave and be men and not be women seeing a Jap behind every calao biid"

They agreed They would not report the shadows of Japs, only Japs

Then we had a beautiful stroke of luck. We found a transformer which would convert 110 volts into 220. It had been used for the only movie projector in southern Leyte. But then our engine wouldn't voik. It would start to sputter and then die. We'd start over it in ind it would sputter again and die. It just kept leading us on

I milly we said the hell with it and all went out among the Japs and found and explured another engine. It took us two days to mount it on hewn logs. We didn't have a brace and bit. To bore holes we had to heat up a bolt and ha miner it through. If you'h immerce! too'h uid the bolt bent.

Then it is o clock one night in the run is volunteer gived irrived panting to say the Japs were on their way. This time it was no false alar in We started disconnecting the wates and boxing up the equipment. We worked all in a tumble. But we were able to move the stuff out into the jangle and cover it before the Japs arrived.

We re established the station in a jungle but built especially for the purpose. About then Kangleon decided it was time for the guerrillas to strike. He ordered his men to go over to the offensive at midnight February 1, 1944, and all through the last night of January, units came slouching down from the hills to take up previously scouted positions.

The offensive was a guerrilla offensive. It didn't consist of fellows going over the top after an artillery

barrage Joe Nazareno, Kangleon's artillery chief, had one 81-mm mortar with five shells and one bazooka gun The strategy was to hang around near the towns waiting for the Jap patrols to come out Except at Anahawan There was a garrison of 12 Japs there They never went out on patrol, so the boys went in after them, first cooking up a plan with the mayor They had found one unexploded hand grenade That was the basis of the plan

The mayor invited the garrison to breakfast the morning of February 1 All came except one They left him outside as guard. Then the mayor told the Japs he had something special for them in the vard outside, and

would go out to get it

When he came out, that was the signal for the guerrillas to begin Some had already crawled in close to the house with the hand grenade One, wearing a playshirt, the tail of it hanging down over his trousers, wandered over to the guard. Under the shirt, stuck in his belt he had a revolver He carried in his two hands a live chicken with a string around its leg, a peg at the end of the string He held the chicken out dumbly to the guard The Jap motioned to him to take the chicken inside. The kid acted as if he didn't understand and dropped the chicken. The Jap clucked vexedly and stooped over to grab the peg and stick it in the ground He didn't like to see the chicker go to waste

When the kid dropped the chicken, one of the others pulled the pin on the orenade and held it, counting When the Jap stooped over for the chicken, the kid pulled out his re-

volver and shot the Jap in the back of the neck, and the grenade was tossed into the window of the house Then the guerrillas rushed through the door with their rifles to finish the job

Joe Nazareno, all flushed up over having the mortar and the five shells, tried to take his boys into the town of Liloan. The battle started with a mortar shell that landed just outside the school building where the Jap garrison was staying. The Japs came piling out into foxholes. They had barbed wire entanglements, too. They fought all day and the battle was pretty much a draw.

That night the Japs fired star shells and Joe icasoned that meant a plea for reinforcements from across th I iloan Straits He posted his men on the heach. When a banca full of Typs came sneaking over the water, loe and his boys were waiting for them The banea grounded on the beach and they opened up with everything they had I hey had counted about 80 Japs in the banca. It was a massacre Joe's boys dived all the rest of the night for bodie and rifles and supplies. They were an lous to reco er the dead to get their clather and cartridge belts

The hazooka nyd been set up to command I iloan Straits. On February 10 a launch came along, about 75 yards offshore. The boys had never fired a bazooka before. There were not enough shells to waste on target practice. They aimed for the engine, and then pressed the trigger.

There was an explosion in the water 50 yards the other side of the launch The Japs all ran to the far side and looked astonished at the cascade of water It had been a

ret.

delayed-action shell for use against tanks. The missile had gone through one side of the launch just above the water line, passed through the other side and exploded harmlessly in the sea. But the Japs never put a launch through Liloan Straits again. They preferred to go more than 60 miles out of their way rather than risk it.

THEN the planes came, bombing and strafing They bombed flat four houses that I had been in with my radio station, but

they didn't come near my new setup in the jungle. They hadn't been able to find out about it. The only result of the bombing was that I lost all my civilian workers for about a week. Their wives came and dragged them off to build forholes for them and the children.

The Japs sent heavy weapon squadout with their patiols. The querillas let them go by Then in the evening when they came dragging back all loose and tired from member a 15-mile match on which they had found noth

ing, the gaerrillas hit them

There is no courate figure on Jap losses Certainly they ran into the hundreds and p rhaps eventually into the thousands. One major had a blackboard in his headquarters as a morale builder on which he chalked up the totals. But guerrillas seldom take over battlefields. They shoot until out of ammunition. Then they retreat If you don't take battlefields, you can't get an accurate count on dead.

At any rate, the Jap losses were

enough to make them react with ferocity The people of the towns randing the Jap food position in the towns serious Their garrisons were living off the townspeople They were force ing them to work The Japs could not exist in deserted barrios. They went, into the hills with fifth columnists, hunting the evacuces. When the fifth columnist identified a town family it was compelled to return home. The hill families were killed to keep thems from aiding guerrillas.

But the evacuation of the towns kept on and it was a big help to us It forced the Jap's hand, made him send out searching parties which we could hit There were hundreds of heroes among the townspeople Oh, that story will never be told the way it should be Its chapters are so numerous and so many of them happened in such lonely places where the only witnesses were those who are now dead

Guerrillas invented native irine fields that didn t cost a cent and didn i require any fancy war mate-They would drive bamboo stakes with barbed ends in the grass along both sides of a trail I hey used a special type of hamboo called bangaka; If you cut yourself on it the wound festers. Natives hate to work with it, but guerrillas made thousands of these barbs and planted them along the trails that the Japs took, so that the sharp ends stuck out about a foot above the ground Then, when a Jap patrol came along, the guernillas would fire or shout and the Japs would instantly throw themselves to the ground — to be impaled on the murderous stakes A lot of Japs were

killed in this way and many others were wounded and finished off by

guerrillas with bolos

The hill men took to carrying two bolos An ordinary bolo has a blade about 12 inches long and is carried on a strap over the shoulder They carried this and then they carried a small bolo under their shirts. When they were caught they'd drop their big bolos as ordered and wait until the Japs came close to the them up Then they'd draw the small bolo and work with it until killed. It finally got so the Japs wouldn't go near a prisoner until he had first taken off his shift. Then the Lilipinos took to carrying shards of glass in their mouths, razor blades if they could find them, and sharpened nails to strike enemy eyes - anything that would do d ımage

Slowly, desperately and bloodily Kangleon's army fought the Japs back into the coastal towns. The hills were left to us

My starion in the jungle was like a ship at ca I made a desk out of a door and I had my radio receiver on it and a door

bell with a telegraph key to ring it When we were to go on the air I rang the bell to signal the engineer, just as if I were on the bridge of a ship. One bell was to start, two to stop, three to reduce power, four to increase power, five to come in for chow. There was no signal to stop the engine When t stopped, it was an accident It took gasoline to start it and gasoline was worth diamond-studded golden.

eveteeth Once started the engine ran on crude oil and we had plenty of that A Jap ship had been torpedoed off the coast and drums of oil had floated ashore. I had every civilian and every guerrilla for 20 miles down there three nights in a row grabbing the oil But gasoline—Lord, oh, Lord—oh, guscline!

Distilling tuba for fuel wasn't practical a tymore. The tuba grew down by the sea and anyway we had nothing now with which to make stills.

I had my radio network all set up but I can t say functioning smoothly I sent an adio set to North I cyte with a guerrilla named Capitius. We built it out of space receivers, and out of this and that, and it took forever to get it working. Capilius spent three weeks going the 120 knometers to the new station. There were Japs, fround and he had to be cautious I mally he went on the air The transmitte worked, but the receiver wouldn't icceive. It had worked all right for us but it didn't for him and he didn't know how to fix it I didn't have a man to spare to send to him. He just kept on sending plintive quiries, isking two hourd him

I ent a runner up give, lum a schedule, telling him to broadcast at eight in the morning and four in the afternoon. It took three weeks for the runner to go up there and three weeks to come back. The runner came back saying Capilius didn t have a watch. I sent the runner back with a watch, six weeks more for the round trip. Then the Jap patrols became most active at 8 am and 4 pm. He couldn't broadcast at those times. He asked for another schedule. I had to send another runner with it.

weeks more After that, his watch became erratic All we could do was to keep our receivers running five minutes on the morning schedule and two minutes on the evening schedule and hope we would hear from him

There were no spare parts for anyof our sets When, for a change, I was going good, the station at Mindanao would go off the air. The Japs ame in there once with 15,000 men ind 100 airplanes and knocked hell but of Fertig's installations. Mindanao couldn't let a peep out of itself for more than two weeks.

Then the Japs would knock hell out of us We usually managed to ave most of our equipment, but it took time and work to get set up again And we did lose one transmitter when they raided the station I had set up under Joseph St John an Army Air Corps man who had been on the sailboat with me to Australia

The first thing St John knew, bullets were coming into his shack. When he got out of the hut he saw about 100 Japs coming down the hill toward him, shooting. He had no ammunity in, so he have do this gun to got himself no encumbrances; put down his head and ran

About 50 fcet from the house, a field of very high grass began St John knew that if he ran through that he'd leave a wake A fallen tree lay out on the edge of the grass st John threw himself under that There was a narrow space under there, enough for Johnny's skinny body, and the grass where Johnny had had to wade to get to the tree was wiry enough to snap back into place w thout leaving a trail Johnny had a Smith & Wesson pistol He cocked it

"You could have heard the click of that hammer in China," he told me

The Japs came over, swishing their bayonets from side to side, pushing the grass apart A Jap walked along Johnny's tree, poking along the side of it Johnny just lay still A fall of rain came on It hit on the log and dripped down on him He didn't move The red ants came out and walked on his eyelids and in his ears and looked up his nose He didn't brush them off He didn't move for five and a half hours Every two or three minutes the Japs would fire shots indiscriminately into the jungle and grass and hills, just to keep the guerrillas away Then they went away, taking everything Johnny had including 150 eggs, a sack of rice, and Johnny's shoes

No, there was no end to it, resistors burning out and transformers and tubes going and raids and helpers losing their nerve and saying they had to evacuate their families to safety, then not coming back Bit to make a very long very exasperating, very frustrating story short Leyte never went altogether off the air Somebody always passed a miracle and kept us going I think we were the only island that never lost contact with MacArthur for a single day

Then, another submarine came in and after that it was beautiful

WE HAD to have another miracle to bring the sub in A condenser on the radio set broke down. Then the batteries started to go We hooked two

batteries together by stripping and taping to get enough voltage to send a message. It was the last message those batteries sent. But it did the trick. It completed the arrangements for the sub

The sub broke water off our beach about six o'clock at night. We had 4000 Filipinos waiting to unload it. There was no pier. It had to be unloaded with small boats. We had 300 of them, but we had to lash them in pairs to make a platform to hold anything. The skipper kept the subtrimmed down by pumping ball ist so that we could throw the cargo over the side.

"Where use the Jups" he isked 'They are five kilometers below us and seven kilometers above us," I told

hım

"My boy he sud if you no trying to sche us you no doing a

good job '

The Japs did send a patrol to find out what all the noise was about But 150 guerriles were waiting for them in trenches they had dug with their bolos and the Japs that got out of that got out of that

I iter the Japs sent ships but there was nothing for them to shoot it. The sub had gone and we had gone, carrying more guns than Kangleon had soldiers for, more radios than we had operators for — brand-new, glistening, powerful U.S. Navy radios — and medical equipment big medical chests. I remember Doc Parado, our chief medical officer opened one of them up on the beach. Then he just sat looking.

"No v I have to read my books again to comember what all this is for," he said when I came up There

were tears of happiness in his eyes
There were two Americans on the

sub whom I was instructed to assist in setting up a weather station— Sergeant Hank Chambliss, from Georgia, and Corporal Gamertsfelder

From Athens, Ohio

The bovs were very nervous at first I had a fine time acting the veteran for them 'Oh we've got nothing to worry about there ain ta Jap nearer than a hundred vards of here. That sort of thing, I hey had four tons of equipment with them and I rounded up to Filipino boys to carry for us

As soon as the weather station was established, a message came directing me to go to southern Samar, establish a radio station and plot a mine field at Surreas Stratt between Homonhon and southern Leyte

I knew what that meant Mac Arthur was on his way

HOMONHON ISLAND
was less than six
miles long and a
mile and a half
wheat it avidest
point Japparole
care out every

now and then I manps p is edd ally Sulu in Island four nules a vay was garrisoned by Jap marines. And there was no place to hide on Homonhon from a determined search. I had only six soldiers with me to beat off a search, so if the Japs came we would have to run and on Homonhon you could run only until your hat floated.

The local population gathered to watch us land We gave them magazines and soap and chocolate and matches, all marked "I Shall Return

— MacArthur" There were 1944 pictures in the magazines They proved to the people we were in touch with MacArthur The pictures of Japanese sinkings caught their hearts and the maps showing what Nimitz and MacArthur had done thus far caught their minds

I had aspirin for the people and quinine and atabrine — the island was crowded with malaria — and I told them MacAithur had sent this for them to show how he always thought of the people of the Philippines

Then I made a MacArthur is notfar-off speech. I knew how the people felt. A certain proportion of their would want liberty at any price. Mac Arthur talk would put ferocity into them. A larger proportion would want peace at any price. Mac Arthur talk would get their on the band wagon. They would realize that was the price of peace.

The big new radio did not work We tried for four days, taking it apart and putting it together shifting from location to location. Then it occurred to me how stunted the trees of Homonhon we, and howered the carth was Iherisland was just one big a back of iron or the had a small set which we put on a nea, hoisied the antenna on the mast, went out about 20 feet from shore and grounded the set in the water. It worked fine

It did not take long to plot the channels through the mine fields Jap ships of all sizes passed frequently I had an alarm clock with me and a small Army compass with a pelorus arrangement

"Destroyer, distance 1600 yards, time x1028 hours, bearing 090, course 275, speed 25 knots' I'd call that out and my assistant, Reposar, would mark it down Distance, course, bearing and speed were taken every minute until the ship was out of sight

I used to sit in a house right on the beach, just a little bit back from my window with my binoculars to my eyes The ships came very close I could make out the expressions on the Jap faces there sometimes, and could get the whole feel of just what it was like on those ships

Then one morning when Reposar was working the set in the banca, I heard a swishing up above and there was a float Zero coasting directly over us I could see the two Japs in the plane One of them was looking at the banca with binoculars The plane didn't come back, but that afternoon a Jap destroyer escort came nosing along the coast I had all the equipment out of our house and hidden and I deployed my men, in the high grass just off the beach. There was no point running and we could kill some, anyway of those who landed But nobody landed destroyer escort just nosed along, the starboard side full of men pecing with binoculars, and then finally nosed out of sight I guess the auplane hadn't been able to give them a very accurate fix on our position

When the channels through the mine fields were accurately plotted and dispatched to Souwespac, I split up my crew and took off with half of them for Samar I figured those who remained on Homonhon would be reasonably safe without a white face around If Japs came, they could just take off their guns and then nobody would be able to tell them from the rest of the population

N SEPTEMBER 12,
Admiral Halsey s
planes came By
that time I had
set up my radio
station in southein Samar and it

had broken down We had fixed it and the generator had broken down We fixed the generator and then it burned out and we stole some generators out of the automobiles in the Jap-dominated Bureau of Constabulary garrison. Then we had to go back and steal the fan belts. We had a lot of trouble breaking in to where the first car was. Then that didn't have a fin belt. We had to break in to where a second car was

Then the planes came Holy cow there never was such a day anywhere before I was just getting out of hed There was a droning that filled the sky The guerrill is must be getting very important, I thought, if the Japs send all that number of planes for us II e poys came running

'Su, planes,' they cried, 'planes planes, many, many planes, sir

We were sending plane flashes to Mac Athur then and I wanted to count the flight and check its course. For a mir ute I couldn't take the sight in Then I realized they were American planes of a type I had never seen before. The last American planes I had seen had been nearly three years ago. But there was the star there was the good old unmistabile star.

"American planes" the boys cried "Why, of course," I said 'You don think the Japs have that many planes do you, and every one of them brand new?

I tried to be nonchalant But gee I couldn't keep a straight face at all and pictty soon I was cheering my head off

I hose planes came over every hour on the hour all day long for three straight days. We cheesed ourselves into 1988. We clapped our hands sore

We jumped like balloons

The raid was on Manila We saw only one example of bombing I here were about 360 Japs coining on a lugger to relieve the garrison at Guiuan Three planes dropped out of formation to have a look at it Only one borabed. It hit square Holy cow, if he d have missed I dhave had some explaining to do But as it was all I had to tell the I ilipinos was. What are you getting so excited about? American planes don't miss. I hey never miss.

I had been waiting for MacArthur to come for a lifetime it seemed e ci since our PI boats had taken hun off Corregidor I had worked for it and suffered for it, too I hose little Shill Return -- MacAithur" wrap pers on the soap and choquite had gone twisting like himming ticker tape though may and at I slept and I dreamed it would be the Mac \thur's boys word come charg ing up the beacl, we'd go charging down to the beach, hitting the Japs in the back we'd meet among the dead bodies of the Japs, we'd shake hands Id wake up ycarning I'd still be feeling the clasp of an Ameri can hand around mine

However, the way it happened was that it didn't happen that way

One morning we heard explosions like distant thunder It was the American fleet MacArthur was land

ing on Leyte, 40 miles away As soon as word came to the nearby barrio the guerrillas raised the American flag over the schoolhouse When we came up and saluted it the town cheered

Why do you not put up the flag of the Philippines, too" I asked

No, sir MacArthur is coming It is for welcome him only, sir "

"Americans will be glad to see the Filipino flag, too," I declared

A tremendous cheer went up from the crowd and the Filipino flag was hoisted alongside the American flag A man grabbed me 'Sir, please." He had been saving something three years for the liberation Would I share it with him please. It turned out to be three bottles of Coca-Cola, ill dusted over like old wine. The cokes were warm, but they had the taste of home in them—and the gratitude of the Philippine people.

Then we got hold of a banea and set out to meet the fleet. Every three minutes, the planes would pass overhead in threes and nines. They do be testing their guns when they passed overhe do I dy't have an American flightith merbut a waved ever thing. This are intended to make sure they understood the meawas not Jap, but was Frisign Richardson USNR, leading I ask Force Minus Zero to reinforce MacArthur

We sailed all afternoon At dusk the wind died and we just sat where we were for a long time until suddenly there was a big ship gliding by us They blinked a recognition signal at me I was scared to death because I didn't know how to answer

With a flashlight I flicked out in Morse code

"I am an American officer en route to Leyte Major Richardson"

The destroyer came nearer

'Come alongside aft," a voice megaphoned

We sculled like mad We put our backs into it and our hearts. The moon shone full on the destroyer I saw that every gun aboard including the main battery, was trained on us. When we got 30 feet away, they told us to stay where we were Sailors lined the rail looking down at us.

'Who are you?" It was the voice of an officer

'I am Majo. Richardson and I'm in the Navy, too "

I he ird someone say, "This guy is

I am a guerrilla " They didn't k now what a guerrilla was the Spanish way I pronounced it 'I am an American gorilla," I cried

'He thinks he's Gargantua, 'someone said I told you the guv is crazy "

Finally the officer said to come alongside He turned a flishlight on me I had my sun helmet on jungle boots, khaki shorts and short-sleeved shirt My pistol was in my belt and my tommy gun looped ove my shoulder

They let down a rope ladder for me and my three boys. On deck a big bosun's mate grabbed hold of me and held me while they frisked me of my guns. I just stood there grinning. I was tickled to death I showed them my Navy ring and my dogtags from Corregidor. I was grinning so much I couldn't talk. I just held them out.

My boys were dressed in shorts, all dirty and ragged, and wore no shoes

"Is this the Army' cried a sailor "Where's their clothes?"

Teodoro held up his trigger finger happily 'Sir, here is my uniform only"

They took me to the wardroom for good old American chow I had been waiting three years for it and then I found I couldn't eat it It was too rich for my taste after eating bamboo all that time

I took a shower and bunked down in a real bed with springs and white sheets and a pillow But I couldn't sleep The bed was too soft I fin illy finished up on the rug on the floor

When I came topside in the moining, I saw three I ilipino mess attendants. They were my poys! I hey had complete Navy uniforms on—hats, dungarees shirts black shoes, everything. Under their aims they each had about six cartons of cigarettes, soap, shaving cream razors, boxes of chocolate bars.

The crew had given them everything out the hull of the ship

That afternoon I was ordered to the cruiser Nashville Some colonels talked to me, passing the time of day sort of, while I wondered what the order had been about

"The General will see you now sir, said an orderly

That still didn't register with me I followed the orderly into a cabin and there sat General MacArthur I was stupefied. The General stood up and walked around the desk and held out his hand. I was so surprised I didn t even hold out mine. He had to take it from my side.

Our task lasted about ten minutes I don t remember much about it It consisted mostly of questions by General Mac Arthur Hell you don t just sit and shoot the biceze with a general I was surprised to find out that MacAithur had not only read every single message we ever sent out but he seemed able to recall the detail in each of them. But I remember mostly the feeling of pun I had every time I forgot to say su The pun was courte frequent I hadn't said "su to anybody in so long, I kept forgetting

AND I guess that about winds the story up I worked with the Army An Corps a while helping them out on spotting Jap targets, and we had quite a guerrilla reunion in Talloban—Colonel kangle early Joe Refrical and yelf We integer each diher, skinny I hen orders can's me to return home for remaind reassignment.

Ladies in Waiting

On A Washington, D. C., bus a woman was heard to remark. I hope my husband isn't late tonight. I always like to see him home before seven."

Another woman, wearing a Marine Corps emblem on her dre s, sighed 'How wonderful it must be to expect your husband home by the hour and not by the year'

tarianism, is based on the respect of Christianity for the individual man and the belief that it is desirable that men should be free to develop their own individual gifts and bents. This philosophy, first fully developed during the Renaissance, grew and spread into what we know as Western civilization. The general direction of social development was one of freeing the individual from the ties which bound him in feudal society.

Perhaps the greatest result of this unchaining of individual energies was the man velous growth of science Only since industrial freedom opened the path to the fice use of new knowledge, only since everything could be tried -- if somebody could be found to back it it his own risk has science made the great strides which in the last 150 years have changed the face of the world The result of this growth surpassed all expectations Whereve the barriers to the free exercise of human ingenuity were removed, man became appelly able to satisfy ever-widening ranges of desire By the beginning of the 20th century the workingm in in the Western World had reached a degree of material comfort, security and personal independence which 100 years before had hardly scemed possible

The effect of this success was to create among men a new sense of power over their own fate, the belief in the unbounded possibilities of improving their own lot. What had been achieved came to be regarded as a secure and imperishable possession, acquired once and for all, and the rate of progress began to seem too slow. Moreover, the principles which

had made this progress possible came to be regarded as obstacles to speedier progress, impatiently to be brushed away. It might be said that the very success of liberalism became the cause of its decline

No sensible person should have doubted that the economic principles of the 19th century were only a beginning — that there were immense possibilities of advancement on the lines on which we had moved But according to the views now dominant, the question is no longer how we can make the best use of the spont incous forces found in a free society. We have in effect undertaken to dispense with these forces and to replace them by collective and "conscious" direction

It is significant that this abandonment of liberalism, whether expressed
as socialism in its more radical form
or merely as 'o ganization or
"planning," was perfected in Germiny During the last quarter of the
19th century and the first quarter of
the 20th, Germany moved for thead
in both the theory and the practice of
socialism so that even today Russian
discussion largely carries on where
the Germans left off the Germany,
long before the Nazis, were attacking
liberalism and democracy, capit ilism
and individualism

Long before the Nazis, too, the German and It ilian socialists were using techniques of which the Nazis and Fascists liter made effective use. The idea of a political party which embraces all activities of the individual from the cridle to the grave, which claims to guide his views on everything, was first put into practice by the socialists. It was not the Fas

cists but the socialists who began to collect children at the tenderest age into political organizations to direct their thinking It was not the Fascists but the socialists who first thought of organizing sports and games, football and hiking, in party clubs where the members would not be infected by other views. It was the socialists who first insisted that the party member should distinguish himself from others by the modes of greeting and the forms of address It was they who, by their organization of 'cells' and de vices for the perm ment supervision of private life, created the prototype of the totalitarian party

By the time Hitler came to power liberalism was dead in Germany And it was socialism that had killed it

To many who have watched the transition from socialism to fascism at close quarters the connection be tween the two systems has become increasingly obvious but in the democracies the majority of people still believe that socialism and freedom can be combined They do not realize that democratic socialism, the great itopia of the last few generations, is in crly unachievable but that to strive for it produces something utterly different — the very destruction of freedom itself. As has been aptly said "What has always made the state a hell on earth has been precisely that man has tried to make it his heaven "

It is disquieting to see in England and the United States today the same drawing together of forces and nearly the same contempt of all that is liberal in the old sense "Conservative socialism" was the slogan under which a large number of writers pre-

Book-of-the-Month Club Offers Reprints of This Article

UNDOUBTEDLY Digest readers will feel that this is one of the most important and significant articles in recent years Many will desire extra copies Newsstand supplies of The Reader's Digest are soon exhausted, but through the courtesy of the Book of the-Month Club reprints have been made available The following prices include mailing envelopes

pared the atmosphere in which National Socialism succeeded. It is "conservative socialism" which is the dominant trend among us now

The Liberal Way of Planning

"PI ANNINC" owes its popularity largely to the fact that everybody desires, of course, that we should handle our common problems with as much foresight as possible. The dispute between the modern planners and the liberals is not on whether we ought to employ systematic thinking in planning our affairs. It is a dispute about what is the best way of so doing. The question is whether we should create conditions under which the knowledge and initiative of individuals are

given the best scope so that they can plan most successfully, or whether we should direct and organize all economic activities according to a "blue-piint," that is, "consciously direct the resources of society to conform to the planners' particular views of who should have what"

It is important not to confuse opposition against the latter kind of planning with a dogmatic laissez faire attitude The liberal argument does not advocate leaving things just as they are it favors making the best possible use of the forces of competition as a means of coordinating human efforts. It is based on the conviction that, where effective competition can be created it is a better way of guiding individual efforts than any other It emphisizes that in order to make competition work beneficially a carefully thought out legal framework is required, and that neither the pastnor the existing legal rules are free from grave defects

Liberalism is opposed, however to supplanting competition by inferior methods of guiding economic activity. And it regards competition is superior not only because in most circumstances it is the most cilicient method known but because it is the only method which does not require the coercive or arbitrary intervention of authority. It dispenses with the need for "conscious social control" and gives individuals a chance to decide whether the prospects of a particular occupation are sufficient to compensate for the disadvantages connected with it

The successful use of competition does not preclude some types of government interference. For instance, to limit working hours, to require cor-

tain sanitary arrangements, to provide an extensive system of social services is fully compatible with the preservation of competition There are, too, certain fields where the system of competition is impracticable For example, the harmful effects of deforestation or of the smoke of factories cannot be confined to the owner of the property in question But the fact that we have to resort to direct regulation by authority where the conditions for the proper working of competition cannot be created does net prove that we should suppress competition where it can be made to To create conditions in which competition will be as effective is possible, to prevent friud and deception to break up monopolies these tisks provide a wide and unquestioned field for state activity

I his does not me in that it is possible to find some 'middle way' between competition and central direction though nothing seems at first more plausible or is more likely to appeal to acasonable people. Mere common sense proves a treacherous guide in this field. Although competition can bear some admixture -of regulation, it carnot be combined with planning to any extent we like without ceasing to oper it as an effective guide to production Both competition and central direction becoing poor and incflicient tools if they are incomplete, and a mixture of the two means that neither will work

Planning and competition can be combined only by planning for competition, not by planning against conpetition. The planning against which all our criticism is directed is solely the planning against competition.

The Great Utopia

THERE CAN BE no doubt that most of those in the democracies who demand a central direction of all economic activity still believe that socialism and individual freedom can be combined. Yet socialism was early recognized by many thinkers as the gravest threat to freedom.

It is rarely remembered now that socialism in its beginnings was frankly authoritarian. It began quite openly as a reaction against the liberalism of the French Revolution. The French writers who laid its foundation had no doubt that their ideas could be put into practice only by a strong dictatorial government. The first of modern planners, Saint-Simon, predicted that those who did not obey his proposed planning boards would be treated as cattle.

Nobody saw more clearly than the great political thinker de I ocqueville that democracy stands in an irreconcilable conflict with socialism morracy extends the sphere of individual freedom ' he said ' Democricy attaches all possible value to eich man, he said in 1848, 'while socialism makes each man a mere agent, a mere number Democracy and socialism have nothing in common but one word equality But notice the difference while demociacy secks equality in liberty, socialism secks equality in restraint and servitude "

To allay these suspicions and to harness to its cart the strongest of all political motives— the cravit g for freedom—socialists began increasingly to make use of the promise of a

"new freedom" Socialism was to bring "economic freedom," without which political freedom was "not worth having"

To make this argument sound plausible, the word 'freedom' was subjected to a subtle change in mean ing The word had formerly meant freedom from coercion, from the aibitrary power of other men Now it was made to mean freedom from ne cessity, release from the compulsion of the circumstances which inevitably limit the range of choice of all of us Freedom in this sense is, of course, mercly another name for power or wealth The demand for the new freedom was thus only another name for the old demand for a redistribution of wealth

The claim that a planned economy would produce a substantially larger output than the competitive system is being progressively abandoned by most students of the problem. Yet it is this false hope as much as anything which drives us along the road to planning.

Although our modern socialists' promise of greater freedom is genuine and sincere, in recent years observer after observer has been impressed by the unforeseen consequences of social ism, the extraordinary similarity in many respects of the conditions under "communisin" and "fascism" As the writer Peter Drucker expressed it in 1939, "the complete collapse of the belief in the attainability of freedom and equality through Marsism has forced Russia to travel the same road toward a totalitarian society of un freedom and inequality which Gei many has been following. Not that

communism and fascism are essentially the same Fascism is the stage reached after communism has proved an illusion, and it has proved as much an illusion in Russia as in pre-Hitlei Germany "

No less significant is the intellectual outlook of the rank and file in the communist and fascist movements in Germany before 1933 The relative ease with which a young communist could be converted into a Nazi or vice versa was well known best of all to the propagandists of the two par-The communists and Nizis clashed more frequently with each other than with other parties simply because they competed for the same type of mind and reserved for each other the hatred of the heretic Their practice showed how closely they are related To both, the real enemy, the man with whom they had nothing in common, was the liberal of the old. type While to the N izi the communist and to the communist the N 121, and to both the socialist, are potential reciuits made of the right timber, they both know that there can be no compromise between them and those who really believe in individual ficedom

What is promised to us as the Road to Freedom is in fact the Highroad to Servitude For it is not difficult to see what must be the consequences when democracy embarks upon a course of planning The goal of the planning will be described by some such vague term as "the general welfare." There will be no real agreement as to the ends to be attained, and the effect of the people's agreeing that there must be central planning, without agreeing on the ends, will be

rather as if a group of people were to commit themselves to take a journey together without agreeing where they want to go with the result that they may all have to make a journey which most of them do not want at all

Democratic assemblies cannot function as planning agencies. They can not produce agreement on everything—the whole direction of the resources of the nation—for the number of possible courses of action will be legion. Even if a congress could, by proceeding step by step and compromising at each point agree on some scheine, it would certainly in the end satisfy nobody.

Io diaw up an economic plan in this fashion is even le's possible than, for instance, successfully to plan a military campaign by democratic procedure As in strategy it would b come inevitable to delegate the task to experts And even if, by this expedient, a democracy should succeed in planning every sector of economic activity it would still have to face the problem of integrating these separate plans into a unitary whole There will be a stronger and stronger demand that some board or some single individual should be given powers to act on their own responsibility. The cry for an economic dictator is a characteristic stage in the movement toward planning

Thus the legislative body will be reduced to choosing the persons who are to have practically absolute power The whole system will tend toward that kind of dictatorship in which the head of the government is from time to time confirmed in his

position by popular vote, but where he has all the powers at his command to make certain that the vote will go in the direction he desires

Planning leads to dictatorship because dictatorship is the most effective instrument of coercion and, as such essential if central planning on a large scale is to be possible. There is no justification for the widespread belief that, so long as power is conferred by democratic procedure, it cannot be arbitrary, it is not the source of power which prevents it from being arbiti iry, to be free from dictatorial qualities, the power must also be limited A true "dictatorship of the proletariat," even if democratic in form, if it undertook centrally to direct the economic system, would probably destroy personal freedom as completely as any autocracy has ever done

Individual freedom cannot be reconciled with the supremacy of one single purpose to which the whole of society is permanently subordinated To a limited extent we ourselves experience this fact in wartime, when subordination of ilmost everything to the immediate and pressing need is the price at which we preserve our freedom in the long run The fashionable phrases about doing for the purposes of peace what we have learned to do for the purposes of war are completely misleading, for it is sensible temporarily to sacrifice freedom in order to make it more secure ın the future, but it is quite a different thing to sacrifice liberty permanently in the interests of a planned economy

To those who have watched the transition from socialism to fascism at

close quarters, the connection between the two systems is obvious. The realization of the socialist program means the destruction of freedom Democratic socialism, the great utopia of the last few generations, is simply not achievable.

Why the Worst Get on Top

No doubt an American or English "fascist system would greatly differ from the Italian or German models, no doubt, if the transition were effected without violence, we might expect to get a better type of leader. Yet this does not mean that our fascist system would in the end prove very different or much less intolerable than its prototypes. There are strong reasons for believing that the worst feat ires of the totalitarian systems are phenomena which totalitarianism is certain sooner or later to produce

Just as the democratic statesman who sets out to plan economic life will soon be confronted with the alternative of either assuming dictatorial powers or abandoning his plans so the totalitarian leader would soon have to choose between disregard of ordinary morals and failure. It is for this reason that the unscrupulous are likely to be more successful in a society tending toward totalitarian ism Who does not see this has not yet grasped the full width of the gulf which separates totalitarianism from the essentially individualist Western civilization

The totalitarian leader must collect around him a group which is prepared voluntarily to submit to that discipline which they are to impose

by force upon the rest of the people That socialism can be put into practice only by methods which most socialists disapprove is, of course a lesson learned by many social reformers in the past. The old socialist parties were inhibited by their democratic ideals, they did not possess the ruthlessness required for the performance of their chosen task It is characteristic that both in Ger many and in Italy the success of fascism was preceded by the refusal of the socialist parties to take over the responsibilities of government They were unwilling wholeheartedly to employ the methods to which they had pointed the way They still hoped for the miracle of a in ijoiity s agreeing on a particular plan for the organization of the whole of society Others had already learned the lesson that in a planned society the question can no longer be on what do a majority of the people agree but what the largest single group is whose members agree sufficiently to make unified direction of all affairs possible

There are three main reasons why such a numerous group, with fairly similar views, is not likely to be formed by the best but rather by the worst elements of any society

First, the higher the education and intelligence of individuals become, the more their tastes and views are differentiated. If we wish to find a high degree of uniformity in outlook, we have to descend to the regions of lower inoral and intellectual standards where the more primitive instincts prevail. This does not mean that the majority of people have low moral standards, it merely means that

the largest group of people whose values are very similar are the people with low standards

Second, since this group is not large enough to give sufficient weight to the leader's endeavors, he will have to increase their numbers by converting more to the same simple creed He must gain the support of the docile and gullible, who have no strong convictions of their own but are ready to accept a ready-made system of values if it is only drummed into their ears sufficiently loudly and frequently It will be those whose vague and imperfectly formed ideas are easily swayed and whose passions and emotions are readily aroused who will thus swell the ranks of the totalitarian paity

Third, to weld together a closely coherent body of supporters, the leader must appeal to a common human weakness. It seems to be easier for people to agree on a negative program — on the hatred of an enemy, on the envy of those better off — than on any positive task

The contrast between the "we and the "they' is consequently al wave employed by those who seek the allegiance of huge masses. The enemy may be internal, like the 'Jew' in Germany or the "kulak' in Russia, or he may be external. In any case, this technique has the great advantage of leaving the leader greater freedom of action than would almost any positive program.

Advancement within a totalitarian group or party depends largely on a willingness to do immoral things. The principle that the end justifies the means, which in individualist ethics

is regarded as the denial of all morals, in collectivist ethics becomes necessarily the supreme rule. There is literally nothing which the consistent collectivist must not be prepared to do if it serves "the good of the whole," because that is to him the only criterion of what ought to be done

Once you admit that the individual is merely a means to serve the ends of the higher entity called society or the nation, most of those features of totalitarianism which horrify us follow of necessity From the collectivist standpoint intolerance and brutal suppression of dissent deception and spying the complete disregard of the life and happiness of the individual are essential and unavoidable Acts which revolt all our feelings such as the shooting of host iges or the killing of the old or sick are treated as mere matters of expediency the compulsory uprooting and transportation of hundreds of thousands becomes an instrument of policy approved by almost everybody except the victims

I o be a useful assistant in the running of a totalitarian state, therefore, a man must be prepared to break every mor il rule he has ever known if this seems necessary to achieve the end set for him. In the totalitarian machine there will be special opportunities for the ruchless and unscrupulous Neither the Gestapo nor the administration of a concentration camp, neither the Ministry of Propaganda nor the SA or SS (or their Russian counterparts) are suitable places for the exercise of humanitarian feelings. Yet it is through such positions that the road to the highest positions in the totalitarian state leads

A distinguished American econo-

mist, Professor Frank H Knight, correctly notes that the authorities of a collectivist state "would have to do these things whether they wanted to or not and the probability of the people in power being individuals who would dislike the possession and exercise of power is on a level with the probability that an extremely tenderhearted person would get the job of whipping master in a slave plantation"

A further point should be made here

Collectivism means the end of truth To make a totalitarian system function efficiently, it is not enough that everybody should be forced to work for the ends selected by those in control, it is essential that the people should come to regard these ends is their own This is brought about by propaganda and by complete control of all sources of information

The most effective way of making people accept the validity of the values they are to serve is to persuade them that they are really the same as those they have always head, but which were not properly understood or recognized before And the most efficient technique to this end is to use the old words but change their meaning. Few traits of totalitarian regimes are at the same time so confusing to the superficial observer and yet so characteristic of the whole intellectual climate as this complete perversion of language.

The worst sufferer in this respect is the word "liberty". It is a word used as freely in totalitarian states as elsewhere. Indeed, it could almost be said that wherever liberty as we know it has been destroyed this has been

done in the name of some new free dom promised to the people Even among us we have planners who promise us a "collective freedom," which is as misleading as anything said by totalitarian politicians "Collective freedom" is not the freedom of the members of society but the unlimited freedom of the planner to do with society that which he pleases I his is the confusion of freedom with power carried to the extreme

It is not difficult to deprive the great majority of independent thought But the minority who will return an inclination to criticize must also be silenced Public criticism or even expressions of doubt must be suppressed because they tend to weaken support of the regime As Sidney and Beatrice Webb report of the position in every Russian enterprise 'Whilst the work is in progress, any public expression of doubt that the plan will be successful is an act of disloyalty and even of treachery because of its possible effect on the will and efforts of the rest of the staff '

Control extends even to subjects which seem to have no political significance. The theory of relativity, for instance, has been opposed as a 'Semitic attack on the foundation of Christian and Nordic physics' and because it is "in conflict with dialectical materialism and Maixist dogma' Every activity must derive its justification from conscious social purpose. There must be no spontaneous, unguided activity, because it might produce results which cannot be foreseen and for which the plan does not provide.

The principle extends even to

games and amusements I leave it to the reader to guess where it was that chess players were officially exholted that "we must finish once and for all with the neutrality of chess We must condemn once and for all the formula 'chess for the sake of chess'"

Perhaps the most alarming fact is that contempt for intellectual liberty is not a thing which arises only once the totalitarian system is established but can be found everywhere among those who have embraced a collectivist faith. The worst oppression is condoned if it is committed in the name of socialism. Intolerance of opposing ideas is openly extolled. The tragedy of collectivist thought is that, while it starts out to make reason supreme, it inds by destroying reason.

There is one aspect of the change in moral values brought about by the advance of collectivism which provides special food for thought. It is that the virtues which are held less and less in esteem in Britain and America are precisely those on which Anglo Saxons justly prided theniselves and in which they were gencially recognized to excel These virtues were independence and self reliance individual initiative and local responsibility, the succe sful reliince on voluntary activity, noninterfer ence with one's neighbor and tolerance of the different, and a healthy suspicion of power and authority

Almost all the traditions and institutions which have molded the national character and the whole moral climate of England and America are those which the progress of collectivism and its centralistic tendencies are progressively destroying

Planning vs the Rule of Law

Nothing distinguishes more clearly a free country from a country under arbitrary government than the observance in the former of the great principles known as the Rule of Law Stripped of technicalities, this means that government in all its actions is bound by rules fixed and announced beforehand -- rules that make it possible to foresee with fur certainty how the authority will use its coercive powers in given circumstances and to plan one's individual affairs on the basis of this knowledge. Thus, within the known rules of the game, the individual is free to pursue his personal ends, certain that the powers of government will not be used deliberately to frustrate his efforts

Socialist economic planning necessarily involves the very opposite of this. The planning authority cannot tie itself down in advance to general rules which prevent arbitrariness.

When the government has to decide how many pigs are to be raised or how many buses are to run, which coal mines are to operate, or at what prices shoes are to be sold, these decisions cannot be settled for long periods in advance. They depend inevitably or the circumstances of the moment, and in making such decisions it will always be necessary to balance, one against the other, the interests of various persons and groups

In the end somebody's views will have to decide whose interests are more important, and these views must become part of the law of the land. Hence the familiar fact that the more the state "plans," the more

difficult planning becomes for the individual

The difference between the two kinds of rules is important. It is the same as that between providing sign-posts and commanding people which road to take

Moreover, under central planning the government cannot be impartial. The state ceases to be a piece of utilitarian machinery intended to help individuals in the fullest development of their individual personality and becomes an institution which deliberately discriminates between particular needs of different people, and allows one man to do what another must be prevented from doing. It must lay down by a legal rule how well off particular people shall be and what different people are to be allowed to have

The Rule of Law, the absence of legal privileges of particular people designated by authority, is what sateguards that equality before the law which is the opposite of arbitrary government. It is significant that socialists (and Nazis) have always protested against merely" formal justice, that they have objected to law which had no views on how well off particular people ought to be, that they have demanded a "socialization of the law" and attacked the in dependence of judges

In a planned society the law must legalize what to all intents and pur poses remains arbitrary action. If the law says that such a board or authority may do what it pleases, anvething that board or authority does is legal — but its actions are certainly not subject to the Rule of Law

By giving the government unlimited powers, the most arbitrary rule can be made legal, and in this way a democracy may set up the most complete despotism imaginable

The Rule of Law was consciously evolved only during the liberal age and is one of its greatest achievements. It is the legal embodiment of freedom. As Immanuel Kant put it, "man is free if he needs obey no person but solely the laws."

Is Planning "Inevitable"?

It is revealing that few planners today are content to say that central planning is desirable. Most of them affirm that we now are compelled to it by circumstances beyond our control

One argument frequently heard is that the complexity of modern civilization creates new problems with which we cannot hope to deal effectively except by central planning. This argument is based upon a complete misapprenension of the working of competition. The very complexity of modern conditions makes competition the only method by which a coordination of affairs can be adequately achieved.

There would be no difficulty about efficient control or planning were conditions so simple that a single person or board could effectively survey all the facts. But as the factors which have to be taken into account become numerous and complex, no one center can keep track of them. The constantly changing conditions of demand and supply of different commodities can never be fully known, or quickly enough disseminated by any one center.

Under competition — and under no other economic order — the price system automatically records all the relevant data Entrepreneurs, by watching the movement of comparatively few prices, as an engineer watches a few dials, can adjust their activities to those of their fellows

Compared with this method of solving the economic problem — by decentialization plus automatic co ordination through the price system — the method of central direction is inciedibly clumsy, primitive, and limited in scope It is no exaggeration to say that if we had had to rely on central planning for the growth of our industrial system, it would never have reached the degree of differen tiation and flexibility it has attained Modern civilization has been possible precisely because it did not have to be consciously created. The division of labor has gone far beyond what could have been planned Any further growth in economic complexity, far from making central direction more necessary, makes it more important than ever that we should use the technique of competition and not depend on conscious cortrol

It is also argued that technological changes have made competition impossible in a constantly increasing number of fields and that our only choice is between control of production by private monopolies and direction by the government. The growth of monopoly, however, seems not so much a necessary consequence of the advance of technology as the result of the policies pursued in most countries.

The most comprehensive study of

this situation is that by the Temporary National Economic Committee, which certainly cannot be accused of an unduly liberal bias. The committee concludes "The superior efficiency of large establishments has not been demonstrated, the advan tages that are supposed to destroy competition have failed to manifest themselves in many fields conclusion that the advantage of large scale production must lead inevitably to the abolition of competition cannot be accepted should be noted, moreover, that monopoly is frequently attained through collusive agreement and promoted by public policies. When these agreements are invalidated and these policies reversed competitive conditions can be restored?

Anyone who has observed how aspiring monopolists regularly seek the assistance of the state to make their control effective can have little doubt that there is nothing inevitable about this development. In the United States a highly protectionist policy aided the growth of monopolies. In Germany the growth of cutch has since 1878 been systematically fostered by deliberate policy. It was here that, with the help of the state, the first great experiment in "scientific planning 'and "conscious organization of industry" led to the cieation of giant monopolies. The suppression of competition was a matter of deliberate policy in Germany, undertaken in the service of an ideal which we now call plani ing

Great danger lies in the policies of two powerful groups, organized capital and organized labor, which

support the monopolistic organization of industry. The recent growth of monopoly is largely the result of a deliberate collaboration of organized capital and organized labor where the privileged groups of labor share in the monopoly profits at the expense of the community and particularly at the expense of those employed in the less-well-organized industries. However, there is no reason to believe that this movement is inevitable.

The movement toward planning is the result of deliberate action. No external necessities force us to it.

Can Planning Free Us from Care?

MOST PLANNERS who have scriously considered the practical aspects of their tisk have little doubt that a directed economy must be run on dictatorial lines, that the complex system of interrelated activities must be directed by striffs of experts, with ulturite power in the hands of a comin inder-in-chief whose actions must not be fettered by democrate procedure. The consolition our planners offer us is that this authoritarian direction will apply "only" to economic matters. This assurance is usually accompanied by the suggestion that, by giving up freedom in the less important aspects of our lives, we shall obtain freedom in the pursuit of higher values On this ground people who abhor the idea of a polit ical dictatorship often clamor for a dictator in the economic field

The arguments used appeal to our best instincts. If planning really did free us from less important cares and so made it easier to render our exist-

ence one of plain living and high thinking who would wish to belittle such an ideal?

Unfortunately, purely economic ends cannot be separated from the other ends of life. What is misleadingly called the "economic motive' means merely the desire for general opportunity. If we strive for money, it is because money offers us the widest choice in enjoying the fruits of our efforts — once earned we are free to spend the money as we wish

Because it is through the limitation of our money incomes that we feel the restrictions which our relative poverty still imposes on us, many have come to hate money as the symbol of these restrictions. Actually, money is one of the greatest instruments of freedom ever invented by man. It is money which in existing society opens an astounding range of choice to the poor man—a range greater than that which not many generations ago was open to the wealthy

We shall better understand the significance of the service of money if we consider what it would really mean if, is so many socialists characteristically propose, the "pecuniary motive" were largely displaced by 'noneconomic incentives' If all rewards, instead of being offered in money, were offered in the form of public distinctions, or privileges, positions of power over other men, better housing or food, opportunities for travel or education, this would merely mean that the recipient would no longer be allowed to choose, and that whoever fixed the reward would determine not only its size but the way in which it should be enjoyed

The so-called economic freedom which the planners proinise us means precisely that we are to be relieved of the necessity of solving our own economic problems and that the bitter choices which this often involves are to be made for us Since under modern conditions we are for almost everything dependent on means which our fellow men provide, economic planning would involve direc tion of almost the whole of our life There is hardly an aspect of it, from our primary needs to our relations with our family and friends, from the nature of our work to the use of our leisure, over which the planner would not excicise his conscious control"

The power of the planner over our private lives would be hardly less effective if the consumer were nominally free to spend his income as he pleased, for the authority would control production

Our freedom of choice in a competitive society tests on the fact that, if one person refuses to satisfy our wishes, we can turn to another But if we face a monopolist we are at his mercy. And an authority directing the whole economic system would be the most powerful monopolist imaginable.

It would have complete power to decide what we are to be given and on what terms. It would not only decide what commodities and services are to be available and in what quantities, it would be able to direct their distribution between districts and groups and could, if it wishes, discriminate between persons to any degree it liked. Not our own view, but somebody else s view of what we

ought to like or dislike, would determine what we should get

The will of the authority would shape and "guide" our daily lives even more in our position as producers I or most of us the time we spend at our work is a large part of our whole lives, and our job usually determines the place where and the people among whom we live. Hence ome freedom in choosing our work is probably even more important for our happiness than freedom to spend our income during our hours of lessure.

Fven in the best of worlds this freedom will be limited. Few people ever have an abundance of choice of occupation But what matters is that we have some choice, that we are not absolutely tied to a job which his been chosen for us, and that if one position becomes intolerable, or if we ect our heart on another, there is ilmost always a way for the able, at some sacrifice, to achieve his goal \othing makes conditions more unbe arable than the knowledge that no effort of ours can change them It may be bad to be just a cog in a in ichine but it is infinitely worse if we can no longer leave it, if we are tied to our place and to the supciours who have been chosen for us

In our present world there is much that could be done to improve our opportunities of choice. But "planning" would surely go in the opposite direction. Planning must control the entry into the different trades and occupations, or the terms of remuneration, or both. In almost all known instances of planning, the establishment of such controls and restric-

tions was among the first measures taken

In a competitive society most things can be had at a piece. It is often a cruelly high price. We must sterrifice one thing to attain another. The alternative, however, is not freedom of choice, but orders and prohibitions which must be obeyed.

That people should wish to be relieved of the bitter choice which hard facts often impose on them is not surprising. But few want to be relieved through having the choice made for their by others. People just wish that the choice should not be necessary at all. And they are only too ready to believe that the choice is not really necessary, that it is imposed upon them merely by the particular economic system under which we live. What they resent is, in truth, that there is an economic problem.

The wishful delusion that there is really no longer an economic problem has been furthered by the claim that a planned economy would produce a substantially larger output than the competitive system I has claim, however, is being progressively ab indoned by most students of the problem Even a good many economists with socialist views are now content to hope that a planned society will equal the efficiency of a competitive system. They idvocate planning because it will enable us to secure a more equitable distribution of wealth And it is indisputable that, if we want consciously to decide who is to have what, we must plan the whole economic system

But the question icinains whether the piece we should have to pay for the realization of somebody s ide il of justice is not bound to be more discontent and more oppression than was ever caused by the much-abused free play of economic forces

For when a government undertakes to distribute the wealth, by what principles will it or ought it to be guided? Is there a definite answer to the innumerable questions of relative merits that will arise?

Only one general principle, one simple rule, would provide such an answer absolute equality of all individuals. If this were the goal, it would it least give the vague idea of distributive justice clear meaning. But people in general do not regard mechanical equality of this kind as demable, and socialism promises not complete equality but "greater equality."

This formula answers prictically no questions. It does not free us from the necessity of deciding in every puticular instance between the merits of particular individuals or groups, and it gives no help in that decision. All it tells us in effect is to take from the rich is much as we can. When it comes to the distribution of the spoils the problem is the same as if the formula of "greater equality" has never been conceived.

It is often said that political freedoin is meaningless without conomic freedom. This is true enough, but in a sense almost opposite from that in which the phrase is used by our planrers. The economic freedom which is the prerequisite of any other freedom cannot be the freedom from economic care which the socialists promise us and which can be obtained only by relieving us of the power of choice. It must be that freedom of economic ac tivity which, together with the right of choice, carries also the risk and responsibility of that right

Iwo Kinds of Security

Like the spurious "economic freedom" and with more justice, economic security is often represented as an indispensable condition of real liberty. In a sense this is both true and important. Independence of mind or strength of chuacter is rarely found among those who cannot be confident that they will make their way by their own effort.

But there are two kinds of security the certainty of a given minimum of sustenance for all and the security of a given standard of life, of the relative position which one person of group enjoys compared with others

I here is note is son why, in a society which has reached the general level or wealth ours has, the first kind of security should not be quaranteed to all without endangering general freedom that is some minimum of food, snelter and clothing, sufficient to preserve health. Nor is there any reason why the state should not help to or gain ear comprehensive system of so or I insurance in providing for those common hazards of life against which few can make adequate provision.

It is planning for security of the second kind which has such an insidious effect on liberty. It is planning designed to protect individuals of groups against diminutions of their incomes.

If, as has become increasingly true, the members of each trade in which conditions improve are allowed to exclude others in order to secure to themselves the full g un in the form of higher wages or profits, those in the trades where demand has fallen off have nowhere to go and every change results in large unemployment. There can be little doubt that it is largely a consequence of the striving for security by these me ins in the last decades that unemployment and thus insecurity have so much increased.

The utter hopelessness of the position of those who in a society which has thus grown rigid, are left outside the range of sheltered occupation can be appreciated only by those who have experienced it. There has never been a more cruel exploitation of one class by another than that of the less fortunate members of a group of producers by the well established. This has been made possible by the "regulation of competition lew catch words have done so much him as the ideal of a "stabilization of particular prices or wages which, while securing the income of some, makes the position of the rest more and more precarious

In England and America special privileges, especially in the form of the "regulation" of competition, the "stabilization" of particular prices and wages, have assumed increasing importance With eviv grant of such security to one group the insecurity of the rest necessarily increases. If you guarantee to some a fixed part of a variable cake, the share left to the est is bound to fluctuate proportion ally more than the size of the whole And the essential element of security which the competitive system offers, the great variety of opportunities, is more and more reduced

The general endervoi to achieve security by restrictive measures, supported by the state has in the course of time produced a progressive transformation in which, as in so many other ways Germany has led and the other countries have followed. This development has been histened by another effect of socialist to iching, the deliberate disparagement of all activities involving economic risk and the moral opprobrium east on the gains which make risks worth taking but which only few can win

We cannot blame our voung men when they prefer the sale salured position to the risk of enterprise after they have heard from their earliest vouth the former described as the superior more unselfish and disinterested occupation. The younger generation of today has grown up in a world in which, in school and press, the spirit of commercial enterprise has been represented as disreputable and the making of profit as immoral, where to employ 100 people is represented as exploitation but to command the same number as honorable.

Older people may regard this as an evaggeration but the daily experience of the university teacher leaves little doubt that, as a result of anticapitalist propaganda, values have already altered for in advance of the change in institutions which has so far taken place. The question is whether, by changing our institutions to satisfy the new demands we shall not unwittingly destroy values which we still rate higher.

The conflict with which we have to deal is a fundamental one between two irreconcilable types of social or ganization, which have often been described as the commercial and the military. In either both choice and risk rest with the individual or he is relieved of both. In the army, work and worker alike are allotted by authority and this is the only system in which the individual can be conceded full economic security. This security is, however, inseparable from the restrictions on liberty and the hierarchical order of military life.— it is the security of the barracks.

In a society used to freedom it is unlikely that many people would be ready delaberately to purchase security at this price. But the policies which are followed now are nevertheless rapidly creating conditions in which the striving for security tends to become stronger than the love of freedom.

If we are not to destroy individual freedom, competition must be left to function unobstructed. Let a uniform minimum be secured to everybody by all means, but let us admit at the same time that all claims for a privileged security of particular classes must lapse, that all excuses disappear for allowing particular groups to exclude newcomers from sharing their relative prosperity in order to maintain a special standard of their own

There can be no question that adequate security against severe privation will have to be one of our main goals of policy But nothing is more fatal than the present fashion of intellectual leaders of extolling security at the expense of freedom. It is essential that we should relearn frankly

to face the fact that freedom can be had only at a price and that as individuals we must be prepared to make severe material sacrifices to preserve it

We must regain the conviction on which liberty in the Anglo-Saxon countries has been based and which Benjamin Franklin expressed in a phrase applicable to us as individuals no less than as nations

"Those who would give up essen tial liberty to purch ise a little temporary safety deserve neither liberty nor safety"

Toward a Better World

To puil of a better world, we must have the courage to make a new start. We must clear away the obstacles with which human folly has accently encumbered our path and release the creative energy of individuals. We must create conditions favoral a to progress rather than "planning progress".

It is not those who cry for more "planning' who show the necessity courage, not those who preach a "New Order," which is no more than a continuation of the tendencies of the past 40 years, and who can think of nothing better than o imitate Hitler It is indeed, those who cry loudest for a planned conomy who are most completely under the sway of the ideas which have created this war and most of the evils from which we suffer

The guiding principle in any at tempt to create a world of fice men must be this A policy of freedom for the individual is the only truly pao gressive policy

Vince of Letter line of the

Condensed from Newsweek

Ralph Rober

Washington rumor after mother as to the ultimate program which is being planned for us. The stories all have been of a pattern which in such eases usually indicates that their accurate. The various reports fit together into a cohesive program which hould make all of us stop and do some hard thinking. Here are the in un points.

1 There is to be established a National Production Council which is to be the over-all "planning agency" and will have the responsibility of controlling the entire conomy

- 2 Under the over-all agency will be a sub-agency or sub-council for each industry, composed of repre-entatives f om Tabor management and Government
- 3 The volume of production will be set by these councils for each industry, which me ns, of course, a quota for each company and plant in each industry. This production schedule will be set at such a level that in the aggregate it will insure "full employment."
- 1 To insure that the full production schedule is carried out the Government will perhaps even "guara itee" the companies against loss by

buying any products which cannot be sold on the open market

5 No new company can enter any field without the appropriate industry council

6 Price will be fixed for each commodity and permanently controlled by the planning agencies

7 Wises ilso will be fixed and laber will be guaranteed an annual wise. All wise is receivents will be certified by the planning is ency and will be frozen a year at a time it order to prevent price schedules from being up et.

8 To offs the anticipated "\$125,000,000,000 deflation in steps, when was production stops, there must be no cutback of wages, and workers are to acceive as much for 40 hours as they now acceive for 48 hours

9 an enormous program of Government expenditures and expansion of Government activities is to be undertaken. This is to include not only regional developments of the TVA type all over the country but housing, education, airport construction, both transcontinental and local road building, wholesale extension and increase of benefits of social security, and so forth

This is said to be the specific pro

gi im of the CIO and its political affiliate the PAC But from other sources it is clear that the thinking along this line is by no me ins limited to the CIO And it also is clear that those whose thinking is following this path know exactly where they are he ided

For example take this excerpt from The Wall Street Journal. Suppose a man wanted to open a new shoe factory. If he's got a new product that's needed, and the facilities and materials can be spared. Ok's switch planners. But if the market is well supplied and leather is some we would suggest some other line of endeavor. If he insisted on going into a business which was not approved, that would be antisocial—in the same class as opium smuogling—and police powers would have to be used.

Yes, those who are maling these plans know exactly what they are a doing And make no mistake about whether they are smart. They are is

sn art, and clever, and ruthless, and de termined as any group in this country

One further point. Do not expect this program ever to be presented as a whole for consideration by Congress. It will be brought out put by put, each apparently designed merely to meet a particular problem of pressing proportions. And every part will be excludly labeled with an innocuous name and wrapped around and around with beautiful and innocent sounding names especially prepared to cover up the real purpose and intent of the proposal.

So if you happen to be a believer in individual enterprise and free dom watch for the component parts of this program. And dor t be misled by someone's telling you that we are just taking a small step toward 'an dustral democracy' or a 'planned economy' Rather, remember that this same program when it was an effect in Italy was known as "I is easin" And today in Germany it goes under the name of 'Nazism

Additional Comments on The Road to Seifdom

'Sometimes it happens that a small book flashes a long light of vaining and of hope Such a book is The Road to Serfdom — one of the great liberal statements of our times.'

— John Davenport in Fortune

In writing which is forced I and thoughtful. Mr. Havek expresses the lear that the democracies are moving step by step in the same direction that Germany went. I his book deserves wide and though ful reading."

— Chicago Sun

"The reader will emerge refreshed as from a great intellectual adventure"

- New Yorl Herald I'rib ine

"Definitely, an important book Nobody can read it without learning much to his advantage." — Howard Vincent O Bien in Chicago Daily News

'A very important contribution to modern political thought. There is little doubt it will create a sensation in this country.' — Kansas City Star.

How Much Do You Know About Men?

Condensed from Woman's Home Companion

Amram Scheinfeld

TOMEN have always believed they understand men better than men understand them
Perhaps they do But in recent years scientists have found some facts about men which will come as a surprise not only to women but to men themselves

As you read the following statements, decide which is true, which filse—always remembering, however that we are talking in terms of aurages If you're right on only half the answers, you'll be doing very well

Men's bodies are constructed more perfectly and efficiently than women's

False Males come into the world with many more in ilformations and organic weaknesses. Their bodies are more likely to get out of order, and chemically don't function as efficiently. The male body is superior only in muscular development.

Men age more rapidly than women

Irue Under average conditions, a man's body deteriorates more rapidly so that he is biologically older than a woman the same age. He is less resistant to most diseases, and with other hazards his remaining life spin is shorter than the woman's

A quiz proving that neither men nor women know all the facts about sex differences

Tests have proved that men and women have the same intelligence

False Males are better in mechanical, arithmetical and abstract reasoning problems, females, in language, rote memory, social and esthetic tests Because of these differences it is not possible to compare the intelligence of the seves in equal terms

Men are less emotional than women

Irue Some 50 of the best recent psychological studies are almost unani mous in indicating less emotional balance in women

Men are less likely to be hysterical than women

Talse During the bombing of London there were more cases of hysteria among male civilians, and the recovery of men under treatment was less rapid than among women

When faced with menacing problems or great suffering, men are more likely to commit suicide thin women

True The male suicide rate is four times higher — in older age, almost

eight times higher — probably because men are conditioned by society to take their failures more seriously or because liness hits them harder. If this fact and the fact that men are more hysterical doesn't seem to square with the statement that women are more eight to all remember the story of the reed that stood up in the storm when the oak ericked. Women, giving in more readily to emotion, yield to strain men, more rigid, may crack under it

Men see color less well

True Color blindn ss is eight times commoner in males and interest in color develops more rapidly in girls than boy

Men can t stand heat and cold, casevere exposure as well as women

It is Women's bodies are better insulated with fat layers, and also function more efficiently in hormonal and then it il act on

Men's erses he less delicate than yomen's

I also I he most cuciul scientific tests ful to show my important differences in sensitivity to pain, or in the senses of si cil, ouch or taste

Mea are generally inferior to woman in prantal electority

Irm In puttude t sts, women are found to be superior where fine mo tions are required. The difference is reveal d in early years, guis being able to button their clothes and to

manipulate doorknobs before boys

Men inherit more talent for art and music

False Both sexes inherit equally whatever hereditary factors there are for talent, but natural inhibiting in fluences (the female functions, child-bearing, lesser drive) as well as social restraints prevent the expression of talent in women to the same degree as in men

Men sleep more soundly than worten

I also Male infinite are more rest less in their sleep and don't sleep as long as gul infinite, and this difference characterizes the select innaturity

Men are less intuitive

True Girls from earliest ages are more observant and conscious of people than boys. As they grow older women develop the power. This is helped along by the need of mothers to understand their children, sick people— and husbands.

Men are less concerned with their app arance than women

I ilse It is only in this country and in Lurope is a result of social changes in the last century that men are restrained from showing too much in terest in their dress. Among most of the world's population men are full, as vain and dress conscious as women and often spend more time and money on the rappearance.

That the Church May Truly Live

Condensed from an address by John D Rockefeller, Jr
Before the Protestant Council of the City of New York

SHORTLY after this World War begin there was presented a picture so horrible it hardly seemed that it could be true It appeared hat hell had broken loose and that millions of eval spirits had become incarnate and ware committing attroctices and acts of cruelty beyond belief

In the face of the awful picture it is not stemore that we should ask ourselves "Has Christianity failed"

But the wir has printed mother picture. In it we see it illions of men and women who are exemplifying in their daily lives unselfishness generosity, loy ilty and sell sacrifice which command the admiration of the world. These people are reflecting Christ's spirit Yet in any of them have no church affiliations for too often the church seems to them quite apart from their lives, an institution which has little contact with or understand ing of their problems, since theirs is fund mentally a religion of deeds not of creeds, expressed in life, not in words

As we view this picture we say with renewed furth "Christianity has not failed, churches may have failed but never was Chirtianity a more vital force in human life than it is today"

Nevertheless, if this unorganized

spiritual force is to be conserved the Christian Chuich must have a new birth. These noble men and women, many of whom have sacrificed their all, must find in the chuich the recognition, the association and the inspiration which they need and have a right to expect.

Let us picture, for a moment, this reborn church

It would be the Church of the Living God

Its terms of admission would be love for God is He is reveiled in Christ and His living spirit, and the vit il translition of that love into a Christlile life. Its itmosphere would be one of wirinth freedom and jov. welcoming to its fellowship all those who are striving to live useful and worthy lives It would pronounce ordinance ritual creed all nonessential for admission into the Kingdom of Cod or His church A life not a creed, would be the test. As its first concern it would encourage Christim living seven divs a week, 52 weeks a vear It would be the church of all the people, the rich and the poor the wise and the ignorant, the high and the low — a true democracy

Its ministers would be trained not only in the seminaries but in some form of work a day life so that they might acquire a personal knowledge of practical problems. Thus they would live in closer touch with humanity, would better understand and sympathize with human difficulties, and would exert their influence as much in living as in preaching.

I see all denominational emphasis set aside I see cooperation, not competition

In the large cities I see great religious centers, strongly supported, ably led, inspiring their members to participation in all community matters. In smaller places, instead of half a dozen dying churches competing with each other, I see one or two strong churches, uniting the Christian life of the town

I see the church through its members molding the thought of the world and leading in all great move ments. I see it literally establishing the Kingdom of God on earth

Shall some such vision as this be realized? Upon the answer depends in large measure the future of the Christian Church

There is another motive for a united church, no less compelling. It is the necessity for cooperation if the forces of right-cousness are to triumph in the eternal warfare against the forces of evil. The forces of evil, united on the common ground of their nefarious interests, are ever ready for aggressive action. The forces of right-cousness are frequently so preoccupied with their petty differences that their attack upon the common foe is scattered and ineffective.

Were Christ to come to earth again, can we imagine that He would regard the observance or nonobservance of various ordinances and forms, or the manner in which they are ob-

served, as of sufficient importance to justify controversy among His follow ers, and their separation into rival factions? Let creed, ritual, Biblical interpretation, theology all be used to enrich worship, and to bring the be liever into a fuller understanding of Him whom we worship, as each indi vidual or separate church may find them helpful toward that end But God for bid that they should ever be regarded as a substitute for that personal, spiritual relation between the soul and its God which is the essence of true religion or that they should be set up as barriers to the Church of the I wing God

What the world craves today is a more spiritual and less formal religion. To the man or woman facing death, giert conflict, the big problems of human life, the forms of icligion are of minor concern, while the spirit of religion is a desperatel, needed source of comfort and strength

If the various divisions of the church as organized today catch the vision and have the breadth tolerance and courage to set aside all nonessentials all barriers, if they will stand upon the bedrock principles of God's love and Christ's living spirit, 'not saus fied," as Donald Hankey has said, "until the church is the church of all good men and women, until all good thoughts and deeds are laid at the feet of the Loid of all good life" the Church of the Living God will come into being, ushering in a new era of Christian unity

What an opportunity! What a duty! In God's name I ask, does any one dare let it pass?

What I have said thus far is the substance of in address which I made

during the first World War The convictions then expressed have only grown upon me with the passing years. I voice them now with even greater assurance as to their timeliness and present applicability. The bitter lessons taught by World War I have not saved us from the vistly greater confligration of today. Not have the church during the past quarter century put its house in order and with unity of action opposed the advising hordes of the godless.

Tod iv, as always, humanity or ives the substance of relation while churches too often emphisize the form. Men have long looked to the church for ich ious truining and spiritual insparition that they may acquire both the knowledge and the will to take right actions in their duly lives. Their natural craving for religious guidance must not be repelled by alphabetical lists of denominational churche and agencies when what they seek is so fundimental Rather should they be able to get in any Christian church, whatever the style of its architecture or the shade of its belief the spiritual wisdom and strength which they need to fit them for practical daily living

Io say that no progress has been

made toward the resolving of denominational barriers during this quarter century would be unjust to various groups which have made definite advance along those lines. But no broadly conceived, concerted movement to that end is under way which has a general participation.

Yet the artificial nature of such barners has been made apparent many times during this war. On February 3, 1943, the eugo transport Dochester was torpedoed and sunk in iceberg waters, 90 miles from Green land. As the ship went down, four chaplains—one a Catholic, one a Jew two Protestants—were on the deck encouraging the men and passing out life belts. When there were no life belts left, they took off their own and give the n away. These chaplains were last seen standing arm in arm praying

As they went to then death, united in the service of their common I ord, so let us the living members of the great religious faiths they represent, go forward shoulder to shoulder is a united army fighting evil, establishing righteousness, brothers in service sons of the one God and I ather of us all!

When a squadron of B 25 pilots of the Fifth Air Force was briefed for a mission to Alexishafen. New Cuinci, the target was St. Michael's Cathedral, run by American and Dutch missionaries before the war, but now used by the Japanese as a storchouse. The pilots were upset. Never before had they been asked to bomb a church. They took their problem to Chaplain Eugene J. Reilly, who told them there was no doubt that the cathedral had become a military objective. The following day the B 25's leveled the church.

When the pilots got home, they arted a collection in the bomber group, and within two days had \$1314. They asked I ather Reilly to send it to the fathers of the church, to start a new and greater St. Michaels."—Robert Shiplen in Name 1.

THE NAZIS BURY THEIR FACTORIES

Condensed from The American Mercury + + + Edwin Muller

Almost a third of Germany s essential war goods are now produced deep — and safe — under the ground

PY D DAY last June, our bombers and those of Britain had almost knocked out the German aircraft industry, and we had undis puted control of the air In the months that followed, we continued to bomb the aircraft factories, preventing repairs We ilso pounded other German war industries — tanks, guns and motor transport It looked as if Hitler's war machine could never again mount a great oflensive

And yet — it did

When von Rundstedt lashed out in December he filled the air with swarms of nev planes, the latest models. He used tanks, attillery and motor transport on a lavish scale. Meanwhite the flying bomb and rockets in growing numbers were har issin, our rear

Where did all this new material of war come from? One inswer is I rom great new lictories hundreds of feet

deep in the earth

Germany has been frantically—and successfully—clawing her way underground. It is estimated that by Jebruary 1, 1945, about 30 percent of her essential war production was below ground, beyond the reach of our bombers. This development not only affected the strategy of the war in Europe but also poses new and

serious problems for the war against Japan And for any great war of the future it raises fantastic probabilities

I have just visited one of these weird subtervanean factories

In the rough hill country of the Ardennes, near the border of France and Luxemburg is a long, winding valley dotted with mines and factories, slimy with coal dust and snoke Midway down the valley is the village of I hil, a stragling row of dingy shacks A side road turns off the village street and abruptly disappents into a hillside. It is an inconspicuous hole—the entrance to an old mine.

Our reconnaissance fliers never knew

it was there Yet each morning more than 5000 workers entered that hole, together with great quantities of sheet metal and other raw material. I very day there came out of it more than 100 flying bombs, ready to be hauled to the launching sites.

My guide and I lit our miner's lamps, mounted a flatear and went clanging through the darkness of the narrow tunnel. Every few hundred feet was the entrance of a side tunnel. After nearly two miles the car stopped. The lamps showed damly that we were in a high, vaulted chamber, perhaps 60 feet wide by 150 feet long. There was a concrete floor, the unfinished walls and ceiling were white washed. We picked our way through crowded machinery, went through a

short p issage into another such chamber, then another and another. Our footsteps echoed in the dead silence. After 20 rooms I lost count. I was told that I'd seen less than half of them. All had been blasted out of solid lock by working in driven to utmost speed by their German bosses.

Hundreds of first-class muchines stood in the orderly rows of a long assembly line motors, lathes, milling and granding machines, drill presses, cleetric spot-welding machines, gas welding equipment, band saws, pickling tanks Some of them were of German make, come Italian, French, American I saw an electric motor mide by a St. I our company, and fine drill presses from New Hampshire and Connecticut There were neat piles of sheet aluminum boxes full of miscellaneous parts. In one 100m there were a dozen or more almost completed fusel iges. All stood just as the working had abandoned them before the advancing Allies

Power to run the machines came from outside, but in the event that the power line was broken by Allied bombing, stand by generators were at hand Excavating machinery was kept near the mun entrance in case it should be closed by bombing

This huge subtrianean factory was worked by slave labor, women is well as men—probably 10 000 Russians, Poles, Czechs, Italians The equipment was designed to require minimum intelligence on the part of the operator Such designing, in which the Germans have made great progress during the war, explains the high production they have been able to get from their unwilling, unskilled slaves. This factory needed only a few

German bosses and engineers, plus a tough gang of Gestapo guards

The workers lived under prison conditions Some were housed in the villages of the valley, crowded ten or 15 in a room, most were kept in hastily erected barricks. They slept on sacks of straw on the floor. Breakfast was a cup of create coffee and five ounces of black bread. Lunch was a quart of potato or turnip soup. Supper, one third of an ounce of sausage and another five ounces of bread.

The German supervisors worked three eight-hour shifts the laborers two 12-hour shifts. Hours were from six to six. In the early dawn the longlines guarded by Cestapo men, would be marched to the entrance, jamined into flatears, and harded into the factory. The work chambers, lighted by electricity, were well ventilated, not so much for the benefit of the workers as to prevent deterioration of the inachines. Apparently no sanitation facilities were provided.

Men who have worled in the fretory can't describe the noise. At the recollection they get wild eved and hold their heads in their hands. Such machines as punch presses make a tremendous din. And all the machines were driven at top speed. In those reverberating chambers the noise was magnified to an overwhelming roar

On the walls were many posters Some were political instruction 'You are now an employe of the German Reach Your salute must be 'Heal Hitler'" Some were highly imaginative pictures of the destruction which the flying bombs were supposed to be visiting on the enemy But most were warnings to those who might flig in

their work Their were graphic pictures of the various punishments—flogging, deprivation of food and water The bosses and Gestapo men walked up and down the line, checking on production Tvery once in a while some laggard would be hauled out of line and made an example of before the others

There was never any rebellion After work, stunned by noise and fatigue, the workers could do no more than stumble home, fall on their straw mattresses and sleep Having inspected this and other factories our Army Intelligence is not disposed to count much on uprisings of the slave labor of Germany

Scores of such well organized underground factories have been found in the caves and tunnels of the laberated countries. And those we have discovered in I rance, Belgium and I uxemburg were crude compared to what we shall find inside the Reich.

Moving industries underground was an afterthought of the Germans At the beginning of the war they were sure that the Reich was safe from air attack Then they began to worry about the development of the big multi gunned bombers, the Lancasters and Halifaxes in England, the Fortresses and Liberators in America After the 1000 plane British raid on Cologne in 1941, they decided to take action Planning and survey required a year, by the middle of 1943 underground installation was well under way The move was made in well-planned sequence, no firm moving all at once or ceasing production while it moved Wherever possible they chose a mine shaft, cave or abandoned railway tunnel that entered the side of a hill, so that the entrance was protected against bombing. When they had to use an entrance without this natural protection they covered the first 100 feet or so with concrete, ten to 30 feet thick.

Some of the plants employ more than 10,000 men There are also underground storchouses for bombs. shells, planes and oil After the great 13id on Peenemunde, * the V-1 and V-2 factories and laboratories went almost entirely underground. It is likely that a large part of Germany's lighter industry such as the manu facture of small arms and ammunition, electrical instruments and precision tools is also sife beneith the surface Manufacture of tanks, locomotives and heavy attillery requires ponderous machines and immense floor space, yet we know of at least one locomotive factory below ground

The Germans haven't yet solved the problem for some industries Steel, for example You can't operate a blast furnace in a case. Not is it practicable to put an oil refinery below the surface.

How can our hombers attack underground factories effectively? The answer is They can't Occasionally we may block an entrance, but at best that means only a basef interruption of work. We can bomb the rail lines leading into the factory, but rail lines can be restored. So far the only way to destroy an underground factory is to capture it.

It's too late for the Germans to dig themselves in completely But the

^{*}See Forty Minutes That Changed the War The Reader's Digest, October 44

Japanese, who also live in a land of hills, mines and caves, may have time to do more

All of this suggests a new conception of the next war. In preparing for it the nations surely will not neglect this most impregnable of defenses. They will create subterranean sites especially designed and excivated for factories. All the essential plants now on the surface will be duplicated underground. There will also be subsurface, living quarters, hospitals, schools, churches, recreation areas. Vist stocks of food will be stored.

The war will start not by old-fashioned declaration but by salvos of
thousands of rocket bombs flying
across the frontici—or across the
oce in As the structures on the surface
begin to crumble, whole populations
will dive underground like frightened
woodchucks Soon the surface of the
earth will be ilmost empty of life—
an inferno of fire, explosions, poison
gas

Inhabitants of Mars, observing all this, may be quite puzzled as to the direction which this civilization of ours is taking

The Beard of Joseph Palmer of the rise and fall of whiskers in America

Condensed from The American Scholar + + Stewart Holbrook + +

NE OF the unsung individuilists wno helped to make the United States a better place to live was Joseph Paln er of litchburg, Mass He is for otten now, and this is bad forgetting, for Pal ner was of a race of men that is all but extinct

Palmer was the victim of one of the strangest persecutions in history Neither race nor religion played a part in his case. It was brought about by a beard, one of the most magnificent growths ever seen in New Ingland or, for that matter, in the United States

Joe Palmer came of sturdy old Yankee stock His fither had served in the Revolution and loc himself. had curied a musket in 1812. He was 42 years old in 1830, when he moved from his nearby firm into the hustling village of Fitchburg, where his beard immediately became the butt of cruel jokes and derision. But before relating the violence that ensued, it is imperative to trace briefly the history of whiskers in America

This continent was explored by men of many nationalities, almost all of them wearing whiskers. Co tes, Champlain, Drake, Raleigh, Captain John Smith, Dc Soto - all sported whiskers of varying length and style Then came the Pilgrims and the Puntans, bearded almost to a man But the beards of the first settlers didn't last, they were gradually reduced in size until they were scarcely more than mild coatces, and by 1720 they had disappeared entirely The fighting men of the Revolution were beardless Not a mustache or a suspicion of a mutton chop appeared on the faces of Washingto 1 Gites, Greene or Ethin Allan No signer of the Declinition had other beard or must whe

And so it continued down the years. No Pre-ident before Lincoln had any hair on his face. Until 1838 the cirtoprists pictured Uncle Sim as smooth-shaven. America did not really so harv until the Civil War was well under way

Thus when Joe Palmer came to Fitchburg wearing a be u.d., whiskers had been virtually nonexistent for at least a hundred years. In spite of his husute oddity, Pilmer was in Lonest, kindly man and a good citizen deeply religious but tolerant, a m in of many intellectual interests. He was also quite immovable when it came to principles, which in his case included the right to wear a flow ig beard

Everywhere he went small boys threw stones and should at him Women sniffed and crossed to the other side of the street when iley saw him coming Often the windows of his modest home were broken by rowdies Grown men recred at him openly

By 1840, Joe Palmer was a na

nonal character, made so by two events that happened in quick suclession. In spite of the snubs of the congregation, Joe never missed a church service, but one Sunday he quite justifiably lost his temper. It was a Communion Sunday Joe knot with the rest, only to be publicly

humiliated when the offilating cleigyman "passed him by with the Communion bread and wine" fut to the quick, he love up and strode to the Communion table, lifted the cup to his lips, and took a inighty swig Then he went home

A few days later as he was coming out of the bitchburg Hotel he was cized by four menarined with he irs brush, soap indiazor They told him but the town sentiment

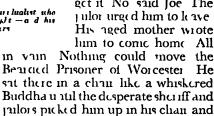

was that his beard should come off, and throw him violently to the ground, injuring his back and head. But Joe in inaged to get an old jackknife out bit his pocket. He had about him wildly cutting two of his assailants in their legs, not seriously but sufficiently to discourage any barber work. When Joe stood up, hurt and bleeding, his gorgeous beard was intact.

Presently he was arrested, charged with 'unprovoked assault' He refused to pay his fine Matter of principle, he said He was put in the city julk to Worcester and there he remained for more than a year part of the lime in solitary confinement. Even here he had to fight for his whiskers. Once the julor came with several men with the idea of removing the

famous beard, but Joe fought so fur iously that the mob retreated without a hair. He also successfully re pulsed at least two attempts by prisoners to shave him

In jail Joe wrote letters in which he stated that he was in there not for assault but because he chose to wear

> whiskers — which was unquestionably the case His son had the letters published in the Worcester Spy Other papers picked them up Soon people all over Massachusetts began to talk. and the shoulf realized hid a Tariar and possibly a mutva on his hands He told Joe to run along home and for get it No said foe The rulor urged him to leave His aged mother wrote him to come home All

Never again was violence attempted on Joe Palmer's board. Free now he soon became active in the fight against slavery. He went to Boston often for Abolitionist inecuings, contributing both time and money to the cause. He met Emerson and Thoreau, who found him the possessor of much good sense, and he became widely known.

carried him to the street

in place of persecution Joe now found himself something of a hero. The veriscrept on and with them his beard spread like a willow. A photograph taken at this time shows a

Jeo Falmer vilvilualist who fuglt fr his right—a d his whilers

growth that makes Walt Whitman seem a beardless youth in comparison And at last, many years before he died, the whiskers of all America came into their fullest glory. The Second Coming of the beard was sudden, an almost instantaneous wilderness of hair that covered the face of male America.

One cannot know with certainty the reason Lincoln when elected was smooth-shaven, but when inaugurated wore a beard Grant, the lieutenant, had worn a tiny mustiche, Grant, the general, had a full beard Robert E Lee went smooth of face to war and was presently full bearded Nearly all the Civil War generals were peering out of whiskers by 1862, and so were their men General Ambrose E Burnside gave his name to a special type of whiskers

Baseball players of the '60's and '70's, as depicted by the careful Currier & Ives, had whiskers Bankers grew a style all their own Razors went into the disc and and vendors of quack beard-growers swarmed into the new market. The proper gift to a male was an elegant mustache cup. Whiskers became a sign of solid worth, a badge of integrity. All over America were full beards, Vandvkes, goatees, Galways, Dundreanes, mutton chops, burnsides, fringe beards, and millions of stupendous mustaches.

And old Joe Palmer was immensely happy, a true prophet who had lived to see his justification. He died in 1875 when beards were at their fullest, and was thus spared the dreadful sight of their withering and final discopearance.

The decline of the whisker during

the next 35 years has engrossed a few of us minor historians. But Mr Lewis Gannett has ably charted it, using for data the graduating classes on his alma mater, Harvard University. His studies show that graduates in the 1860's were hairy as goats. But in 1872 a majority were wearing only mustaches and burnsides. But 1890 beards and burnsides (sideburnare the same thing, only there is no much to them) were distinctly obsolete, and the mustache was at it peak.

Decline now followed with tragispeed The class of 1900 was without one beard. The last Harvard footbal mustache appeared in 1901, the labaseball mustache in 1905.

The White House witnessed a similar decline From Lincoln through Taft only one man without at least a mustache was elected to the Presidency — Mckinley But beginn a with Wilson in 1912 and continuing to the present, no President has worth hair on his face Many thought a was his beard that defeated Hugher in 1916, and his was for year, the onlibeard on the once heavily whiskered Supreme Court

Old Joe Palmer, then, died exactly the right time, and he too some pains to make certain that he was not wholly forgotten. In the old cemetery in North Leominster, no far from Fitchburg, is his monument, a rugged square stone as till as a man, and on its front is a carving of Joe's head, with its noble bend flowing and rippling in white marble Below the head appears a simple legend "Persecuted for Wearing the Beard"

Hell's a-Poppin' in Kansas

Condensed from Chemistry

Paul W Learney

plants go for years without a fine—and their first fire is often their last. But in Sunflower, Kansas, 35 miles west of Kansas City, there is a factory that averages 150 outbreaks a day in one division with a recent high mark of 259 fires in a single 24 hour period. This factory is one of the largest powder plants in the world, packed with sudden death. Yet it has the lowest accident rate in American industry.

Sunflower Ordnince Works, built by the Covernment, is operated by Hercules Powder Company under the unsdiction of U.S. Army Ordnance Covering an area of 40 square miles dotted with nearly 5000 buildings it is one of five plants that manufacture for Army and Navy the new powder used to propel rockets. This rocket or jet propulsion powder, called JP for shore, must burn at a furious rate.*

It is on the JP lines at Sunflower where 60 percent of the operators are girls, that the 150 daily fires occur tet so efficient is the protection provided that there have been no fatalities, and only 17 'lost time' injuries. These workers, handling the most

Fires break out every few minutes at the Sunflower Ordnance plant where girls handle our new rocket powder, most treacherous ever made yet the pirls are safer than they would be at home

treacherous po vder ever made, are actually four times safer on the job than they would be it home

The combined Army Navy rocket program now calls for \$150,000,000 worth of rocket powder a month Thirty months ago no one in this country knew how to make it. When Army Ordnance asked the Hercules people to get going on a JP plant in August 1942, two Hercules engineers and an Ordnance officer rushed to England to get the formulas which the British had learned from the Frencel and Germans.

Back home the Americans saw ways to speed up British methods Nearly every time saving change, however, introduced are iter risk and called for more claborate safety precautions For example, after the Brit ish mix the powder they dry it for 24 hours before rolling it, our men reasoned that by beating the rollers the stuff coul! be dried and rolled in one operation. Since IP is nearly 50 percent nitrogly cerin as contrasted with a maximum of 20 percent in other powders this proposal was appalling, but so were the production figures anticipated by the irmed forces Accordingly, safety men were called in to take out the risk

JP manufacture begins by treating

See War's Screaming Infant Prodigy, The Reader's Digest, March, 45

cotton with nitric acid to produce nitrocellulose or guncotton This is mixed with nitroglycerin and other ingredients and agitated into a goo, or slurry, in huge tanks equipped with rubber-bladed beaters. When you peer into a tank your spine tingles as you realize that it is whipp ng up nitroglycerin and guncotton much as your wife whips up the bitter for a cake But the calm confidence of the experienced powder men soon dissipates your fears Before long you even grin halfheartedly when you hear them refer to the nitro tank-cart as the 'angel buggy'

These people know how close to disaster they are all the time, and they don't miss a trick in the avoidance of trouble. Workers in danger areas know that the mere possession of a "strike anywhere" match means instant dismissal. Buildings are kept to a minimum size and spaced wide apart.

Lven the number of occupants is rigidly restricted, if five persons is the limit, an employe has to come out before a visitor will be admitted. Every hizardous building is surrounded by earthen barricades, 12 feet thick at the base, to divert any possible explosion upward. The buildings have escape chutes instead of stairs, lead floors to minimize sparking hazards, and many other safeguards.

By the time the slurry leaves the mixing houses it is dried into a slightly moist paste and transferred to the roll houses. About six pounds of this paste is dumped onto a pair of bulky steel rollers heated to 210 degrees. Working somewhat like a wringer, these rolls compress the paste into a sheet resembling a black

rubber blanket It is here that most of the fires occur

Each girl operator wears a trim white uniform, safety shoes, gloves, a turban, and a plastic mask which covers her face and has a bib that tucks into the neck of her coveralls to protect her throat All cloth garments are flameproofed

The roll house (there are scores) is a low building about 100 feet long with a roofed porch or boardwalk running its entire length. A house contains four bays, each with a rolling machine and operator, each bay is provided with two exit doors. A fiber bucket of powder, in pastelike form from the mixing houses, is delivered to her at the outer door by a helper. She walks in some 25 feet and empt es the stift on the rolls. From that moment on she never turns her back on the machine.

She retreats to the inner door of the bay, where the control levers are situated, and starts and stops the rollers several times until the powder is evenly distributed on the cylinders. She then moves in upin and empties a small envelope of chemical into the powder, leaning over to smooth the mixture. Backing away once more, she reaches behind her for a broom and returns to brush off the inaching and the tray under the rollers. Then walking backward as an animal tames does in a lion's cage, she replaces the broom.

The rolls are now started on their run which, in four or five minutes, will "cook" and compress the powder into its blanket form. The girl suddown in a chair on the porch to watch the timer. At the prescribed time she returns to the controls, flips a lever

and a blade slices the powder blanket off the rollers, dropping it into the ii by beneath. As she does this the operator peeps cautiously around the door jamb, for it is during this operation that most of the fires occur.

Invariably fires are preceded by an ominous crackling which is the gul's cue to dart out. The gas pressure kenerated in a split second is terrific and can often be felt out in the open, to feet or more from the machine.

Inc girl was pinned against the wall war — "as if a giant had grabbed me ind slammed me against the boards" Another Girl was bowled off her feet was the blast she had the presence of mind to stay on the floor and roll but the doorway.

Although there are only six pounds of powder in most of the inachines, he stuff burns like a huge blowtorch long tongues of flame roar out, followed by clouds of yellowish, choking smoke, often chunks of flaming powder are flung in all directions. I was standing ten feet outside the auter door when I saw my first fire here, and my hat was almost blown off by the fierce gust of pressure.

Yet the machines where these fires occur are in operation again within so minutes. The fire never gets beond its point of origin. The explanation of this miracle lies in the insenious protection system, designed and perfected before ground was noken for the new JP powder division. C. L. Jones, Hercules safety ensineer, called in the engineers of the automatic Sprinkler Corporation of America and said, "I want you to design a sprinkler system that will oplate in a half second or less."

The engineers went home mumbling to themselves, for even the fastest systems took three seconds. However, they succeeded in developing a system which puts a torient of water on a fire in a half second, and has frequently done it in one fifth of a second.

The deluge system is installed as an integral part of each machine. Hyper sensitive detectors are set just a few inches above below and behind the iollers. The machine is flanked by open fog nozzles and other nozzles cover the remunder of the room and the operator When the temperature of the powder rises suddenly, as it does just before a fire, the detectors trip the vilve mechanisms, sending water out of each nozzle at the rate of about 35 gallons per minute A deluge blankets the machines, the entire room and its exits Most of the fires are put out in five seconds, with much of the powder still unburned

New girls, who break in as helpers delivering powder, are likely to be jittery when they first go on the machines but their nervousness passes with their first fire 'With fires popping around you all day long," one explained, "you can't help but get used to it" Getting wet and having your hair-do mussed, she said, was the worst hazard involved

A few months ago a worker suffered a reportable injury, which spoiled Sunflower Ordnance's outstanding safety record of 1,125,000 man-hours without an accident This employe was a carpenter Surrounded by 40 square miles of sudden death, he slipped off a roof and wrenched his back

Must a great postwar housing program be hamstrung by restrictive and obsolete building codes kept in force by pressure groups?

Can We Break the Building Blockade?

Condensed from The Atlantic Monthly

Robert Lasch

AST SPRING the city of Chicago, groping for some way of converting 22 square miles of slums into decent residential areas, sought to revise its building code When the question came before a City Council committee, few citizens were on hand But Paddy Sullivan was there to block the adoption of modernized building regulations Paddy is president of the Building Frades Council and spokesman for the established craft unions of the construction industry Frequently, by accident or design, he is also the spokesman of business interests which, like the unions, have a real or imagined stale in traditional construction methods

Paddy and his counterparts elsewhere pack a hefty political punch. This is one reason why many cities have found it impossible to keep their building codes up to date, why home construction often bogs down under artificial costs, why ordinances originally intended to establish standards of safety and sanitation have grown into protective walls surrounding entrenched materials and labor.

Our national housing needs can be conservatively estimated at a minimum of 1,000,000 new low cost dwellings a year for at least ten postwar years To achieve this annual output,

ways must be found to reduce costs without impairing quality of construction

The kind of code that Paddy Sulli van wants to maintain in Chicago keeps the average cost of a house somewhere above \$6000 To make new housing available to more people, our goal must be production of the same house for \$4000 or less

Chicago's experience with building codes might serve as a warning to other cities The city set out to revise its code in 1927 For 11 years pressure from the entrenched interests provented any action at all When the City Council took up the ordinance at last, it quietly strangled nearly all the recommendations of a committee of experts Clause by clause, pro gressive measures encouraging the use of new materials and methods in home building were deleted The new code finally enacted into law required in general the same type of construction that had prevailed for 30 years

In 1933, Chicagoans had gazed with admiration on modern types of construction exhibited at the World's Fair In 1938 their City Council outlawed most of these innovations. When it was proposed to permit use of metal or fiber board for exterior sheathing, as alternatives to lumber,

aldermen raised a horrified cry of "tin and paper" houses At the same time, however, fabricated steel dwellings were prohibited, one alderman solemnly declaring that in case of fire such a house would fry the occupants as in a skillet

Cellular steel and concrete floors, used safely for years on railroad bridges, were ruled out for home construction. When the matter of perforated brick arose, the council decided to specify the exact location of the perforations. This had the incidental effect of compelling outside manufacturers either to make a special brick for Chicago or to yield the field to local interests.

Nothing illustrated the forces at work better than the case of plaster walls Experts said that wallboard and other dry-wall methods provided fire protection equal to that of wet plaster, and proposed to permit use of these materials. At the instance of the plasterers union, aldermen changed the provision by requiring that any substitute have the same total thickness as a traditional wall Mayor Edward | Kelly, about to come up for re-election, persuaded the councilmen to add a further qual ification, requiring that any substitute possess the "sanitation value" of a plaster wall He stated frankly that he acted at the request of the plasterers

So a formula was worked out which, under pretense of permitting plaster or its substitutes, actually panned the substitutes An incidental result was that it erected a barrier against all experiments in the building of prefabricated houses, since prefabrication requires dry-wall construction

Such discriminations increase building costs without a compensating increase in safety, sanitation, or any other proper purpose of building regulations

Many cities will enter the postwar era unprepared to take full advantage of modern methods of home construction. One study in 100 cities showed all of them specifying masonry walls eight to 17 inches thick. In Britain, four-inch masonry walls have stood for years, and in this country many new wall materials have been developed which do not clepend upon thickness for strength.

The building-trades unions have borne their full share of the onus of high costs. But let us not condemn the unions alone. Whenever a union benefits from a certain type of restraint a materials dealer or subcontractor usually benefits too.

In Chicago, stone contractors and unions prohibited the use of pre-cut stone from Indiana insisting that the cutting be done in Chicago. I hat gave a competitive advantage to the local contractor and a work monopoly to the local union but it also increased the cost of shipping stone, and so reduced the potential market for it

Union glaziers frequently refuse to install windows fully fabricated at the mill Painters rule out the use of spray guns, or even the use of brushes exceeding a certain width In New York, lathers refused to install metal lath and metal rods which were not cut and bent, at extra expense, on the job When prefabricated pipe of fitted lengths was delivered to a job with threads already cut, Houston plumbers demanded the right to cut off the

threads and rethread the pipe at the site

Collaboration between manufacturers and unions has been most strikingly illustrated in plumbing. The Department of Justice contends that manufacturers representing 80 percent of the business sell their products only to approved jobbers, who distribute them only through approved master plumbers, all at fixed prices. When a price cutter enters the field, he often finds it impossible to get his fixtures installed.

The hod carriers' union has long banned the use of ready mixed concrete in Chicago Mixing it in small batches on each job raises the cost from \$6 50 to \$8 50 a yaid, which amounts to around \$100 on a fiveroom house In Seattle, the Department charged the sheet metal workers' union with refusing to install any furnace not locally made. Electrical workers have engaged in the same game, using their powers of collective bargaining to fivor certain manufac turers. The ultimate result of all such practices is another barrier to a sus tained large volume of housebuilding

So it goes with almost every branch of the housebuilding industry. Into construction of a typical house go 200 items of equipment and 500 labor operations involving 40 skills or trades. Each group furnishing the material

or labor for one operation yields readily to the temptation to jack up its costs, on the theory that the net effect on the total is too small to affect the market But the combined effect is deadly

Supreme Court interpretations of the antitiust laws, giving unions im munity from prosecution under them, make new federal legislation necessary if we are to deal with restrictive practices of the unions and eliminate cost-raising combinations

Some doubts may exist as to the future of the prefabricated house, but there is no doubt that the rise of a wholly new industry — low cost home construction — can be stimulated by standardization of parts, pre assembly of equipment, and modification of habitual construction methods. It is quite possible for such a mass housing industry to develop side by side with the traditional custom building crafts, one serving the lower and middle income groups, the other supplying its usual market in the upper brackets

After all, what serves the general interest serves the particular interest of every economic group using new tech inques to build a million houses a year will do Paddy Sullivan and his counterparts nore good than a hope less fight to preserve the old tech inques in building half that number

Army ABC's

An Army friend tells me that service men, with characteristic shrewd ness, ha ereduced the maze of Army rules and regulations to three simple orinulas

If it moves salute it 2 If it doesn't move, pick it up 3 If it's too big to pick up, paint it!

Ice in the Moscow Pipe Line

Thousands of planes are now ferried safely from Montana to Moscow over Alsib, the Arctic Circle route where formerly a crash landing meant almost certain death

Condensed from The Saturday Evening Post
Wesley Price

HE coldest airway in the world starts in Montana, crosses Alaska and Siberia, and ends in Moscow Over it more than 6000 fighters and bombers have been flown to Russia, surging through gaps in the icy we other. The code name for the route is Alsib

Lleven men have died in a single day to keep Alsıb open Some were on thansport which vanished in a cloud rink over Canada Bush pilots bewe it struck a mountain, loosed an walanche, and lies forever buried Others were in a crew liner trying to aske Watson Lake in a night bliz-'iid The crash killed pilot and coolot I wo survivois stayed with the chigerated bodies 14 days Then hey strapped skis to their broken egs, put snowshoes on their hands, ınd crawled away ın mınus-50-degree scather They were found four days iter, still crawling, and they had 11 ide four miles

On the same day, a transport panned the Yukon Territory at 14,-300 feet with the cabin heater broken and the temperature at 70 below tero. A sergeant tried to that his iteczing feet with a blowtoich

That was one day in the coldest Alaskan winter in 25 years 1942-43, the first winter we tried to ferry over Alsib Several hundred planes should have been turned over to Russian pilots at Fairbanks, Alaska, that December Only 14 got through There was ice in the Moscow pipe line

The jun had to be broken The Nazis were wheeling new tanks up to Stalingrad faster than we were delivering cannon-firing P 39's to blow them up Hundreds of lend lease planes were being sunk in their crates on the shipping route to Murmansk A Presidential directive crashed down Movement of aircraft to Russia was to have first priority, even topping movement of planes for the AAF If Stalingrad were lost, our ally might be lost, and the war

It was a man-killing, heartbreaking job, and it was done by the Seventh Ferrying Group and the Alaskan Division of the Air Transport Command This winter planes have gone through hundreds at a time, guided by radio beams, refueling at great air bases with paved runways and heated hangars

In the beginning, the gas stops

were one-way dirt strips Mechanics lived in tents, repaired planes outdoors Radio was a bad joke Pilots navigated the 1935 miles from Great Falls, Montana, to Fairbanks by following someone who had flown it before The maps showed big rivers truly, but some lakes were indicated 50 miles from their real position, and a peak marked 4000 feet might be 5000

In the spring, melting snow makes temporary lakes, easily confused with real lakes on the map In summer, great fires smolder in the muskeg, and smoke from them is thick enough to "sock in Fort Nelson, Fort St. John and Watson Lake for three days running In winter, snow blots out lakes and rivers used as check points. If there's wind, blowing snow obscures the runway, you re blind during the last so feet of letdown. If it's calm, the snow blanket ruins depth perception and evergreen boughs must be set out along runways to give the eve judgment

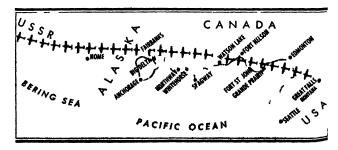

Even now, with good strip maps and plenty of radio range stations, pilots get lost Snow static jumbles reception Mountains and ore deposits twist radio beams into dog legs or bounce them to uncharted courses Pilots are warned that the steady

on course signal may switch instantly to a mad gibberish, or false cones of silence The needle of your automatic direction finder may werve to a display of northein lights, or to the nearest tall mountain Weathe changes are sudden and violent Nome Air Base goes from unlimited visibility to zero-zero in 20 minutes Clouds overhang the route, deck upor deck, with 10 mg in them the year round

Forecasting is done by the 16th Weather Squadion, USAAF The have 125 stations along the route some in such desolate spots in the Arctic Circle that mail and supplic are dropped by parachute The seven or eight man crews are volunteer sifted for personality factors. The may see no new face for six months and they must be able to take it

The Alsib ferry route got its reastart in June 1942. The Air Transport Command chose Great Falls is the southern anchor because it has more than 300 crystal clear flying days innually. Northward was string of RCAF training fields all the way to Edmonton Beyond were some bush-pilot strips. It was an airway but a ramshackle one. Intermediate fields had to be built. Existing fields had to be expanded to war size and paved.

Edmonton, for example, had we'll established an port. But in the hot summer of 1942, American heave bombers sank to their hubs in similar

mering asphalt Colonel Ted Bolen hustled out to a camp where workmen were awaiting transportation north to build an airport at Big Delta, on the road to Fairbanks He made a speech He had 80 planes stuck, and they had to get to Alaska — Dutch Harbor had been bombed He had a trainload of steel matting on a siding, but there weren't enough soldiers to unload it or lay it not any money to hire civilians. Who would volunteer — for no n iv⁹

They all voluntcered, 1150 men They laid the matting at a speed money couldn't buy, finished at three o'clock in the morning, and at dawn cheered the bombers on their way.

The first planes sent over Alsib for Russia were A 20 attack bombers, five

of them, departing from Great Falls on August 31, 1942 The Seventh Lenying Group flew more bombers through that autumn, mixed with (47 transports and hundreds of P-39 Anacobia fighters American boys fresh from transition training set them down at Fairbanks with eggshell care Russian pilots who took over were older men, harder, and all veteran killers of Nazis They flew combat style, taking all the airplanes had to give They had to fly to Norne, across the Bering Strait, and on to Moscow, almost 6000 miles, and they were in hell's own hurry

THREE FOURTHS Of a century after Secretary of State Seward bought Alaska from Czar Alexander II, the Russians have come again Along the frontier streets of Fairbanks stride Soviet fliers in clumping leather boots, balloon like blue pants and fur parkas waiting to pick up planes from U S pilots and fly them across the Arctic wastes to the eastern front With the fliers are many women incchanges. The Russians enjoy the American steak and mashed potatoes in Fairbanks restaurants the milk shakes in the drugstoics and they shop in the stores for the same things GIs and Army nurses buy tobacco, perfume, feminine underwear trinkets They are supplied with U S currency - including old large size bills left in Russia by American troops of the Archangel expedition in 1919

The Russian and American fliers speak a different language, but basically they are not disimilar. They share a love of rollicking songs, a zest for adventure and in enthusiasm for such delights as good food, pretty gals and vividly decorated Arctic clothing. Between the pilots of the two countries there as much mutual admiration. Bravery salutes bravery, and the men who fly the Alsib route are braver.

The icriving went well — until the cold of that first winter struck Mechanics in in and out of heated tents in 20-minute relays to service planes Barchanded, they lost fingers With hampering gloves, it took two hours to change a spark plug Spilled gasoline froze hands like liquid air Frostbite lopped off toes. One unlucky captain lost his lower lip Men disappeared in blizzards 15 feet from the runway, and rescue parties used caterpillar tractors to find them.

But engine starting was the worst problem Good advice came from proneer fliers of Alaska Territory who said to dilute the oil with gasoline when the plane lands, then waim the engine in the morning with a fire pot, a sort of overgrown blowtorch Brigadier General Dale V Gaffney, commanding general of the Alaskan Division, now has it down to a sure start system. Dilute the oil, immerse an electric heating unit in the oil tank and let it cook all night, in the morning, blast in the heat for a couple of hours. But first you have to heat the heater, to get it started.

Twenty pilots have been killed on the Alsib run and some have never been found A forced landing was almost sure death the first winter. But the rate of plane losses is now down to one out of 120, according to Lieutenant Colonel Kermit R. Hatt. commanding officer of the Seventh Ferrying Group. Most pilots are save!

In December 1943, the Alaskan Division set up a search and rescue unit under Major Joseph Γ West-over, a veteran pilot Since then every lost plane has been found

Pilots cranking on a Gibson Girl ridio have brought a rescue plane overhead in 40 minutes. Others at tract help with smoke columns or an SOS trampled in snow and garnished with fir branches. Lacking these aids, search pilots look for charried terrain or cracked treetops, sure sign of a wreck. If the search plane can't land on skis or floats supplies are parachuted, and rescuers proceed overland with dog teams.

Pilots who survive bail outs and forced landings bring back weird storics of licky breaks Lieutenant Thoras A Dichiara, who jumped in a winter storm without gloves, rations or matches, landed near the

only railroad track in hundreds of miles Fifteen minutes later a train which runs only once a week came along and picked him up Lieutenant Ciane, of Philadelphia, sole survivor of a bomber crash, found a trapper's well stocked cabin Eighty four days later he made his way back to base

Before pilots go over the route, they get special briefing on survival in the Arctic Feet are the first worry, and sheepskin lined flying boots, once highly regarded, proved poor stuff on the ground Perspiration and bits of snow wet them inside, and wet feet freeze Mukluks are better — light cannot boots with soft leather soles, loose enough so that several pairs of socks can be worn I teking mukluks pilots are taught to wind strips of parachuse cloth into a legging

General Gassney considers Alsib the toughest run in the world — com purble to the Hump line from India to China, but almost five times as long, requiring more than 20 air bases and emergency fields. The most isolited of these is Galena, lying on a bend of the Yukon River between Fairbanks and Nome Last spring the Yulon backed up from an ice jam putting runw ivs barracks and hang as under six feet of water Rescue planes discovered all of Galena's men huddled on three gravel piles in the midst of ice water and floating debris

When Galena is waterproofed — more diking will do it — the Alsib route will be an all-season airway from Montana to Nome It is already the most thoroughly winterized airway in the world, a potential link in peacetime world system, forged complete by the Air Transport Command, a pipe line to Moscow

The Veteran Betrayed

How Long Will the Veterans' Administration Continue to Give Third-Rate Medical Care to First-Rate Men?

Condensed from Cosmopolitan

Albert Q Maisel

Author of 'Miracles of Military Medicine and The Wounded Get Back

better medical care than our own I rom Guadalcanal to Coral Gables, from Normandy to Mitchel Field, I have seen with a proud heart how endless resources and priceless skill have been combined to give our sick and wounded the best that modern medicine can provide

But I have been shocked and shamed to discover that these same service men, after they have received a veteran's honorable discharge, are suffering needlessly and, all too of ten, dying needlessly in our Veterans' Hospitals

Our disabled veterans are being betraved by the incompetence, bureaucracy and callousness of the Veterans' Administration, the agency set up over 20 years ago to insure the finest medical care for them

We have never stinted the Veterans' Administration. We have given it over a quarter of a billion dollars for nearly a hundred great hospitals. Recently Congress appropriated over \$105,900,000 just to run these hospitals. But conditions in these beautiful buildings are far worse than cold statistics can indicate.

In every one of these hospitals that I have visited — from Minnesota to Massachusetts — I have found disgraceful and needless overcrowding

I have found doctors overloaded and hog-tied by administrative restrictions. One man could give his average patient only seten minutes' attention a week. Many of the doctors were in competent men who could hold no position in any well run hospital cynical men who joked about their patients' miseries.

I have found nuises so negligent that they did not bother to wish their hinds after examining one patient with a contagious disease before turning to another

I have seen desperately such veterans served food that would be rejected in the worst Bowery flophouse. And I have seen these same veterans exploited by concessionaires

Then I have gone to many state and county hospitals, just as tied down by government restrictions and labor shortages. Here I've found real doctors practicing real medicine. Here there are lower death rates and higher cure rates. That is why I know that there is no excuse for the Veterans' Administration's third-rate.

treatment of first-rate men — no excuse except incompetence and complacency

I have seen such incompetence in Veterans' Hospitals of all types the mental institutions, the general hospitals and the tuberculosis hospitals. But because no single article can tell the whole grim story, I shall concentrate on the last of these three groups

Last June Harold Schweibert wrote a letter from the bed he had occupied for almost a year in the Veterans' Facility at Dayton, Ohio An overseas veteran of World War II, Schweibert had been treated for tuberculosis in Army hospitals in England and, later, in the United States Then, discharged, he was turned over to the Veterans' Administration for further treatment

For a year he endured that "tic itment" Finally, in despair, he wrote to Dr H H Brueckner, Superintendent of the District Tuberculosis Hospital of Lima, Ohio, begging to be admitted to that institution Here is his description of the Veterans' Hospital treatment

I have lost all belief of recovering in this place I was admitted June 23, 1943 I was only aspirated twice, in July when 1500 cc of fluid were removed and in August when 1000 cc were removed Haven't been exam ined since February 1944 I had a flare up about three weeks ago and being sent up to be fluoroscoped by our ward surgeon, the pneumo doctor refused to do the fluoroscoping and sent back a sarcastic note to our ward surgeon I have made up my mind to leave here and the sooner the better for my own good "

Dr Bruecknei sent Schweibert's letter to Dr Louis Dublin, vice-pres-

ident of the Metropolitan Life In surance Company and at that time member of the Veterans' Administration Medical Advisory Council Dublin had been fighting for improvements in the Veterans' Tuber culosis Hospitals But two weeks later, Dr Brueckner wrote another letter It read "Harold Schweibert will not have a chance of coming to this hospital for removal of his pleural effusion He died July 2 of apparently cardiac failure and cardiac embar rassinent probably because of severe mediastinal shift caused by effusion"

In simple English that means that Harold Schweibert died because the wall separating the right and left lung was forced against his heart by the fluid that gathered in his lung cavities—the fluid that Schweibert begged to have removed

An isolated case? I have records of many cases of shocking neglect. But let's see what the Veterans Administration itself says.

Its last published annual report showed that more than ten thous and men were treated for tuberculosis and discharged from the hospitals during the fiscal year But only 2,3 were discharged as arrested cu es—10ss than one "arrest" achieved out of every 43!

New York State TB hospitals, excluding, for the sake of fairness, Ray Brook Sanatorium, which takes mostly carly or minimal cases, achieved an arrested condition in 25 6 percent of all the patients they discharged—a record more than 11 times as good as that of the Veterans' 4d ministration! Even in cases classified as "far advanced" when admitted, more than 15 percent were dis

charged as "arrested" — still six and a half times as many as the Veterans' Hospitals attain for all cases, including minimal

Let us make another comparison Of all the veterans treated for tuberculosis, only 3 67 percent are discharged as "quiescent," "apparently arrested" or "arrested" But New York State's hospitals (Ray Brook again excluded) discharge 48 i percent in these favorable classifications

What about the death rate in these so-called hospitals for our veterans? During the last recorded fiscal year, 1117 patients — exclusive of the "run-aways," whose hospitalization was in complete, and those whose condition is not stated — were discharged alive. In the same period, 1922 veterans died in these hospitals.

This is no war created situation. The Veterans' Administration has been "achieving" this desperately poor record for two decades. And it has been publishing figures in its annual reports which, though technically correct, are actually deceptive

The trick is simple The reports do not figure the death rates as a percentage of the total number who complete treatment Instead, they figure it as a percentage of the total number discharged And that total includes more than 58 percent who never complete treatment at all — the men who run away "Against Medical Advice" or "AWOL" because they see how few are cured and how many die, the men who prefer to go elsewhere for treatment, or to suffer and die quietly at home Those who die outside usually after leaving a Veterans' Hospital in disgust — are just as dead, but they don't clutter up the statistics! By such juggling with figures the Veterans' Administration manages to make it seem that the death rate in its tuberculosis hospitals is only 18 96 percent Even so, that rate is 50 percent higher than the average death rate of all the 92 T B hospitals approved for "residencies" by the American Medical Association

One reason for this appalling result is that the Veterans' Hospitals are despeiately overcrowded — despite official evasion of this fact. At Castle Point, N. Y., for instance, there were 582 patients on October 3, 1944. Yet Castle Point was built for 479 patients. I asked Colonel Carleton Bates, Manager of the Facility, how this miracle was accomplished.

"Oh, ' the Colonel replied, "we've actually raised our capacity to 625 We do it by the more econonical use of space"

By robbing patients of day 100ms, diet kitchens and toilet facilities, by crowding beds the Veterans Ad ministration has "stretched" the same facilities to serve 30 percent more men than they were built to serve

Another reason for the high death rate and the sky-high number of "iunaways' is that the veterans' doctors are overworked. The excuse is "the war." Yet in the county and state hospitals I have visited, hit just as hard by the Army's call for doctors, physicians carry nothing like the burden of cases heaped upon some veterans' M.D. s

The county sanatorium in Minneapolis, Glen Lake, had 451 patients on September 19, 1944 It had 11 physicians — one to 41 patients But in the same county on the same day, the Veterans' Facility could spare

only three doctors for 179 patients in the TB Pavilion — one doctor to 59 patients The third doctor had just arrived During the previous six months there were only two doctors for an average of 150 patients

The record of the Facility was bad Out of 125 discharges in the first seven months of 1944 28 left the hospital in coffins Seventy went out "Against Medical Advice." Only 27 achieved "in remum hospital benefit." Seventy eight percent of the men treated for TB achieved no benefit.

At Glen Lake Sanatorium three quarters of all discharged patients achieve a rating of improved or better

If the overloaded veterans doctors were at least first class I B specialists, the patients might have less cause for complaint But here against, the Veterans' Administration has a shocking record

The Assist int Medical Director of the Veterans Administration in charge of all tuberculosis hospitals told me that he has 'more tuber culosis specialists than any other outfit in the United States

"How do you select these specialists? I asked

'Well, they come to us is general practitioners, he answered 'All we require is an MD and one year of internship Then we give them a four month,' orientation course at one or our I acilities."

Four months in ikes a "specialist' in the eyes of the head of all the Veterans' TB Hospitals! Not a single Veterans' Hospital has been approved by the American Medical Association for residencies in chest surgery or tuberculosis The reason? Residencies

cannot be offered unless the American Medical Association judges a hospital to be "in a position to furnish acceptable training" Obviously, synthetic specialists who qualify by a four months orientation course cannot give 'acceptable training' to anybody Nowonder Dr Dublin has written 'MD's of good repute just will not stay'

There are exceptions, but the majointy of the physicians I have interviewed have been tired or evincal nien, whose goal seemed to be to finish the days work and get home

Under such physicians — and under the kind of administration that sets such standards — the treatment of tuberculosis cases cannot but be far below average

Consider now the in itter or chest surgery During the list 20 years physicians have developed a dozen operations to collapse the infected parts of the lungs so that they rest Sixty percent of discharged patients at Glen Lake San itorium receive col lapse therapy. In New York States TB hospitals the 2239 patients treated in a single year received abo pneumothoraxes (the simplest type of collapse therapy) and 907 had more complex operations At the Minnesota State Sanatorium, 58 percent of the patients receive pneumothoras or other surgical treatment. But in the Veterans Hospitals, only 1968 chest surgery operations were performed in a year for 10,718 tuberculosis patients treated Only 184 percent of the patients received any chest surgery whatever

Nor is that the worst of the sto v At some Veterans' Hospitals, chest surgery is practically unobtainable From at Washington, D. C, under the very nose of the Veterans' Administration Central Office 190 T.B. patients received a grand total of eight operations, all induced pneumothoraxes. Yet this Veterans' Hospit al is listed as a Chest Surgery Center.

Poor treatment, backward treatment and no treatment at all? are not all the tuberculous veter in has to complain of At every Veterans Hospital I have visited, a private concessionaire has been allowed to run a "canteen" Invariably the patients complained about these "licensed profiteers"

At Castle Point last year, petitions signed by hundreds of patients complained that the dishes in which food was served to contagious TB cases were afterward used — without sterilizing — to serve other patients and visitors. They also complained about high prices.

One patient told me of being hirged 35 cents to eash a \$20 Government check. Whereupon the main in the next bed become highly indigent. He had been charged 65 cents!

After six nonths of repeated prote its, this concession me was finally removed — only to have another private check casher installed. For eashing Government checks at no risk, this individual now nots over a hundred dollars, profit in a single morning s work.

A universal complaint of the patients concerns the food I ast September, at Castle Point, 400 patients signed a petition begging fer better food Three weeks later, this is what I found being served is the day's main meal one small pot of cold tea, two thin slices of white bread, a tiny pat

of butter, a few thin slices of stewed peaches and — the main course — a beet stew containing six or seven tiny chunks of greasy and it swimming in fast concealing gravy. All cold as the grave

Not is Castle Point unique among Veterans' Hospitals in its bad food My records show complaints about the food from almost every patient interviewed in every Veterans' Hospital I have visited. And this in the treatment of tuberculosis, where good food - and plents of it — is considered an essential for successful treatment.

One might expect that this combination of slamped food, skimped service and skimped medicine would at least not cost the taxpavers too much money. The cost at Glen I ake Sanato ium. Minne apolis, is \$38, a day per patient. At the Minnesota State Sanatorium it is \$271. But the cost of caring for a 1B case in a Veterans' I reality is \$580 per day a first class price for third class incdicine.

In the face of all this evidence one might well wonder "Can reform help? Can anything be done—now—to insure decent treatment, a fighting chance for a cure for the thousands of veterans now heided into these excuses for-hospitals?"

Men such is Dr I ouis Dublin have fought for reforms for many years But all such protests have been in vain Indeed, many prominent plysicians have considered the task of reform a hopeless one

I he noot of this cancer is in the Central Office in Wishington, among the men who have long been awite of this mess and have failed miserably

to clean it up The cure must start there, with drastic changes in both personnel and policies Here are specific things the Veterins' Administrator could do, right now, to effect

a cleanup

He could bring in new blood stirting with a new medical head of all the Veterans' Hospitals - a man with an outstanding accord both as a doctor and a hospital administrator This 'new broom could rid he hospitals of the wort of their present per sonnel He could give the rest a chance to practice real medicine, by freeing them from paper work and from the 14m of restrictive orders that now beat even the better men into a self protective policy of "playing it safe and 'stinding pit' He could make the hospitals teaching hos pitals, keeping the older doctors on their toes by making them train young interns and residents

He could eliminate overcrowding immediately by using the same de vice the Army and Navy have used—leasing resort hotels until new hos pitals can be built. But most of all, he could restore simple, common hu manity to the Veterans. Hospitals. The individual veteran would cease to be a 'case or a number' or a 'compensable'. He would be recognized ion what the country and Congress me int. him to be an honored citizen entitled to the very best his country emprovide.

All these things could be done right now Whether they will be done is up to the Administrator of Veter ans Aslair — and up to the American people who hare him pay him and who can give him his orders

Doctor's Dilemma

A THIRD VI AR medical student was delivering united his first baby in one of the poorer sections of South Botton. As is the case in 'home deliver es,"

most of the family were present

As soon as the infinit was boin, the nervous student held it up for the customary spank. To his horior, the baby slipped through his fingers, falling harmlessly onto a pile of blankets on the floor. The grandmother, who throughout the entire procedure had been sitting calmly by the kitchen stove, began to hurl a stream of abuse at the frightened young medico. Quickly recevering his wits, he said professionally. He ll be all right in id im. Sometimes we have to drop 'em three times before they start breathing."

— (numbuted by Dr. I. F. Hackworth

Lieutenant General Vandegrift of the Marines tells this one

A patient came to one of our field hospitals with the complaint that he was unable to sleep at night, and the doctor advised him to eat something before going to bed

But, doctor," the patient reminded him, "two months ago you told me

nev to eat anything before going to bed "

The good doctor blinked and then with professional dignity replied 'Ms boy, that was two months ago Science has made enormous strides since then '

It Pays to Increase Your Word Power with Ed Funk

Your vocabulary is important to your relationship with other people. If the words you use are stale and trite you give the impression of a colorless and commonplace personality, while a broad command of linguage in all estous a welcome addition to any circle. Fortunately, you can, if you will, steadily increase the number and variety of the words you know. Don't slide by the unfamiliar words you encounter in your reading look up their meaning and learn how to use them.

Here's a quiz designed to test your vocabulary. The following 20 words appeared in a recent number of this magazine. After each word you will find four choices, a bic and d. Underline the word or plusse that you judge to be nearest in meaning to the key word. Compare your results with

the inswers on page 52 and find your vocabulary rating

- 1) cutcl a a topographical map is a wheal flaging card c a combination of seprete firms to maintain prices d a two wheeled soman reliale

The extraordinary career of Richard R Wright, born a slave and now kinding Negro banker of the United States

Company of Philadelphia He thinks that his best years are still ahead

Every working day from 8 30 to six o clock Wright sits in his small, crowded office, busy with telephone, correspondence, Negro and white callers discussing losins and payments, the affairs of his race

Io get the full diama of this man's accomplishments clance back to the day more than 80 years ago when news of Negro freedom came to a south Georgia plantation. Harriet, Dick Wright's mother, went to her mistress. 'Are we really free?' he said fearfully Reassured, she gathered up her children and wandered, afoot, 200 miles northward. After many months near Atlanta she found a school that had been opened to teach Negro children to read and write. Dick, then aged 11, entered at once.

One day the head of the Freedmen's Bureau General O O Howard, visited the school "What message shall I take from you children to the people in the North who are helping you" he asked A boy rose in the back row 'Massa, tell 'em we're rising!"

That striking answer of little Dick Wright reached the ears of John

HEN Richard Robert Wright had taught school for 50 years, he decided to quit Born a slave, he had usen to be president of a Negro college in the South, a distinguished member of his rice Now he thought he d better give ounger teachers a chance But Wright was only retiring from teachnot from life

For yours I had been telling my haduates to get into business hours. But they would come back, and well me there were too many handings for a Negro. I realized that the worst handicap was a firm belief among both whites and Negroes that the Negro hadn't any head for business. I thought it was up to me to disprove it."

So, at 66, Wright became a banker II at was in 1921 Foday, at 90, at 1m, vigorous man with fine cut leatures, white hair and sharp dark eyes, Wright is the leading Negro banker of the United States, president of the fitizens & Southern Bank & Trust

Greenleaf Whittier, fighter for human liberty, and Whittier immortalized the phrase in his poem Howard at Atlanta Thousands of times the words of Dick Wright have been repeated in lectures, sermons and songs They became the slogan of a rising race

Dick Wright pushed on through school, finally graduated from Atlanta University Then he started a school of his own for Negro children, tuition 50 cents a month One day a mother came with 25 cents — one "ition" she said, half the money for her little girls first month's schooling Soon she brought in the other 25, making it "tuition"

When Dick Wright was appointed first president of Georgia State College for Negroes, Dr Oliver Wendell Holmes sent him a message "Man, you're not rising, you're risen!" Wright was president of that college for 30 years, fighting for the right of Negro boys and girls to an education not only in handicrafts and farming but in science, languages and the a ts

Then came the decision to start a bank In his teaching days Wright had organized a national Negro teachers' association. Now he wrote several hundred Negro teachers all over the United States, asking whether they'd like to buy shares in a new bank to be owned and run by Negroes Entirely on his name he raised \$156,250 Then he visited various cities to determine where to locate the bank Finally he fixed on Philadelphia To a man, the leading bankers of Philadelphia advised him against it There were enough banks in Philadelphia, they assured him, and besides he didn't know anything about banking "That just made me, determined to go ahead," says Wright

He had three grown sons, all college graduates, and he persuaded the youngest, Emanuel, to join him in the banking adventure Father and son enrolled in a course in banking at the University of Pennsylvania Me in while, Wright bought and remodeled an old building in a section of Phila delphia that was predominantly Negro

The Citizens & Southern opened with \$125,000 capital and 300 Negro stockholders. From the start, Wright used his bank as a means of creating better relations between white and colored people. For instance, the streets in that area were unpaved. Wright got up a petition to the city fathers which was signed by hundreds of people, black and white. Ultimately the district got everything tasked for, pavements, street lights, traffic lights "That bank is the best thing that ever came into this part of town," said a white shopkeeper.

Wright promotes thrift among the people of his district, colored and white "The Negro is often said to be thriftless and unreliable," he says, "but as a banker I have never been able to see any difference between white and Negro The e are thrifty and thriftless people among them both in about the same proportions"

He encourages individual initial tive by lending money to ambitious youngsters. One time four young white men came to ask his advice about starting a hat factory 'I looked them over. They had saved about \$400," he says 'I told them when they had their plans ready to come back and tell me what they

needed Ultimately I lent those boys \$10,000 They made good, and paid bacl every cent of it"

Another man who wanted to start a sweater factory looked all over the city for credit before he came to Wright 'I thought he had character," Wright told me "Character is more important than collateral So I lent him \$300 to get started Last year that man banked \$219,000 with us"

Dozens of small Negro enterprises in Philadelphia, such as laundries dry cleaning establishments, groceries, bakeries and schools, have got started or survived crises by the help of Wright's bank

'Of course there are handicaps for the Negro in business,' Wright sud, 'but I always say to a young man studing out, 'Don't have a chip on your shoulder, don't be aggressive Go ahead straightforwardly as if you expected to be treated like anybody else, and you usually will be Your ability and honesty will do more to put you ahead than your color will hold you back"

"In the South it's different," he told me 'But the South today is going thead more rapidly than the North in tolerance and fair play for the Negro I predicted 25 years ago that this would be true, and it is "

The president of a large downtown Philadelphia bank, after telling methat he dibe proud to wilk up Broad Street with Wright because he admired him so much as a man, added hesitantly "But I don't think he's hard boiled enough to be a good banker. Why, the other day the Myor—" everybody calls Wright "Major" because he was a paymaster with that rank in the Spanish-Ameri-

can War — "the Major came in here asking my advice about making a certain loan 'Major,' I said, you'd be crazy to make such a loan! That man hasn't got anything!""

I repeated this remark to Wright "Well," he said, 'maybe I'll make that loan anyway I think the man has character"

A member of Wright's board of directors told me that sometimes when the board has turned down a loan Wright goes ahead anyway

'Of course," the M yor commented, "every bank in the world gets fooled on borrowers and loses money but it's a cur ous thirg that on those losins we've never lost a cent

One time a group of Negro profes sion il inen formed a corporation, borrowed morey from Wright's bank hired aminager and started a laun dry It looked like a sure thing But the management was bad, and the business fuled Since it was a cor poration, no individual was liable for the debt. Yet the incorporators raked up all available assets and repud the bank in full I failed to make suic the compiny had good management," Wright says "But my estimate of the character of those nich was right '

Loans to churches are often considered by banks in the nature of charity Wright's bank has loaned money to over 100 Negro churches in and around Philadelphia, and every obligation has been met

Recently he called in 20 white businessmen who had banked with him for ye its and asked if they hid any kicks or suggestions "Yes, I have a kick," one of them said "Why did

you ask only white men here today? The next time get some Negro businessmen, too We re all dealing with you together "Wiight's ceaseless efforts to break down barriers between the races in a business way has had its effect

In the 1933 banking crisis, the Citizens & Southern was one of the first Philadelphia banks to reopen "Some of those big downtown banks whose presidents had advised me to stay out of banking," said the Major with a humorous squint, "didn't reopen at

Today the bank's \$125 shares are worth \$143 in open market The bank has some 10,000 Negro depositors, 1000 white depositors Total deposits are \$2,312,000 A small bank for a big town, perhaps, but a big bank in its implications for the Negro people Today the United States has 11 Negro banks The other ten are in the-South

On the well of Wright's office is a photograph of the first meeting of the National Negro Bankers Association, which Wright organized Here is a picture of the airplane that Wright bought in 1939 and sent, with a Negro crew, on a good-will flight to Haiti and then on a trip around the Negro colleges in the South That trip did much to promote the enlist ment of Negro youth in our air forces

And here is a picture of this year's celebration of National Freedom Day, the day on which President Lincoln signed the Joint Resolution of Congress proposing the Thirteenth Amendment, and thus insured the legal end of slavery The Major orig inated the idea of celebrating this day — February 1 — and already 1t is observed in many states. As he and his associates conceive it, National Freedom Day is not only a celebra tion of Negro freedom but a day to challenge bondage everywhere, to as sert the right to freedom of all men

So, "Tell them we are rising" has a constantly widening meaning as the Major repeats it

Maid's-Eye View

A FEW DAYS after a Chicago dowager, a Mrs C, hired a new houseke per, she found a letter written by the former housekeeper to he successor, which gave a complete account of the house and its hired help. Shamelessly she read the communication The butler, it said, was a pleas int man. The chef was inclined to tipple The head housemaid was ery vell principled — and so on "As for Mr and Mis C," she read, "they behave as well as they know how"

THE Richard Himbers were being interviewed by a maid who explained that she left her last position because she couldn't stand the way the master and m tress were always quarreling "That must have been unpleasant," remarked Hımber

'Yes, sir," the girl declared, "they was at it all the time When it wasn't me and him, it was me and her!" - Sid Ascher in Caravan

Lest We Forget

 $_{
m v}$ JAPANESE HELL SHIP

--- By Ira Wolfert

I wo American survivors from a torpe doed Jap prison ship tell their ghastly and authenticated—story

Calcutta has lived long in history, but this war has produced a story of Americans that is even more terrible

Two of the survivors relate it — Marine Corps Scrgeants Verle Dwight Cutter, 26, of Denver, and Onnie Ellsworth Clem, Jr 25, of Dallas

"About 650 of us were taken out of the Jap prison camp at Lasang on Mindanao, in the Philippines," said Cutter "They stood us in ranks of five and looped a half-inch manula rope through the pants of the men on the outside of the column Is a man had no pants they tied it to his wrist, and if the wrist was ulcered they were kind about it — they looped the rope around his neck

'There was plenty of room on the road to spread out and walk comfortably, but they pulled the rope tight and squeezed us up against one another. Then they walked us that way about two and a half miles to where a freighter was waiting. Some of the fellows' feet were so sore they had to hobble. Some had malaria. Two or three were crazy and kept shouting.

"None of us were exactly normal any more We'd all been Jap prisoners at least 29 months The Death March, Cabanatuan, Davao Penal Colony — we'd all been there Finally we were taken aboard the prison ship and stuffed into the hold "

"Stuffed is right," said Clem "I came along with a party of 100 from the Matina Airport camp and they stuffed us in among the 650 others Everybody was leaning and lying on everybody else The air was so soupythick and bad smelling that after a day of so even the strongest of us lost our energy We just lay there all dopey and stupid"

Cutter said, 'A boy next to me had inalaria I'd say his temperature was about 108 I'm pretty near an expert on malaria by this time, I've had it 48 times since Bataan In all those times, the Japs gave me a total of 16 grains of quinine to doctor myself *

"'Look, fellows,' I said, 'this boy's awful sick He's got to have a place to lie down' We all started pushing and shoving and finally made room enough for him

"After a while we worked out a system A fellow would take a turn lying down—for one hour in the day and one in the night. Then he took a turn sitting on his knees or squatting on the backs of his legs, whichever rested him more. After that, he took a turn sitting with his knees pulled up under his chin. We went like that for 18 nights and 19 days."

"At first," said Clem, "we thought,

^{*}The standard minimum dosage for clinical malaria is 30 grains per day

'Oh, I ord, when is this going to end?' But after a while we didn't think anything We were just numb"

"We were fed twice a day," said Cutter "They'd lower the stuff in buckets, each meal was a scoop of steamed rice and about four ounces of thin soup for each man The Japs had cannotes — a kind of sweet pot ito — and they made our soup by boiling the peclings in wat i

'We hid only two thirds of a cup of water a day each Finally the Japs scaled the hatch entirely. At first, they'd left one board off on each side for light and an Now it became pitch-black in the hold and so stuffy the men panted like winded dogs.

Why did the Japs treat the men like that? This was not a punishment, our men were merely being transported from one part of Mindan to to work in another

Cutter threw up his hands 'I ve given up trying to figure out why the 'Japs do anything' he said 'I was with the Maines in China before the war and I ve spent five years watching Japs, fighting them and being their prisoner. And all I ve learned is to give up trying to figure out what makes them do what they do'

Clem said "More than half the time we were on that ship, there was no reason at all for us to be there We just lay tied up at a pier I think they kept us there because they just didn't give a damn whether we lived or died"

"They re really so dumb it's pecular,' said (utter "I remember at Davac Penal Colony, I was building a fence around the chicken yard There was a chicken there that would

break its eggs and eat the shell Now, everybody knows a chicken does that because it's not getting enough calcium in its diet. But when a Jap saw the chicken do this, he slapped it into a little coop and kept it in solitary confinement for three days. He put a sign on the cage explaining that the chicken was being punished for breaking its eggs. None of the Japs seemed to think it funny. Once I saw a guard cut off the tail of a carabao to punish it for stepping on a harrow."

'There was a strict rule against work details bringing chow back into camp," said Clem We all sneaked stuff of course, but could count on a beating with clubs and ritle butts when we were caught. At Davio there were plenty of or inges on the trees but when the Japs caught us taking some, they lined up the whole detril in two freing rows and ordere l us to slug each other Then they laughed like kids at a Mickey Mouse Of course we hat soft and aclegraphed each punch so the man getting hit could roll with the blow. The Japs went up and down the line and if they thought you weren't hitting hard enough they'd wallop you with a club or poke a bayonet into you

"I hey ve got a tradition of beat ings," said Clem. Their officers would beat their own men right in front of us, knock them down and whack them with the flat of a saber. The noncoms beat the privates. The three-star privates beat the two-star privates beat the one-star privates. The one-star privates anyther the one-star privates are the one-star privates. The one-star private can't beat anythody but a prisoner or a civilian."

Sometime around four o'clock in

the afternoon of September 7, 1944, the 19th day aboard the hell ship, an American torpedo struck another ship in the same convoy A bugler blew the alert for general quarters, but he got out only two or three scared-sounding notes and trailed off, windless with fear

Cutter looked up the hatch and saw an automatic rifle stuck through the opening Another Jap dropped a grenade down just as the gun opened fire. The Japs were shooting the Americans like rats in a barrel. The grenade dropped ticking at Cutter's left foot. Cutter kicked it under some boards, and it went off, putting nine fragments into his left leg, four into his right leg, and three in each arm

Then a torpedo hit the prison ship "When the first explosion came," said Clem, "everything blacked out for a minute and when I came to, it was so black I thought I was under water I didn't dare breathe Big soft things were bumping into me I thought they were sponges Then I thought I was dead and that this must be what it is like to be dead You float around in blackness and big soft sponges keep bumping you But soon I realized they weren't sponges but the bodies of dead Americans And I found I wasn't under water at all, the blackness was because I had been keeping my eyes closed in fear

"The ladder was full of guys climbing over each other and I climbed with them and got my head out of the hold Then I saw a Jip soldier with a 25-caliber machine gun shooting everybody coming ou! Two bullets hit me, one on the right side of the head and the other just under the chin, gouging deep creases and clout-

"My ears were broken and I couldn't hear I was floundering in a gruel of broken bones and torn flesh, then I was back up on deck again The Jap with the machine gun was

ing me over backward to the bottom

gone, but another Jap was shooting at us with a rifle from the superstructure, so I slid along and got a boom between him and me

boom between nim and me

"There were dead Americans all over The water was filled with the bobbing heads of Japs and Americans I could see the beach about three miles off I remember telling myself, 'You've got a long swim ahead of you,' so I took off the G-string which was all I had on

"A Jap came crawling by and I took his life preserver in my hands and jerked it off him I don't know where I got the strength I couldn't do it now I didn't have any trouble with the Jap, maybe he was frozen

with fright

"Then I went over the side When I hit the water, I couldn't move my right arm because there were two pieces of steel from the torpedo in my shoulder and one in my upper arm I hadn't noticed them before '

In the meantime, Scigeant Cutter had picked himself up after the blast of the grenade and was making his

w by up the iron ladder

No bones were broken by the fragments, but I was bleeding a lot I got about a third of the way up when something knocked me to the bottom again I got halfway up again and then a big rush of water came up from the hold washing me onto the deck That water saved my life, but it drowned everybody below me

"There were three feet of water on the deck and bodies slopping in it A Jap came along, and I willoped him on the jaw with my bloody hand and he tumbled over backward I put my toot on his neck and yanked off his life preserver. Then I noticed the Japs were shooting at me from the superstructure and I pressed flat underneath it where they couldn't get at me.

"Then I saw Hury Meson, a friend of mine, stinding by the hatch and throwing bourds over the side for us to use as life preservers. Duck, Harry,' I yelled, 'they're shooting at you!"

'Suddenly the board he was holding flew high into the air as a bullet hit him. He spun around twice and fell I i in ind groped under the water for him, but the water was sloshing every which way, and it had washed him away. When I got back under the superstructure I noticed my life preserver had beer torn by a bullet I unny, but I h, dn t noticed the bullet hitting me at all.

I went down with the ship I was afraid to move from the superstructure on account of the bullets. Those Japs kept on shooting as if murder lust had carried them past fear, and I swear I heard shots in that last guighing little silence before the ship slid down, taking us all with it."

"I was clear of the ship and swamming hard when it went down," said Clem "There were little spurts of water hitting up all around me I saw an American up ahead hanging onto a plank. The sourts of water walked toward him, fast, then suddenly both his arms stiffened and he sank out of sight. I couldn't figure

out what had happened My mind was like a muscle that had been hit and paralyzed. There were four or five Americans treading water beyond that, and I headed for them. The little spurts of water headed for them, too, and one of the men threw up his arms. Then there was a lot of thrashing around, and soon the whole lot of them disappeared.

'I realized then we were being shot at and I started to swim away from everybody else, figuring I'd have a better chance if I stayed by myself. Then I saw a Jap whaleboat about 100 yards away. A Jap officer was standing with his saber in his hard. The whaleboat made for a group of Americans and the Jap officer leaned over the side and cut viciously at the heads in the water. There were five other whaleboats further away and over each of them I caugh, the glint of sunlight or sabers.

It took me two hours to make the beach. I shiping guerrill is rose up out of the grass. The first one took his pants off and give them to me. I here was still shooting going on all around. Another torpedoed ship had been run up on the beach. The Japs had got off, spread along the beach, and were shooting. Americans as they came out of the water."

"Arifr going down vith the hell ship," Cutter said, "I came up in the middle of a bunch of Japs One of them was holding onto a little dough nut life preserver. I grabbed hold of it, pushed him off and started swimming to shore. I saw Harry Meson lying on his back on a plank. This camp officers were towing him. One had been shot in the leg, yet he not

only swam but kept helping push the plank Bullets had torn Harry's shoulder and cut an artery. There was nothing to use for a tournique, and no way to put it on, so the officers kept working the plank gently toward shore regardless of their own danger. I swam up to help, but by the time I got there Harry was dead. We left him floating on the plank and separated to have a better chance to make shore.

"The Japs on the shore were still

shooting Americans as they came out of the water, so I headed far down the beach and stayed in the water until after dark"

BOTH Cutter and Clem snapped back to firm health from their ordeal with the intraculous resiliency of youth, and a U S submarine took them from Mindanao 21 days after the guerrillas rescued them Of the 750 Americans on that hell ship only 83 are known to have survived

Py giving you 20 checks both of us will profit. You can sell the \$Lio checks for \$L_2\$. And the purch seas, of course will want to keep the autographs and won t cash the checks!

The Man Who Wouldn't Die

Condensed from The New York Sun

Bob Davis

Author of People People Everywhere etc., and for many years columnist on The New York Sun

Because of its tuncliness and at the suggestion of a number of readers this article is reprinted from the October, '39, Reader's Digest

"EDICAL SCIENCE," said the Army surgeon, "is not the last word in saving lives Any doctor who served at the front knows that

'Ill give you one instance," the surgeon went on 'Among the wounded at a temporary hospital behind the lines of Chateau Thierry, in 1918, was an Irishman from Iowa A bullet had entered his right side, back of the collarbone, passed through his lung, diaphragm, gall bladder and liver There were 13 perforations in his intestines, six of them double punctures"

Was he conscious?" I asked

'Thoroughly, and in a communicative mood During the examination and while we were preparit g to operate, he said, in a voice heard by every conscious man in the hospital 'I'll be all right, Doe Don't worry about me'

'We administered ether, opened the stomach, sewed up the perfortions and did whatever else was necessary. It was astounding that he survived. But with surprising vitality he came out of the ether announcing that he was 'all right' Close by were

a dozen other terribly wounded men One of them sat bolt upright, looked at the lowa private and broke into laughter 'If that guy can pull through, so can I,' said he

"From that day until a week later, when I was called to another section the pattent's sole salutation was 'I ll be all right, Doc Don't worry about me' He became the man who would not die and in the very soul of those about him he implanted a determination to live He had several lapse, high temperature and pulse, with distressing symptoms, but not once, even in his frequent deliniums, was he shaken in the belief that he would recover

"He formed a messenger service among the nurses 'You tell that bud over there with a busted conk,' s id he, 'that I've got from 13 to 20 holes inside of me and that I'll be back at the front again Say to that fellow who thinks he is goin to be paralyzed that this war ain t yet started, and tell him to get back on his pins as soon as he can' Io an officer whose right side had been shot away he said So long as your heart is still there you should bother A young fe'ler like you can stand a lot of hard lick and still have the best of it When I get back Im gonna tell my buddies that a month in the hospital is a furlough?

ocul ited every man Out of the 12 more d, four died, but the had so thoroughly influence that they i Doctors and nurses wer that eminated n, crying out so that 'I mall right' of the surgions who he optimist was discharged He told me that every other man in the ward believed that he had been led from the grave by the Iowan

"I hat soldier trught me that a patient discouraged is on the downgrade, and that medicine without hope is hopeless Among the souvenirs I brought back from the war was a letter, written at the front by a soldier who had rejoined his regiment. I quote it in full

"'I'm all right, Doc Don't worry about me'"

The Voice of Experience

IN 1936 when Simon Bolivar Buckner, now lieutenant general commanding our forces in Alaska, was attending a refresher course for colonels, a young instructor remarked that Regimental Headquarters should prepare the programs for company training, because inexperienced captains might make errors if they did their own

Up rose Buckner and ended all argument by saying "Uncle Zeke was known in my Kentucky home town for his wisdom One day a young

friend asked him, 'Uncle Zeke, how come you're so wisc?'

"Because I've got good judgment," the old man replied 'Good judgment comes from experience, and experience — well, that comes from poor judgment!" — Contributed by Bngadier General John W Lang

Taking the Hush-Hush Out of Hernia.

By Paul de Kruit

Thousands of people have it, but few know that it can be easily and simply cured by surgery

IRIEND of mine, a professional man in his early 50 s who had never been seriously sick a dry in his life, was taken with a spell of coughing one morning. Shouly afterward he experienced a pun in his groin. It grew worse and he became mauscated and felt a lump at the site of the pun. He hurried to his doctor, and learned that he had a heinin

Of course, my friend knew the word, but he hidn't the frintest ide a how scrious a herma might be or how crively it might affect the rest of his life. He'd seen quack ads about painless supture cures and trusses. But he d always thought that only those who did he my manual labor developed hermas. He hadn't the foggiest notion of what a herma really was, why he'd developed it, or whether there really was a cure for it

In his ignorance, my filend was typical of most of the 6,000,000 or so Americans who have ruptures. The subject seems to have been generally considered unmentionable. For example, only one article on heima is listed in general imagazines during the past five years.

This taboo is almost certainly due

to the fact that the vist inajority of ruptures occur in the groin, close to the sex organs. Thus the disease has remained in the shadowland of prudery, with the result that its treatment has too often been a field for cheip advertising and quackery.

The ordinary rupture is simply a bulging of a loop of intestine through the muscles in the lower part of the abdominal wall, in the groin where the abdominal joins the thigh. Such ruptures are called indirect inguinal herm is — indirect because they bulge slantwise through the will of the abdomen, inguinal because that so the medical word for the groin. In bulging may remain slight for a long time, but it tends to get worse, finally the loop of intestine in my descend into the scrotum — the pouch that holds the male sex glands.

General belief to the contrary, these hermas are not primarily due to strains or injuries, the ultimate cause goes back to infancy. At about the time of birth, the testicles, which during a boy baby's development remain inside his abdomen, begin to migrate downward. They push the abdominal lining ahead of them forming a sac. This sac pushes down between the abdominal muscles, leaving a passageway, and finally splits open to permit egress of the testicles into the scrotum.

In the majority of youngsters, shortly after they're born, the sac—now looking like an open sleeve—closes at both ends and withers away after the sex glands have passed through it to their normal destination. But in a cert un number the sac persists, it may remain for life. This is the weak spot. This is the site of the future hernia.

Any slip, sudden strain, violent cough or sneeze any lifting or pushing or pulling, may bring on the rupture by pushing a loop of intestine into the sac. Pressure inside the abdomen tends to push the loop farther and futher down inside the sac, so that the weak spot in the wall of the abdomen becomes wider. The sac acts like a wedge, straining and weakening the abdominal muscles which may thin out much like a worn-out hammock.

The hernia may even become choked by the pinching action of the muscl's on the inner opening of the sie. Then the natural passage of the intestinal contents is obstructed. Worse still the blood circulation may be cut off. That sinister event is called strangulation and then's the traffic lights, for gangrene may begin within five or six hours. Without operation the death rate from a strangulated hernia nears 100 percent.

It is far from true that hernia is laigely a dise ise of workers in he ivy industry. Naturally it is likely to appear earlier in a steel puddler than in a clergyman, but even white collar work rs, if they have that inborn and unsuspected sac, may sooner or later develop it

An inguinal hernia raicly strikes

like a bolt from the blue, it's a slowly progressive disease that may smolder for years before it begins to distress its victim. Dr. J. J. Moorhead, New York City surgeon, reports that a very large number of men have inguinal hermas without suspecting their existence for months or years. Yet even in this underground state most exists can be spotted by competent physicians. The possibility of herma is one of the major reasons for a regular medical cheelup.

Women may suffer hermis, though much more rarely than men and these too are likely to be disabling and to end in dangerous strangulation. Hermis in women are due to a weakness at the point where the large blood vessels pass from the abdomen into the thigh. They too can be detected early by a physical examination.

The in youty of rupture victims simply drig out their lives in gn iwing distress and worry. That lump in their groins once it appears, tells their that a vital part of their insides is not where it should be. Their distress is mental too they re afraid to pull push lift, strain or even sneeze

Millions of rupture victims try to control their dangerous and distressing defect by trusses. In the earlier stages of a hernia it is usually possible to reduce it, to push back tempor inly the loop of intestine out of its sac into the abdomen. Then it can — some times — be successfully held back by a truss. But trusses never cure a hernia, they merely appease it

Trusses themselves cause annoy ance that is especially severe in sum mer Morcover, the constant pressure of a truss weakens the muscles so that

permanent cure of the hernia is far more difficult if operation becomes desperately necessary, later, and it's common for surgeons to find that the hernia has slipped by the truss though the patient believes it's controlled I ir from curing a rupture, a truss may contribute to bringing on the dingerous stringulation

We would have it least 240 000 more able fighting men today, but for herma. And it is estimated that the ruptured men in industry suffer, on the average a 25 percent lowering of their working capacity. There is no way to present an inguinal herma but it is one of the most highly curable of all the breakdowns of the human body.

In the past 25 years the rise in the permanent cure rate has been astounding. In the culvagoo's perhaps 30 percent of hermas came book despite operations but ruptured people now have close to 95 chances out of 100 of permanent cure in those

many hospitals where the surgical staffs have special skill and wide experience

Hernia is a simple mechanical breakdown of the human machine, and easy to get at Whit the operation boils down to is this. The surgeon finds the offending hernial sac, ties it off at its internal opening and removes t, then, by a very circful overlipping of abdominal muscles and tendo is, he strengthens the weakened wall of the abdomen

Given skilled surgery, the risk of the operation is extremely low. In many modern clinics the patient can sit up the first day afterward, and start walking around the second. I oday, with local anesthesia, even old people and those suffering from heart disease are no longer denied the surgical cure of their hermis. The operation is so successful that the U.S. Army now accepts formerly ruptured draftees when they we been cured by good surgery.

To the man who rebuilt the Pacific Fleet, morale is the best offensive

NIMITZ and His Admirals

Condensed from Harper's Magazine

Fletcher Pratt

from a late Sunday bath for immediate conference at the Navy Department, no hint as to subject There were Marines at the door that gray December Sunday of 1941, and I a Mari learned that the news was war Already a desultory conversation was going on among Secretary Knox, Assistant Secretary Forrestal, Admiral Stilk and Pear Admiral Nimitz of the Bureau of Navigation

All appeared hampered by lack of information about what was happening out at Honolulu (where the machine guns were still hammering). When the discussion came down to a specific point it was usually Nimitz's suggestion that vis adopted.

He was only one of the burcau chiefs (there are seven) and a rather junior admiral But the keynote of their gathering was whom can we trust?

FLETCHER PRATT served in the War Library Service during World War I, and then became a free lance writer specializing in military affairs. He is a member of the U.S. Naval Institute and the author of several books on sea power and the history of our navy I is latest book, published last year 1. The Navy s. War Mr. Pratt recently returned from Pearl Harbor, where he interviewed Admiral Nimitz and other officers.

Nimitz of Bunav, which in spite of its name was the office charged with handling personnel, would presumably know that, and he was also hen apparent to the command of the Pacific Fleet

A fleet commander in any navy must be removed when he is once knocked out Confidence has been lost In those black hours when the last bombs were still falling on Pearl Harbor it was not evident from Washington how much damage had been done, but it was evident that under Admiral Husband E Kimmel we no longer possessed an offensive navy

Automatically the second name on the list was brought up. The name was that of Chester W. Nimitz. Ad miral Kimmel was his frie id ind he did not wish to compete. But in war no officer has any right to regard per sonal feelings. When Nimitz wis notified that he would take over the Pacific Fleet, he had hardly slept at all for several days, and had eaten next to nothing. Just before he stepped on

the train that was to take him to San Francisco a surgeon beckoned I ieu tenant La Marr aside and told him he was to be head keeper — to see that the Admiral got some sleep and food during the trip

That trip was made under circum stances out of a picare sque novel. The Admiral and Licutenant shared a stateroom, Nimitz was "Mr. Wainwright," with instructions to recognize no one and in fact he did freeze his face up when an old acquaintance hailed him. It seemed a wise precaution Whom could we trust? A freighter had been torpedoed between San Hancisco and Pearl Harbor and PBY's were going down all over what had become a sea of my tery.

La Mair had been with his chief for over a year but on that trap found a Nimitz he had never met before Around Washington the Admir il was known as one who demanded official form and attention to detail Now he became suddenly humin, laughed, told jokes. The first full report of the Pearl Harbor diminge was in La Marr's brief case and La Marr had been instructed to keep it from Nimitz as long as possible With his mind on this the Licutenant was a rotten pupil, before they reached (hicago Nimitz told him he would never be a cribbage player and switched to a whole series of new varieties of solitaire, constructed by himself to illustrate the mathematics of permutation I he I teutenant wondcred who was soothing whom

During a wait between trains at Chicago, I a Mair let slip a remaik about that complete Pearl Harbor damage report I iom this point on the Admiral took command and set

up a routine which began as the Santa Fe train pulled out Nimitz would have a couple of stiff cocktails, a big dinner, then compose himself for the evening with a section of the report, clucking gently as he read murmuring from time to time, 'It could have happened to anyone'

At the coast I a Mair turned back. The Admiral went on by plane to Pearl Harbor. Those who saw his meeting with Kimmel described the latter is trying to draw him toward the building, while Namitz hung back, looking and looking and looking at the wiceks along the shore.

When the men of Pearl Harbor filed into the conference room on December 31 to meet their new chief they brought with their not only the black depression of that disister but the knowledge that they had joined the wrong team. It seemed altogether likely that Kinimel was going back to face a court martial, that the Nimitz team was due to move in But Admir il Nimitz told them that he wanted the Pacific Fleet staff to stay and work with him, without change.

That moment has been described as the true crisis of Pearl Harbor, the victory following the defeat which made all the rest possible. It was also the first of daily conferences with all the ranking officers at Pearl Harbor present and the Admiral in the chair

These gatherings were not all sweetness and light, especially in the beginning when the news was universally bad. The air officers, who led the only effective striking force the Navy then possessed, were resentful over the first piece of news that had met Nimitz on his arrival — that the carrier task force for the relief of

Wake had been recalled because a Jap fleet had appeared off the island

On the other hand the "battleship admirals" felt thrown into the background by the air forces. They were honestly convinced that sending cruiser-carrier forces into waters where they could encounter enemy battleships might result in a disaster that would lose us the war

This strategic question was settled at Coral Sca in May 1942, when our carriers were trapped against Australin by the Japanese fleet rounding the Solomons, and the Jap battleships fled from the contest but the important point here is Niniitz's solution of the personal question. Early in these discussions the violence of the argument reminded him of a story. He told it, and was rewarded by seeing faces relax into laughter and the conversation, when it was resumed, go forward on the basis of an effort to find common ground Nimitz developed the story-telling technique out of an extellent memory and a literary skill which permits him to furbish up many an atem dredged from an old volume to fit a new case

The preparations for the Saipan operation of 1944, for example, produced a few verbal fireworks between Army and Navy commanders "This all reminds me," said Nimitz, 'of the first amphibian operations — conducted by Noah When they were unloading from the Ark he saw a pair of cats come out followed by six kittens 'What's this' he asked 'Ha, ha,' said the tabby cat, 'and all the time you thought we were fighting'"

(When the submarine Darter asked permission to cruise outside her assigned area into another where she thought she might find more "meat," Nimitz dictated a reply "Yes, my darling *Darter*, shoot your fish at the Japanese, but duck their patrols like you orter" The staff thought it too undignified to send)

Nimitz desired above all to familiarize himself with the thought patterns of the men around him A Navy custom requires the commander of a ship or group to call on the ranking admiral when he enters harbor. It was generally assumed that the custom would be discarded on the coming of war, along with such matters as wearing dress swords Nimitz made the call obligatory The visitor would be introduced and asked to sit down Then he would immediately be faced with embarrassing questions The Admiral was interested, however, less in the answers than in the way in which they were made He was looking for men who are at their best in meeting a particular type of difficulty This is one of the iersons behind a striking feature of the Pacific war — the frequented anges of command It is the Nimitz method of picking a commander according to the task to be performed

Scinctimes Nimitz confers with the Comminder in Chief of the U S Fleet, Admir il King, on the Pacific Coast, both men flying to the meeting place Such journeys are the only occasion when Nimitz takes to the air He came up through the submarine service himself, does not particularly enjoy flying, and always returns exhausted from these trips

At one of the earliest of these conferences, the Marshall-Gilbert raids at the end of January 1942 were decided upon, as a practical experiment

to shed light on the then debatable question of whether cruiser-carrier forces could take care of themselves on a long-range oceanic move. It is significant that the commander chosen was Halsey — Nimitz had already marked him as a fighting leader who would slug on through if faced by unexpected odds.

When it was decided to go into the Solomons in the summer of 1942, Nimitz asked that Vice Admiral Robert L Ghormley head the operation That big, bald, alternately smiling and sulphurous officer is one of the most intelligent men ever to wear the blue and gold, and a strategist of a high order Moreover, he had inade a special study of the geography and oceanography of the Solomons area

So Ghornley took command of our first offensive And on its second night, off Sivo Island, Jap torpedocarriers sank four heavy cruisers and crippled a fifth, the whole heart of the expedition

On the morning the landings were to be made in the Solomons, Admiral Nimitz stepped outside the door of his office to his pistol range and, as was his custoin, worked off the nervous tension by banging away at the target The first, good news was brought to him there he knocked off and went back to work. When the story of Savo Island reached him, the Admiral stayed on the range for a long time, his face set, pouring bullets into the target as rapidly as he could shoot before going indoors to dictate new orders

One of them obviously would have to be for the relief of Ghormlev He had been nearly 700 miles from the scene of the disaster and could hardly be held directly responsible for it, but the thing had happened under his command and the moral effect would be somewhat the same as in the case of Kimmel and Pearl Harbor Moreover the campaign in the Solomons had suddenly become a question of straight dogged defense against superior forces There was only one logical commander for the job — Halsey

Halsey was ill, and when he recovered he had to familiarize himself with the problem, so it was mid-October before he was fully in control. The two and-a half month interval was probably the blackest period of the war for Admiral Nimitz, the second crisis he had had to meet, with the Marines bucly clinging to Guadalcanal, the Navy under fire for concealing losses, and some of the command and staff appointments in doubt.

No one noticed any change in the Admir il's outward demeanor If anything he became more human, more considerate of his subordinates. Admir il Ghormley was brought in to become head of the 14th Naval District (Honolulu) where his good strategic brain would be available at headquarter Plans normally have to be made about eight months before the guns begin to shoot. It takes that long to assemble the supplies, "fleet in" the ships, conduct the rehearsals By January 1943, it was evident that the Japs had given up Guadalcanal for dead At home Forrestal's shipbuilding program was a success, the mechanical means for developing an American offensive strategy were reasonably well assured But what line was it to take?

The classical doctrine of American

strategy was for a central Pacific offensive which offered a prospect of bringing the major Japanese fleet to battle Nimitz plumped for going up the line of the Solomons, with the long, costly campaign of beachheads, air battles by day, and destroyer fights by night. There is not the slightest doubt that he made the correct decision. Our forces then had neither the numerical superiority nor the training adequate to conduct a sustained offensive.

A good deal of the technical planning came from the new officer brought in to hend the staff in the spring of 1943. This was Admiral Charles II 'Sock' McMorus He had come up rapidly, had been only a captain in charge of the San Irancisco during the Cape Esperance but tle in 1942 * Mc Morris's memory for figures - tons, dates distances - is productions, and in bricf conversations during courtesy calls Nimitz found him possessed of a remarkable ability to see his way through a tangled web of such figures to an over all evaluation of a position

Nimitz had another place for R symond Spruance, the victor of Midway in June 1942, that place was at the head of Fask I orce 58, which conquered the Marrians and fought the first battle of the Philippine Sea. A flood of light is thrown on Nimitz and his methods by a comment made by one of the officers at headquarters "Yes, the Admiral thinks it's all right to send Raymond out now. He's got him to the point where they think and talk just alike"

The process that had begun on the bleak last day of 1941 was by this time practically complete. The fleet was rebuilt. The mechanical and statistical advance of the U.S. Navy during the war has often been no ticed, what has generally escaped at tention is the moral and technical advance for which Chester W. Nimitz must receive the credit, as he would have to bear the blaine if it had not taken place.

Nivy men generally he positive, self assured, given to vigorous snip judgments. Nimitz departs from the norm in the direction of flexibility and an effort to understand cluses. Constintionated with the best minds of the Nivy has left him less sure of things than are his jumors.

And for that matter, contact vails the best minds of the enemy. It is the Admiral's habit, as it is the habit of every good military man to try to anticipate the enemy's move by imagining himself in their position and, with the aid of information about their observed movements figuring out what he would do The process paid r ch dividends in the Coral Sea battle (when he boldly sent for from base a large propertion of our then slender sea strength) and at Midway (where the move through the central Pacific might well have been the feint and that toward Aliska, the main attack)

But as the Japanese again and again failed to strike with their su perior forces, noncomprehension set in 'I don't know exactly what I d do in their situation, but I wouldn't do that," Nimitz confessed frankly

The result was that he began an effort to get at the Japanese thought

^{*} Off ape I sperance on October 11-12, a U S fore at a cost of one destroyer sank four Japanese cruisers and four destroyers

process He reads very rapidly, absorbing a book a night with ease Now he read everything he could lay his hands on about the Japanese With the aid of Admiral McMoiris some remarkable conclusions were reached One was that the Japanese commanders were required to report success in any mission they under-

took, and that their own upper ranks of command were required to believe these reports even when they contradicted rational reasoning Out of these conclusions grew the movements of strategy that led from Saip in to the second battle of the Philippine Sca, with its disaster to an entire navy for the only time in this war

Goofy Gooneys Joe E Brown in Your Kids and Mine"

VERYWHERF I went in the Pacific I was the first comedian to entertain E the boys Everywhere but Midway The gooney birds were there ahead of me Nobody but a God with a sense of humor could have thought up such a bird. One and a half feet tall, good natured from his cowlick. to his pigeon toos, he combines absurdity with dignity like a deacon on a drunk He flies as if riding a bicycle uphill. When he linds on the water he puts out his neck and skates on his belly When he lands in the dut he often forgets he s got to use a different technique so he skids across the sand on his double chin and then he gets up and looks around reproachfully as if somebody shoved him He does that over and over, for one lovable trait about a gooney bird is that he never learns

The gooners put on a swell show for spectators, a crazy pantomime often going on in 50 or 100 couples at the same time all over the islane I wo gooneys face each other carrying on a weird dialogue of squawks and catcalls. One of them claps his long beak in the other's face and then turns around covly as if he were going to hide his head. They stand mo tionless a moment, and then the coy gooney starts wilking all iround the other one, in a rocking chair kind of motion, mumbling and muttering, and occasionally letting out a hysterical giggle. The partner in this strange performance stands with his feet motionless, but he pivots his head through the whole circle looking as if he is wringing his own neck

The kids spend nours trying to figure out what it all me ins

Once while I was there someted gave a goon v a tablespoonful of liquor And immediately he was drunk as a lord and twice as gooney as usual He swaggered over to the runway as if he owned the outfit He made a large gesture with his wings, and then he staggered and fell on his face But he got up with great dignity, like a man making an after dinner speech, and tried it again, waddling from side to side with a mad glint in his eye and a drunken cackle wiving behind him like a comicstrip balloon. At the end of one of my shows a sailor presented me with a gooney bird "A kindred spirit," he said Then the gooney bird and I performed together and I don't know when I ever worked with a better stooge Fact is I was the stooge for that master comic

ousehold Servants Are Gone Forever

Your maid after the war — if you get one — will have the social and economic status of a factory or office worker

Condensed from The American Magazine

Mrs Shelby Cullom Dates

Chairman, National Council on Household Employment

NE MII LION house maids all over the country have hung up their aprons, donned overalls and deserted homes for war plants. A few upper-income families can still get help by paying up to \$150 a month for single workers, but for the average middle-income family. Mildred, the maid-of-all-work, has faded into memory.

However, many a housewife, now overburdened with domestic drudgery is saving hopefully, 'As soon as Mildred is laid off after the war I know she will be glad to come back to me."

But I wonder I m familiar with the conditions under which Mildred used to work. She drew down \$14.2 week, and put in a 12-hour day. I here was scarcely a minute of her waking hours she could count with certainty her own. With just I huisday and Sunday afternoons off, she had little opportunity to mingle socially with gurls her own age.

Mildred is now in a factory where she works eight hours a day, six days a week, and makes about \$33 She has social security and workmen's compensation. She works side by side with eals who have similar interests, bowls with them, attends their dances, and takes part in the activities of their

union Outside the factory she's her own boss

Half the guls in war plants me in to keep on working after the war I our out of five would prefer to stay in factory jobs. Many are striving to fit themselves for new occupations hotel, restaurant and department-store work. Not one in 1000 wants to return to old-style domestic service. Radical changes are in order if we hope to persuade these guls to lay down their wrenches and pick up mops and brooms.

The National Council of Household Employment was formed ten years ago to coordinate the efforts of the many groups -- YWCAs, the Women's Buildiu of the Department of Tabor, countless women's clubs and civic organizations - interested in raising housework standards. We have listence to laments f om both housewives and servants. The litter complained of prevailing low pay ('I can't lay up a nickel'), un ittrictive living conditions ("Inerc's not even a coinfortable chair to sit in when my work's done"), 'ack of pilvacy ("She's always snooping in my room"), and social stigma ("I'ni ashamed to tell my boy friend I m a maid") Fven louder wails were occa sioned by the long, uncertain hours

But the biggest gripe was the lack of freedom, the consciousness of being eternally at someone else's beck

Meanwhile mistresses unburdened their minds to me about the "experienced cooks" they'd hired who couldn't fry an egg, about flighty maids who thought themselves "too good" for housework Now that housewives have learned to do their own work they are less likely to put up with these shortcomings than they were before the war

"I've scrubbed floors, washed the clothes, dressed the kids and cooked the dinners for two years now," a young mother told me not long ago "Hereafter, the girl who carries a key to my home has got to be trustworthy, courteous and efficient I'll take less service than before but whatever work I pay for will be professionally well done"

Streamlined housing and mechanical inventions will not eliminate the postwar need for servants. The four-course dinner that wafts itself onto your table ready cooked exists only in the storybooks.

But if we can't abolish housework, we can dignify it and raise it to the level of a profession or trade It's time we recognized the right of cooks and chambermaids, equally with factory workers, to a normal family life

In this mechanical age it's nonsense to class housework as an "unskilled" calling I know one girl who was required to operate a washer, mangle, electric iron, vacuum cleaner, waxer, and pressure cooker, to answer the telephone, receive guests, order groceries, check the bills and look after a small baby. She received the magnificent sum of 20 cents an hour

Last year she quit to work in an aircraft factory for 75 cents an hour

To be sure, domestic employment has a lot to recommend it over a factory job The surroundings are pleasanter. It lacks the monotony and the strain of the assembly line. Unlike much factory work, it isn't dirty, noisy or physically exhausting. And factory pay isn't as much as it seems, after you've paid for your rent, meals, laundry, and bus fare.

Elsa Graves, who operates a 20-ton crane in a Chicago steel mill, spoke at a recent forum in New York "I did housework before the war," she said "Many of the girls I know had housework or nursemaid jobs If wages, hours and other standards could be made equal with those in industry many of us would choose it again"

If the present trends continue, you will meet your postwar domestic worker on a clear-cut, employed-employe basis. You will grant her the same hours, pay, freedom and respect that you would if she were working for you in a factory, store or office. She will not think of herself as a "maid" or "servant", you will probably refer to her as a "housekeeper" or "household assistant," depending on her duties and degree of experience

She will work a 5½- or six-day week Her time off will be sacred She'll quit at her agreed time each evening, even though your husband misses his train and gets home late for dinner She will not live in, except in rare instances If she does, she mix agree to ten hours a week "on call' evenings in return for her room Working an eight-hour shift, she won't be there at both ends of the day Either you'll get up moinings to

prepare breakfast, and have the evening to relax, or you'll sleep late, but serve your own dinner and wash the dishes

The law will probably require you to carry workinen's compensation insurance, so that if the worker in your home is injured both she and you will be protected. That's only fair. In the United States, one accident in ten occurs in the kitchen, and three times as many accidents happen in homes as in factories. You are also likely to be traced to provide unemployment insurance and retirement benefits.

In return you can expect your household assist int to know her job and do it well without constant supervision. How much you pay her will depend somewhat on where you live. In a city like Buffalo or Milw inkee the full time services of a trained houseworker may cost about \$20 a week. In small communities wages will be slightly lower.

'But" I here you exclaim I can't possibly afford to pay that much 'Your solution is a part time worker Perhaps you'll split her services with your neighbors. Or if you

are a large-city apartment dweller you may escape completely from the cares of an employer by shifting the responsibility to a household service corporation I have a friend in New York who never sees her maid. The girl airives after my friend and her husband have left for their jobs. She washes the dishes, inakes the beds, does the light washing and cleans the apartment. In actuan my facend mails a modest monthly check to the central office. The girl has four such homes on her list is through each day at four, and gets good wages If she's sick, there's no interruption of her work the office provides a substitute

When Mildred and her friends come trooping from the factories, they regoing to find a whole new deal awaiting them. But they won to be the only gainers, By putting housework on a business basin well get more and better service crowded into fewer hours, well end the mutually degrading mistress mad relationship and well find new privacy and a more in timate family life. In short, by freeing dome the workers from their old servitude, we shall free our homes as well

Ladies' Choice

The British Parliament was discussing the system of cheap form tele states for the armed forces and Sir Ian Fraser suggested that the phrase I am going to have a baby" be included in the list 'The statement should be added, he explained, because there are so many happy young women who would want it"

for the very same reason," said Captain Edward Charles Cobb, "will you also add the message I am not going to have a baby"

Shepherds of 🧨

largely through the he roic efforts of two () tho lic priests and a Protestint minister thousands of Jewish children in a rince were saved from () criman brutality

the Underground

Condensed from Christi in Herald

George Lent

arow a freight train on a siding in eastern I i ince a woman worker of the I rench Red Cross he ird a strange, muffled willing like the sound of a ridio heard through a will She walked along the train listening, and discovered to her horror that inside one of the cars children were sere uning. She called the station agent and they managed to get the door open Recently in Paris, she described the seene to me

There were 80 Jewish children picked tight in that freight car, clinging to each other in terror. They had been put aboard by the Germans at Pairs with two loaves of bread, a ligon of warer and some cheese. They had been locked in for 18 hours while the train made its halting progress toward the Reich Four had alaerdy died. The presence of these dead companions, the darkness, the fear of the unknown future had made the children hysterical. Several of them were temporarily deranged.

These youngsters will probably never see their parents again — even assuming that their parents have escaped death. The Germans had cut off their identification bracelets and most of them were too young to know

their names. One little girl remein beied brightly that she lived at number 16 but could not remember the street.

Yet these children were lucky, they were smuggled into hiding and today are alive and well. Most of the 15,000 Jewish children the Germans seized in I rance and picked off to Cerminy were not so fortunite. Nothing his been he aid of them, and there is evidence that many were put to death in the gas chambers of Poland.

My story concerns the children the Germans didn't get. There were 12,000 or more, from babies to gawky kids of 15 and 16. Four thousand were smuggled across the Swiss and Spanish borders, 8000 were kept alive and safe right under the Nazi nose.

The lenders in the work were two Catholic priests and a Protestant minister — Fathers Chaillet and Duvaux, and the Reverend Paul Vergara Father Chaillet is a nervous man with the pallor and tired eyes of a scholar who works 14 to 16 hours daily Father Duvaux is a figure out of the Canterbury Tales, an enormous rosy tub of a man with a full fan beard Pastor Vergara, whose denomination resembles the Presbyterian is small and

gnomelike, with disheveled gray hair and high cheek bones

These three men perfected an interlocking organization throughout It ince the sole purpose of which was to save Jewish children from the Nazis I ather Chaillet alone managed to find safety for more than 4000. Duvaux tucked away a thousand Vergua with the help of other Protest int ministers accounted for a sixth thousand. The rest were taken care of by ordinary people, inspired by love of children and hatted of the Germans.

A celebrated physician helped by taking Jewish children to his hospital and fitting them out with falle disease and fever charts. He also developed a chemical formula which washed the word. Jew from the children's food cards — the red ink of the stainp had resisted all previous eridicators.

One committee of ten middle aced, womer five Protestant and five Catholic, in inaged to save 358 children at the rist of their own lives. One woman was captured and put to the torture of boiling hot laths alternated with acy cold ones. It is now six months since she was acleased, but she is still in bed. Scores of men and women who aided the youngsters were imprisoned some were killed.

Father Challet, a Jesuit, was the outstanding figure in this labor of love After the 1940 armistice, he started a militantly liberal weekly called *Temoigrage Chritica* (Ihe Christian Witness), which attained considerable underground influence, especially among young men and women They rounted I ather Challet's office

Early in 1942, Vichy rounded up and shipped to Germany several thousand Jews In I yons, where the priest lived, the deported men and women were forced to leave their children behind — 120 in all I ather (hille started gathering up the youngsters Four he found, half started and terror stricken living in a cellar A dozen more were picked up on the street Thirty he took from a barracks where the police had put them

Methodically he set out to put the children beyond the reach of the Ger' mans in such a way that they migh be united with their families after the war. A former detective fingerprinted each child. Records of names, addresses and identification marks were drawn up in triplicate and secreted.

Then I other Challet sent his young aides usually guls of 18 to 20, into the country on their bicycles to talk to pensions. They discovered if the pensions were patriots, if they could be trusted with the care of orphons and if they had a cow or a milk goat. In a radius of 100 miles around Lyon the guls secured havens for most of the children. Arrangements for the others were made with Catholic or phanages and schools. I also paper had to be prepared for each child.

Older, mitton's looking women, ran the greater risk of taking the children to the new homes. It was difficult rehearsing the little ones. One small girl, given a new name, wept 'How will Maina know me when she comes back?' A say year old boy of Dutch parents, who spoke I rench with a thick accent, was warned to keep utterly silent on the journes. The ride lasted four hours and the child did not open his mouth. But on arrival, his pants were wet "You told me not to speak," he explained pathetically

Incorporated into the persant families, the children mingled freely with the other voungsters of the locality, in school and at play. In these small communities the status of the new arrivals was no secret. But only a nalf dozen in all were betrayed. Never has a secret snared by so many been so well kept.

A few months after I other Chaillet had hidden the children the Germans set a quota of 200 Jews to be surendered by I yons and the Vichy police proposed to send the children is part of it. I ather Challet defied the authorities to find them, and was sent to a concentration camp.

In prison he wrote an open letter to Catholics and Protestants which was smuggled out and sent to 10 000 priests and ministers. It appealed to all churches to join the fight against Hitler by helping the Jews. Much of the valuant part taken in the Resistance by the Trench clergy can be traced to the influence of this letter.

Releved at the end of three months I there. Chaillet dofted his ciencial his sind took his organization under fround. Tem ignage (historians an organic) the Resistance achieved a cululation of more than 200,000 (Now back in the open, it is the most widely tend weekly in France.) I ather Chaillet was recognized as the spiritual leader of the Resistance and General de Graulle appointed him chief of all the social services of the Underground.

His center of operation was a hum ble room in a slum street of Grenoble Here he planned many successful coups of the Resistance and worked out the complicated mechanism of hiding Jewish children

Once, trapped by the Gestapo, he

hastily chewed and swallowed papers that might have incriminated him Then he mannged to talk his way out As time went on he extended his activities until he was operating in every corner of I rance. His staff of several hundred workers ranged from small boys who served as messengers to five counterses, who acted is escorts.

In July 1942 the Cermans founded up 13000 idult Jews in Phils and heided them into the Velodrome d Hiver, the big sports here I he sereaming of the women, torn from their children, could be heard for blocks. Thousands witnessed the increant at horified the French and spocked them into activity. Neighbors picked up the children and tried to comfort them.

Father Duvius a Dominic in, sent out nuns who brought back 30 of the children. At night he distributed them in groups of three, among the homes of friends in Paris. There they strived until places could be found for them outside the case. Then the nunwent back for more. This was the beam unsuch the worl of Lacher Duvius.

I or him it was particularly daugerous. He had been famous in hurope before the war as an oppositent of anti-Semitism. The Nazis ransacked his house and carried off his books and papers. Gestapo men kept watch on his quarters 24 hours a day.

Not all the children left behind iter the July and fell into frendly hands. The Cestapo found many of them and put them in camps, where they stayed in a sort of cold storage to await the next draft. Children who had lived in good homes were now living in filth unwashed, uncared for, vermin ridden.

One day a Red Cross worker who visited such a place described what she had seen to Pastor Paul Vergara The little man went into a black rage At the settlement house he had been running in a Paris slum, he brought together a dozen women, including his wife They prepared an order in German, purporting to come from Gestapo headquarters, requiring the release of the children It was a dangerous trick, but it succeeded

Over the door of the settlement house, Pastor Vergata had painted the words of Louis Pasteur "We do not ask of an unfortunate What country do you come from or what is your religion? We say to him You suffer, that is enough You belong to us, we shall make you well "That night 70 ragged, frightened Jewish children shuffled across the threshold beneath the noble inscription. On the following day the pastor embarked on the enterprise of finding permanent homes for the children, cooperating with Fathers Challet and Duyaux

Twice later on the Gestapo raided the settlement house They killed Vergara's brother in law the first time Warned of the second raid, the office staff escaped through a window and across adjoining roofs But the Germans imprisoned and tortured Vergara's wife and son, and later deported the boy

Most of the 8000 children hidden in I rance are still in their foster homes About a thousand have been claimed by relatives who escaped from the Nazi net and with the liber ation have come out of hiding. The rest must wait until the war is over and hope that their parents will come back from Germany. No one really believes they will

These are not happy children They have been through experiences that have aged them beyond their years. They have seen their parents beaten and dragged awiy. They themselves have been brutally treated. For all these happenings there is no explanation that makes sense to the mind of a child. But the people who opened their homes to the youngsters have come to love them "If Jeannot's parents come, yes, we shall give him up," one woman said. But if they don't Jeannot is ours, our own."

Polls Apart

A British journal recently printed this story. Shortly after the capture of Aachen Allied military intelligence officers conducted a public opinion survey in the town. One citizen after another, questioned as to his political views, revealed that he had been opposed to Hitler from the beginning, but fear of the Gestapo had sealed his lips Finally one Allied officer said to a professed enemy of Hitler "Very encouraging, your views in Aachen. We had believed that most Germans were Hitler supporters."

The Aachen burgher replied hotly, "We hate Hitler Anything to the contrary is the filthy propaganda of the decadent, Jewish, bolshevistic, capital
18tic, plutocratic democracies"

— Edwin A Lahey in Chicago Daily News

The Case of the Murdered Consul

By Anthony Abbot

A true story based on facts taken from The Doctors Mayo by Helen Chapesattle, published by The University of Minnesota Press

MAN kills in the night and sets a guilty bonfire—and as in aftermath of that crime a million people are delivered from pain

I speak of a remarkable midnight fire that occurred years ago in the German Finbassy in Santiago, Chile It was not until the day after the fire that all the horior of it was known

It was not until the day after the fire that all the horror of it was known. I hat was when the police found the things in the furnace. Detectives and their medical specialists came and looked. They called the German ambassador, he looked, and his thick skin purpled with rage. This was no ordinary fire it was arson, and murder. For the charted skull and bones in the furnace showed that before the body was burned the head had been cracked open with a blunt instrument.

Our poor German consul has been killed by an assassin," screamed the German ambassador "His body has been burned in his own furnace Probably he was also robbed Open the safe!"

The ambassador was right A fortune in cash and negotiable securities had been taken from the safe

Now the German Government flew into a rage Chile's forcign minister did everything in his power to appease "The janitor of the building is missing," he said to the German ambassador "The janitor must have killed your consul, he stole your money, he has escaped But our police will find him Justice will be done And we will pay indemnity

Germany continued to scream with rage and threatened war unless the absconding janitor was found at once and put to death. Meanwhile, the president of the republic issued culo gies of the deceased German consul, and the plans for the funeral, which Chile intended to hold prior to send ing the body to Cermany on a battle ship were the most obsequious ever decised.

Only the police authorities remained calin. Exploring every detail of the case, they called in Di. German Valenzuela, amember of the jurisprudence faculty of the medical school, who noted a singular incongruits—the murdered in an was reported to have been in his late 30 s, yet this skull had an almost perfect set of teeth I eaving the laboratory, Di. Valen zuela hurried to the home of the consul's widow

"Midim,' he said to her, "did your husband have a lot of dental work done".

"Naturlich!"

"Please — the name of his dentist" Presently Dr Valenzuela was talking with the consul's dentist. The two looked over charts and records. The consul had indeed, had much dental work done. But in that skull from the furnace only one tooth was missing.

Dr Valenzuela hastened to the

home of the janitor. The wife waved her hands passionately in the face of Dr. Valenzuela and shrieked "My husband never hurt anybody. He never burned down a house, he never stole, he never killed. No, never my husband!"

Dr Valenzuela soothed her He simply wanted to know about her husband's teeth Well, they were clean and strong and beautiful, and all his own, he had lost only one in his whole life.

Dr Valenzuela now hastened to the chief of police As a result of his information, the warrant against the junitor was torn up. The junitor, they now knew, was the victim, not the killer. A warrant was issued for the vanished German consul. Obviously he had killed the junitor and thrust the dead man into the furnice. Then he had stolen the treasure from the safe, set fire to the building, and decamped — a living dead man, with a fortune in his valise.

I or a while it looked as if it were a completely successful crime. The fleeing criminal had almost reached Chile's southern border and might well have escaped into the Argentine — but for a landslide that halted the train Be fore the tracks could be cleared, the consul was in handcuffs Later he was hanged

The Chilean Government with drew its apologies and canceled the obsequies, and it was the German officials who made apologies and officed a staggering sum to Chile as indemnity When this money was received, the president of the republic sent for Dr Valenzuela and bade him name his own reward from his grateful government

Dr Valenzucla closing his eyes as if he iring again the murmurs of pain, the anguish of his people who were too poor to have hospital facilities and to have enough dentists, asked simply for money to build and equip a modern dental college.

His dental college was there when one of the Mayo brothers, Dr Will, toured South America and was aston ished at its modernity and complete ness. It is there today, a strangely beneficent consequence of a brutal crime and a living monument to a doctor's altruism.

Announcement Concerning The Reader's Digest \$25,000 Contest for Ideas for New Businesses

Over 49,000 entries were received in the Contest, which closed February 1, 1945. As soon as possible the names of the 175 prize winners will be available. Another installment of Ideas for New Businesses will appear in an early issue of the Digest. Ultimately — when paper can be obtained — the best material, along with helpful counsel to the man or woman who plans to start a business, will be published in a bookled Date of publication, and price, will be announced later.

DRAMA IN EVERYDAY LIFE · XVIII

The Bottle of Jordan Water

By Dorothy II alworth

N A high shelf in my fither s paisonage study wis a bottle of water from the River Jordin He let no one but my mother touch the shelf because it must have no dangerous, irreverent dusting the bottle was a treasure, and hard comby

When my fither entered the ministry in 1892, he believed that God had called him and he had traced by an exceptionally wide education to make himself worthy of the calling from a finishing touch he had taken a trip through the Holy Land He walked through most of the country he did not want to rade where Our I ord had gone on foot He talked to shepherds, and watched fishermen on the Galilee shore. When he came to the Jordan River he filled a gallon glass par with Jordan water and bought it home.

A lot of folk called at the parsonage to see the Jordan water, for the Holy Land in those days seemed very far away, and few Americans had been there

During each Easter serson my father baptized the babies of the parish with the Jordan water We watched the water level in the bottle sink lower and lower until at last there was enough left for just one more baptism

Those last few drops of water, my fither said couldn't go to just any baby but only to some special one Lor I long time he looked around quietly but he couldn't seem to find the right buby And then pressure was brought to be a on him to use the water when the infant daughter of a wealthy parishioner chairman of the church board was to be christened I o give the Jord in water to that baby would make things a lot easier all around He save halfhearted con-But first" he sud defiantly, 'I m some to get the Presiding Elder to take my pulpit for one Sunday, and Im soins off on a trip'

Whenever he believed that his soul needed restoring he took a trip—not a pleasure trip but one among people who carned their living by the sweat of their brows. Long before it was popular, my father preached the social gospel. And he made it his business to find out what it was like to work in steel mill and canning factory.

On this midwinter trip he spent ten days in a West Virginia town among the men who worked the coal mines. He tilked with the miners in the dust-choked shafts and tunnels. He shared his bread with them in the half hour they had to rest at noon sitting there in the fitful darkness lighted only by

the Davy lamps One miner, a big hulk of a man, finally came up and touched the small gold button in the shape of a cross which my father wore in his lapel

"You priest?' he asked

"Not exactly," my father said, "but I try to do God's work"

"I got baby You baptize my baby" He was a Pole new in this country The others called him Gus

I here and then my father made his decision Back in his hotel he wired my mother "Send Jordan water Love"

Mother was secretly glad, of course But to be on the safe side she wired back 'Are you sure? Remember chairman" And Father answered "Positive Mind at peace"

It was a snowy Sunday morning when he took the bottle and a bundle of groceries to Gus s tin and tri-paper shack. Its one room was cold, the small flickering oilstove in the corner could not warm it. Lying in a market basket, was the baby, a wizened little thing that looked as though it could not live very long. On either side of the basket stood Gus and his wife, their faces proud and shining. And there were a few neighbors.

Since Gus could speak little English, and his wife none at all, my father used the neighbors as interpreters to explain about the Jordan water, telling them that such water brought a special blessing

"What is the baby's name" my father asked

'George American name," Gus

My father poured the water from the bottle into a little white bowl one of the neighbors brought, and said a prayer Then he took the baby in his arms "George," he said, "I baptize thee, in the name of the Father, and of the Son, and of the Holy Ghost'

Still holding the baby, he said quietly, "Whoso shall offend one of these little ones, it were better for hin that a millstone were hanged about his neck and that he were drowned in the depth of the sea. For of such is the kingdom of Heaven." And then he stopped and added fiercely, "Gus, ge yourself some blankets and a big new stove!"

My father came back from the trip with his clothes coal stained and his pockets empty, for of course it was he who gave Gus the money for the stove and the blankets. When he christened the daughter of the wealthy parish ioner, he explained "The Jordar water has been used according to the will of Cod" And even the wealthy purishioner did not dare ask—a least not then—what was the will of Cod.

About three months later a letter came from Gus, written by a friend ohis "Dear Sir I tell people how you baptize my baby with water from that river and how my boy got special blessing and must grow to be fine boy and they not believe me Write letter so I can show and they will be lieve me."

My father wrote the letter and en closed a map of Palestine, showing the River Jordan marked with recent, and a Bible with the verses under lined that tell about Christ's baptism. For several years after that he ser Gus an Easter card asking, "How is my Jordan-water baby?" But no word came back.

For almost 20 years more, my father carried on his work By the time we entered the first World War, he was an ill man, and he knew that death was not many months away Almost the last occasion in which he took part was a local Liberty Loan drive It opened with a service at the church Liberty Loan headquarters had sent a galaxy of talent somebody from Congress, a couple of actresses and, as the stir attraction, an Army captain with a spectacular record

The church was crowded to the doors. The altar was filled with the flags of the Allies. People said it was the finest sermon my father had ever preached. After it was over and the people had filed out, my father saw, standing by the altar rail, the Army captain whom the I iberty Loan committee had sent. He was a fine, strong young man, and his chest glittered with his decorations.

"It certainly is a privilege to have

you with us,' my father said, shaking his hand warmly

"You look just like I figured you would," the captain said "You see — you and I met once A long time ago My folks told me about it, over and over, and said I had to grow up to be somebody on account of it So they saw that I got an education, and when the war came I was lucky enough to get a commission In France I thought a lot of times about how I was nobody and you believed I might be somebody, and how my family was cold and hungry and you gave us blankets and a stove and something to eat. And it made all the difference in the world

'Why, Captain,' my father asked, "whenever did I see you cold and hungry?"

The captain drew himself up and saluted

"Sir he said, "I am your Jordan-water baby"

Chicken Coup

JIRTI AIRMI N from a crashed C 87 came down in the Himalayan foothills where the tribesinen were said to be head hunters. Fiere looking warriots led them in grim silence to the chief's hut. There they sat while the scowling circle muttered to one another in ominous tones. A row of human skulls was stacked up against the wall.

At last they got up nerve enough to ask for something to cat. They had seen some chickens in the village, and a sergeant from Iow i neld up his fingers in the shape of an egg. I he natives shrugged uncomprehendingly. To make himself clear, the sergeant squatted on the floor, flapped his arms and cackled like a hen. To his construation, the fiercest of the natives leaped out onto the floor, flapped his arms, uttered a triumphant rooster crow, and came at him in a barnyard attack. Terrified, the sergeant gave a series of outraged squawks and began hopping around the room in maidenly retreat the rooster in hot pursuit

The natives burst into delighted laughter, the tension was broken, the three airmen, cheered and feted by the tribe, later were led safely back to their base. But the sergeant still shudders when he sees an egg

Half a Million By-Passed Japs

Condensed from Liberty + Morris Markey

Are some half million Japs on by passed islands establishing a Pacific empire for Nippon that will survive her defeat?

үн ат are we going to do about the half-million Japs that the Navy and Army have left behind them in their swift islandhopping drive across the Pacific² As Admiral Nimitz has put it, we left them to die on the vine, and from the military point of view they are indeed dead on the vine But looking toward the future of the Pacific, when the list bittle has been fought, some au thorities are saying "If the by-passed Japanese are not dug out and destroyed, they will dominate the Pa cific just as surely as if they had won the military victory"

Ihe great in ijority of these Japs are soldiers, a few are technicians and laborers. Some hundreds of Japanese women are with them officers' wives, nurses, prostitutes. About 100,000 Japs are in the South Pacific, in New Guinea, New Ireland and the Solomons. The remaining 400,000 are scattered all over the Central Pacific from Ocean Island just west of the Gilberts, through the four big atolls in the Marshalls, to Wake and Truk and the northern islands of the Marianas group

Japanese surface vessels cannot reach any of them with supplies, for

our navy maintains a constant patrol Nor can they receive help by air, for once or twice a week our planes drop bombs on their landing strips. Photographs show that the little people below work desperately to repair the damage in the hope that a Japanese plane might show up. But just as their strip is almost ready for such an unlikely event, our bombardiers calmly knock it apart again. It is a matter of routine.

By-passed Japs still occupy about two thirds of New Guinea's 312,000 equate miles. The natives, dark-skinned fuzzy-wuzzies who used to be cannibals and head-hunters, are on the whole loyal to the Allies. Now and again they bring out reports to General Sir Thomas Blainey, cominander of Allied land forces in the Southwest Pacific which give a fairly good picture of the Jap way of life.

Apparently the Japanese, notoriously an ingenious and resourceful people, have made themselves almost completely independent of help from home. New Guinea's soil is rich and they have large areas under cultivation. They have introduced the growing of rice, and have applied efficient breeding methods to chickens and pigs seized from the natives. These things disturb General Blamey to the point of saying "Japanese colonization in the New Guinea by passed."

area is an accomplished fact These people will absorb and dominate the region in the future, unless we root them out"

At Majuro atoll, one of our objectives in the Marshalls, we saw his prediction already a fact. When we entered the immense lagoon we discovered, to our astonishment, that it was not defended The Japanese garuson had moved out months before, to concentrate strength on the four eastein atoll strongholds of the group atolls which we by-passed And they had taken with them every Majuro woman between 16 and 40 Of course the ultimate offspring would be halfbred But the Polynesian or Melane sian is not greatly different in color and stature from the Jap, however different he may be in background and temperament And Japanese fathers have a talent for discipline and ındoctrınatıon

Not long ago the skipper of a U S destroyer, making a routine patrol run some 20 miles off an enemy atoll in the Marshalls, sighted an outrigger cance under sail. Its lone navigator came aboard. He was the chief of the

natives on the atoll, and he had put out in hope of falling in with an American vessel and making a request His people, nearly 200 families, were suffering severely. The Japs took more than half of each catch of fish, rationed severely the fruit of the trees. And the Japs would not let them occupy shelters when American bombing planes came over. Would it be possible for the Navy to get his people off that island, to another where America was in control?

The destroyer skipper said that it would indeed be possible. The native chief put back to his island, and between midnight and dawn that night the destroyer drew inshore. It was a moonless night. And now an extraordinary procession put out from the beach scores and scores of canoes, bearing the entire native population of the atoll. They moved under sail, with muffled steering oars.

Out of the darkness, they came up to the waiting destroyer Lines were paid out And when the sun came up over the Pacific it shone upon a fabulous parade a U S destroyer towing nearly a hundred native canoes

in long single file, each boat crowded with men, women and children Soon they were all settled in a new home, with food and medical care, and their men were building new huts

From the chief and his fellows the Navy learned that the Japs had tried to start gardens,

but before things could begin to grow our pilots spotted the clearings and dropped bombs. The principal item of diet was fish, which imposed no great hardship, because fish is a staple in Japan. These coral islands are not easily cultivated. The sandy soil, the incessant trade winds, the sparse rainfall make farming in the ordinary sense impossible. But they do produce coconuts, palm shoots, taio root and pandanus seed, all of which are edible.

The natives estimated that the original Japanese garrison had numbered about 7000 — and that about 4500 of them were still alive A large number had been killed by our air attacks. The rest had died of beriber induced by malnutrition, dysentery and kindied ailments.

The Japanese had forced the natives to work for them, helping rebuild the runway each time it was knocked out, constructing bomb shelters and mounts for AA guns. The bomb shelters were solidly built, and nowadays our raids were causing only small loss of life. The Japs seemed to have plenty of AA ammunition (to which our pilots could testify), and the chief had the impression that they got more ammunition, even new guns, from time to time

This last confirmed the Navy s own observations upon a highly critical point. For months we had been operating in the Pacific without molestation from submarines. The evidence seemed to show that Japan was using its submarine fleet in the effort to maintain contact with the isolated, by-passed strong points. Of course the supplies that could be delivered by

these vessels were very limited Medical necessities and munitions, per haps Certainly no large quantities of food, and no reinforcements

It seems reasonable to believe that this particular atoll is typical. The Japanese are managing to survive And the problem is simpler for them in big masses like the Truk atoll, which has very fertile soil.

Mark it well that not a single by passed garrison has even hinted at surrender The reason may be that these isolated Japs listen to the radic broadcasts from the Japanese home land We well know how those broad casts go time and again we have heard that the Japanese have won fabulous victories at sea, in the air and on the ground It is possible that much o this broadcasting is directed at the half million Japanese troops cut of in the Pacific islands, who believe firmly that they will be rescued or re inforced in time to share in the fina victory of the Empire

Well, what are we going to do about it?

It does not seem very likely tha these people will starve to death, and there is a limit to the attrition of bombing It will be an anticlimax i we must turn from the thr lling day of Japan's unconditional surrender to mop up a hundred tough little strongholds, whose commanders wil not believe or acknowledge the news of that surrender, yet that seems the inevitable prospect. For otherwise the Central and South Pacific island will be Japanese, and a constant threat to peace in the Pacific Ever in defeat the Japanese Empire wil have absorbed a new world of its own

'Bad"Boys Can Be Made Over

Condensed from Survey Graphic

Elsie McCormick

Side of New York's PS 37 to suggest that it is one of the most remarkable public schools in the country But when you go in, boys passing in the halls smile and say "Good morning,' with warm, unexpected friendliness The classroom where you are taken by the principal, Mrs Lillian L Rashkis, is decorated with homemade murals, and clean cnough to satisfy a hawk eyed sea captain A boy proudly brings out the bottle of lemon oil they use to polish their desks, another suggests that the desks be opened to show how they are kept And as you leave, the pint size youth who opens the door invites you to come again, with the air of a friendly host

The guest who arrives on a Thursday morning is likely to visit the school assembly Here 250 boys listen to the speaker with absorbed attention, then fire questions which indicate a breadth of information quite startling in a school that ranges in grade from 5-A to 8-B A number of nationalities are represented, many of the boys are colored But there isn't a bored or sullen face in the room, and there isn't a boy who doesn't make a neat appearance A school, the visitor might think, for boys with unusually high IQs and excellent deportment records

As a matter of fact, the enrollment of PS 37 is drawn from serious be-

havior cases in Manhattan and The Bron. Some of these boys have run in piedatory gangs, beaten or even knifed other children, constantly played truant, assaulted teachers, committed vandalism, and kept classrooms in a perpetual uproar At least half have had court experience and many were sent to PS 37 as a last resort before commitment to correctional institutions

Out of this raw material Mrs Rashkis and her teachers have devel oped a school whose standards of interest, courtesy and good behavior are considerably above average According to Judge Juvenal Marchisio of the New York Domestic Relations Court, the school salvages more than 90 percent of its pupils for future good citizenship

When a boy is transferred to P > 37 he usually arrives under convoy of a truant officer. He is surly and defiant, he expects this to be a tough school, worthy of his fanciest misconduct

The class to which he is assigned baffles him. It is a small class—about 16 boys—with the desks arranged in an informal circle. The boys actually seem interested in their work. Feeling a little self conscious, the newcomer tries out a Bronx cheer. To his amazement his classmates, rather than the teacher, shush him down "Kid stuff" they call his antics.

The new boy soon discovers that misbehavior no longer attracts atten-

tion Nor can he win any laurels by boasting about his record, for there are boys here who can match or exceed almost any record of youthful transgressions. As a result, the unwholesome props that have been sustaining his ego collapse

But this is only the first step "The most important thing is to find something in which he can be successful,' Mrs Rashkis says "Up to now he has known nothing but criticism, he feels that nobody wants or likes him"

Soon after a pupil is admitted he is tested by a psychiatrist and a psychologist from the Child Guidance Bureau A home visitor calls on his family Their findings are presented at a conference attended by the principal and his teachers. The causes of the boy's difficulty are discussed, his abilities and character traits an alyzed, and a plan worked out for his rehabilitation.

In nine out of ten cases the blame tests on the parents Of 65 boys recently studied, only four hid homes that were satisfactory. Again and again the reports show squalor, indifference, lack of understanding, cruel treatment, perpetual family tows, divorce, and parents who are seldom at home

By no means all the boys come from backgrounds of poverty Four teen-vear-old Frank was a sorry-looking specimen with a nervous body twitch His record showed that he shouted in class, used foul language, and was hated and feared by his schoolmates His home, the school's visitor discovered, was nicely kept and the family was not uneducated The difficulty was that his father demanded instant, cringing obedience

from his son and beat him if he hesitated The boys form of protest was his behavior in school

Frank had ability to draw, but his only subjects, the psychologist learned, were skeletons, coffins and grave vards At PS 37 he was given the job of making a mural for his class room, showing scenes from Colonial history Driven by a desire to get the details of his mural correct, he studied books on the period — and advanced two years in reading ability within a few months. The plaise he received for these achievements made a great change in the boy's disposi-The twitching disappeared Later he gained enough poise to address the school assembly Although his home situation remained far from ideal, he ceased being a problem

A not uncommon mistake of parents was presented by the case of Solly, a boy from a comfortable mid dle class home. At his previous school he had refused to say a word in class, and his perpetually sneering attitude raised hob with morale. After two weeks at PS 37, Mrs Rashkis, seeming to choose him at random, made him her office boy Solly became so interested in running errands and answering telephones that he forgot his sullen taciturnity

Within a week he told Mrs Rash kis his story His brilliant brother, destined for a professional career, got all his mother's concern and affection "I just thought, 'What's the use of my trying to be anything?" "Solly explained Mrs Rashkis convinced him that, even if he didn't enter a profession, he could serve society in other ways

Solly has since grown into a useful,

well-adjusted citizen. He is the owner of a small factory and the father of a

happy family

The tendency of teachers and parents is not to trust a problem boy ith a responsible job. Yet such a job often proves to be effective moral medicine. George, a boy who had fuled to adjust himself to his stepfither, expressed his unhappiness in

truancy and temper tantrums Six schools had dismissed him before he came to PS 37 He showed his first sign of interest when Mrs Rashkis asked the boys to suggest a good way of storing and distributing the midinorning milk (corces plan was accepted as the most efficient and he was put in charge He did the work faithfully, without missing a day

'George is a changed boy," his stepfather wrote 'He's actually happy His temper tantrums have disap-

peared"

Another boy well known to the truant officers was given a job running the motion picture machine. He went through two terms without being late or absent once. Asked about his good record, he end, 'Well, I never was in a school before where they really needed nie."

Nerve center of the school is Mrs Rashkis A mature and warm hearted woman, sympathetic but not sentimental, she can talk on a boy s level, see his point of view, and penetrate the shield he tries to raise between himself and the adult world. To be a PS 37 boy was once considered a disgrace. The new principal set out

to make it a matter of pride, when she took charge of the school in 1930

One problem was to make classwork interesting. The present curriculum is the result of careful study by the school staff, by authorities in the New York City system, and by an advisory committee of nationally known educators and psychologists. Evidently they accomplished their

purpose The attendance records of PS 37 now compare well with those of other schools, even though some of the pupils have to travel more than an hour from their homes

Conventional subjects are covered in an uncon ventional manner. The work of each class I visited was tied in with a central topic, such as "Americ i's Great Men and Women.

Great Men and Women "The Story of American Industry and 'The American Home' You would hardly im igine that studying The American Home would appeal to sixth grade boys who had been the most conspicuous hornets in the New York school system Yet no class I visited anywhere demonstrated greater interest Small fry crowded around to show me di igrams of housing developments, and a complete two story miniaturehouse they had made Many of the boys have carried the instruction into their homes by painting and repairing furniture, making window

There is special training in nutrition, because improper food can have a giert deal to do with antisocial be havior. The staff carly discovered

boxes, and raising the family stand-

ards of order and cleanliness

Lillian L Rashhis

that breakfast for a number of the boys consisted of two or three cents' worth of candy, bought on the way to school In some unsupervised households the boys had only sandwiches for dinner, or perhaps a couple of recream sodas. The teachers prepared a model breakfast for the pupils fruit, milk and cereal. The mothers were told about it, then invited to take a nutrition course. Better nourishment has meant less illness and greater emotional stability.

About 15 percent of the boys who enter the school lisp or stutter — indicating emotional maladjustment A teacher trained in speech improvement helps them overcome their handicaps, then public spealing practice gives poise and self confidence

Assembly periods furnish a me ins of blowing off steam Frery Monday, school problems are discussed with the give and take of a New Lingland town meeting. The boys learn to respect others opinions and to disagree without resorting to knuckle dusters The assemblies are impressive Drums roll during the lusty singing of The Star-Spangled Banner a bugle and a color guard underscore the salute to the flag The 8-B classes enter to the strains of Pomp and Circumstance, with all the dignity of the U S Supreme Court Some of these big boys had been bullies in their former schools, but the prestige they enjoy here brings an ainazing change of attitude

PS 37 goes in heavily for vocational classes. The woodworking and printing shops and practice in office proced re have prepared many a boy for advanced work at a vocational high school. The older boys are encouraged to take jobs after school.

Earning money adds to their selfice spect and leaves little time for hanging out with neighborhood gangs. Above all, they set about making themselves eligible for the jobs they want when school days are over

Hardly a day goes by when a former pupil doesn't drop in to tell Mis Rashkis about a new job, introduce his bride bring pictures of his chil dren or show a decoration awarded overse is I saw a redheaded Marine corporal who had just come back from the South Pacific with ribbons indicating a Purple Heart and a Presidential unit citation When Mis Rashkis introduced him as a former pupil, the boys sang The Halls of Monte ruma with a fervor that shook the auditorium

"I didn't deserve all that plaise" he said afterward "It should go to the teachers who made men of us'

According to Judge Marchisio schools such as PS 37 established through the nation would mean a long step toward the cure of juvenile delinquents As Dr Trank J O'Brien Associ te Superintendent, points out the idded expense is small compared to the cost of institutional rare and possible imprisonment — to say noth ing of broken ives. And many of the features are not dependent on extra cost,' he adds "The spirit of friendli ness, the concern for the pupil's self respect the use of respon ibility to build self confidence can be applied anywhere that there are wise and sympathetic teachers"

Even if a community is too small to afford a separate school, the same principles can be applied. This kind of school atmosphere can, in fact, bring out the best side of all children

NOW IT CAN BE TOLD

Spark Plugs of France's Secret Army

Condensed from Tricolor

Blake Clark

The astounding tale of Americans and British who parachited into France to help organize resistance behind the German lines

Cast on the evening of June 5, 1944, was interrupted by a dry British voice saying, "Eileen is married to Joe Repeat Eileen is married to Joe The compass points north Repeat The compass points noith"

To most listeners, including the Germans, this was nonsense but for 500,000 Frenchmen it was the long-awaited secret call to action. That night, before a single Allied soldier had set foot in Normandy, all over France bridges collapsed, dams buist, steel rails leaped from ties, locomotives raced down wrong tracks, trees crashed across roads, flames lose from fuel dumps, telephone lines plummeted to earth.

By the next day, D Day, German

BLAKL CIARA, former professor of English literature at the University of Hawan, is now a member of the armed services, on duty in Washington He is the author of the best seller, Remember Pearl Harbor', a condensation of which appeared in The Reader's Digest for June 1942 and of Robinson Crusoe, USN, the ad entures of Warrant Officer George Tweed on Iap held Guam, which has just been published by Whittlesey House

troops and supplies were slowed to a walking pace. The formations sent to repel the landings in Normandy were delayed an average of 48 hours—precious time to the Americans and British. And later, after the break through, French querrillas constantly informed General Patton of the exact location of each German column and protected his flank, helping him make one of the speedlest drives in the his tory of warfare.

The story of the role played by British American and French under ground organizers in setting off this powder keg of Irench resistance can now be told

All operations were directed by a joint command, established by General Lisenhower. The first group of secret operatives sent to France got in touch with local suboteur groups which were spontaneously rising all over the country. These groups were persuaded to abandon sporadic acts of violence that only brought murderous reprisals, and to accept assignments from London Headquarters.

The three major underground plans for D Day were known as the Parrot, the Dragon and the Armadillo The objectives were to silence communications, blast railroads, and pave highways with mines to slow Panzer divisions

It was necessary to select, train and

arm thousands of Frenchmen, under the very eyes of the Gestapo Fo implement the Dragon Plan, operatives arranged a meeting of representatives of a million railway workers and the head of de Gaulle's secret service For the Parrot Plan, de Gaulle men were slipped into key spots of the telecommunications system, for the Armadillo, villagers were instructed in explosives and minelaying

The average organizer working on these plans could expect to live three to four months—if he was lucky. He had to keep files of information, and these were sometimes found by the enemy. He was forced to trust a few persons any one of whom could be a spy. He had to produce his identity papers occasionally, and if the numbers we e checked he was lost

If he was a British or Aincircan agent he had to be on constant 20 ord ag unst slips that might give him away. At nicellines he had to remember to tuck his nipkin in his collar, French fashion. He was careful not to ask for shaving cream or toothpaste which had been absent from French states for two years.

The Gestipo set traps to try to make the operative reveal himself. In one city, riding two abreast on bicycles was arbitrarily prohibited. In another, no bar could serve red wine on Tuesday and Friday afternoons, and bartenders were instructed to report anyone who asked for it. But despite such traps, some operatives led double lives with amazing success, opening tobacco shops, bookstalls and secondhand furniture stores where various "customers" traded without arousing suspicion.

Escapes were narrow Operative 154, an American agent, wounded in a gun fight with the Gestapo, was handcuffed and tossed unconscious into the back of a staff car Regaining consciousness, he took out a pistol concealed in his sock and shot each German in the back of the head Frenchmen filed off his bonds and he continued his work in another section of France

Operative 171, a de Gaulle worker, was in a hoter room when the Gestapo raided the place. He can to the top floor but could find no escape to the roof. He darted into a room, and found a maid sorting sheets. Frantically he explained that he was running for his life and s. d, "Quick—get in bed with inc. 'No!" she protested. "Don't be a fool, he said. "I've got more important things or any mind!"

The Gestapo men shoved open the door and turned on the light. The couple in bed pretended to be an noved. The Gestapo leader laughed "Have an enjoyable evening," he said, and closed the door.

Sometimes the agents carried out special missions. For instance, Allied secret services wanted a sample of a new explosive powder being devel oped by German scientists. French operative 202 contacted a friend in the factory where the experiments were conducted The Germans had made it iinpossible for workers to obtain samples, even brushing the nails of each one as he left. One day when factory workers were observing a secretly planned ninute of silence to demonstrate French unity, one man obstinately kept on working Angry patriots knocked him down and beat

him Guards rushed to his a d and carried him to the hospital A month later London scientists were working with a sample of the powder which he had scized a moment before the work-

stoppage

Indispensable to the success of the secret organization was the radioman, who maint uned regular communications with London, ordering nins and explosives, and directing the linding of new operatives. The wireless telegiaphy operators, one of whom was an American girl, are the unsung heroes of French resistance The operators who transmitted from Pitis were in constant dinger of being pin-pointed by 36 German ducetion finders continually combing the other so efficient were these direction finders that 20 minutes after an agent came on the an the patrol car would be at his door Miny a radiom in climbed out a back window only seconds ahead of the Cestapo

By January 1944, through the cfforts of nearly 1000 secret operatives, the full strength of every effective icsistance group in France was thrown into work on the Dragon, Parrot and Armadillo plans lo each group, Headquarters in London dispatched detailed maps of the unit's priticular area, indicating specific local objectives Special instructors were parachuted in and held night classes for two or three villagers at a time, showing them how to blow up railroads and bridges By June 1, the map of I cance on the wall at Headquarters was covered with ied dots, each indicating where patriots were trained, supplied, and ready for the signal to attack assigned objectives

When the signal came for action on the evening of June 5, 5000 Frenchmen each carrying two packages of TN1, slipped out and blasted the railroads of Irance in more than 500 places. And thanks to a strategically placed. I rench operative I ondon knew every important train movement two days in advance so Allied places were able to swoop down on almost all troop trains headed for Normandy.

Under orders from I onder certain agents had become conversant with the operations of the 74 booster stations in Irance's long-distance telephone system. Now, equipped with German passes they went to the booster stations and blew their up.

Thousands of villagers planted mines and littered roads with the-busters which blasted German truck tires. The most optimistic hope had been to hold up the German reinforcements for 12 hours, but the operatives delayed them two days.

The underground's triumph on D Day brought new thousands flocling to help clear the enemy from every part of France To aid them to organize quickly, Headquarters sent a second wise of secret soldiers, the "Douglases,"* who now parachited into enemy-occupied territory lach "Douglases," be incompleted territory lach "Douglases," a French and an American officer, and a radio operator

Most Dougs went to the mountainous regions to help the Maquis, who now numbered 400,000 — all wanting arms Helping supply them was the chief contribution nade by the

^{*} For reasons of security all names of plans operatives, units or groups are fictious

United States to France In four months 12 000 000 pounds of guns, grenades and medical supplies were flown over On July 14, 328 American Liberators and Fortresses in a daring daylight mission dropped enough equipment to arm 36,000 men

Always fighting in German-held territory, the Dougs had many hair-raising adventures. One British officer who had broken his leg when he parachited in was recuperating in a liench farmhouse when the Germans came to search. An American radio operator carried him to a swamp where he lay in water up to his neck for three days before the enemy gave up the hunt.

The SGs Special Groups — were the hell rusers of the secret army Specialists in demolitions and closein-fighting, they were dropped into France in groups of 15 to 30 to carry out jobs calling for exceptional skill

Lleven croups parachuted into southern I rance, chiefly to cover Nazi escape routes along the Circassonne Gap and the Rhone Valley These 182 men organized and trained Maguis units, and in combined operations with them killed 461 Germans, wounded 467, and took some 10,000 prisoners. The first group landed in the Department of I ot, where Germans were strong.

battalions, they ambushed 1000 Germans, blew a railway bridge and a violuct and closed the entire Department to German movement

As the Germans retreated SG tactics changed One group of 25 went in to save the gicit hydroclectric plant at Eguzon, the most important electric installation in France The Germans had 500 men there ready to demolish the plant when it became necessary to pull out 1 he officer in command of the SGs arranged a me trug with the enemy commander, speed his uniformed men through the rinks of the Miguis and permitted them to be glimpsed by the Germans while he negotiated He threatened attack by 1500 U.S. Army paratroopers, and offered safe conduct to another city. The fright ened Germans pulled out, leaving the →power plant intict

To a man, the soldiers of the secret army give full credit to the patriotic I can be prople who risked everything to help liberate I rance. Many were continually hunted and lived without adequate food or shelter. Operating in small bands or singly, some had carried on the fight for four years, dedicating their lives to the struggle against the Germans. Their valor will always be an inspirition to freedom.

THE SUPER (Held together with gummed tape)

Condensed from 1 orbes

Jack Stenbuck

bull housemaster and I nealsh professor at Middleses School in Concord Mass ran onto a few items of merchandise which appealed to him and which he felt his friends might want to buy as Christmas gifts. He bought a small stock which he pecidled among his acquaint ances in his spare time. The following year he converted his study into a display toom

People lifted his unusual merchandise so much that he was encouraged to open a store of his own

In 1941 at the age of 50, Trumbull chucked up his job, borrowed \$500 and hung out a sign 'The Country Store—I H Irumbull Prop, on the fumous burned Thoreau fomestead near Concord's historic buttle ground

The town divided into two camps those who snorted with indignation at this descriation of hallowed ground, and vainly searched the zoning code to see how such nonsense might be stopped, and those who shook their heids and offered to bet Trumbull yould lose the \$500 and his shirt to boot

loday Trumbull not only has his shirt but a general store doing an unual business of \$100,000 And Concord citizens now point out his etablishment with pride

The store has a hitching post outside, whittlin' chairs on the verrand i, a penny candy counter with
old-time sweets in blown class jus,
quaint I ranklin stoves, a checkerboard for the oldsters, antique music
boxes for the youngsters and, it
goes without saving an old 'ishioned
or icker barrel right in the center of
things Everything about The Countiv Store is informal, from the redflainnel underwe is directing from the
ceiling to the merch indisc piled on
wooden tables

Those who gather round the crucker buriel need little imagination to conjure up famous shosts of the past for the building dates back to 1760. It has served as the trading post of Henry Thoreau's father, the shocmaking shop of Cyrus Pierce, bootmaker for a host of Concord's gicuts, the law office and home of John Keyes and also as a tavern and a town hall. It was the first home in Concord to boast a tin bathtub

When Frumbull started, he served to every day to as many customers as happened to be in the store at 3 pm. It was brewed on a Franklin stove in a rare antique pot and served in firest china. All business stopped and Trumbull, his help and his customers gathered round the cracker barrel. More recently, as the number of customers grew, Frumbull had to

move the tea ceremony to his base ment office, an antique lover s puradise, cluttered with kerosene lamps, Colonial clocks, an 18th-century safe, Currier & Ives prints, even an ancient brick water boiler. None of the antiques in office or store is for safe

All of Trumbull's merchandise has a nostalgic flavor - maple syrup, honey and stone ground meal from Vermont, milking stools made by hand in New Hampshire, hunting knives forged by a blacksmith in Maine, flannel shirts, denims, peppermunt candy and licorice sticks and the 1 mous 7 anzib u the confection which Silem set eighting of old always took with them on trips found the world because it remained fresh for months in inv weather frumbull says he has just about everything the country store carried except billowy pettico its

Trumbull uses his brass fronted 1012 Ford to search the New England countrys le for unique merchandre. Though his advertising is confined to an occasional one inch ad in a few publications of limited circulation he has developed a thriving mul-order business that reaches as far as Alaska, Hawan and Mexico Simply through word of mouth advertising his mailing list grows at the rate of 1000 a month

Four times a year, Trumbull sends out a catalogue featuring merchan-

disc which he describes as "only the best from the Fist and the West." He wastes no type on catch phrises, I wher, his copy weaves in the tradition behind the merchandise he offers. And if someone writes to ask about an item, Trumbull often personally pounds out a reply so detailed that the recipient has the feeling he is. The Country Stoes only customer

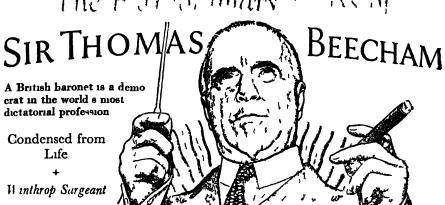

Trumbull himself comes from a family of Salem traders. His father sailed to the far places of the world and, in 1871, outfitted Stanley for his expedition into Africa in search of Di Livingstone.

To those who express surprise at Trumbull's success, Concord folk explain 'He is so genuinely enthusiastic about his merchandise that he spreads the enthusiasm to his help and his customers, and the pains he will take to order just the right kind of sport shart or to find an especially desirable jar of preserves can't be matched anywhere"

ARIENE FRANCIS, on the Blue Network s Blind Date program, asked a service man What were you before you joined up? "Perfectly contented," was his brisk reply

The Fatire, Imary " in in

sergeants and minnal trainers, symphony conductors are probably the most withering and tyrannical group of men to be found in civilized society today. The explanation is not that the conductors are innately irascible. They are a product of their association with musicians, who tend to be is antic and undisciplined as talented monkeys.

The ways in which in orchestra can torment a conductor are beyond number. A trombonist who has perfected the technique can blow spit balls with telling accuracy through the curved crook of his instrument while facing innocently in the opposite direction. A nickel deposited in one of the f holes of the concertmaster's violin produces a curious, caterwauling distortion of tone

One of the most interesting ways of plaguing a conductor is to play wrong notes and see how long it takes him to detect them. Sometimes the conductor fails to detect the false note at

all in one high ranking U. S. symphony or chestra there was a cellist who played a stanza of Sousa's Stars and Stripes Inverse in the middle of a Brahms symphony during several successive seasons. The conductor never poticed the interpolation, and the cellist regards the successful deception is one of the great achievements of his artistic career.

At this point it will be obvious why most of our leading maestics assume from the start that their musicians are potential criminals. The conductor must get the upper hand and hold it, and different conductors have different approaches to this problem Toscanii i possesses a microscopic knowledge of what every man is supposed to be doing and car sense an impulse to sabotage almost before it appears Stokowski cows his orchestra with a superior Byronic glare, Tritz Reiner treats his to an unrelenting course of icy veil il browbeating. Serge Koussevitzky

handles his by howling with pun at the slightest hint of livity

The most unorthodox approach is probably that of Su I homas Beccham, founder and conductor of the I ondon Philharmonic, and a frequent guest conductor of U S orchestras A man of lordly, Victorian bearing, whose imperial goatee and aristociatic air would stamp him as a personality in any walk of life, Peecham is so obviously accustomed to command that minor attempts at sabotage seem a trifle silly Secure in his habit of authority, Beech im can issord to unbend without fe it of losing his dignity He can joke, ask his rousicians for advice impersonate a windnull chew his boton, admit frankly that he is not familiar with the score — ind still m unt un a dignified atmosphere "Beechain, Bernard Shaw is supposed to hive remarked, "is the only adult conductor I have ever met 'He has at my rate, the faculty of treating his men as fellow adults To the iverage symphony orchestra this experience is so novel as to be unnerving

Many orchestra musicians maintain that Beecham doesn't really conduct at all The carefully polished gestures of Koussevitzky, the sensitive baton technique of Toscanini are refinements that Beecham manages to get along without He has, properly speaking, no technique of the baton whatever His jounded, dignified figure bounces and cavorts like that of an excited racing fan whose horse is winning by a nose He will lunge like a fencer, crouch as if he expected to bring his oboist down with a flying tackle, and when signaling the brass for a powerful entrance he will go through the motions of a baseball pitcher. Frequently in his excitement he lets slip his baton. Sometimes he even fills off the podium "Podiums," he once remarked lofuly after such a mishap, "are expressly designed as put of a conspiracy to get rid of conductors." Once, at a Chinegie Hall concert, he reached such a peak of artistic exuberance that he broke his suspenders and had to leave the stage clutching his trousers.

The astonishing thing about these gymnistic performances is that the music Sir Thomas is conducting is sue from the orenestra with precision polish and exquisite grace. No other fumous contemporary conductor—not even Toscanini—can match the delicate yet virile flavor these violent gestures impart to a Mozart or a Haydn symphony.

Beecham's remarkable aplomb is traceable in part to the fact that he is absolutely independent financially He is one of England's riches men The \$150,000,000 fortune amassed by his ioiebears through the invention and sale of England's most popular lax itive, Beecham's Pills has enabled, Sir I homas to buy symphony ordner tras and opera houses as another multimillionaire might buy racing stables He is probably the only maestro in the world who conducts purely for pleasure — a pleasure un maired by the slightest worry over what critics, audiences or boards of directors think of him

Another factor is unquestionably Beecham's genial and eminently bal anced mind, which delights in defying the tradition of pompous sham that often surrounds the profession of con

ducting But perhaps most important is his enormous artistic authority Beneath all his tomfoolery he is really a learned and artistic illy unimpeachable musical scholar

When Sir Thomas was a little boy the Beecham home near Liverpool was a rendezvous for famous musicians from all over Europe. As young Thomas studied piano and musical composition, he also learned at first hand the traditions and psychology of musicians.

At the age of 20, he organized his first symphony orchestra Waggish associates dubbed at the "Pallhan monic" Sir Thomas was undis mayed A short time later he took his place in the audition line of a small British opera company to get a job as an accompanist. One singer had forgotten her music Sir Thomas offcied his services "But," said the impresario, ' do you understand? You will have to play the accompaniment entirely from memory " 'Cert unly, uplied Su Thomas He not only a companied the singer's upin, he went on accompanying successive singers in arias from dozens of opris — all flawlessly, all from mem ory The impresario hired him not as an accompanist but as conductor of his company

Today Beecham is so sure of his knowledge that he rarely takes the trouble to do the hours of boning up that most conductors consider indispensable. At Covent Garden he was famous for arriving in the crchestra pit at the last minute before a performance, taking up his baton and then asking his chief violinist, "I say, old man, which opera are we playing tonight?"

Beecham has visited the United States many times and has become one of the most popular orchestra and opera conductors. At 65 he is still at the peak of his career

Sir Thom is got his knighthood following services to the British I impire as cultural amb issador in Italy during World Wir I. He is still capable of conversing with profundity and wit on practically any phase of international policy or governmental philosophy. He is a profound student of the Llizabethan drama—notably the plays of Beaumont and Hetcher, about whom he is writing a bool.

Though he views life is a rule, with unused intellectual detachment, Beech une in be roused to a towering fary on two subjects music over the ridio and music in the movies. The former he firmly believes "can never achieve the tonal perfection one he are at the actual performance because it is required to run the garant of knobs and levers and electrical gade ets handled by mea who, almost invariably, are mechanics rather than artists."

The latter is the favorite of all his aversions. If I were President of this country, he roared in an interview "the first thing I d do would be to abolish music and talking in the movies. The movies are sheer bedlam in a madhouse. God! Now that the silent films are through, you can t go anywhere and he ir nothing!"

Brecham's usual approach to 16 he usal difficulties is that of a self depieciting fellow artist asking help in solving a bothersome problem. He is one of the few conductors who seem to realize that it is the orchestra that is doing the playing Pausin, to cor

rect a muddy passage, he will examine the score with candid curiosity 'Nobody is playing anything like what I've got," he will complain, raising an eyebrow "I believe the high G in the horns (glancing at the player) is much too loud, through no tault of yours" He will then repeat the passage, grinning appreciatively at the improvements

Very risely he will beenk into a tantrum, which in Beecham's case consists in picing up and down, burying his Ldwardi in beard in his chest and 10 iring like a lion Sometimes his anger takes a colder turn which is even more disturbing "We cannot expect you to follow us all the time," he will say to the offender with figid politeness, 'but if you would have the kindness to keep in touch with us occasionally

In a less Olympian personality, Beecham's informality would be fatal to prestige As it is, it often leaves his musici ins rattled. The fact is that the aver ige musici in doesn't feel that a great performance has been given unless he has been goaded and term fied to the point of hysteria in the process Once after a particularly fine Beecham concert in Cainegie Hill, a critic wis talking to a New York Philharmonic violinist "That was a magnificent performance," the critic remarked "Don't be a fool," replied the violinist, "that man Beech im is a big bluff. He can't conduct it all He acts as though symphonic music was just a lot of fun?

In the moining's mail came a letter to the store containing the clipped advertisement with the I don't give a damn about the soap flakes Where can I get the washwoman???? - Contributed by Joy Reese (oleman

Now I Lay Me...

Condensed from Good Housekeeping

WONDER if ever there was a child who wanted to go to bed! I un sure I never heard of one And, indeed, no wonder! I or bed means the end of the bright day, the elo e of a great adventure. Yet I have noticed that no matter how much resistance he puts up, every child loves his hated bed once he is comfortably in it. It is his special place, his safe home his own little stretch of security.

When I look buck to my own childhood, I find that bedtime of all times loons largest in my mind. Our parents — happy hum in beings! — had to books on child psychology All they had to guide them was their love and their hum in wisdom. And of course, time! No matter how busy the day, they always had a half hour to spend with their children at bedtime That quict, wirm, secure hill hour, after the noisy day, gathered up our moments of play and sent us checifully into the light. All dissensions were healed by it even the naughtie t child felt good after it

Now, to feel good is so feel safe And that is how children should go to bed, wrapped in their is notence. The attitude of grow ups has changed since I was young Children, once considered merely human beings in little, have become a race apart, with special laws. Bearded men—often bachelors—have written earnest

books about them. They urged us not to rock them to sleep not to sing them lullable. They even banished fury stories, 'so as not to encourage lying,' Poor bearded men — ind poor children!

I or myself, I a n ready to go to the guillotine in defense of the lullaby. Not to sing a song to a little child as he settle down for the night seems unritural to me. It need not be a cradle sent any tune softly sung will do I sing to a cert un little boy from the time he was no bigger than a fursize exclish. It is not I who he e taught him to meet the night bravely. It is the memory I always keep of my mother siving a his children sleep in peace.

Keiding and singing and the old simple privers always reasert them selves. Small children do not need theology or secturan religion, but we do them a great wrong if we do not tell them the Bible stories and teach them how to pray. For those old truths, retold as tales, set up a find of annumation that will last throughout their lives. The ancient stories will wake in the child his fire all conception of something greater.

than himself I do not think there's a child whose heart and mind could not be stirred by the concepts of heaven and angels Indeed, children understand these matters better than grownups do, for they are still at the age of wonder and not so far from tru h

Prayers, too, give them a feeling of safety — and also a sense of responsibility. Once a child has asked that "God bless" a beloved person, he comes into a new, less selfful relation with that person. He is no longer just the treasured baby, he, too, is doing the treasuring

It seems to me that the prayers I learned is a child are still the best. The first of them is so well known I almost feel shy to quote it. Nevertheless, it gives me a feeling of grace simply to write the words

Centle Jesus, meek and mild, Look upon a little child, Pity my simplicity, Suffer nie to come to Thee!

Pity my simplicity! One does not have to be young to say that It is the cry of all our hearts, no matter how silent our lips

There was another prayer — not so generally known — that used to give me a great feeling of contentment of comfort for the dark hours and of hope for the day

Lord, keep us safe this night, Secure from all our fears, May angels guard us while we sleep Till morning light appears!

But songs and prayers and reading at bedtime are not the only elements that make for contented sleep Some imaginative children find going to bed a torture because of their fear of the dark. Once the light is out, the walls retreat, familiar objects disappear, and the bed, like a boat, goes sailing out on a boundless sea of blackness What can we do for this shapeless fear but give the child a night light? It need not be in the room A gleam of gold from the hall or bathroom will do, a tiny crick of comforting light to keep him safe from the daikness Nothing else — no amount of reasoning — will cure that haunting terror

I talk of safety, but you must not think I am suggesting that you or I or anyone clsc can really keep children safe. For children, too, are creatures of life and life is not a safe process. Watching the rosy, sleeping faces, we realize with a catch at the heart that we cannot save children from their fates no matter how we treasu e them. But we can give them calm and happy moments, and wells of aircient truth to draw on in the time when their need is great.

A new employe was assigned the task of sending out letters to a firm a clients, telling of a new gas heating unit soon to be ready for delivery. By error, she sent a it most of the envelopes without the letters. The blunder was discovered only when telephone calls began pouring in from curious recipients who wanted to know what should have been in the envelopes. The incident created more interest than the letter could have done—and the girl is in line for a bonus—left keen in Philadelphia Record.

Conquest of Our Worst Pacific Foe. DISEASE

The amazing work done by Army and N ivy medicine to combat the vicious tropic il discuses which at first caused more cusualties than enemy gunfue

desperate battle we could have lost. Not to the Japs but to needs and disease bugs.

We knew a good deal about the pends of tropical disease when we beg in fighting in the humid jungles of he Solomons But not enough The n cets fought back and our hospitals londed up Malaria dengue fever, lysentery put men out of bittle is surely as if struck by Jap bullets Occisionally men developed filariasis a mo quito-borne dis ise producing glandular swellings that can nile the victim's legs swell to the aize of telephone poles. On New Britain and New Guinea, soldiers and Marines f hting in the till Junai gr ss came down with so-called scrub or bush' typhus, one of the most scrious tropical discuses of all

In 1 Picific camp I visited recently, a poster sixs bluntly, 'On Guidalanial discuss I and out ten men for every one wounded by the Japs' I his is a fair estimate of what happened

We took all the precautions we could, we sercened our kitchens, disinfected our latrines, burned our refuse. The men drank when possible from Lister bags and pur field their Condensed from The American Legion M is time

Frederick C Painton
Was correspondent now at the front in the Pacific

canteen water to guard against the deadly amebre of anichic dysentery. But jungle fighting men run out of water and drink anywhere in desperate, burning thirst. And in battle they can't go behind screens to cat, and flies craw! on the food.

Then it I is we the problem became even wor. Hundre is of dead Jips I by hidden in junch undergrowth Flies bied by millions in their rotting bodies. Dysentery figures went up.

There wasn't enough DDI, the miricle insecticide * to district the battlefield A Maine medical officer thought of a compound called 'penate,' which is sodium arsente. He sought out (F Pemberton, chief entomologist of the Hawaiian Sugar Planters' A sociation, a main with 20 years experience with tropical insects. Will penate kill mosquito and fly larvae?" he isked

Pemberton said yes, and adult flies and mosquitoes as well if the compound remained moist. Its deadly effect would not last as long as DDT, but it would do the job

And so when we invaded Peleliu list September, two assault forces

* Sca Freedom from Insect Pests, The Reader's Digest, May, 14

stormed ishole simultaneously—soldicis and Maines to destroy Japs and sanitary squads to destroy insects. In each sanitary squad were 15 men carrying knapsack sprayers filled with penite. Jap snipers and artillery took toll of them. But they did their job. They started spraying at the water's edge, working inland over Jap military installations, latrines, food dumps and native huts. Power sprayers came ashore right after them to spray swamps, villages bivoure areas. In some places specially equipped planes sprayed DD1 in solution.

'The results were startling,' a medical officer told me "For the first time perhaps in tropical military his tory, casualties from mosquitoes and

flies were negligible"

I or example, dengue fever was endemic on Angaur and many of the native population had it in mild form But at the end of 30 days not one case was reported among the American forces. In one Army division there were only seven cases of malaria, and these probably had it before the a tack. In the heat of battle some Marines forgot to take at ibrine and 7 recurrences of malaria developed, but only four had to be evacuated.

On Saipan our forces encountered dense black clouds of flies — the result of a Japanese law making it a crime to kill a fly * The sweep of a man's hand could capture a hundred They crawled into nostrils and eyes, they were thick around kitchens and

latrines

To combat the plague, tons of DDI powder in solution were loaded on C-47 transport planes. The pilots took their lives in their hands to really at treetop level, literally covering the island with the insect killer. Today on Saipan there are not as many flies or mosquitoes as you'd find in a comparable size section of the United States. Dengue fever once endemic on the reland, has been wiped out. There is no implain and no dysentery.

Our worst enemy proved to be the tiny larval mite whose bite causes the d ingerous "bush' typhus Nast fields of kunni grass often growing to a height of 20 feet in New Guinea, New But up and nearby islands, provide perfect cover for 11ts, which he apparently host to this deadly mite. The first case of the disease was reported an December 191, in lin i few weeks 230 men were down. I wents two of these died, and many who recovered had permanent heart impairment and were no longer useful for mr itary service. Only careful nuring kept the mortality low. In Burma, where Merrill's Manauders encountered the discise deep in the jungle without proper medical care, the death rate was much higher. The clise ise was sirdonicilly called the "Japanese sceret weapon?

A strict preventive inclicine regime was instituted. All grass and shrubbery were destroyed. All camp sites were burned over and sprayed, and the men were cautioned never to sit or lie on the ground. All wearing appared.—leggings, socks, fatigues—was dipped in DDT solution. To get rid of the rats, we used the pre-bat system. That is, traps were set with

^{*} To p otect their sugar cane crop from a boten insect, the Japs had imported a fly which was the natural enemy of the boren It was to give these flies a start that the Japs imposed a penalty for killing any fly

nonpoisonous bait and for six days the rats were made accustomed to eat there. On the seventh day the bait was poisoned — and rats died by thousands. In consequence of there measures, scrub typhus ceased to be a menace

The thatched huts of native villages, lacking even rudimentary sanitary systems, were also hotbeds of infection. The natives themselves suffered from dengue and malaria, yaws and skin diseases, tuberculosis and intestinal parasites. In the 30 days following conquest of one of the Marinas, more than 42,000 surgical and medical treatment were idministered to the 17,000 natives, there were 508 deaths from malinatiation and dysentery.

The nivil and military government cleaned up villages and latrines and sewage. Power sprayers covered all stagnant water. Native women gathered ture root to make por and cut lanlong greens to add to the C and K rations that were distributed. By December 1944, only 90 days later, medical and surgical treatments had fallen to 9400, and there were only 50 deaths. As the backlog of malnutration and chronic disease is cleaned up, the number of treatments is expected to fall to a few hundred.

In the Marshalls, 90 percent of the population suffered from yaws, a discase causing ugly sores and painful swelling of the joints, it reduced working efficiency of the natives to nil Intravenous injection of arsphenamine compounds has arrested yaws in these islands. In the month of January this year, only one native was treated

Now sanitary routines are taught

to the natives by military governments. Women have been trained as nurses and nurse's aides, and infantwelfare measures have been instituted.

Our medical care has given the lie to Jap propaganda among the natives that we are murderers and devils After our troops had secured the is land of Peleliu, the natives were found hiding in caves where they had fled in terror. They were suffering from skin discases, malnutrition, intestinal parasites, and were in a des per ite state. Induced to come out and submit to inclical treatment. they have been restored to health Only three reeded hospital care list December The Chamorio chiefs convened and signed a scroll of thanks for the help they received, and now work hard for the Americ ins in griti tude Pelchu is one of the islands we need as Pacific outposts after the var The native population will be our friends

All this does not mean that we do not have some cases of malaria, den gue and dysentery. We also have what the menicall "crud," a skin outbreak like ringworm caused by excessive perspiration and too few chances to bathe. But tropical disease has ceased to be the menace it once was, and there have been no epidemics to incapacitate thousands "It can safely be said," I was told by a naval medical officer, "that we have reduced casualties from the mosquito and fly to one 25th of what they were in 1942."

But constant vigilance must be maintained if only to protect people at home from diseases to which they have no environmental immunity Every day dozens of big C-54 hospital planes take off from such places as Leyte and Saipan, carrying wounded to the United States Inside one of those planes there could be a single bu, or insect capable of transmitting a disease that might spread rapidly

So sanitary squads disinfect planes at the departure point and at intermediate stops. Light traps are installed at all airfields to gather every specimen of tropical insect planes arriving at Honolulu are searched carefully and every bug is placed in an envelope. These are taken to C. E. Pemberton at the Sugar Planters' Association laboratory where,

against 200,000 already classified specimens, they are identified and their disease bearing potentialities are carefully weighed. Thus far, no new diseases have got past these outposts

The know-how acquired by our medical experts in the Pacific will have inestimable peacetime value. Our island garrisons will be protected against diseases that once caused these islands to be called "the white man's graveyard." American tourists and commercial travelers will be as safe from disease as in the United States. We shall have beaten the bugs too.

New Angle to a Math Problem

NORTH CAROLINA citizens have been urging better pay for public school teachers. The following advertisement appeared recently in the Rale gh. News and Observer.

Teacher Wanted for Bolivia High School

If you have had no professional training, the state allow \$71 33 per month If you have spent several thousand dollars for four years of teaching experience you will receive \$158 a month, provid d your certificate is for mathematics, otherwise \$148 After deducting withholding tax, net monthly salary is from \$54 to \$135 Your work will deal with nothing more important than the minds of the children upon whose shoulders will fall the task of maintaining the peace to follow this war. Why should you expect much pay for this type of work? Lesson studies and plans, grading papers, teaching classes, extracurricular activities, etc. will not require more than 12 to 15 hours per day. We will not claim the balance of , our time. Better apply early as we expect to choose from the first 100 applicants. The person chosen to teach mathematics will only be the fourth tencher this year, not the sixth or eighth as in some schools. Average cost of room and board will only be about \$40 per month. Apply in person or write.—

Glenn M Tucker, Principal, Bolivia N C

Piratical captains with shanghaid hands no longer cruise the world s greatest oyster grounds, but it's still gruching work for tough men

Condensed from The Saturday Evening Post

Hore and Bloomfield

-ogan's Hii i is four fathoms down in Chesapeake Bay, and oysters **a** grow on the top of it Yesterday, Log in 5 Hill saw only some sca fulls and a flock of black ducks Lorlay, boots clump on the decks of suling vessels, and the place is alive ind profine I or this is November, the start of the diedging season and ovstermen have worled a month to get it idy for this day

But captains and crews are grambling because now there's no air and is along vessel needs some air "S and dumn thing as last years openin,' said Doublehead One thing about an oyster, though — it don't change its address "

Doublehead is a tall man, squinty blue-eyed, stubble on his chin, plaid shirt and greasy cap He swim into i doublehead, or sting ray, when I was a boy On the Chesapeake, nickn incs never die

The vessels are old girls of 50 to 60, proper though silty grandmas now, after a hell-ship youth. The law leeps their jibs and mainsails up the law forbids dredging by power The boats are cleaner than they ll be again this season. On deck and in the hold, the chunks of stovewood

are 1 cked, the three stoves are blacked, the stovepipes are new The water casks are as white as a sea gull s belly There's a new broom without a downwind slant to its bristles vet. and handles on all the coffee cups, and bright new lines in the rigging

I hey ie all fresh print and a captun's pride They're bageyes and skiplicks, unique to Chesapeake Biv They ic centerboarders, from 45 to 65 feet on deck, and they Il float in four feet — a handy thing for crossing a shoul. The buggyes have two mises the skippicks have one. The m i ts have no use for the perpendic-They rake aft. Some vessels have little figure heads on the end of the longhead under the bowsprit — "a fish a cagle, a tarapin turkle or a wom in," Doubleheid said

With the islimity of breeze for a change of tide, a dark band of wrinkles springs icross the water, and the bo its swing to it There s air now, not a wind to unhair a dos, but enough to sul a boat. Men heave on the flywheel of the gasoline winder amidships - - a single cylinder, 12-h p job that runs all day on four gallons and hauls up the dredges. All over the fleet an iron coughing breaks out

The sails curve out with wind The vessels pass and crisscross Cool eyes gauge the distances and note the port and starboard tacks A rhythm of shuttling comes into the scene, like dancers on a floor

Each captain knows the edges of the hill as definitely as a pisture fence, though the landmarks are miles awily When he rings his bell, the diedge splashes over the side At once the ship slows down Diagging the diedge is like dragging an anchor It scrapes and bumps along, growing heavier with oysters, making the vessel go slower still

The dredge — 'drudge," the men call it — is a broad iron scoop with a toothed edge to dig into the ovster bottom, a chain bag to hold the oysters rope mesh above it to let trash work through There's a diedge on each side of the boat, and three men to each dredge

The stronger the breeze, the bigger the haul before it has to come in The bugeve Richard Smith flings up a stavsail between her masts, catching the high and faster air. As the heavy dredge comes dripping over the roller, the men dump the oysters on deck. Clang and the dredge has splashed again. The men scramble over the oysters, culling, chipping apart the ones that giew in pairs and triplets. Those under the legal three inches they shovel overboard to grow some more.

Off the hill lotters the Government-gray patrol boat, and two bigbellied ships, with purring Diesels and waiting cranes They are "buy boats," to buy the oysters and take them to market On them, the men talk of the dredges they could drag—

they'd scrape the bay clean in a season That's why the efficiency of motors is forbidden. The situation is bad enough as it is Chesapeake Bay is the world's greatest oyster ground, but in 50 years its yield has come down from 111,000,000 pounds to 35,000,000.

Doublehead swears at the first haul of oysters Half of them have to go back, to grow another inch in another year "The bottom's laid over with young'uns Next season, now—'But times are good even so Of every dollar of oysters sold, 35 cents goes to the captain for his ship and gear. The captain and the six others share alike in the 65 cents, and from this they all split the grub will Last year the diudgers often made \$125 a week, while oysters reached a historic high, \$3 a bushel—about a penny an oyster

At sunset they quit, according to law The home port is usually too far from the beds. They run into a cieck or lie under a point for a lee On bitter cold nights, the anchor splashes in the rolling open water, so that a boat won't find itself frozen in The anchor light goes up, bocts come off, socks hang over the stove to dry The men are all in the captain's cabin, sitting on a step that rims the tiny floor, backs against bunks The steam of supper plates comes up in red and wind-whipped faces. The oil lamp swings a little and the battery radio is going

It's a snug, hot place on a night when the dcck is all ice On the for ward bulkhead the cookstove glows, and a broad-bottomed coffeepot puffs steam The oystermen rest and talk until eight or nine o'clock Sunrise will find this boat on the oyster

grounds again

Behind many of the drudgers are a couple of centuries of bay men, who left them an Elizabethan pungency of speech, some reserve toward "forcigners" from another state, and gristle in their make-up They like the gamble of their work, and shrug at hardships One captain sold his bugeye two years ago and invested in a firm This season he's back with a skipjack, which matches his age, 63

They speak with pride of the days when drudging was really hard and homicidal. I hat was about 40 to 60 years ago, and the ships sailed with shanghaied crews called hoboes. I here were no gasoline winders then, and every diedge load had to be cranked in by hand Saloonkeepers sold drunken men to shipping agents, who sold them to the captains.

I left Ballamer [Baltimore] one night with \$160 invested into my hoboes, 's iid one big-shouldered old captain "They was surprised next day to see where they was — abeam of Bloody Point They didn't take a notion to workin, but I had no trouble I kept a bar handy, and I got 'em movin We had a good season

"Shanghaun' done some of them hoboes good," he went on "Clean livin' and hard work We sold to the buy boats, and got our grub and water from them That way we anchored out all the time and never let the hoboes put a foot ashore You couldn't trust 'em'"

The hoboes were paid off at the end of the season at \$7.50 to \$10.3 week Often the captain got them drunk, and their pay was what they

found in their pockets next day Some were "paid off by the boom' — knocked overboard by a calculated jibe of the heavy spar At two places, potter's fields were established for the bodies of oysterment that washed ashore Said a Government report on the oyster industry in 1884 "Dredging in Maryland is a general scramble, carried on in 700 boats, manned by 5600 daring and unscrupulous men, who regard neither the laws of God or man They are gathered from the vilest dens of Baltimore"

Somewhat dryly, Double head said, "I he cap'ns wasn't all hard One was a real good fellow He given his crew ugar for their coffee on Christmis Lots of 'em let the men go

ishore in the spring '

The modern pirate works at night, with a motor boat and a diedge. One is rumored to have made \$1,00 in a week last season. But the patrol boats also go out at night, drifting on syster grounds, listening for a motor. I hen there's a chase, and there may be shooting. Along the Maryland Virginia line a few patrol boats mount machine guns. Troubles keep breaking out, not eased by an old rivalry between the waterinen of the two states.

Patrol boats are 1 un by the state, which owns the land under the water Maryland's Department of Tidew 1-ter Fisheries employs nearly 100 men, 1 shore and on the watch boats, chasing pitates and inspecting oysters for size They fine a diedge boat \$100 if more than five percent of the oysters are under three inches

But dredging is only part of the oyster industry, some grounds are

reserved for the tongers These men use motorboats or even rowboats Tonging is hard, lone-handed work The tonger operates a pair of rakes that are bolted together, opening and closing scissor-fashion — wide rakes with long limber shafts He lowers his rakes to the bottom, opens his arms wide to open the teeth, then works his arms together by short jerks as the rakes comb through the bottom The shafts closed, he pulls them up hand over hand wet, and in midwinter, freezing He balances them like the long pole of a tightiope walker and shakes the oysters onto the culling board

And he's making big money these days. Now and then a powerful main on a lucky spot makes \$200.2 week many average \$100 in good weather. Oysters are high and unrationed, and the oyster beds are not too crowded with boats because so many of the men have been drafted - the Navy and Coast Guard make petty officers of them right quick. Bur all the old men are out with their rakes. One spry fellow of 86 in a rowboat takes five or six bushels every sunny day.

Tongers work from the first of September to the tenth of April while dredgers are limited to November first to the middle of March The tongers take their oysters to the buy boats or to the local oyster houses, or "factories," and get their cash on the spot The oyster shuckers are mostly colored folk with some magic of their hands. To a novice,

an oyster is a locked safe, but the shucker's knife finds the lip at once and pries its way in One expert was timed at 30 oysters a minute He could do 18 gallons a day, at 50 cents a gallon

The oysters are graded for size, washed, and packed into gallon tins for refrigerated shipment. They will be stewed or fried or, often enough, dropped into symmetrical shells at an oyster bar

A single oyster may spawn 500,000 000 eggs in a season. These become almost invisible larvae, swimming about for two weeks being consumed with relish by all kinds of marine life, including oysters. The survivors die if they settle on mud. They must exment themselves to a hard, clean surface such as an oystershell. An old boot or whisky bottle will do. In some places, cement coated brush or egg crate partitions are staked out to exten them. In two to four years, the oyster is a legal size.

Oysters are healthful the year around as oystermen know. The taboo of the months without R comes down from the days before refrigerated shipping. But oysters are finest and fattest in winter, because they lose weight in summer, when they spawn. Their nutrition value is high, they draw from the sea water many minerals needed for human health, particularly iron and iodine.

In the Chesapeake country, oysters are always on the table Sometimes a tonger will shuck and eat 100 The oysterman's breed is full of 100

Can These Guerrillas Free Fascist Spain?

Condensed from Collier s + + + Ted Allan

The veterans of the first fight against fascism plan to achieve victory in the final one

'NDER a hot Spanish sun Franco's troops marched past the reviewing stand in Oviedo, capital of the Asturias region of northwestern Spain, as bands played spirited Falangist airs to the thousands sithered there by order of the la linge It was July 17, 1943, the seventh inniversary of the generals' revolt scainst the Spanish Republic German consular officials on the review ing stand stood at stiff attention when one passing band played he German national anthem The Falangists cheered, arms were rused in the Nazi-Falange salute It was quite an affair

Standing on the side lines were three men sent into Oviedo to make sure the celebration was engaging the attention of the troops and police. If I ranco's police had been more alert they might have recognized them as miners and suspected that they were querrilla spies belonging to Pepon de la Campa's guerrilleros. Pepon means Big Joe, and Big Joe stands six feet four in his sandaled feet and he leads the largest and most efficient army of guerrillas in Spain.

While the Falange was enjoying itself in Oviedo, Big Joe and his men came down from the Asturian hills and surrounded the town of San Esteban de Pravia, some 35 miles away I hey flung open the jails, releasing

every anti-Franco political prisoner They gathered every truck and wagon in the vicinity and carried away from the huge arsenal every gun, bullet and shell

The celebration in Oviedo was suddenly called off and soldiers were rushed to San I steban de Privia But when they arrived Big Joe was gone, the munitions were gone, the political prisoners were gone and 314 men of the town were ilso gone. They had joined the guerrillas

Big Joe the most colorful guerrilla leader in Spain today, is the terror of Iranco's troops in the Asturias Every time a new big reward is of fered for him dead or alive, he posts his own reward for Iranco—'One peseta, dead or alive, preferably dead" He commands an estimated 12,000 men, many of them former miners who pride themselves on their ability to handle dynamite, and are crack shots as well

The miners hate Franco for what he has done to Spain and because he led the Moors who broke their 1934 strike Hundreds of unarmed miners were killed then — and the rest haven't forgotten But they are not alone in their hatred of Franco After their defeat in 1939, many Republican soldiers took to the hills in little groups For the first two years they functioned in cells of ten, carrying

out small raids on army posts and supply dumps As long as Hitler ravaged Europe their cause was hopeless, but they never gave up

At first their numbers increased slowly, but as Franco's tyranny ground down, more and more Spaniards were driven into the guerrilla ranks For Spain was starving Franco subordinated Spain's economy to Germany's needs, and chaos spread

More people died from starvation and disease in Spain from 1941 to 1944 than in any other country in Europe Her civilian death rate is the highest in Europe — including the devastated countries like Yugoslavia and Greece Though Spain's war was technically over in 1939, there has been no national reconstruction of revival Prices for necessities are staggering Workers earning 12 to 14 pc setas a day (about 85 cents) must pay 18 pesetas for a dozen eggs

Most of the new factories are owned by the Germans, for the Cermans did occupy Spain even though the fact was off the record And despite Germany's approaching defeat, Spain remains occupied Of the 4800 joint-stock companies in Spain today, 987 are controlled completely by German capital, and an estimated 2000 have German directors

As recently as last summer I G Farben, the gargantuan German chemical trust, built four new chemical plants in Madrid During 1944 it also completed a synthetic oil plant near Cordoba and a magnesium plant in Santai der German steel and textile trusts likewise control munitions plants, textile factories, and mines

The guerrillas knew this, and more

at preventing the copper, the wolfram and mercury, the iron, coal, shells, guns, tanks, and airplane engines being produced in Spain from reaching Hitler's armies. They smashed railways, blew up bridges, slowed work in German-owned factories and supplied themselves with arms so that they would be ready for the big day when it came.

In Castilla province their leader is a short, thin, scholarly-looking man known as El Ingeniero — The Engincer Whatever he was — and that is not known — El Ingeniero is of e of Spain's most effective guerrilla lead ers. He has operated from the Guadairama Mountains since 1939

When he needs supplies he gets them with an elan typical of the Span 1sh guerrilleros who fought Napolcon On one occasion last year El Ingenicio and a group of his men dressed in working clothes, entered Madrid on foot and made their way toward a large medical supply house. The guards at the factory were quickly disain ed (They did not put up too much of a fight, one of them even told where the best supplies were) Fl Ingeniero and his men loaded three company trucks with supplies and drove back to their headquarters The same tactic has been used to obtain clothing from the Martinez Quiros department store, one of Ma dııd's largest

After our invasion of North Africa, 5000 guerrillas following a bitter tight took and held Malaga for 45 hours, hoping the Americans would land there and help them liberate Spain, but finally despaired of our coming and withdrew

In appraising the possibilities for

a successful people's revolt against I ranco (not a more replacement of Franco by a military junta), it should be remembered that, with the exception of parts of Greece and Yugoslavia, no appreciable area of Europe was liberated by the efforts of underground fighters alone. They were able to carry out effective sabotage, and arsenals and dynamite bridges, but were unable to defeat an enemy equipped with all the modern weap one of war until the Allies gave them direct and in the form of invading armies.

The powerful force of Spaniards in I rance may play the role of the in viding army After their defeat in 1939, more than 500 000 Republicans crossed from Sp un into France Many scattered from there all over the world, but perhaps 350,000 remained, and of these some 50,000 fought with the French Maguis for the liberation of the country In fact, because of their military training they formed the nucleus of the Irench Forces of the Interior in southern I rance, out numbering the French three to one They helped liberate such cities as Marscilles, Perpignan and Borde iux The first men who lost their lives when the Maguis storined the city hall in Piris were Spaniards, and Spiniards diove some of General Jacques Leclere's tanks — bearing the names of Cuadalajara, Brunete and Madrid through the liberated streets of France's capital

The body which directs the Spanish underground is the Junta Suprema de Union Nacional, the Supreme Council of the National Union of Spain It is made up of representatives of until Franco groups ranging from the

Catholic right to the Anarcho-Syndicalists and Communists on the left In between are right-wing and left-wing Socialists, Republicans and Basque and Catalonian nationalists The Junta Suprema his established regional and provincial councils, and today there are goo local juntas

The most important political event inside Sp un in recent years was the adherence to the Junta Suprema in 1943 of the Partido Popular Catolico representing middle class (atholic groups, and the Catholic Agraran Unions, representing large sections of the Catholic persantry (the poorest and most exploited of all Spain's people) Many members of these groups had supported I ranco, believing his propigind that he was fighting for Christrinity igainst Bolshevism? Their present stand, plus the adher ence of the Basque Citholics, dis proves franco's claim that Spain's Catholics - apart from some power ful members of the church hier trehy - arc on his side

The Junta Suprema's program includes the following points break all political and economic ties with Germany, re establish freedom of the press and of religion, begin the economic reconstruction of Spain, establish a consultative assembly which will write a constitutional charter of liberty for Spain, this charter to be ratified by the people in a free, democratic election

The Spanish Republicans have been fighting fascism longer than any other force in the world — since 1936 — and they are determined that this time, freedom shall not escape them. They are sick and tired of the various schemes dreamed up by diplomass to set up a monarchy in Spain.

At present there are several Republican leaders in exile, and they have been unable to reach an agreement on Spain's future Juan Negrin, the last Republican president, may be the hope of Spain, for he alone may be able to unite all the various factions But certainly no Republican leader can rule peacefully without coming to an agreement with the Junta Suprema If an agreement is not

reached, and Fianco is replaced by some transitional government with out the Junta Suprema's support, then Spain's weary, hungry, tired people, who do not want civil war, will wage it, nevertheless. They remember their brothers who died by the thousands on the barricades of Madrid with the words, "Madrid will be the tomb of fascism," and they are again ready to die to make those words come true

Where Did That Title Come From?

Good Night, Sweet Prince (Gene Fowler's life of John Barrymore) — From Horatio's salute to the dead Hamlet

Now cracks a noble heart Good night sweet prince And flights of angels sing thee to thy rest!

All This, and Heaven Too (By Rachel Field) — From Mitthew Henry (1662–1714), who wrote of his father, the Reverend Philip Henry "He would say sometimes when he was in the midst of the comforts of this life — 'All this, and Heaven too'"

For 14 hom the Bell Tolls (By Ernest Hemingway) — From a meditation written in 1624 by John Donne, English poct

No man is an Iland, intire of it selfe any mans death diminishes me, because I am involved in Mankinde And therefore never send to know for whom the bell tolls, It tolls for thee

—Details in Upon Friegent Occasions

Gone With the Wind (By Margaret Mitchell) — From Ernest Dowson's Cynara, written in 1896

I have forgot much, Cynara! gone with the wind, Flung roses roses riotously with the throng, Dancing, to put thy pale lost likes out of mind But I was desolate and sick of an old passion Yea all the time, because the dance was long I have been faithful to thee, Cynara! in my fashion

V ice of the Turtle (John Van Druten's dramatic hit) - From The Song of Solomon

For, lo, the winter is past, the rain is over and gone
The flowers appear on the earth, the time of the singing of birds is
come, and the voice of the turtle* is heard in our land

genuity and achievement that American science has produced, the story of Waldo L Semon of Akron, Ohio, is one of the most remarkable Back in the 1920's Semon was supporting a wife on \$50 a month earned by teaching part time while he studied for his doctor's degree Today, at 46, he ranks among the world's greatest industrial chainsts

Semon has probably done more for the nation's wartime rubber program than any living scientist. One of his inventions — a strangely inert, nonflammable synthetic called Koioseal - has enabled U S designers to slash fire hazards and lesson weight in every new fighting ship and waiplane Hundreds of U S tanks owe their rubber treads and increased speeds to a Semon process for bonding rubber to metal More significant still was his prewai discovery of Ameripol, first butadiene-type synthetic rubber produced com nercially in this country

The genesis of Semon's scientific wizardry goes back to a childhood spent wandering the country from

Here's a success story to warm the cockles of your heart

Wartime Rubber

Condensed from Future

Ralph Wallace

Georgia to Oregon His father, an engineering jack-of all-trades, built lighting plants, ice plants, electric railroads and dams Young Waldo, a boy with an insatiably inquiring mind, was poking into his father's engineering books almost as soon as he could spell out the words

At nine, alone and unaided, he built a wet-cell battery from a zinc jar lid, an old are-light cribon and sal ammoniae dissolved in water. The battery operated a buzzer set for communicating with a friend next door. Waldo next put together the first wireless receiver in his town. The parts cost \$5, which he cained by picking strawberries at ten cents an hour. When he was in the sixth grade he invented his own logarithm table to provide quick answers to arithmetic problems.

In 1914, while the family lived in Seattle, Waldo stumbled onto a German treatise on organic chemistry. The dry, prosaic textbook struck electric sparks in the vouth's mind. It told how dyes could be synthesized and implicit in every paragraph wis the hint that, with knowledge and research, almost any organic compound could be synthesized. A world of wonders suddenly opened up

Financially college seemed im-

possible, but he determined to eun his way through Foi a year he hacked brush with a surveying gang pushing a highway through the rattlesn ake-infested country around Yakima Out of his \$65 a month salary he saved \$500

From his first days at the University of Washington, he showed an imazing aptitude for research Before the United States entered the first World War, Army Intelligence assigned a problem to the university's chemistry department, which passed it on to Waldo, then a callow sophomore of 18 The problem was to find developing agents for secret inks. In three months Waldo discovered more than 100 and sent the results to Washington Later he devised a process which increased the yield of IN Γ When he found a from toluence method of making mustard gas from selenium, the American Chemical Society published his report of the work — an almost unheard-of honor for an undergraduate

Meanwhile he worked at anything he could turn his hand to as a janitor, as a chemical analyst for local industries. At graduation, he ranked among the first ten in his class, and easily first in chemistry That summer, on the strength of a slender teaching job while working for his doctorate, he married Marjorie Gunn, a pretty blonde chemistry student he had known since his freshman days Marjorie tutored to help out yet there were months when the threadbare young couple had only roast wheat and a friendly farmer's vegetables as their staple food But Waldo won his doctor's degree and became One day in 1926 Semon received a letter from Dr Hailan L Trumbull, manager of chemical research for the B F Goodrich Company Trumbull was looking for a particularly ableman to tackle an important job Would Semon be interested?

If ould he! A few days later he was in Akion. The job proved to be a chemist's dream of research. Severally cars before, Goodrich technicians had patented a process for bonding rubber to steel with a newly invented adhesive prepared from rubber. A million-dollar a vear business had been built up lining acid carrying tank curs with bonded rubber and the process had many other industrial applications. Goodrich now wanted to find all the sinthetic rubberlike materials which could also be used to weld rubber to steel.

For months Scinon created one synthetic adhesive after another, many worthless, others patentable. One morning he struck boldly in a new direction. Years before, a Rus sian scientist had prepared a compound called polyvinyl chloride, so hard and horny it had proved useless. But its molecular structure was similar to that of rubber, Seinon decided to try to convert it into an adhesive by dosing it with a high-boiling ether.

A gelatinous mass coagulated in the test tube — precisely what he did not want. He broke the test tube and tweaked the material with thumb and forefinger. Amazingly, it stretched! A thrill crept up Semon's spine as he realized that he had found a new rubberlike synthetic.

Further experiments showed that

ing qualities. Unlike natural rubber, it was nonflammable. It was practically impervious to the oxygen in the air, whereas rubber succumbs quickly to oxygen attack. And again unlike rubber, which soaks up petroleum products like a sponge, it was unaffected by oil or gasoline. Because it sealed against the corrosive effect of almost every acid known, the new material was named Koroseal.

Next, semon created a whole group of age resisting chemicals which have since dramatically lengthened the life of both synthetic and natural rubber tires

In 193, Semon was called from his other research duties to concentrate on a practical synthetic rubber for tires. For a quarter of a century, German and Russian scientists had been seeking the answer to this problem. Semon first investigated every detail of their work, for six months he toiled 16 hours a day, reading scientific reports in French, in German, in Linglish.

When that was finished he knew the main ingredients, but not the secret formulas, of the five principal synthetic rubbers in the world Calmly he set out to reproduce each one in his laboratory. This necessitated polymerization of the principal ingredients — a strange chemical reaction in which the individual molecules link together like a line of men clasping hands, and thus produce the elasticity characteristic of all rubber and rubber synthetics. In six months he had reproduced them all—a staggering scientific feat

With that immense technical background, Semon suled for Europe in 1937, hoping to learn something of Germany's synthetic rubber techniques. He was especially interested in Buna S, the rubber on which Hitler's armies later smashed France and Poland. German scientists received him cordially, but showed him nothing except products made from his own Koroseal, which the Germans had blandly appropriated and now manufactured in productious quantities under the name of Igelite. Buna plants were 'inconvenient' for him to inspect. And the Gestapo shadowed him to be sure orders were enforced.

By the time Semon returned from Europe he was sure that war with Germany was inevitable. And if la pan were to seize the I at East rubber plantations the United States would be in a bad way. He recommended to Goodrich that synthetic rubber research be pushed at redoubled speed Additional scientists were inimediately put under his direction Intri cate methods for making raw ma terrals from alcohol and petroleum were worked out Machines like miniature Feiris wheels, holding as many as 100 test tubes, whilled day and night to polymerize new for mulas About 14,500 synthetic 1ub bers were produced with more than 250,000 separate evaluation tests on the various samples

Suddenly one of Scmon's formulas—a formula today under strict military scerecy, but whose principal ingredient is butadiene—showed exceptional promise But still heart-breaking difficulties cropped up on every side. The butadiene had to be refined to 99 percent purity before it would polymerize properly. The minute quantities of chemicals carried on the shoes of workmen cleaning.

the tanks ruined several batches And the first rubber proved so leathery it could not be shaped into tires But one by one these difficulties were ironed out

The fall of 1939 rolled around, and the Nazis were smashing across Poland John L Collyer became president of Goodrich, and into his lap was dumped the problem of what to do with Semon's new synthetic, called Ameripol Hundreds of thousands of dollars had already been spent on research, to make Ameripol into tires would cost hundreds of thousands more — and perhaps the company s reputation if the tiles went had Moreover, the synthetic had proved far more expensive than natural rubber Collyer called Semon in Weie Semon and his fellow technicians positively convinced the new synthetic would stand up? They were? Then he would take the gamble

In the spring of 1940 Collyer displayed America's first commercial synthetic tire to a group of leading industrialists. Within a few months scores of companies and thousands of individuals had bought the new tires for tests. Results exceeded Semon's most hopeful dreams. With more than 50 percent synthetic rubber in their make-up, Ameripol tires held up for 25,000 to 40,000 miles—far better than Germany's Buna tires.

When the Government's synthetic rubber program was finally launched, fellow chemists from all the rubber companies elected Semon chairman of their first technic il committee. His patents were poured into an industry pool, and many of his processes have now become standard in practically all Government plants

America's fighting ships formerly used wires and cables insulated with a rubber-asphalt coinpound. A shell or torpedo hit would ignite this insulation, and the fire would often race along wires throughout the ship, short-circuiting all controls. Today insulation in new naval craft and airplanes is of nonflammable Koioseal, or of Vinylite, a similar substance. And because so little is required, it means tons less weigh for the ship.

Koroscal's postwar potentialities are startling. Oil con panies plan to use Koroseal packages for motor oil, it will also be used as weather stripping, as an invisible coating on wall paper and fabric to seal against dust and moisture as a brilliant colored car upholstery outwearing leather. Even runproof stockings have been created by weaving a colorless hread of Koroseal with the regular thread of both nylon and silk stockings. So far, nearly 2000 potential uses have been listed

A few months ago Waldo Semon was named for the Charles L Goodvear award — most coveted honor in rubber science Magnificent as his contributions have been, in a sense they are no more important than his example an example which demon strates that an American boy without wealth or important connections but with courage, determination and na tive intelligence can become one of the great scientists of the world

How explain these odd alliances between tra ditional enemies — puppies and squirrels or deer and doss who become happy playmates?

Strange Anımal Friendships

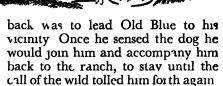

Condensed from Nature Magazine

7 Frank Dobie

Twould not startle me to see a lion and a limb lying down to gether — provided each had been cut off from its kind, and the lion had made the acquaintance of the limb while not hungry Nearly all animals yearn for companionship, and when they cannot consoit with their own kind they sometimes form devoted attachments to creatures utterly foreign

A ranchman out on the Frio River in Tesas had a pet buck, raised from fiwinhood with the house dogs. It formed a particular friendship with a massive mongrel known as Old Blue. The two were inseparable. The buck would paw other dogs away from food while Old Blue gorged himself. When the pack hunted, the buck would accompany them, leading in the chase after wolves or other animals. When four or five years old, the buck took to ranging alone, far away. The only way to entice him.

J Frank Dobic beloved Texas teacher and historian, author of Coronado's Children and The Longhorns, has recently served a year as exchange professor of American History at Cambridge Universit, England Cambridge sought someone to explain the colorful background of America to England's young people, and in this eistwhile cowhand, folklorist, author and editor they found a versatile and eminently qualified choice

Unusual attachments are at time, no doubt, motivated by the instinct for self protection. On the plains of kainsas, years ago, a traveler observed a feeble old buffalo bull keeping company with a band of mustangs. The wild horses probably tolcrated him more than they loved him but in their company he was sate from wolves. On the other hand Buffalo Jones, who did much o preserve the buffalo from extinction, came into possession of a two-year-old colt that had been ranging with a herd of buffalos for about a year

When I was a boy living on a ranch thickly populated with bobwhites, a quail took up one summer with our chickens going to roost with them in the chicken house, although it is the nature of quail to roost on the ground Morning and evening, while bobwhites were calling on every side, this plump little bird, apparently oblivious to his kind, stayed close to the chickers

There is a mothering, protective instinct in a great many animals that often leads to remarkable associa-

tions In 1934 an orphaned moose calf in Wyoming was adopted by a milch cow And a friend of mine in Texas owned one of the most passionately devoted foster mothers I have ever known of a mare mule that adopted a Brahman calf She raised the calf, nursing it until it was far past the usual age for weaning I read recently of a similar case also in Texas, in this instance, when the rancher approached the calf the mule kicked him and broke his jaw

Animals, like human beings, have contradictory instincts. Once a dog with nursing pups pursued a female coyote to its den and helped kill it. The coyote, too, had pups, and when they were brought out the dog whined and nosed them in a most sympathetic manner. One little coyote was saved and put with the dog's puppies. She nursed it and "flead' it along with her own young, and it grew up a boon companion of the dogs.

In Oakhurst, Texas, a family of children had a female dog as their chief pet Someone gave them three tiny squirrels. The dog immediately claimed the squirrels as though they were her own offspring. They suckled her and she reared them successfully Before the squirrels arrived she had been on the best of terms with a cat, but after she adopted them she would angrily drive the cat away if it came near her charges

Some animal friendships are not to be accounted for either by the theory of protection or the theory of isolation They develop, like many human friendships, through accidental propinquity A resident of Duncan, Okla, discovered a neighbor's dog shed where he kept a cow At first the cow tried to hook the dog, Buck by name, and keep him away Finally Buck had his will He took to keeping company with the cow while she grazed If a strange dog appeared, he would chase it away The dog and cow grew to be inseparable companions

One of the prettiest sights of Nature in my memory is of a spotted fawn and two kittens lying on Bermuda grass in the sunshine. The fawn would stretch out its delicate head along the ground, and on either side of it the kittens would stretch cut also, all three cat-napping. All three would drink milk together. When the fawn nibbled grass, the kittens would place their forefect up on its legs and shoulders or on its head. As a captive the fawn had no other playmates, the lettens wished for no other cat society.

Some years ago a Texas rancher raised a litter of hogs and a litter of dogs together, the pigs and pups playing with each other promiscuously One day he trapped a fox, tied up his grown dogs, and then released the fox for the pups to follow Finally the fox turned to fight One pup yelped for help Three of its playfellow shoats came running, attacked the fox, and were killing it when the rancher pulled them off

The rush of the hogs to the distressed pup is essentially no more foreign to Nature than a dog's guardianship over a child belonging to his master. Given the opportunity, al most any combination may develop between one kind of animal and an other, just as between man and any kind of animal. It seems to be part of

Ld Kohinson

Condensed from

We discovered that the unadvertised inconveniences outweigh the much borsted conveniences that living in a large city has to offer Living time we turned around it cost us money and trouble.

I or example, just to let the baby play outdoors, we had to get to either blankets and toys walk it o blocks, wait for a bus, ride a dozen blocks, carry everything into the park and find a spot where we could sit down. Then, one hot Sunday afternoon, a policeman came up and said, 'I ook, you can't sit here"

That is when we began to think scriously about living in the country. At first we didn't see how we could afford it, then we wondered whether we could swing it by raising ome of our food. We knew nothing about farming, but in ide a start by reading a couple of hundred books and pamphlets. Then, near Norwalk, Conn, about an hour from my New York office, we found a six room house on a two acre tract of flat, wooded lated. The down payment was just \$600, and interest, taxes and amortization came to only \$49.30 a month—

A little land, a lot of hving is the slogan of this energetic young couple who have mide a suburban farm piy

which, even with my commuting capenses added was less than our rent had been a New York

Our bisic idea was to farm for our own use rather than for point we called it our Have More Plan When you produce only a few things, you have to sell the surplus at wholesale and buy other things at retail But when you raise sin iller amounts of a great many different things you can use them yourself and you have to buy year little.

Fodav on our little farm we are producing all our milk and cie im, some butter, all our eggs, about 120 pounds of chicken a year, several hundred pounds of pork, bacon and ham, plus tabbit, lamb, goose, raspberries, and all but a few dollars' worth of fresh, canned and frozen vegetables plus fertilizer for our garden and lawn

Having a garden, fruit trees, milk goats, chickens, rabbits, geese and bees sounds as though we were overworked Actually we hindle it all easily, even though I commute to my New York job five days a week We are both young — I'm 3., my wife 29 — strong, and unafiaid of work We get up at 6 30 and I'm home from the office in time to work in the garden from seven until nine in the evening In the canning season we are sometimes busy until midnight I couldn't recommend the pace for old people or we iklings, but if you can take it, it's fine

Our figures show that the market value of the food we produce averages \$55 a month above cost. Moreover, our doctors' bills and numerous other expenses have dwindled. For instance, in the city we spent quite a lot on the iters, baseball games, cockt iil parties and so on. Today our spare time is used productively — building a stone wall, cutting firewood, working with our animals. All these savings, added up, come to around \$900 a year. Then there are the intangibles better food, pride in our home, a feeling of accomplishment.

Eggs were our first project We thought we'd need about two dozen a week and so bought seven pullets They cost \$11 The first week they didn't lay Then one evening when I arrived from New York I found my wife all excited — our flock had produced an egg During the next eight months those seven hens laid 646 eggs We figured they cost us 26 cents a dozen, against 60 cents in the store So we increased our flock to 20, cutting feed costs about 15 percent, and now use four dozen eggs a week When we have a surplus I get 60 cents a dozen for them right in my own office

Then came broilers and fryers,

tery" These batteries reduce the chances of losing chicks by disease. The hatchery sends us 32 chicks at a time, and for feed it costs only 16 cents per pound of chicken I abor? The first chickens we diessed took about an hour a bird, but the other day we did seven in two hours. Our battery takes less than ten minutes a day to operate and by running it 90 days we get enough chickens to last us a whole ye ir

We thought we should raise at least one other kind of poultry, and found geese to be the best enting and he ensiest to raise. We started with a dozen goose eggs (\$4), seven hatched under two of our hers. We atte three traded two and kept a pair for breeding

This brings us to another aspect of our Hive More Plan triding with our neighbors. We traded geese for turkeys. Similarly we traded ribbits for pears, and last winter trided broilers and eggs for potatoes. Wher several neighbors use the Have More Plan, variety can go up while both cost and labor are going down.

With the first winter over, we natuially turned to a griden. In season we had all the fresh vegetables we could est. In addition we canned or froze about 275 quarts for winter use. Alto gether we sayed ourselves about \$150

One day when we ran over our milk, butter and cheese bills we found the dairy department was getting about 25 percent of our food budget. It was obvious that we should start producing milk But a cow requires a couple of acres of pasture. Our an swer was milk goats.

A Nubian doe with her two weeks

ping This doe milked 4½ quarts a day and now, nine months after freshening, still gives a quart and a half She's young and we expect she'll do better at her next freshening. Our friends from the city are always flabbergasted when we tell them that was goat milk they had for lunch. Actually, goat milk properly hindled his no distinctive taste, is a little richer than cow milk, and is naturally homogenized.

We kept cramining more foodproducing units into our rimiture faim We put in 15 blackberry bushes is a hedge, and planted ten grape vines, a hundred raspberry bushe and a small strawberry bed. Our 18 fault trees add to the beauty of our front lawn. I roin our bechives we took about five pounds of honey last year, and this year will extract at least 150 pounds—which represents a total of 24 hours of work a year on my part

We bought two inoculated seven weeks old pigs in April, slaughtered them in December, and had 460 pounds of poek at a cost of 22 cents a pound. Then we added rabbits—two does and a buck. Judging from the way they are producing, we'll have 30 to 40 three or four-pound labbits a year. They are easier to dress than chickens, require less than five minutes' care a day, and cost only eight to ten cents a pound. We never have more than 18 at a time and their hutch takes up no more space than a good-size table.

The part of our Have More Plan that gives us the most pleasure is preserving food so we can live off the fat of the land year round People today are lucky to have three mod-

ern ways of conserving food quick freezing, pressure canning and dehydrating. We have actually eaten better in the past two years of rationing than ever before. The chicken we take out of our freezer is tender and delicious. And we have good tasting greens in January, and so on The quick freezer is the hub of our miniature farm.

Of course, it's best to preserve certain things in glass jars, and our shelves full of gleaming jars give us a feeling of pride and contentinent. The saving is tremendous, too Our 75 quarts of home-canned tomatoes cost—including plants, spray, jars, sprees and electricity—exactly \$4, in a store 75 quarts cost \$16.50 Our savings 76 percent.

The cue to our Have-More Plan is found in the little word ue My wife at d I have worked as a term on everything from our first seven hens Believe me, the mairiage of a man and wom in really means something in homestead farming, whether in the open spaces of the West or on a commuter's farm

There's another vital point in our plan Jackie, our son He is already an independent little thing, afraid of nothing He loves all our animals, and by helping care for them he will learn much concerning life and its processes He will take responsibilities carly, and learn what it means to earn his own bread What's more, he will have all the childhood fun for which country life is famous

Our Have-More Plan is a pattern, not a panacea — and a pattern for only part of the people. Some don't want to do the extra work, some can't, others simply don't like country.

living But the average family can make this country living city job idea work. For modern appliances and methods have simplified farming, the short work-week provides more time than one had ten or 20 years ago, and it is easier today to raise plants and livestock successfully. Seeds, plants,

livestock breeds, fertilizers, pest con trols and feeds are all better

After the war we believe the country living city job idea is going to be tried out, and successfully, by many American families They will, like us, adopt the slogan—"A little land, a lot of living"

The READER'S DIGEST

An article a day of enduring significance, in condensed permanent booklet form

..... May 1945

n anning'

By Henry A Wallace

AM against a Planned Leonomy It means that all eco-

nomic decisions would be made by a small group at a central spot

Nevertheless I favor planning I favor planning to keep our American economic system competitively fice I go further I favor planning to make our economic system free er than it is today

It is threatened today by what that great and beloved American, the late Villiam Allen White of Emporia, kansas, called "private totalitarianism" It is threatened by the tendency toward concentrating American economic decisions in the hands of the directors of a few large corporations. At the end of our last boom, in 1929, five percent of our corporations owned 85 percent of all of our corporate wealth. In 1937, 13 corpora-

Note In his new book, Sixty Million Jobs to be published jointly this spring by Reynal & Hitchcock and Simon & Schuster, Henry A Wallace discusses at length his views on the means of achieving full post war employment within the framework of the American way of life

for Freedom

Writing as an experic iced businessman, our new Secretary of Commerce proposes three steps by which the number of small enterprises would be every year steadily increased

tions possessed the services of one third of all the country's industrial research scientists. In 1942, under the influence of this tendency, 75 percent of our war-production contracts were held by 56 of our corporations

The true danger in such a situation is not that a few men become rich I am preaching no waifare on wealth as wealth. The true danger is that decisions determining the economic destinies of millions upon millions of Americans tend to be made by a few men in a few central spots. This concentration of economic power, if unchecked, could finally give us a private Planned Economy just as tyrannical as any public Planned Economy Economic freedom requires that economic decisions should be, as much as possible, not concentrated but diffused They should be made, as much as possible, not by handfuls of men but by multitudes of men True free enterprise cannot survive except as the enterprise of the many

I propose that all our governments, federal, state and local, should dehberately encourage the enterprise of the many And I note with satisfaction that "small business," which is the enterprise of the many, still exists in this country in great volume. Some defeatists say it is dead. It is not. It is sick. It needs care and cure. But it is far from dead.

In 1944 the United States contained three million separate business enterprises Only three thousand of them employed more than one thousand workers Two million of them employed less than one hundred workers Those two million, employing from 99 workers down to only one worker (namely, only the owner himself), can be called 'small business" They might seem too tiny to be important Yet look! In 1944 they provided 45 percent of the whole total of American industrial and commercial employment "Small business" is still approximately half the population of our American business economy

We should not, then, despair of "the capitalism of the common man" in America We should go to work to retain it — and enlarge it We should not be content just to save "small business" We should aim at expanding the area in which "small business" can thrive and multiply and grow

I THINK I know how we can move toward that objective First, though, I ought to qualify myself, as my critics say, on the point of "practical experience" I can do so quite readily I am myself a small business man, and I know all the woes of taking a business from the stage of being only an

idea to the stage of being a going reality

As a well-known "dreamer," I "dreamed" a better seed corn I started breeding seed corn and in breeding it My experiments were very "practical" They produced an improvement in seed corn I then organized a company to handle that improved seed corn and market it I raised the money for the capital of the company I borrowed money for the seasonal operations of the company I took a "practical" interest in the mechanical equipment of the com pany With Simon Cassady, Jr, I designed the first modern seed-corn drying and processing plant in the world I was president and general manager of the company till I came to Washington in 1933 to be Secre tary of Agriculture The company now has plants in Iowa, Illinois, In Adiana and Ohio We sell four million dollars' worth of seed corn a year We take the greater part of our profits, after taxes, to build new plants or to modernize old ones I think I know every headache and every heartache that a small business man can have as he struggles from nothing to some thing And I know what it means to meet a payroll

I contend that there are at least four practical things that can be done to make it possible for more American citizens to start businesses and to develop them, and I contend that these things would benefit not only small businesses but large I contend that Big Business itself would be benefited by more development of small businesses

In my opinion the first thing to do is to see to it that newcomers are not

artificially excluded from any business area Such exclusions happen often They happen, for example, through monopolistic pools of patents, through monopolistic controls of raw materials, through monopolistic deals between rings of manufacturers and rings of distributors

All such arrangements are bad for the big businesses themselves They diminish competition and thereupon diminish progress and thereupon diminish true ultimate profit. It is the duty of Government to strive to destroy all such arrangements Two advantages will emerge. The large businesses will compete more among the nselves And new small businesses will enter the previously closed fields and accelerate competitive initiative and achievement I do not see how any friend of free enterprise can call it "persecution of business' when Government strives in this way to broaden free enterprise

Such is Point One Knock down all arbitrary barriers that prevent a small business man from entering a business of his choice

Point Two is to see to it that new small businesses have a reasonable access to credit. They do not have it today. In the matter of credit, of finance, of loans, they are much worse off than they were 30 years ago.

To begin with, it costs more today to start business Machines for production have become more complicated and expensive Marketing mechanisms have become more elaborate and require greater initial expenditures. The new capital necessary for a new small business is therefore much larger now than formerly

Meanwhile the banks have become much stricter in extending loans. The federal bank examiners have more and more insisted that the loans by banks shall be ultrasafe. In the old days there were multitudes of loans known as "character loans." The borrower borrowed on "collateral" consisting of virtually nothing but his known good character. Such loans are rapidly becoming extinct.

Yet the country abounds in savings. It abounds in saved dollars held in private hands. These dollars run each year into the billions. They should flow back into business. In large measure they do not do so. That is one of the main reasons for recurrent unemployment.

Our most basic national economic problem is

How can the total of our annual savings be induced to find its way into total energetic investment?

The biggest field in which such investment is needed, and in which it falters, is small business. Many of our thoughtful financiers acutely realize this fact and are seeking remedies for it. Some have suggested local pools of capital, organized by local financial institutions and local public-spirited citizens, and supplemented, when necessary, by Government I think this proposition is sensible and sound

Myself, though, I would stress the kind of governmental assistance that we see in the Federal Housing Administration A private lending institution advances money to a citizen to help him acquire a home. The Federal Housing Administration simply usures that loan. It guarantees the private lending institution against all important loss. The money remains

completely private. The home remains completely private. What has happened has been no promotion whatsoever of state socialism?—that is, of governmental ownership and operation. What has happened has been just the reverse. The Lederal Heusing Administration, through its governmental insurance of private loans, has visits promoted the private ownership of homes in America. Japprove every governmental measure which promotes and energizes private ownership and energizes private ownership and energizes.

I worrd therefore approve the establishment of a Covernment a ency which in certain encuinst in es would guarantee loans to small businesses. Those circumstances would be

The business equesting the loan must make sense to the directors of a perate lending institution. And

In private lending institution must be able to show that it annot absorb the total risk all by it ell and needs insurance against loss and

There must be a minimum of red tag in Washington

I im convinced that under such an arrangement our private loans to private small business would be revived and multiplied into new thou sands and hundreds of thousands. I am convinced that under such an arrangement the force of free enterprise in this country would be greatly expanded and strengthened. The number of free enterprisers would be every year steadily increased. Their businesses would remain entirely their own. V. hat the Government would be doing would be simply but vitally this.

It would be helping to pump our private

savings back into private investment. It a ould be helping to avert unemployment. It would be helping to revitalize small business in its contest for survival against bir business. It would be helping to promote 1 merican economic freedom.

I im happy to note that Senator I also of Olio who so strongly fears my tendency toward humanitarian governmental dreams, is in substantial agreement with me. On behalf of small business he has introduced a bill for governmental insurance or long term loans by banks and insurance companies and of stocks held in the portfolios of investment trut. I can now companionably say to Senator I at

I cllow idealist welcome!

All possible business fields open to newcomers! All possible sensible credit fielditie open to newcomers!

Those nemy Points One and Twe My Point Three is governmental industrial research

LHAVE already spoten of the a tonishing concentration of industrial research scientists in the employ of a few large corporations. These corporations rations are not to be condimined or that Rather they are to be commended, with their research scientists they are producing new processes and new products of mealculable value to minlind But they smulta reously and altogether unintentionally, are bringing it about that our whole new scientific world of magical materials and maked a cthods will be coessi ble in large part only to corporation of tit inic financial resou ces

Imagine the condition of agriculture if research into the treating of soils, into the raising of crops, into the

breeding of animals, had been left to a handful of large farmers who could cover their discoveries with patents We would not today have our stead alv increasing number of family farms scientifically and effectively in in iged by small farmers with no research facilities of their own

What has modernized them has been the research work of the United State Department of Agriculture and of our state agricultural colleges and universities, carried to the farmers by uch educational agencies as the federal Extension Service

I submit that the Department of Commerce should be empowered to do a imilar work of research and edu eition for Americal enterprisers in commerce and industry. For more than 40 years the Department of Commerce has had a research division called the Bureau of Standards Its activities were greatly stimulated by Herbert Hoover when he was Se ictary of Commerce The Bureau nevertheless remains only the tiny nucleus of the vist array of laborato nes and of scientists that could make us research cryices to business the equivalent of the research services that the scientific bureaus of the Deputment of Agriculture render to luming

I hearthy concur in the recommendation recently made by Mr Maury Mayerick, the energetic and creative Chairman of the Smaller War Plants Corporation. He has had much experience with the difficulties of small business in its warting efforts and in its postwar plans. He says that one of the things that American small business most needs is 'technical assistance in a manner comparable

to that given farmers by the Department of Agriculture"

My Point Three, then, is that our Government shall give to inillions of small business men the same opportunity to keep abreast of new scientific developments that it now gives to inillions of small agriculturalists

My 1 33 point is tax elef

The Senate Committee on Small Business recently reported as follows

'The waitime tax structure falls relatively more heavily on new and small businesses than on long established large firms. This makes it very difficult for the new and small businesses to lay uside funds for reconversion to peacetime operations. It jeopardizes their survival.

I add

Thousands of small business men who have grown suddenly from small size to medium size have had to pay over 70 percent of their annual profits in taxition. Many a small business, honestly capitalized, cannot prepare for sound percetime expansion because taxes hurt the little in its with a big idea more than they hurt the big in marth no idea.

I suggest

1 The excess profits the should be abolished as soon as possible after the war is over and the durger of inflation is past. In the meantime exemption from the tax should be substantially increased to assist small business.

2 Inpinding business should be permitted after the war and danger of inflition is past, to lighten its federal income taxes by writing off new plants and facilities more rapidly than it can under existing law

3 Corporations that make no use of national capital in inkets should be

granted the privilege of being tixed in accordance with partnership princi

ples

4 The period during which busine slosses may be curred over and off set in a liter very against points should be extended from two to five or six years.

Such is my program of covernmental assistance to new small businesses and to the callacement of American economic freedom. Such, in this field are my proposals as an unabashed governmental planner.

I back them with in final observation that all governments, life all wide wake but messes, are planning at all times. When the Administration of George Washington, ander the influence of Alexander Hamilton, persuaded the Contress to error a traiff law, at planned a protected American manufacturing industry. But the greatest of all American governmental planning performances was by the Kepublican Party under Alraham Lincoln.

In 186 approximately one thad of the land between the Mississippi River and the Pacific Slope was virtually unpeopled. It was owned by the federal government as public land. It could readily have been sold to large ranchers and to large speculative land companies. That would have been the easiest way and if Big Business way. But there was a contrary idea. The contrary idea was to dispose of the land in small parcels of 160 acres each.

This idea was violently opposed by the eas in manufacturers because it meant that their workers would have a chance to mighte from being eastern wage earners into being western independent property-owners. The Republican Party nevertheless went ig aimst the eastern business interests and in its platform of 1860 declared itself for a West of small faims. There upon in 1862 a Republican Congress passed and Abraham I incoln signed the memorable Heimesterid Act under which my man or wom in who would settle on 160 acres of public land and cultivate at for five years could have it free

This was the greatest governmental contribution to free enterprise in all human time. It set up a breed of independent settlers who successfully spread small taining enterprise over an area which otherwise might have been one only of feed algreat estates at founded the vestern individualism that has been ore of the glories of our nation.

The fixer value over all governmental planning is particularly needed in the field of fixed taxation traff and monetary policies. No government has ever been able to corpore possibility in these fields. The responsibility is especially grant after war, because the governmental budget their represents such a large share of the national income. In order to carry the vistly increased burden it is vital to unleash all the energic possible.

After the Civil Wir the building of the western rulroads, combined with the Homestead Act, released such a burst of energy that our nation increased greatly in stature in remarkably short space of time has be said, nevertheless, that uncertain over-all monetary policies after the Civil War made our progress

exceedingly irregular. We had senious depressions such as those of 1873 and 1803

After World War I the building of roads and the expinsion of the automobile business did for us what the western railroads and the Homestead Act did a generation or two caller But here again faulty over all monetus and tariff planning by the Government led to disaster and the smash of 1930

After World War II we shall have expansion in urports and aviation in electronics in tride with the Orient and Latin America But American free entaperse no matter how completely releated cannot avoid the necessity of skilled Government plan ning in the field which is the Governments own responsibility. The Govcinment will not carry out its duty in this field satisfictorily until the people themselve understand aust what is involved in wise government al action. This particular subject is outside the scope of this inticle and I am mentioning it only because I realize

that free individual enterprise unaccompanied by Government wisdom with regard to fiscal amonetary and tariff policies can lead to dangerous setbacks

I believe that American free enterprise is the best economic system in the world and should always strive toward being even better I believe that the United States Government, just is it encouraged the eastern wige cliner to become a western property owning firmer, should by newer and different methods sing fully encounage every wage earner who has it in him to rise from the bench of the employed actis in to the desk of the self employing businessm in Instead of appropring the tree of Anchem free enterpris. I want to see it put forth more branches and more blooms

I shall governmentally plan toward that end as long as I have any governmental opportunity, and I shall urge such a course upon the people and upon their elected representatives in the Congress

Hinds Across the Sci

As a Red Cross worker overse is, I found that an occasion il officer was likely to the little wolfing. Nor did being thoung male the existop after marriage. One friend of ours, a colonel, muried an Arms nurse. Presently she had to go back home for the usual reason—their union had been blessed. Our colonel friend stayed close to his knitting for about a month, then one evening be got into his best tailor made uniform to come to dinner with us. On the way be thrust his hand into his pocket and pulled out a piece of paper on which he found in his wife's handwriting, So you re all dressed up—why?

I Knew Your Soldier (Infantry Journal Lenguin Book)

A father reports on his son at the front

Condensed from
Better Homes & Gardens

Anonymous

The author is an Army officer who in civil life was a writer Out of consideration for his son he withholds his name

woods on the dark, snowy woods on the edge of Germany, this tall young soldier and I Somewhere below us, out of sight beyond the naked forest, a fi mous American regiment wis jabbing at the Germans across a frozen stream. Off to the south, in the Ardennes bulge, artillery fire rolled down the valleys like distint bowling balls.

The command post was a battered schoolhouse to our right. Its back door, concealed from the enemy, squeaked open and shut endlessly as messengers hu need in and out. Lach time it opened a thin, yellow streak of lamplight tumbled out across the dirty snow.

Behind us over the shoulder of a little hill, an invisible column of ammunition trucks gruited past bringing up the night's supply of shells for the 105 s and 155's. We could hear ambulances, too heavy with double loads, panting up the grade from the dressing stations.

A German 88 dropped a shell somewhere into the deep valley off to our left I must have staited, for the young soldier put a reassuring hand on my shoulder

"It's okay Dad," he said "They'll come a lot closer than that"

The soldier was my only son He was 19 years old, a battle-hardened veter in He had left the lines only is few hours ago in a few more hours he would be back in his place. He was my son but he might have been yours. I hat s why I'm writing this Because I an one father whose militury duties took him for a few hours to the particular front where his son was lighting. I want to share with all inthers the pride and anxiety, the joy and bitterness the impressions I brought away with me

There was no time that most to answer all the questions I had stored up. How was the boy equipped and trained? What did he want most? What were his future plans. Had the war changed him?

The boy looked fine I out h, capt ble that Thinner than when I last saw him Taller I believe Straighter, I m sure His title, strapped across his shoulders seemed to be a part of him He was wind brown and clean shaven. He wore his helmet just off the proper regulation, horizontal position. He's not a parade soldier. He's a fighter A rifleman in the lines.

He wore a field jacket over two sweaters and a wool shirt and wool underwear, two pairs of trousers and two pairs of socks in his field shoes He looked as unlike a military school cadet as any man can look But that snowy forest wasn't a parade ground, either

One night six months before, I'd said good-bye to this boy We had met the hour of his leaving with a noisy, spurious gaiety. There was no calety left in him now. He was dead scrious He stood there in the snow with his feet apait, he id tilted slightly forward, and I had the impression that he was listening constintly for sounds I did not he ii All good sol diers get the cautious habit of listening What was this one thinking about this boy who like your own boy, had always liked to dabble in thoughts too by for him who like your own, had the independent, exploring, questioning mind of modern vouth?

He wasn't thinking of the Iou Ircedoms that night. He wisn't thinking of a happier I etter postwir world. He wisn't in thinking any plans even for himself. Maybe men'e in do that in the back areas. Here in Monschau I nest this boy was thinking only of how to keep himself and his friends alive and how to kill Germans.

He had met Gern ans close up, not through the headlines of the morning newspaper. He knew them as tough, determined skillful soldiers and he hated them, as all his mate did, with a deep, hot, personal hatred. He hated them for their curring and authlessness, for the dead refugees he had seen beside the roads of France, for dead little towns. He hated them for what they had done to his own friends. His squad had been hit hard

last month His buddy and one other were killed and six more wounded There'll be no soft peace if he and his pals have a voice in it

The big guns rumbled, off to the south, and an ambulance groaned on the steep grade over the hill

'Cigarette'" The boy pulled out one of those boxes that come in the K ration can, four cigarettes to the box But when he saw my own pack he quickly put his away Thanks," he said Ill save mine"

"How's the family" he asked

I told him all the details I could think of I hen he isked, How's Bob?

Bob is his dog Bob w is fine, I told him

Ed up it the farm tried to put him on a scale and weigh him the other day 'I said. He got bit "And for the only time in that hour and a half I he ned this boy I rugh. I hen he stopped It's hard to I rugh when the ambulances are puffing up the grade from your own sector. I changed the subject

What's your outfit like"

Know our record since Normandy? Since Africa? Not many of those first ones left and they re getting tired. But they know how to make the best of things. You pick it up pretty quick from them. How long do you think the will last, Dad"

No one is trying to guess?

"Well, I know it won't be Germans we re fighting next Christmas, any how' He inhaled deeply 'My sucss is that we'll have this job done by the Fourth of July I hat's what we're all hoping If we just had more ammunition, big stuff, a lot of 1,5"

"And if you had twice as much as

you have now?"

"Oh, we'd want more, of course It's just comforting to hear it passing over We'll never have enough to

satisfy us "

I asked him about the food Swell, he answered Hot meals right on the line twice a day, with hell popping ill around "Sometimes I think once a day would be enough? he said. We get some casualties, hundling the steaming kettles up to the forholes. We could take K ration instead one of the meals.

I isked him what he had been reading There's no time to read he said. He wasn't happy about the few magazines from the States he had seen "The ads are pretty had. Particularly the pictures. The fellows get sore, looking at them. Pictures of war, all prettied up. No mud. No stench. Just heroics and attitudes. It gives the people at home false ideas."

He didn't hale the radio news from the States, either Nothing but victories. He knew firsthand the cost of victories big and small I has boy of mine had seen the results not in terms of towns taken but in men huit and men killed. He disliked the casy sound of it all on the radio.

He took another of my cigarettes and I watched his face in the flame of the lighter—so old for his 13 years, wise, tired, wary, but calm, determined I found that he wasn't interested in Washington gossip The quarrels between management and labor, rationing, books, plays, songs,

all these belonged to a world of which he was no longer a part. His mind was concentrated on this little strip of snowy woods with the Germans just across the river

'We've got to blast them out of the dams," he said, pointing east I hat's our next job Going to be tough '

He mentioned the wonderful nurses in the hospitals, the medical corps men working und r fire 'I hey to heroe, for my money," he said Heroes. It was the only time he used the word. He talked about the fact that he hadn't been paid for two months but no, thanks, he didn't need any money. About toilet paper and what a blessing it was, coming up with the rations. About his rifle and his shoes. The things that counted

And then as in How long did I think it would list? Would the troops be shipped direct to the Picific or be allowed to come home on their way? When would we have some V-bombs to fire back at the enemy?

The door of the command post opened and a young officer called "I me to be some," My son hitched his rifle higher. He stood for a moment like a ramiod and then reached out his hand

'Good night, Dad See you at home," he said

Sure," I answered "See you at home Good night, son'

He saluted and turned on his heel and stepped off into the darkness, toward the little valley where his regiment was fighting Ge mans across the frozen stream

Sleeping Pılls Aren't Candy

The excessive and indiscriminate use of the burbiturites is a health problem of considerable and growing importance

-D: Thorias I a ran
S: h ! (n ral
L 5 I ublic H alth Service

Condensed from The Siturdity I vening Pot + Rita Halle Ideeman

McPher on according to a coroner s jury died of an according to a coroner s jury died of an accordination of sleeping tablets. Just before Christians I upe Velez the actress, committed suicide with the same drug. The ewere only the more conspicuous people Every dry others die from the unic cruse Vet we go on taking our own sleeping pills cern no connection between these deaths and our habits.

We would be outriged as the suggestion that we are becoming a nation of drug heads. Nevertheres as long ago as 19,9 there were enough users of sleeping pills. In bituates to the doctor goof balls or red devils or yellow pickets to the addict - to account for the sal of 2,200,000 doses a day. Today, with the wornes, griefs and readjustments of lives and hours clusted by the war, the figures show that we are using almost three times as much.

In New York City there were five times as many accident il deaths from then use, or misuse, in 1942 as there were in 1937. In San Francisco, accidents from them increased 150 percent from 1940 to 1944.

The barbiturates are valuable when properly used, they have been classed

with salvais in insuling and sulfanilamide is the outstanding medical discoveries of the century. And death from their properly supervised usage is so the that some physicians prescribe them lightly. To Mr. whose on is in the Philippines or a prison cump to Mr. Jack on who is on the might shift to anyone who just can takep they prescribe a pill for a iew divs to set them buk into the habit. These people delighted with the r sults tell then friends. And they all continue to use them - changir a the effect wears off from one lind to mother of the 60 m er illuse

If they took them only occasionally, in situations similar to the one for which the physician prescribed, there would be little harm done But usually the person who has found seven or eight hours release from the problems of the day wants to be sure that he will get this release every night So at furt hesitantly later with less thought he takes a pill And the oftener he does this, the more readily he does it. He is on the way to becoming an addict He has little, if any idea of the danger, except for a perfunctory caution on the label that the tablets "may be habit-forming"

and are "to be used only by or on the prescription of a physician 'Yet, in addition to addiction, they may have other evil effects

A recent test of almost 400 men showed that their average IQ was lowered 3 36 points after the use of only three grains of one of the baibiturates Sleeping pills in my produce a serious skin dise ise They mix bring on acute or chronic intoxic ition which, in turn, may cause motor accidents and even unintentional crimes In New York a boy under their influence walked into a rest iurant, removed the contents of the cash register and walked out so casually that the onlookers did not it ilize what had happened In Florida a salesman normally a kind, devoted husband, murdered his wife while under the influence of the pills

Their continued use leads to shattered nerves and to strange psychological effects varying from stimulation in certain combinations to drow siness, com 1 and de 1th All the se dangers are heightened when the drugs are taken by people with kidney trouble of in combination with alcohol And since some barbiturates remain in the system is long as eight days and their effects are cumulative they may, as was inentioned in the reports of the McPherson death lead to a state of forgetfulness in which the user 'may not remember how in inv of these pills he has taken 'That is one of the reasons the British Medical Journal, as long ago as 1926, could report that deaths caused by barbitu ates were "sometimes suicidal, but perhaps more frequently from accidental overdoses taken for sleeplessness "

It is too easy to get these drugs A boy arrested in New York for robbery while under the influence of a combination of a barbiturate and beer said that the tablets could be bought almost anywhere in his neighborhood. Increasingly the drugs can be purchased not only in drugstores but in such places as hotels, apair ments newsstands and saloons.

The federal law v high insists upon proper labeling of drugs and upon their sale only on prescription applies solely to drugs which trivel between the states Only 3, of the states have any laws at all These with few exceptions, forbid the sale other than on prescription, but do not forbid refilling the prescription is often as the user wishes or the druggis permits they do not require any record of purchasers or amounts. What many officials would like to see are laws for the sile of bailuturites similar to those for narcotics — the most rigid according of every grain from the time it leaves the wholesaler urtil it reaches the consumer

Well intentioned druggists now find it extremely difficult to control sales which they know should not be made. One day, a leading druggist in a large city was asked by one of his best customers, a prominent banker, for a dozen tablets. The druggist said that he could not sell them without a prescription. The banker was furious. If the druggist refused to sell him something everyone knew could be bought anywhere, he said, he would get his pills—and take his business—elsewhere. And he stormed out

The next morning when the dri ggist picked up his newspaper, the words stared up at him Prominent BANKER DIES OF OVERDOSE OF DRUC

Most druggists want to live up to the high ethics of their profession, but - as in every profession - there are offenders Among these are the druggists who deliberately picy on the we iknesses of known addicts criminals and prostitutes. One pharmacist was found to have sold 126,000 capsules a year to Orientals He was in iking a profit of \$100 a week when mested Another druggist was making \$200 a month from sales to addicts and was indirectly responsible for a wave of craines in his neighborhood, committed mostly by young boys under the influence of barbiturates

State laws are effective when pulllic knowledge and opinion are behind them. This was demonstrated in Connecticut, where, in nine months of 1942, there had been nine deaths from harbiturates, 26 treatments and one commitment a week for addiction in state hospitals alone. Six months later, after a public hearing and the adoption of regulations, not a single death had occurred, there were few cases of treatment and the number of committed had dropped to none

All these things add up to a serious case against the indiscriminate sale of barbiturates. The criminal features are of concern chi fly to the police. For the rest of us the concern is that we ourselves may become victim of these drugs. Until the discovery of a sleep-inducing drug that is completely harmless at would be better for us to go on counting sheep.

A proposal to insure the ment in the United States

Full Employment?

Condensed from Harper's Magazine +

Stanley I chergott

NACK in 1941 a well known pub licist suggested that at att un able full employment United States could produce even more than the 99 billion doll us worth of goods and services turned out in the boom von 1929. Many an economist and businessin an called hum a vision in Y But the war has demon strated that a production of 150 bil lion doll its or more is quite possible Furthermore and this is the fright cning thing this vast flood of production has been achieved without any of the ten million young mer thoro malix proceed the backbone of the labor force

Obviously, therefore, the problem of finding jobs in postwar production for ten million exservice men and heaven knows how many nullions of unemployed munitions hip and air craft workers is a matter demanding the utmost sobriety in I forethought An effort to deal with such possibili ties in advance is the duty of every responsible citizen

There has been talk of 60 million postwar jobs, but we have vet to see a detailed plan which proposes to is suic them. Throughout the country a happy go lucky optimism says to the soldier and war worker easy, bud There II be work a plenty There ll be more than enough loose money to get things going again?

Washington economist specializing in post war employment problems

But will there be'

In support of the comfortable be lief that the postwar world is bound to be one of humming prosperity, thice usuments are commonly advinced (1) Business is planning it that way (2) The spending of war savings will bring about an unprece dented demand for goods (5) The plastics light metals electronic gada ets and other scientific wonders de veloped in the course of the win will create new demands new industries and new high levels of business ictivity

Let us examine first, the plans of business. It is a poor firm indeed which does not have its Vice President in Charge of Postwa Planning - often with a considerable staff. And many trade associations and special organizations (such as the Con nittee for Frononic Development) have lud plans for whole croups of andu tries Moreover, nearly all businesse expect to hire back their veterans in accordance with the terms of the Selective Service Act

Some businesses have been making enormous profits and have laid aside huge reserves. These concerns may be able to assure postwai jobs. But for every firm in this category, there are a hundred others which either do not have substantial reserves or cannot convert to peacetime production. The shippaids are one example. Plane demand, too, according to the trade's own chamber of commerce, is likely to skid by 85 or 90 percent, and with it will go the demand for astronomical tonnages of aluminum and magnesium. And so on. How many jobs can such industries safely promise?

Moreover, business is a collection of many enterprises, big and little Fach of them has a healthy tendency to go its own way. At best there can be only a great many individual plans, which we hope in a add up to something approaching full employment.

I urthermore, many a firm with a neat postwir plan also has a reservation which doesn't show on the blue prints. A spokesmin for the Association of American Railroads, for example, recently asserted that "the nation's railroads do not expect to place orders for new postwar equipment until at least six months after the close of the present conflict, at which time it will be possible to determine their postwar needs."

This wait and see attitude is pericctly reasonable. Any business which
would guarantee to buy equipment
and provide jobs before it had a
shrewd notion whether it could sell
its product at a profit would be risk
ing suicide. But while each individual
firm waits to see what the general
postwar business picture may look
like, ex soldiers will be waiting for
jobs and a deflationary trend may
well set in

Now let us look at wartime savings

and postwar demand, which we are told are bound to sweep us into prosperity The Federal Reserve Board had calculated that in June 1944 the increase in readily spendable savings amounted to about 40 billion dollars How potent a force is that?

Terrific, according to one school of thought. This fund will create a new pattern of spending and saving, causing millions of families to use their current earnings more freely. Maybe so But most of us know that the middle- and lower-income groups always have spent all of their earnings, aside from the slender margin saved for emergencies. Forty or 50 billion dollus, split among 30 million families, is not enough to change their longestablished buving habits or to wipe out their worries about the future.

U S Chamber of Commerce survevs indicate that 1,500,000 families will build or buy new homes, 3,700,000 will seek automobiles, and so on for furniture wishing machines and refriger itors. Such estimates give some indicition of whit people would like to do But in order to foresee what they actually will do, we need more information A recent public opinion survey of war bond owners disclosed that 100 percent wanted to spend, but that 73 percent planned to wait and see how things went While they wait, business will wait Production will wait And employment will wait

The primary factor which will determine postwar spending will be not the size of past savings but the size of anticipated future income Job security, not wartime savings, is the key to what lies ahead Give the average consumer a reasonable assurance of steady work and he will spend a

good part of his wartime reserves. But leave him uncertain of the future and he will hoard. The mere promise of security, in other words would go a long way toward creating jobs, while fear of unemployment inevitably will help bring on the very thing we fear

Perhaps the gaudiest of all the urguments that insist on automatic prosperity after the war is the one which points to the Marvels of Science. The demand for plastic houses electronic quick freezers in unesium dishwashers, and a helicopter in every garage is cert un to bring jobs and more jobs, we are told.

I or any given industry these hope ful predictions may well be time. But to the extent that plastics merely re place steel and glass or magnesium replaces east from there will be no immediate net increase in employ ment There will be more jobs in the plastics factories but fewer in the steel and glass plants. Often there may be a net decrease in jobs, since one of the most attractive things about many of the new products is that they can be turned out with a lower labor cost (A recent addition to one of the big aluminum plants in the South phenomenally increased the output of the factory, but the increa e in employment totaled only

40 workers)
In November 1944, when war production was at its peak, 33 million men and women were at work in our factories, farms and service trades. Those who may be expected to leave the labor market when the war ends—to rus families, retire or 50 back to school—will partly balance the number of returning veterans who will be seeking jobs By 1950 we shall

have near 60 million men and women who will want postwar jobs

Nobod knows what may happen when was spending is cut from the present 84 billion dollars a year to, say, three billion dollars, which was about what we spent on 'defense in 1940. It is probably conservative, however, to estimate that seven million people may be thrown out of work. The total mash, add up to a good many more after all we had over 7,000,000 unemployed in 1940.

Perhaps this force ist is too gloomy. Maybe the optimists will turn out to have been right after all with their estimates of the job providing capabilities of postwar spending and the blossoning of a hose of new products.

The basic moral problem still re-Are we going to let security for our demobili ed soldiers depend on charce on the hope that the optimists ire guessing right about an indefinite future? Or does the nation have a responsibility for guaranteeing security and an opportunity to work to all veter ins and war worker past as they have the individual duty of doing their strong in warting? Already there is let ed veterins who ne savin incrountry could feed nic ind sive i clothes and 'urnish medical car so long as I was fighting We can provide jobs for everybody while the war is on — why car t we do the same thing in peacetime of we ically make up our minds to it?

Well, why not? What we need is a firm assurance that unemployment never again will be permitted to become a national problem.

Such a guarantee might take the form of an official statement of na tional policy by Congress and the

President, with the advance concurrence if possible of the major organizations of industry and labor. It might simply declare that unemployment, aside from seasonal fluctuations would never be permitted to exceed four percent of the total labor force. If the number of jobless should climb above this level during any three month period, the Inecutive, with the advice and consent of a joint Congressional committee would then take action to put the guarantee into operation.

It is quite possible that the guarantee would rately be invoked—that its very existence would be enough to prevent a major depression. It would serve as an issurance to business that it could put its postwar plans into operation immediately with confidence that there would be an ample market for its products. It would fore stall the retrenchment and precessall the retrenchment and precessally beautiful salies.

The insurance principle on which this suggestion is based has been universally accepted by Americans for 200 years. Our closest approach to it on a national scale—the guarantee of bank deposits by the Lederal Deposit. Insurance Corporation, the inere existence of which has climinated runs on banks. The etire banking system stands higher in public esteem because of that assurance.

Just how the National Limployment Guarantee should be put into effect, if the need ever arose, is a matter for Congress and the Executive to decide. The primary method would

be public works not hastily improvised leaf raking but enterprises which would protect our natural resources and build up our productive capacity. Obvious examples are reclamation projects, reforestation, rural schools, soil conscivation, new high ways, development of the great river valleys on the IVA pattern. And the men hared should have regular jobs at regular salaries, and should be held to regular standards of efficiency.

Public works projects might well be supplemented by other measures to stabilize employment some gov conmental and some private. A more adequate social security system higher mini um wages to bolster consumer spending a shorter work week incentive taxation establishment of the umual wase principle in industries y here it is feasible all these would help Ariaid formula is the last thing we want Appenence and ingenuity should constantly produce better cconomic devices for fightin unemployment just is they bring forth a continuous tream of new weapons in witting

Can we afford it? Many worked citizens will point to our postwar debt of some 500 billion doll its. How can we co on spending to guarantee employment without shown—the country into bail ruptey?

I not we know that the Government is going to have to spend public funds to deal with unemployment in any case. Prolonged unemployment on a large scale is no longer politically possible. Shall we commit ourselves in advance to spend whatever is necessary to keep men at work, or shall we spend hurriedly, wastefully, and on a larger scale to put their back to

THE READER'S DIGEST

work after a depression has hit? If we make the commitment in advance, we may never have to spend at all

Second — and most important the cost of a National Employment Guarantee would hinge upon its success in revitalizing the spirit of enterprise It is clear that our 300 billiondollar debt can be handled only if we succeed in maintaining a high level of production, employment and national income If we can keep the national income at 140 billion doll its a year, the carrying charges can be met handily and we can make some progress at paying off the principal If the national income should slump back to the 1932 level, the present debt would become completely unmanageable, and we should be bankrupt indeed

Under these circumstances the public spending of riew billion even to avert a major depression would seem to be simply good business.

From a cold-blooded financial stand point, the most hazardous thing we can do is trust to luck and do nothing

The first step is simply for Congress and the President to make a formal acknowledgment — now — of the responsibility which they cannot in any case escape. They need go only as far as I mil Schram, president of the New York Stock Exchange who has warned that "any sound postwa domestic program inust contemplate the production of goods and services at a level sufficiently high to occupy all who wish to work and are able to do so. If this can be established as a settled national policy with assurince that the full resources of the nation will, if necessary be mobilized to curry it out, we not only shall be discharging an obligation to our serv ice men, we shall be taling our first effective measure to insure the whole country against mother economic disaster

Cerm my s exiled great man of letters writes the obituary of the exalt hat excitook the Cerman soul

Thomas Mann

sive monster of our cra Na tional Socialism is on the point of fulfillment. If its igony were only its own, and not at the same time that of a great and unfortunate nation now suffering for its besottedness we could view the cat istrophe with a colder sense of satisfaction for that which is night and necessary.

It is impossible to demind of the abused nations of Lurope of the world that they draw a neat dividing line between Nazisha and the German people. The world has gone through five yours of a war full of uffering and sacrifice a war unleashed by Germany, and from the very first day of this war Germany's opponents were freed by the com-

A VOI UNTARY CAIL from Hitler's Cermany in 1933, I homas Mann internation ally famous novelist ind Nobel pieze winner is lived in America since 1938. He early predicted the collapse of the Nazis in country wide lectures 1 idio addresses beamed by BBC to Germany and in such publications as I he Coming I utory of Democracy (see The Reader's Digest, October 1938). He applied for naturalization papers a year after his arrival in the United States

bined Cermin ingenuity courage, intelligence, discipline, military efficiency—in short, by the whole power of the nation which stood behind the regime and fought its battles. They were not faced by Hitler and Himmler who would be nothing it ill if the strength and blind loy alty of German manhood were not fighting in I dying with misguided valor for these criminals.

No one can deny that the "na tional awakening of 19,, possessed the uncounty power of a genuine revolution. But hopelessness and damnation were written on its features

Creat revolutions, I wrote in my druy it that time, 'usually at tract the sympathy and administron of the world by their passionate gen crosity What is there about this German' revolution that so isolates the country and breeds only uncomprehending loathing round about? It boasts of its bloodlessness and vet it is the most vindictive and blood thirsty that ever wa Its basic char icter is hatred, resentment venge ance, biseness It could be much bloodier and the world would still ad mire it. if it were at the same time finer, brighter, nobler It was left for the Germ ins to bring about a revolu tion of a character never seen before

a revolution opposed to ideas, to liberty, truth and justice. Nothing like it has ever occurred in human history. And all this is accompanied by tremendous rejoicing of the masses who believe they have accomplished their intent, while in reality, they have only been deceived by mad cunning."

At the risk of appearing to deny German responsibility, I shall not conceal what I knew at that time, namely the rapidity with which disillusionment and doubts spread through the land, the rapidity with which the 'democratic' self identification of the rulers with the people became an impudent piece of fiction For I saw the nation wilk into a trap from which, partly out of stubbornness and partly out of weakness, it could now no longer escape

'I have an inner conviction," I wrote for myself alone that the people as a whole are filled with a deep-rooted dread of their leaders and of the situation into which they have been led Indifference, fatalism, hopelessness are the 'bearers and supporters of the regime, rather than faith and enthusiasm A cowering watching and waiting prevails. These people would sigh with relief, is though freed of a nightmare, if it were all over."

That is what I wrote and I cannot deny it What I saw at that time was a people lashed into a nationalistic ard falsely revolutionary frenzy, but a people nevertheless depressed fearful of future ills, fatalistically indifferent, a people that saw itself delivered up to a questionable adventure without the slightest chance of resistance

The condition which I called "an

internal war of revenge" soon developed into a state of war with the outside world, an ersatz-war of hope less isolation and the carefully nui tured delusion that the German peo ple were the champions of truth and that all evil in the world had maliciously united against the country that could bring salvation. But every state of war, genuine or pretended, brings the people and its government closer together ichieves the emergency identification of nation and regime.

Then the wil came, the real war The Germans did then best — and then worst. Attocities were committed it which the heart of humanity trembles — unitonable, unforget table. As long is possible they refused to recognize the first that the war was lost and when they finally did recognize it then ingrained fanaticism and Gothic pathos in the face of destruction were made to replace the lost furth in victory.

It was a terrible sight to see an entire nation rushing to hell with its eyes wide open. Attempts to break away to unseat the regime, to save what of substance and of future might still be saved, failed igno miniously. Ne er had a nation acquired more cruel rulers, masters who more ruthlessly insisted that it should perish with them.

The national catastrophe which the regime carried in its bosom is at hand. For 12 years we who are German exiles have waited for it with a mingling of horror and hope. Yes, we wished it — for the sake of morality out of genuine hatred, out of design of the punishment of absurd wicked ness. And now that the debacle is

here — an all-embracing moral, spiritual, military, economic bankruptcy without parallel — our pity for so much misguided history, for so much imprudence, for so much defiance of the real dem inds of the present world equals our satisfaction. For everything German is placed in jeopardy, including the German spirit, German thought, the German word, and he are forced to face the question whether in future 'Germany' in any of its manifestations can due to open its lips in human affairs

How will it be to belong to a nation that never knew how to become a nation and under whose desperate megalomaniae efforts to become a nation the world has had to suffer so much? To be a Cerman author—what will that be? Back of every sen tence that we construct in our language stands a broken—a spiritually burnt-out people, bewildered about itself and its history, a people that according to reports, despairs of ever

governing itself and prefers to become a colony of foreign powers a people that will have to live in solitary confinement, because the fearful accumulation of hatted round about will not permit it to emerge from its bound incs—a people that can never show its face again

One thing is certain. There must be an end of the martial Reich, that never understood the meaning of the word 'liberty, that regarded as liberty only its right to enslive oth The much inized 10m inticism called Germany was such the world that no measure that destroys it as a state of mind can be disapproved. The hope remains that with the cooperation of the German will itself, purified by cruel suffering, a form of government and of life for the Cerman people may be found that will encourage the development of its best powers and educate it to become a sincere co-worker for a brighter future of mankind

The Veteran Betrayed · 11

Our Mental Casualties

Condensed from Cosmopolitan

Albert Q Maisel

Author of Miracles of Mil tary Medicine and The Wounded Get Back'

These are the most harowing whose wounds are of the mind. These are the men the world forgets—because they are locked away in Mental Hospitals.

Already more than 10 000 mentally wrecked veterans of this will have been 'shochorned in beside nearly 30,000 from the last will who still haunt our 30 Veterans. Mental Hospitals. I very month the overcrowded wilds become more crowded still—while others winder our cities untreated or cymically discharged is "unimproved."

There is no excuse for this situation Long 190, Congress ruled that all veterans — the mentally disabled included — were entitled to the finest care that modern inclicine can provide We have spent hundreds of millions building giant hospitals, paying the salaries of the men who run them Yet I must report with shame that our honored veterans are not getting the services we have paid for Instead,

A pre 10us article on the treatment of tuberculous veterans was condensed from Cosmopolitan in the April Reader's Digest some me being beaten by sadistic brutes. And thousands, who should achieve a speedy cure, me receiving almost no treatment and are being allowed to degenerate and die

In October 1944 a conscientious objector, Robert Hegler, ran away from the Veterans Mental Licility at I vons, N J where he had served for eight months as an attendant Heshowed his diary to reporters in New York a record of endless brut ality

Hegler wrote A veter an of this will wis stied to a chair with a sheet and vigorously punched. I wo weeks later I was ordered by the head at tendant to turn cold water on a patient held for cably under a shower

He wrote of patients being "wrung out" the attendants' lingo for choking a veteran with a towel around the neck. A patient was held down by one attendant and kicked in the head by another. One seriously ill patient was beaten up in bed by two attendants and died the next day.

More than 50 shocking instances of brutality appeared in Hegler's diary When the story broke in the New York papers, the Administrator of Veterans' Affairs, Brigadier General Frank Γ Hines, sent an investigator to I vons. Then a month later, he issued a statement admitting abuses and promising a cleanup.

Ten weeks later I visited the Vet-

cians' Hospital at I yons

It still had the same manager and the same Chief Medical Officer The physician who had been in charge of the Acute Service during the period covered by Hegler's charges had, according to hospital authorities been ordered t ansterred to mother fieldity He had not been discharged ilthough the substantiated abuses had been inflicted upon patients under his guardianship. But up to it le ist January 15, 1945, he was still at I vors, practicing medicine on detenseless mental patients. But Chief Medical Officer pointed out The sino longer on the Acute Wards

The Veter ins Administration In structions for Attendants has this rule. 'Under no circumstances must a patient be struct should or subjected to olinic. The offender will immediately to dismissed'

Yet I was informed that "no dis missals had occurred — though a few attendants had been permitted to resign"

One man was punished Robert Hegler was sent to prison — not for maling the charges which were substantiated, but because he violated the rules that forbid a conscientious objector to leave the hospital grounds without permission

I he new Acting Chief of the Acute Service took me through his "disturbed wards" Peering through tiny portholes we found five patients in whit he euphemistically called "seclusion" cells Lach cell had only a

bed and a veteran in a shapeless bathrobe from which the cord had been removed. These, I presumed, were diagerously violent patients

My guide opened one of the doors and an old man in felt slippers shuffled toward the doorway. He weighed no more than 90 pounds

"Is he suicid'il' I asked

"No was the reply, 'we keep him here to protect him from the other patients'

A touching bit of consideration, that -- 'protecting" a man by confining him alone in a bare locked cell

We pissed onward, to a patients' dayroom furnished with about a dozen hard chairs and benches Some to odd patients had the choice of standard or sitting on the cold concrete floor. Half a dozen were sleep ing on the floor although a dormatory, just across the hall, was filled with beds 'It's not good for them to stay in bed during the daytime, I was told. But no one seemed to mind their sleeping on the floor.

I isked about restraints?— in other of those soft words so frequently used within the Veterans. Hospitals to cover up the hard realities. The medical officer began to shake his head in the negative but just then an attendant handed me a pair of leather handcuss.

"Resti unts' of any sort are forbidden in many of the most progressive mental hospitals. Others limit them to the so-called 'wet pael"—the wrapping of the patient in a cold, wet sheet — which has medical value But at the Veterans' Hospitals 'restraints' include these great cuffs—leather bands, three and a half inches wide, that are locked over the wises

and tied to a leather belt fixed tightly about the patient's waist

The officer asked a patient wearing the cuffs, "Do those restraints huit vou?"

"No" the veteran said. Then he lifted his shackled right hand as fai as the belt would let it go and tried to point toward his heart. "It a here where they hurt—inside," he said.

Beating of patients has been 'discontinued" at Lyons But the men who did the beating haven t been fined And "disturbed" veterans are still put into "seclusion" or 'restrants'

Not are conditions better at the other Veterans' Mental Lacilities. The vast majority of them are overcrowded In September 1944 the Facility of Northport, Long Island, had 437 more patients than it was built to hold Coatesville Pa, had an overload of 215 Waco, Ieras, an overload of 243 at North impton Mass 992 patients are crammed into building built for 770 On January 15, 1945, at Lyons 1901 patiens were housed in a hospital built for 1716

Of course, as with its Tuberculosis Hospitals, the Veterans' Administration does not idmit that such overcrowding actually exists. Capacity has been "increased" by the simple device of adding so called 'emergency beds," a process which has already crowded 3000 extra beds into spaces never designed for them. At Northport I found dayrooms and even a dining hall converted into such "emergency bed" wards, while patients were forced to eat in a cell in

Such overcrowding has had its effect on the already low standards of treatment Hospital managers encourage discharges because beds must be made available for new patients. Thus, at Northport in August 1944 only 19 patients were discharged is having achieved "maximum hospital benefit" while 89 were discharged "Against Medical Advice," despite the fact that legally committed patients cannot leave of their own free will

Colonel Harold Γ Foster, Clinical Director at Northport, answered my surprise at these figures by saving, 'The Veterins Hospitals feel that, as long as the patients are not violent there is no harm in letting them go '

"No ham" The police blotters of scores of communities repudiate that view. One might cite a Detroit case—in honorably discharged wounded veteran of Guidale and who broke into a store and stole \$1500 and a gun. I hat man was on the records of the Dearborn Veterans' Hospital, diagnosed as 'hysteria, shell shock was neurosis." But he was discharged uncured—supposedly.

The records of admissions and discharges from the Lyons Hospital for the entire veir 1944 show that 500 patients were sent out on so called 1111 d Visits — three month experimental discharges. More than one fourth failed so decisively to adjust to the outside world that they had to be recommitted.

Ict those who are discharged half cured may still be lucky. For others may linger for years in veterans. Hospitals virtually untouched by modern psychiatric techniques. Within the last dozen years, medicine in the mental field has made remarkable curative advances. But the Veterans' Administration has denied these advances to patients for

three or four years after they had been widely adopted because "the veteran must not be experimented upon" When a new procedure is at list grudgingly adopted, it is often turned over to sketchily trained, overworked doctors whose every move is in "experiment" conducted at the outlient's risk

One of these advances is electroshock therapy, first introduced in 1937. The mental hospitals of the State of Wisconsin have used it since 1939. St. Elizabeth s, the great fedral mental hospital in Washington, its used it since 1940. New York State's mental hospitals adopted electroshock in 1941. But it was not until ite in 1943, that electroshock was saidely introduced into the Veter ins Mental Hospitals, and some of them ire still only "preparing to institute," his form of the itement.

Having waited all these years, one night imagine that the Veter ins' Administration would trum its docors adequately. Again, let's look at the record. At Northport I found lectro shock administered by a single physician. It was his duty to give this reatment to several hundred men, wery week — on the side. His main ob was to care for the inmates of an intire building — 225 patients. He was a conscientious physician, but he ould average seven minutes a week are patient, apart from his electroshock work.

At Lyons, electro-shock therapy is performed by a doctor who took the wo weeks' course which made him hat he jokingly called an "expert" Previously he had spent all his time is the hospital's X-ray man He still reforms his X-ray duties Besides

this he has given exactly 20,579 electro shock "treatments' in a single year. He "treats" as many as 90 cases in a single morning — two minutes per patient.

Another of the new treatments for cert in types of cases is the extremely delicate operation known as prefrontal lobotomy, involving the piercing of both sides of the skull and a careful probing and cutting to sever certain brain connections. If done right, it can often change a violent patient into a normal human being. If bungled, it can produce disastrous results and even death. Somewhat over a thous and prefrontal lobotomies have been performed in the United States since it was first devised in 1937.

The Veterans Administration held off until 1944 During all the years when it might have sent its physicians for training, it inted this operation as "experimental" Last year it sent four physicians to study under Dr Freeman, who with Dr Watts, also of George Washington Medical School, devised the operation These mended not complete six months of a year of resident training They just took a tyo weeks brush up course

Veterans' Hospitals differ from other hospitals such as the federally operated St Elizabeth's only in that they do more "experimenting' and won't admit that they do any St Elizabeth's, for instance, has interns and psychiatric residents — competent young doctors who practice only under the constant guidance and instruction of older physicians But the Veterans' Hospitals have no interns, no psychiatric resident physicians Their doctors are hired as full medical officers They need not even be psy-

chiatrists In fact, I was told 'We'd rather have men who don't know any psychiatry Then they can learn our methods when we detail them to our indoctrination schools'

"Where are these schools located?'
I asked

'Well," my informant said, after a pause, 'we're not running any such courses just now"

The fact is that not a single one of all the hundreds of doctors who man these Veterans' Mental Hospit ils is a diplomate of the Board of Neurological Surgery Only 22 stiff members are to be found on the latest list of the American Board of Psychiatry and Neurology

In contrast, St Fliz both's Hospital with a staff of only 43 full time medical officers has 26 diplomates on the board's list and the New York State system of psychiatric hospitals has 85

Despite all their shortcomings, the Veterans Ment il Hospit ils are not operated cheaply

St Elizabeth's, with the same federal pay scales and far higher stand ards of service operates at a cost of \$2 per day per patient. Minnesota's progressive Me ital Hospital System operates at costs varying from a low of 48 cents per patient per day to a high of 79 cents. New York State, in the highest-cost area in the country, manages to run its mental institutions at a duly cost per patient of 84 cents.

But the Federal Treasury pays out, for every patient on the rolls of the

Veterans' Mental Hospitals, \$2.4 per day!

By every measure—their record their personnel, their abuses, their medical backwardness—the Vet erans' Mental Hospitals stand in dicted as third-rate institutions. Only when it comes to expenses do they outdistance comparable federal and state institutions.

There is one final measure of these hospitals we have vet to consider their abominably poor record of cures. The last available Annual Report of the Administrator of Veterans' Affairs shows that 23,147 veterans were discharged from these 30 hospitals during a vear. Of all these, less than eight percent are rated as recovered, "apparently recovered or cured!"

The list is ulable record of St. Llizibeth's Hospital shows that more than 45 percent of its discharged male patients were rated as recovered Smill wonder that the Navy refuses to discharge most of its mental cases to the circ of the Veterans. Administration Small wonder that it insists on sending these men to St. Eliza beth's

But the Army is too large to boycott the Veterans' Hospitals Already, thous ands of World War II veterans have been discharged into these men tal mantraps. For these men—and for the tens of thousands who will follow them—there is no hope unless the Veterans' Hospitals are cleaned up—drastically, thoroughly and promptly

How We Are Going to Look

Condensed from The Baltimore Sunday Sun

Roy Chapman Andrews

JUMAN BEINCS, half a million years from now, would be caricatures in our eyes—something out of a bad dre in Big round heads, almost globular, hairless as a billiard ball, even the women! Very clever these future people will be — much more intelligent than we are — but alas, at the expense of hearing, tasting, seeing and smelling. I heir faces will be smaller But they will be taller, probably several inches, though shorter bodies are predicted, with longer legs and only four toes.

We might hesitate to invite one of those future humans to dinner, were he to appear now in advance of his time, except for his conversational brilliance. But he would have some physical advantages over us no appendicitis, no sinus trouble, no fallen arches, neither hernia in man nor filling of the uterus in woman.

Such predictions aren't pure guesswork. They are based on the known progress of human evolution. Before us is the visible evidence of fossil human skeletons, beginning with that

ROY CHAPMAN ANDREWS, world famous zoologist, explorer and for many years director of the New York Museum of Natural History has done extensive research in Alaska, the Netherlands Eas Indies, eastern and central Asia He is author of On the Trail of Ancient Man and many other scientific books and articles

of the Java Ape Man, more than half a million years old, and progressing in a definite sequence up to the present day. We have every reason to believe that the development of reduction of the same physical characteristics will continue into the future. We can visualize some of those changes if we forget the paltry six thousand years of known civilization and think in terms of thousands of centuries.

Instead of being among the 'oldest families," as we would like to believe, man is one of the newest comers. Not long before the beginning of the Ice Aee, say six or seven million years, he was a quadrupedal ape, swinging blithely through the treetops like a present-day gubbon or chimpanzee. But he was an ape with possibilities Some inner urge impelled him to get up on two feet and free his hands for purposes other than locomotion.

He did this in an incicably short time, judged by evolutionary standards. It required 60 million years for the horse to change from the fourtoed Eohippus, scarcely bigger than a fox, to the thoroughbred of today. Man accomplished a far greater initiacle in only a fraction of that time

That man is already becoming taller is shown in records of the last 50 years, in both Europe and America Members of the present generation average 3.55 centimeters (1.37) inches) in height above their fathers, younger sons are tiller than their elder brothers, fathers are tiller than their fathers. Perhaps vitamins are responsible, or progress in medical science and hygiene. But it is doubt ful that we shall ever become grants. Nature tried that experiment once—in the grants of Java and South China—and evidently found it unprofitable. I can see little reason why enormous size should be in asset.

That our hypothetical man will have a larger skull is a safe prediction. The hum in hi in his constantly increased in size and complexity since the Java Ape Man and his ever demanded a larger house. True the size of the bit in does not always indicate intellectual power the biggest brain on record belonged to a feeble minded London cardener. Nevertheless, the dictum that the bigger the brain the better the min has held good as a general rule throughout evolution.

The iverige of the Ape Mins brain capacity was only 81; cubic centimeters, modern man boasts in incrace of 1350 cc Future m in could be expected to have it least 1725 cc Not only has the volume of the brain constantly increased but those centers connected with thinking have been improved by folding and by a denser accumulation of nerve cells and fibers This, however, at the expense of the sense areas But modern man has compensated for that by inventing tools to sharpen the senses, such as the telescope and hearing devices — all products of

his better brain That the skull of fu tuic man will have a shorter base and be round instead of long and narrow is ilmost certain

The Java Ape Man had "over hanging brows caused by a heavy bar of bone above the eyes, so did Peking Man Rhodesian Man and Neanderthal Man By the time our own species armsed, the bar had been signify reduced Nevertheless, its ru diments still persist in our faces I ogically the men of the future will have almost smooth prows "Wom on s features point the direction in which evolution moves" says Su At thur Keith The smooth brow con dition has already been achieved by the female of our species And how they love it! But we poor males have in inconsiderable swelling above the root of the nose on either side of this protuberance vestigial ridges of bone still icm in Thus women ire about half a million years ahead of men, at le ist in this respect. But they need not be too smug. If sex differences per sist females of the future will re

jeice in an almost bulbots forcheid, like a newborn by by s by the tille we men have reached their present condition of be juty

Modern man is in a de plor ible condition regarding his teeth. They are frequently twisted, impacted and mal erupted. The last molars, or "wisdom teeth," appear relatively late in life or not at all in the future they will disappear, as will two or our fron teeth (the lateral incisors). Our soft food and polite man ner of eating are largely re

sponsible The Eskimos, who gnaw their bones, have beautiful teeth So did most primitive men But vou can't have good teeth or jaws unless you at resistant food. We don't do it. If the time ever comes when man lives on concentrated food pills he can say good-bye to the last of his teeth.

The earliest humans had long jaws and projecting faces. These have procressively shortened and receded as man climbed up the evolutionary ladder. Less use of the jaws and powerful chewing inuscles enclosed by the cheek bones is largely responsible. In evitably this will continue unless our cating habits change, and the hypothetical man will have a pitifully small and receding free.

The man of the future will be lucky if his head does not resemble the surface of a billiard ball before he is 50 years old. No hope for the women either Han do parlors will have little place in feminine life of half a million years from now. Wig makers yes, if that happens to be the style, but natural tresses will be a thing of the

past Body har, too will disappear In the course of human evolution the pelt has constantly diminished. We do not need har to keep ur warm when clothes do the job. The vellow and black races already have lost most of their body hair. Depilatory creams for the future female will be unknown.

Our hypothetical man of the future will escape some of the ills that make our lives miserable. When we became vertical creatures nature left us with many weak spots. All our internal organs had to be suspended in the thorax or bound to the back wall, otherwise, they would sig distressingly. This necessitated a widening and flattening of the chest and a great expansion of the pelvis to form a weight-bearing basin. Nevertheless, we are still poorly fitted mechanically for an upright posture. No automobile manufacturer would date put a car on the market with so many defects.

In the first place, our chassis is much too long It gives us a weak lower back I ew men reach middle life without aches and pains in the lumbar region. Since we have no support from the front legs the "small of the back' must bear the weight of the entire upper body. No wonder that we have sacroilize displacement! But nature is not one to let such a defect in architecture go on indefiintely. Obviously our backs must be shortened, or strengthened Either we must lose a lumbar veitchia or, more probably, the last one will become fused with the sicrum

Our abdominal protuberance is another weak spot. The curve of the lumbar vertebrac pushes the abdomen forward between the ribs and the pelvis in a decidedly unlovely and mechanically imperfect manner. Men get hernia and women prolapsed uterus. These ills should be much less prevalent when the back is shorter.

The hypothetical humans will not be troubled with an appendix, for it is definitely on the way out Morcover, nature is pretty certain to do

something about our sinus afflictions. In the four footed stage, the sinuses drained beautifully, but not so when we become vertical the openings must migrate downward to function properly, and they doubtless will do so

The change in our extremities was a pretty good job on the whole. I doubt if our hands will alter much, but there is room for improvement in our feet. We still suffer from fallen arches and that is pretty sure to be remedied. As the line of leverage in walking shifted from the middle to the big toe in modern man, the little toe became less and less important. Even now it is almost useless and sometimes lacks a nail. Useless parts seldom persist indefinitely so we can confidently predict that the little toe is doomed to disappe in

Such is an impressionistic picture of the future hum in so facts his physique is concerned. What will happen to him mentally and spiritually we can only sucss. Dr. Harry Shapiro, from whom I have drawn many ideas embodied in this article, is an optimist "Inevitably," he says, "civilizations will have declined and new ones will have arisen Perhaps on occasion civilization will come per ilously near to barbarity but it will ever spring anew to dizzier heights

But the pesimist is entitled to his opinion, too. The human species may not continue to exist for mother half million veris. Regardless of the possibility that man may destroy him self (and he is making a pretty good attempt in the present war), the life eyele of all organic forms seems to be determined by nature. When they have lived their allotted pain they disappear Animal dynastics that once reached majestic heights are known now only from their fossilized remains

Mars history on earth has been meredibly short and brilliant. Like a meteor flashing across the sky, he has risen to control the mimate world. But he may burn out as rapidly as that same shooting star leaving behind only the dead records of his once clorious past.

Tiles of Kiufmin

Discribing a new play to play which the ector George Kaufman Ruth Gordon explained, There is no so nery at all In the first scene, I in on the left side of the stage and the audience has to imagine I meating dinner in a restaurant. Then in secure two, I run over to the right side of the stage, and the audience imagines I m in my drawing room.

'And the second night,' nodded Kaufman 'you have to imagine there's an audience out front' —Bennett Cerf in Liberty

As the final curtain descended at the opening night of one of Kauf man's plays, cries for Author! Author! were heard from the back of the house and soon echoed throughout the theire. Someone saw him standing at the rear of the theirer and asked, 'Why didn't you acknowledge the applause?"

"I was too busy yelling 'Author'!" he replied - Myer Primack in Coronet

I Was an American Spy

To repay the Japs for their treat ment of her in American woman sup a mucht club in Munita which proved a fertile source of information

condensed from The American Mercury

Claire Phillips As told to I rederick C Painton

TIEN the American troops retented in Bataan in February 1942 my daughter Dranc and I went with them, trying to stay near my husband. John Phillips of Headquarters Company, jist. In fintry Overrun by the Japs we fled to the hills, where we lived like hunted beats Dranchael bad attacks of malaria and needed medical care. In desperation, I smuooled her into Manila where we were sheltered by Judge Manierto Roxas. I relative of my former husband. Dranc's father

During those terrible months in the fills I developed a red hatred for the Japanese. I told Judge Roxas I was seeing to spy on them My plan was to open a night club on the water front where I could vatch shipping and troop movements, and get information from Japanese is Judge Roxas tred to dissuade me. He said I was sure to be caught and executed.

But I had son enough of the Jips to have utter contempt for their files and organization. For two months I had worked under the name Madame Dot in Anna Teys night club — night under Jip noses — and they had suspected nothing. I am olive-skinned with black hair, and I passed as Italian-boin, mairied to a Filipino. I had been in the entertainment busi-

ness ever since I left high school to join a tent show. My low, husky voice made torch singing natural. While at Anna I ey's I studied the Manila night clubs and the Jap character, and decided that, if I charged outaigeous prices and entered only to high Jap officials and unity and may be as hats, I could make a go of it.

I paymed a dramond ring and a wrist watch for sufficient pesos to male a start. I chose a house in the I mita section, where I could watch ship movements in the harbor. I named the place the Tsubaki Club. The word club in Japanese signified exclusive, and tsubaki means camellar which to the Japanese means delicate and difficult to set. I cly Cuculara, a Lilipino call was my chief performer. She knew what I was up to and she aved my life many times.

On opening night October 15, 1042 I stood it the door As a Jip officer entered, I bowed my head yery slowly and said, 'hombara,' me ming a very polite good evening I hen I would lead the officer to a table and he would select a hostess. She would pour his beer light his eighted and sinile upon him Most night clubs in Manila gave one floor show weekly, I had one every night. Fely sing Japanese songs, I did torch numbers, and I had Filipino boys and girls perform native dances, which the Japanese like very much

I had my troubles At first the Japs

would make determined passes at me and the hostesses and frequently would slap our faces when we told them it wasn't that kind of place. But gradually as I built up a better and better clientele, this trouble ceased. All customers complained at fast of the high prices. I told them I had to add in the price of the floor show and, after all it is necessary to pay to be so exclusive. You could see them swell with satisfaction.

Often young officers would drink beer, then smish the bottle on the floor and will out without paying Once a brutal officer broke a beer bottle over a hostess's head. The Japhad a rigid order that all cases of misconduct or de truction of property by officers should be reported. I deliberately refrained from making complaints. It want do build good will

The Japs have a stringent rule against dancing which they recard is disrespectful to the war effort.

Nevertheless Jap officers would often force the hostesses to dance. One meht a Jap mulitary policeman — in enlisted man walked in crossed the floor to ac plain who was dancing and slapped his face. The captain reddened, but merely turned off the floor. I was pariety because the Japs could now close down the place, and all my efforts would be for naught. Tely whispered. You leave this to me

She and a Jap major told the MP that we had protested but had been forced to yield. The major did a little bribing. The MP tore up the complaint and from then on I was trusted by my Jap clients. They came back night after night, and I was making money. It was time to get to work.

I made contact with Captain John. B Boone commanding the guerillas in the Batain military district. My code name was High Pockets, and my information was coded in food terms. If it was important, he'd write

Beins delicious? If the news was stale, he dwarte. Cabbage spoiled on arrival

The first messenger we used wis cought and shot. The second survived He had a double soled pair of shoes and we could put the message between the soles. Or we would split the center banan in a bunch put a message and design fisten the skin back into place.

Once a month I sent Boone pack ages of food and medicine and all routine information. If I got mything upon I I had a lalipino water who would account the hills at once. My orders were to report the movements of all Jap vessels and the destination of Jap troops moving through

A nivil ciptum skipper of a Red Cross hospital ship came a one night. He get very drunk and told how he had just arrived from Bou garville with many troops. I asked, Wounded?

He Imshed loudly me repited 'Only a few slightly wounded All the rest are first class treops. We knew the stupid American must let a Red Cross ship go unmolested.

I sent information to the hills that might that the Japs used ho pital ships as troop transports. This captain also told me all badly wounded Japs were killed and buried. I he ad this frommany Japs, who said the men were as good as dead and anyway at would save them from torture by the Americans.

One night I was sitting with a Japanese officer He said, "Haven't I seen you somewhere before?" I thought he meant at Anna Fey's and I started to answer, "Oh, you mean before—" A brutal blow of his fist knocked me to the floor He said angrily, "Always you people say 'before Japanese came' Degenerate Americans gone forever There is only Japanese new order now Remember that"

A few times I knew the result of my work. The captain of an aircraft currier liked Fely's singing. At his fire well party, Fely slyly asked him where she should write. He said he was going to Singapore and then to Rabaul I got that information off posthaste. Months later one of his officers dropped in Sadly he said to I ely, 'Your sweetheart is no nore. Most on that ship are no more." We shed a few crocodile tears.

One night the Japanese commander of a submarme flotill a took a fancy to me. He had seen Sally R and's fandance in San Liancisco, and now he is ded me to do the dance. I said,

You return tomorrow night? We made two fans of split bamboo and tissue paper. Fely sewed me some flesh-colored tights and I arranged a dim reddish spotlight. The commander came with 40 of his officers and they almost lost their eyesight straining to see if I was really naked. He came again the next night with most of his officers. 'You do Sally Rand dance," he said 'Tomorrow surrise we sail for the Solomons.'

I did the fan dance with great success and sent off word to the hills Months later an officer came to the club and told me that he was one of

the few survivors of the flotilla He got very drunk drinking to the ashes of the victims

Meantime, I tried to make contact with someone in Cabanatuan prison camp in order to help my husband. We had proof that Red Cross packages sent there were not given but sold to the men. I was making lots of money and I wanted to give John what he needed I made contact, only to be stunned by the news, 'Your husband died two weeks ago. The Japs and malaria—but he starved.'

Chaplains Robert Taylor and Fink Tiffiny (both to die with 1600 other Americans when a Jap pilson ship was to pedocd en route to Japan) wrote me of the prisoners' urgent need So I joined what was known as Group U, to send messages, money, food and medicines into the camp We unraveled bedspreads and knit the thread into socks. We even made medicine Beriberi and scurvy were prevalent because the prisoners lacked the citius vitamin So ve bought culumansis, native oranges, and boiled them down with sugar We sent the concentrated juice to the camp it demijohns. The guards had to be bribed, usually with American watches, pens and cameras

As many as 100 messages containing up to 20,000 pesos would go at a time. I have a fruit jar full of pieces of faded paper, receipts for money, some written on eigarette wrappers. They didn't have to send those, bless their hearts. The ones who are alive today owe me nothing and I say now, "Forget it"

This running of stuff into Cabanatuan was my ultimate undoing On the morning of May 23, 1944, I was

sitting at breakfast, grief-stricken and uneasy because I had just been told that Ramon, one of the Cabanatuan messengers, had been captured Suddenly four Japanese military policemen raced into the room I jumped up Two of them jummed revolver inuzzles into my ribs

"Where all your papers?' cried one "You spy! My heart sank, my throat got so dry I couldn't swallow Spies are shot or, more often, decapitated. They blindfolded me and led me across town to a guardroom. Later in the day the investigation began, with me still blindfolded.

A voice said as if out of a Holly-wood movie. You might as well come clean, High Pockets. We know everything. The word High Pockets struck me numb. They had a attacepted a letter. But to whom? Boone? If so, I was as good as dead.

He begin to read a letter of mine to Chaplain Taffany and I knew now that the Talipino garl who had been carrying our letters had been captured

Suddenly he said, 'Who is Cal?"

I replied that it was an abbreviation for calamans. That letter had said we were running short of demijohns and I had asked Chaplain Liffany to return all he had

To my am azement, they didn't believe me. I was kicked and benten "Answer who is this Cal and who is Demijohn".

Desperately I repeated again and again that "demijohn' was jug and "calamans was or inge

'Ve no fools!' cried the inquisitor
"Cal is code word and John is American name You tell me what you say
to this Demijohn"

I screamed at him again Hands seized me I was stretched out, bound hand and foot and head tied nigidly Suddenly a garden hose was held to my mouth and nostrils. This was the water treatment and it is just like drowning only more horrifying. Of course I passed out I regained my senses crying out with agony. They were pressing lighted cigarettes to the inside of my legs. 'Who is Mister Demijohn and what is Cal?' I cried out a repetition.

So you want more water?"

Before they got the nozzle of the hose in my mouth I yelled, "I ook demijohn up in a dictionary" Then water poured into my mouth and nostrals and I died all over again

But when I required my senses they stopped the inquisition. Lyery Jup officer curries a pocket Jup Inglish dictionary and they had found I was right. So they went out and the guard took off the blind fold.

I was left alone in that room for three weeks. I was given three cups of water duly and one cup of rec One day when the Jap was mopon the corridor outs le my cell I mad signs that I wanted water to wash my filthy suments. He issed the p filled with gray, sour soapsuds and hurled it in my face. With matted hair, dirt thick on me, lice and fleas sit on the floor I grew weak from lack of food, and flesh melted off me and the eignette burns festered and mide scars I'll bear to my grave mumbled to myself to hear my voich and know I lived

At the end of three weeks I was moved to Santiago prison and placed in an eight-by-ten-foot cell with 11 other women At the end of three months, in which each hour passed like a century, an officer I'd seen in the club passed the window I called to him I said I was going mad and wanted to know if he could have my case examined so I could have an end to this living hell

At 2 a m (the Japs like to take you out of a sound sleep, thinking you will soften up) I was taken to the inquisitors Here I was told that the original letters in my case had been lost, but they had others In one I had been plain dumb, for I had written, Here I am, an American running a I ipanese night club"

The inquisitor was furious at nic, grinding his teeth and velling, 'You thicf, you reach in Japanese pockets and rob them of money to buy things for degenerate American,"

They tortured me by putting the point of a shingle nul under my fingernail and hitting the nul with a hammer. One fair htful shock of pain tears through you to your toes and you re out cold Lyon if I had wanted to answer their questions, I was incapable of 1 now 1 he pain had dismembered my mind

A week later, I was taken blind folded to the old Spanish torture chamber under San 1ago. Here the blindfold was removed and I saw I spanese officer with a glittering drawn sword. He ordered me to kneel down I felt the edge of the sword laid against the back of my neck

"Say a prayer," he said, "for this

is your end "

I might have flinched, but I was incapable of movement There was only silence, and time flowing like a gushing torrent, and I praying Then

the officer s voice said, "You brave woman You expected tell names You no tell, so we must believe vou --- ''

I never heard the end of his speech I fell forward on my face in a faint

Three days later they took me to Fort McKinley for a formal courtmutial When I tried to defend myself a blow broke off half a tooth "You required say only you guilty, not guilty, said a voice I said guilty to get it over with, and was immediately sentenced to be shot as a spy

Lach night as I lay on the floor in Bilibid Prison I thought, "This night they will come to take me out and After a while I was no shoot me longer afraid This went on until

November 2.., 1944

Then to my amazement, I was taken out for a new trial This time the charge was not espionage but acts humful to the Imperial Japanese Government' Asked how I pleaded I stumbled over "guilty," I was so anxious to say it. I was thereupon sentenced to 20 years at had labor

The next day I was taken to a woman's puson and by contrast it was like heaven. We stuved, we ate boiled banana leaves and horrible cassava But we worked it gardening under i kindly Filipino who asked only that we make a showing for the weekly inspection by Japanese officers. My flesh was slowly healing and so was my mind Then came that blessed day, February 10, 1945, when the helmeted American boys came in I went forth barefooted and ragged, but happy in my liberty and the hope of seeing my Diane and my native land again

Twenty Who Fed a Nation

How the U S Army, once again, found the right men for an emergency job in France

Condensed from Farm Journal + + + George Kent

RDINARII Y vou wouldn't choose a county agent as a horo, but the other day I listened to a tale of 20 American county agents in France that s as fine a story of a complishment as his come out of the European Theater of Operations

The youngest was 27 the oldest 48 only a year previously they had been riding dut roads in Texis, Illinois, California and Kentucky talking to farmers about fertilizers and crops. They were licuted ints, captains and majors but they didn't know or give a hang about military discipline. There job was to help farmers, this time I rench farmers. Their assignment was to feed France from French resources without touching the food of the Army. But for them I rance today would be much hunging than she is

Their leader, I reutenant Colonel Bruce W McDaniel, has operated a group of 31 associations of orange growers in Redlands Calif He was also a director of the National Cooperative Council Thus he understood the intricacies of processing a crop and getting it to the consumer He served two years in the other war and was wounded in the Argonne

"I was in I ondon when my orders came,' McDaniel told me, "and when I read 'em I almost fainted'" They informed him that his job was to marshal the indigenous resources of I rance so that the country could feed itself as soon as possible. He was permitted to choose 20 expert assist ants and a few clerks and call on the transportation pool. But that was all

With this outfit, he had to arouse and or anize a stunned farm population whose cattle had been slaugh tered in large numbers, whose poul ti sheep ind pigs had been carried off whose fields had been mined

A few weeks after D Day, a Duck ground up to 'Oniaha' beach and McDaniel and four county agents set toot in Irance. I ach carried a bed roll and a knapsack. They had urgent instructions. Paris must be fed. A hungar Paris meant trouble. It was absolutely vital that food come rolling a with the American troops. "It was like being told to feed Chicago, with the rest of the United States paralyzed," said McDaniel.

Inversion and an automobile—and a nation to feed. It any but these hardhanded America is, the notion would have been preposterous. What railroads existed were being used by the A my. The agents were also barried from the main highways and were told to forage for their or notices and to enlist the local popular

tion for labor

Each of 15 other farmers in uniform was to take over a designated area as soon as the troops overran it. I hese men, whose knowledge of French was meager, were left to tackle a stupefied and often suspicious peasantry. They had nothing to work with in the beginning except their ibility to convince people that they came unselfishly for the good of I rance.

One of the first five who landed was stocky Steve Debman of Texas He was sent to Coutances The flour mills and creameries of that city had been run by electricity brought by cable from a power station on the other side of the Soulle River The cable had crossed on a tower but the Germans had destroyed the tower and cut the cable And there was no coal for the power station

'Our first job is to get the cable up so let's put up a tower. Steve told the mayor "But," asked the mayor, 'the coal' Where can we get coal'. "I ll get the coal, you get me the tower" said Steve

Once the French people give you their hand, they re the best anywhere I he mayor called his people together and told them that the job was important not only for themselves but for the iceding of the Lienconnen who were 16 building the port of Cherbourg "Those folks were marvelous," said Steve Men and women, even childien, went into the river and salvaged old bridge timbers brought beams from bombed houses. others ransacked sheds and woodpiles Scores cut down trees in the woods and dragged the logs to the river edge Wading in the river, the carpenters and the masons went to work and a 70 foot tower began to

Steve soon saw that these people knew their business, so he drove off to towns and nearby Army camps to find coal He found it Finally the tower was finished. In the power station a jubilant stoker threw coal into the fire. And in Coutances, across the live, the lights of a creamer, went on

Some of the flour mills had been stripped, but the county agent from Texas took a part from one and a piece from another, and by telescoping three damaged mills obtained one good one. He provided the enthusiasm and the know how After that, the French took hold and did the test. The men who made the port of Cherbourg ready for shipping never complained for lack of food. Debman was cited for 'conspicuous meritorious service'.

In Rennes four county agents and McD miel sat down with five French officials to plan the collection of food staples for Paris. The wheat stood in the fields unharvested. There was no coal and no gasoline for the threshing machines. The situation seemed hopeless, but McDaniel said, 'It's got to be done.'

They worked, as Debman had, by seeking out a may or or other influential official and appealing on the ground of patriotism Paris must be fed. It got results Often the village turned out en masse into the fields—women, old men, little children. They cut the wheat with scythes, threshed it with flails, loaded it in oxcarts and brought it to old windmills with broad, creaking sails pressed into service again because they needed no fuel. But once this

start was made trucks and threshing machines and tools came out of hiding, and the agents scoured the country for coal, gasoline, spare parts, trees Flour and butter soon piled up in warehouses, ready to be sent to Paris when Paris should be freed

I anky, bald Churlic Davis of Louisiana presided over what the French called the beef marathon Davis roamed the countryside, talking and pleading with fumers to bring their cattle to market in the town of Le Meilerault to help feed Paris Soon cows, heiters, steers and bulls begin converging on the town Davis hired 22 drovers, hard drinking toistering men who knew their business well, to drive the citile to Purs, 150 miles tway I milly when some 3000 head of cattle had been rounded up the great herd, mooing and bellowing, was got under way

The route was along back roads because the good highways were reserved for Army traffic Some roads were mined, and a few head of cattle were killed, but dying, left the roads safe for human use. As the great drove of cattle passed through villages, people cheesed. The drovers, cracking whips and hoisting bottles, loved the acclaim.

On the day of the liberation of Paris they were still five days' march away. One of the drovers got up on a stump and delivered an address to the cattle,

with oratorical flourishes "Cows, steers and calves of France!" he cried

This is the hour when we need every able bodied beef bearer to contribute its utmost to la patrie, so move faster, waste no time, mes cheris Paris awaits you!"

The cattle finally came lowing through the Aic de Frioinphe, a big steer in the lead. On one hoin was the tricolor of Franco, on the other an American flag. The drovers called him. Papa Napoléon."

Itucks from Rennes came close on the heels of the cattle with flour and on one quarts of fresh milk a div. I after they brought fruit and vegetables. All this was food out of the soil of Itance to keep the people of Itance fed, none of it was from the supplies needed by our advancing troops. It was a triumph for McD in iel and his 20 county agents.

Then trucks and their ability to organize saved the rotting sugar beet crop in brittiny. They rushed wheat to a desperate Marseilles and relieved a scrious food shortage their They got potatoes transported to regions that needed them most. They are functing everywhere for seed to give fairners for their spring wheat planting. They are trying to tart man

ufacture of much needed milk cans and fairs machinery

The big at d exciting part of the job is over But France thanks to their help, has been fed

How to Gain Emotional Poise

Condensed from "Best Sermons, 1944 Selection"

Reverend James Gordon Gilkey

Pastor of South Congregational Church, Springfield Mass

Suppose you are easily upset, easily thrown into a turmoil Suppose you would like to have self-mistery. Can you gain mental and emotional poise? If so, how?

Your difficulties may of course, be such that you need a physician or a psychiatrist, but if they are less complex and more manageable, remember three rules for gaining emotional poise which have grown out of long and bitter human experience

The first is this Get the right mental picture of your oun life. Most of us think of ourselves as standing wearily and helplessly at the center of a cucle bristling with tasks, buildens, problems, annoyances and responsibilities which are rushing in upon us. At every moment we have a dozen different things to do, a dozen problems to solve, a dozen strains to endure. We see ourselves as overdriven, overburdened, overtured.

This is a common mental picture - and it is totally false. No one of us, however crowded his life, has such an existence

What is the true picture of your life? Imagine that there is an hour-glass on your desk. Connecting the bowl at the top with the bowl at the bottom is a tube so thin that only one grain of sand can pass through it at a time.

That is the true picture of your life, even on a super-busy day. The crowded hours come to you always one moment at a time. That is the only way they can come. The day may bring many tasks problems, strains but invariably they come in single file.

I, for example, may have a hundred different things to do before tomight but they will come to me one by one. Therefore I can stop thinking about my future responsibilities, and can ban from my mind the sense of strain which is automatically created if I picture all my tasks as arriving simultaneously. Thus I can make my way through the day in perfect quietness—living one moment at a time, doing one thing at a time, facing one problem at a time.

You want to gain emotional poise? Remember the hourglass, the grains of sand dropping one by one. There is the true picture of your life.

The second rule Scale down the demands you are making on other people What are those demands? One is the demand for attention and praise I ittle children make this openly and unblushingly, we older people make it in secret ways—perhaps even unconsciously, but all of us make it continually We cannot endure being ignored.

Are these demands met? Do we actually get attention, commendation, expressions of gratitude? Usually we do not This is the actual and plunful record of experience. When we do not receive all we think we deserve (and in many instances do deserve) we are upset, mentally and cinotionally

The way to avoid this inner turmoil is to expect less commendation less appreciation. Years ago I read an essay with the quaint title. I ishing for fish not in the pond. I o learn what fish are not there to be caught, and then to stop trying to catch them—to do that is to sive one's self-much fruitless effort and many bitter heartaches.

The final rule 4t any cost in effort, leep your world from growing small. As we grow old many of us let our world grow smaller until finally a day comes when we find ourselves living in a miserably restricted are a surrounded only by our own feelings and our own interest. A novelest described such a character. 'Edith was a little country bounded on north and south and cast and west by Felith."

Many to whom this happens do not realize it is happening. I hey tell themselves they are getting on in years, that their strength is not what it used to be, that they should cut down the number of their responsibilities. So they drop most of their activities and refuse to try to acquire any new skills.

Thus gradually and without realizing it they become wholly self-centered is a result they are mentally and emotionally upset most of the

time Why? Because they are thinking continually about themselves and are living solely for themselves Do you want to escape mental and emotional turnoil in your later years? It inv cost in effort keep your world from growing small

Suppose you start making these d forts Ciryou get help from God You can You can get it in church In church you have withdrawn hom the noise and tension of daily life You have made yourself inwardly quet you have joined in acts of worship and prayer, you have to cused your thought on one of thes deep issues. As you do these things God's help comes to you. It comes as a new insight, invading your mind from the Divine Wisdom at the core of life. It comes as a new seconity flowing into your he let from the Di vine Silence it the center of things

Stituted by the clive of modern life, most of us are haunted by the realization that there must be a better way of living — a way of unharried sciently, unfailing power. Here and there we see individuals who have found this better way and are following it. They are not people of idleness or mooning meditation, they are individuals who carry their full share of the common burden. But they do it without chafing under the load We are strained and tense, they are poised and at rest.

How do they win this victory? By finding God, drawing from Him strength and wisdom and quietness. Their victory is within our reach. The peace of God can guard our minds too.

TO SUITS That Save Flier's Lives

Doctors and engineers got together to defy gravity

Condensed from An News Albert Q Marsel

Jun Jap who designed the Zero wa a wily Jap indeed He gave I his pilots no armor, no self scaling gas tanks and less speed than similia combat planes of other nations But the Zero's lighter weight and slower speed gave I ap fliers a big advantage they could turn on a dim

with out blacking out

For nearly two and a half you they counted on the fact that they could pull away from our fighters by a tigh or turn than our mon could inake Then on Much it 1944, the I ip advantage bless up lile a pin pricked balloon. Fighting Light, an untried saurdron fresh from the States, rose from a currier and in its first strikes bagged if Japs in the in and got three more probables?

There was nothing different about lighting Eight's planes, but there was something different about the nich Most of them had never flown in combat before, yet they were able to pull acrobatic maneuvers that would have blacked out any other phots in the fleet — it 50 miles or more greater speed than the Jap could work at!

The secret was a bit of mulical cngincering that a few Navy and Arriy doctors and old fliers had been work ing on for years, called the G Suit It consisted of five small bladders, a few lengths of hose, and a little trick valve, all weighing less than five pounds This little contraption was ill that was needed. Wearing it in ten m you engagements from Palau to the Philippines, Fighting Eight pilots destroyed 243 Jap planes and sank 7,000 tons of Jap shipping - and lost only three men in its 3000 sorties

The Zoot Stat as our pilots call the new device enables than to over come G which is flict talk for grav ity. When a maneuver creates force. of more than four Gs (four times the si with pull on a pilot's body) the blood is forced away from his brain to lower parts of his body. I acking b'ood his bi in staires for oxygen alter a lew seconds, sucht fails, and ne is caught in the dreaded blackout With luck he may be blind for only they seconds dizzy for they more, and reach full consciousness again miles from his triget. At their worst, G and the resulting blackout can throw a flier into a spin, or cause him to come back to sight and consciousness to find the enemy chasing hım

Besides the relative slow speed and maneuverability of their planes, the Nips had another advantage They are small men. The distance from heart to head - from the blood pump to the brain — is less, and the stunted Inp might therefore be expected to have a slightly greater tolerance for G

The Navy's problem was to raise our own pilots' G tolerance, while keeping the extra weight and speed of our planes As early as 1939, physiologists working with the Navy and Army Air Forces had the basic principles of blackout prevention thoroughly pinned down But it wasn't until last year that their device was perfected Although the Navy originated this air suit and was the first to battle test it, the Army Air Forces supplied important simplifications and, after battle tests in the Europe in theater beginning in December 1943, became the first to distribute the suit for service use

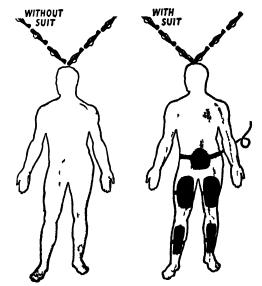

The final solution, as used tod by by both Aimy and Nivy fliers, is a flying suit equipped with small blidders

one on each calf one over each thigh, and a fifth over the lower abdomen. In ordinary flight, the bladders are uninflated. But the instant the plane begins to change direction and G begins to mount, an ingenious valve shoots air into all five bladders, which press igainst legs and stomach preventing the blood from rushing into the lower part of the body.

I he force of gravity that induces blackout throws the valve into action. I he higher the G, the more air passes through the valve and the more tightly do the bladders bind. The average flier finds his tolerance raised by at least one and one half Gs—enough to let him make formerly impossible maneuvers.

in perfect safety When G drops off, the bladders relax as casually as a set of muscles

It all sounds simple now, but when the first Anti-G suits were developed, flicis would not wear them. They were heavy, het, complicated af fairs that looked like old-fashioned laced up corsets. Then along came Fighting Eight Its novices had a world of respect for their tactical of ficer, Lieutenant Commander Elbert Scott McCuskey Hc had seven kills to his credit, and knew from previous Pacific experience what blackout could do to a flier Sold on the Zoot Suit from the start, McCuskey con vinced his men one by one, by chal lenging them to stry on his tail, he wearing the Zoot Suit, they without

I we bladders of the anti blackout sust are adjusted to a flor s abdo men thighs and calies Without the Zoot but blood is forced to the lower extremities by additional gravity pull causing a blackout Br pressing on blood iest is the bladders then inflated slow the down ward rush of blood away from the brain

it By the time Fighting Eight had completed its training, 46 of its 49 pilots were wearing the suit. The squadron's first days in combit convinced even the three die hards

On the second divided Piliu, one division of Fighting Eight witched another group, not equipped with loot Suits, make a series of steep passes at a group of lokes. They witched them full is the lokes turned off, saw them full away and lose the quarry. Then the loot suited fliers attacked.

I was able to get on the fail of one Zeke,' the executive officer later reported 'from a dive that would have been too steep except for my suit. He took evisive action whipping violently from one direction to a turn on the opposite side. Yet I stuck with him for three miles long enough to fare. His plane exploded. I lived on another at 1,000 feet pulled up short and fared one burst. He flamed right off and fell into the sea.

Estra offensive power is not the only advantage of the Zoot Suit. It has brought back scores of men from what would once have been fatal missions. One young ensign of Tahting Fight dived after a Zeke and had him smoking, only to find another Jap on his own tail. "I immediately palled back on the stick and did a sharp climbing turn, pulling eight and a half Gs. Without the suit I would have certainly blacked out. As it was, I held the turn easily until the Zeke could no longer follow."

Carrier fighters often have to operate close to the water in intercepting high speed. Jap torpedo planes. At such levels even the briefest blackout can prove fatal, wet pilots had to risk

it In this dangerous work the Zoot Suit has now cut our casualties, and taised the Japs proportionately

The suit has also proved its value on strafing runs. Formerly a pilot had only two choices to pull up early, diminishing the effectiveness of his attack or go in all the way and turn sharply, incurring enough G to grayout or blackout. Good pilots always did it the latter harder way. The Japs knowing this took to jumping our pilots when the blackout gave them the edge. But now Zoot suited Americans have not only extined Americans have not only extined such and consciousness but counter attack instantly dropping their istonished attackers.

Perhaps no flier loses the Zoot Suit more than the vitally important vingmen. These are the flars who follow a leader guarding him from attack while he strikes for a full. Until Lighting Light went into combit wingmen were constantly field with two alternatives. If they eased up and fuled to tale their turns sharply enough they lost their leaders, separated both planes became easier prey If they took the tight turn on the inside at horter radius they blicked out lody, wingmen feel I know I can the it up just as Sifer one of I is htmg. I ight's wing men reportea and keep joined up without 51 iving out ?

By the time they had completed then phenomenal first tour, the pilots of Lighting Light were sold on the Zoot Suits except for one defect. They kept complaining to the flight surgeon who helped develop the suits that they were much too warm for the tropics. So, aided by the underwear and coiset makers who manu-

factured the suits, he produced a new nylon coverall weighing less than three pounds and cool as in autumn night

Meanwhile the fighter pilots of the Army Air Forces who were fighting the Jerries gave the G Suit an equally enthusiastic reception "I never was able to turn inside a Jerry before, but I did it today," said one Lighth Air Force "subscriber" By D Day of the Normandy invasion, the G Suit was in widespread use in fighter and fighter bomber missions

It remained, however, for one un lucky Navy pilot to discover a totally unexpected use for the suit. Finding his plane on fire after a strafing at tack, he nosed up until he lost speed, then bailed out at 1000 feet. Once if the water, he missed his life jacket, so he unzipped the legs of his Zoot Suit, put them behind his back, but the hose connection to his mouth, and blew. When they found him he was nonchalantly treading water, sup ported quite comfortably by the five inflated Zoot bladders.

Rising to the Occasion

Once at a dinner I sat beside G. K. Chesterton. A scintillating monologue poured from him in one continuous stream. And as he talked, his chair cracked alarmingly under his massive corpulence. At length the class arrived. The chair swaved and splintered. But not for a fraction of a second did he cease speaking. Rising, he continued to talk imperturbably while his hostess rushed forward, removed the debits, and substituted another chair. Then, without appearing to notice so trifling an incident, Chesterton reseated himself, still conversing.

- 1 M W Stirling Lif I ittle Day (Thornton Butterworth)

ON A bright June morning in the early gos, Bernard Shaw, full of revolution iry ideas, was speaking before a crowd in a city park. Poised on a large circus barrel, he alternately stirred his audience to cheers and jeers.

Suddenly, he disappeared from view. He had dropped through the barrel. The crowd rocked with laughter, but as he was hoisted out again, Shaw declaimed, 'Surely nothing more need be said. The weigh of my argument can always be depended on to carry me through!"—Contributed by Alexander Lambie

Discovering Winston

When Winston Churchill was appointed Under Secretary for the Colonies in 1905, I was named his private secretary I was not too pleased I had met him only twice and thought him truculent and overbearing When I told Lady Lytton, his friend as well as mine, of my m givings, her answer was one of the nicest things that can ever have been said about anybody. The first time you meet Winston you see all his faults, and the rest of your life you spend in discovering his virtues."

- Edward Marsh 4 Number of People (Harper)

Doc Smith and the Appleblossom Club

Condensed from Household

Nelson Intrim Crauford

IN MICHICAN there is an area of barren cutover pine land occupied
by farmers — many of them foreign born — who eke out a meager
living on maginal land. Yet this impoverished country has 75 of the best
consolidated aural schools in the
lanted States. Here, too the rural
church — despair of clergy and so
ciologists — has taken a new lease
on life.

It was not always so Less than 20 years ago the run il schools and churches here were as minginal? is the land. They are flourishing today thanks to a bunch of college boys and girls from the Central Michigan College of Education, in the little town of Mt. Pleasant — youngsters who had them selves grown up in dreary one room ountry schools.

It all begin one evening in 192, in a Beaverton, Mich, school oom Dr. Miurice L. Smith, professor of cluention at Central Michigan, had been trying for years and in vain to make farmers see the advantages of consolidated rural schools. He was to talk to the Beaverton parents that night on the subject Before le left his college office in Mt. Pleasant he

How a group of hard working college a students revitalized schools and churches and made farm life happier in a once for potten region of Michigan

rsked some of his students to come alone and sing a little and pep up the meeting. They agreed

That night, toilworn farmers in overalls and then tried looking wives many in the black shawls of the old country sat awkwardly behind the too small desks. They were apathetic, at best amostly they were suspicious or hostile But now one of Doc Smith's young students went up to the teacher's desk strummed a few chords on his guitar and began to sing

' I m Ole Svensor with the big gui t ii I sing the luft songs to guls near and fai "

He stopped singing and began to talk still strumming the guita "I really am Ole Svenson," he said 'My folks are Swedes — guess you'd know it We've got a little farm in Alcona County, a lot like the farms around here Mama's a widow, and there's eight of us kids I sorta ran the farm till the next boy got old

enough Then I came down to Mt Pleasant to go to college — and I met Doc Smith "

Doc sensed a new warmth in the audience He caught a whispered "ja, gut"

Ole went on, "And now, two other students of Doc's are going to sing Jennie Knaus and Georgiana Papadopoulos" Ole broke into the strains of 'O Susanna" Jennie's sweet soprano and Georgiana's low contralto joined in They swung into 'Home on the Range' The farm folk were already wiping their eyes Then Georgiana recited 'I he House by the Side of the Road" as Ole plunked his guitar and Jennie humined a lilting melody Applause shook the frail little schoolhouse

When Doc Smith arose to speak he felt humble Audiences like this had always listened to him coldly, without response Now there were warmth and cager attention. It had taken his young friends to win the hearts of these conservative country people With rising enthusiasm he told his **convictions** that fur il children were entitled to the best education obtainable because farming is the basic 10b of the nation, how the little oncroom school, uninspiring, meagerly equipped, paying its teacher a starvation wage, could not hope to build a happy country life, how consolidating a dozen little districts into one big one would make possible a modern building and first-class teachers

After the meeting the farmers thronged around him "Professor," they said, "if we could have a teacher to train our kids the way you did Ole and his friends, we'd vote for any kind of school you want"

Doc Smith himself had attended a one-room school in Kansas Later, teaching in such a school, he decided to devote his life to improving rural education. Now, after the Beaverton meeting, he knew he had found the way. He arranged for a meeting in every schoolhouse in the township. To each he brought Ole, Jennie and Georgiana. Everywhere their reception, was enthusiastic. Within six months a consolidated school district had been voted, and the new building a fine fireproof edifice, was under way.

Meanwhile the three young people told their story to fellow students it Central Michigan, and soon they had formed the Appleblossom Club, named after the Michigan state flower. The club grew fast its membership rose to 200 about half boys, half girls. Every member was at least partly self-supporting and most of the members wholly so

The club gave its programs—expended to include operettis plays and pictures showing modern farming methods—at hundreds of school house gatherings and Grange meetings—with one of Doc Smiths constructive speeches always following. It revived country dances the American square dance and the dances of the dozen nationalities represented in the region. It stimulated the formation of community councils.

The International Harvester Company sent a reluct int representative to one of the programs. He was popeyed with astonishment 'This is just like a revival meeting, only a lot more practical," he exclaimed His company donated a bus for the club stravels.

As a result of the club's efforts, 75 thriving consolidated schools — each replacing eight to 12 old-time districts — now inspire the children of this once dreary region. The teachers, college graduates with fairn experience, the every subject in with the betterment of tural life. Crops, livestock, landscape gardening, music drama, public speaking, manual training, athletics are part of every pupil's everyday experiences. I or adults there are classes too

Through the schools and the Appleblossomers, alfilfi was introduced to make livestock-raising profitable. The ilfilfi attricted grisshoppers turkeys were brought in to cit the pests and soon became a thriving side line Small fruits began to replace the pot ito, which depleted the thin topsoil In 1944 there was a livestock show at Manton's Appleblossom school, where 12) registered animals were exhibited in this region 15 years ago even grade stock was rare. In this one district 20 furnhouses have introduced plumbing and electricity installed by the schoolbovs themselves

Everywhere in the region you can see evidences of new confidence and pride. Houses are planted. There is shrubbery about mem. Farm machinery is well kept. Agricultural practices have improved, the families eat better-balanced meals, the people have more community pride, more ambition for their children.

"My folks come from Lithuania," one farmer told me "They didn't have nothin' there, and we didn't have nothin' here But then those college students came here and showed how our kids could have as good a chance as anybody else"

At the Beaverton consolidated school last January only four of the 27 weekday nights were without an event of some kind school dancing, basketball games, American Legion meetings, baby health conferences, parentteachers meetings All this in a region where winter used to be a period of forloin isolation

ONL NIGHT in 1936, members of the Appleblossom Club were I menting that summer vacations seemed to be ill work and no play for many of the poorer children on remote farms

I here ought to be a su nmer camp for them, said one of the girls

'What's stopping us from building one,' asked the treasure, 'We've sot \$100 in the bank.'

With the enthusiasm of youth, the club went theid I hey persunded a retired circus man to provide 3 icies of inverside land they got permission to dismantle old buildings for lumber They cut cedar poles in a quilled stone, and dug sind Lices hour had to be snatched from work, for these young people not only kept up their studies but also carried on their jobs — canitor service newspaper delivery, waiting on table, tutoring Three large buildings are now complete, with accoinmoditions for 100 children Since they opened, 1500 underprivileged country children have enjoyed at Appleblossom Lodge the healthful group activities of summer camp life

Next came the rur il church When their car stalled on a sideroid at Deerfield Center one day, in imbers of the club noticed a rekety church, apparently abandoned Inquir revealed tha services were no longer

held The members pitched in, made calls in the farming community, and found plenty of young people who said they would be interested in a live, active church organization So the club repaired and painted the church, formed a choir announced a picnic supper to be followed by a service at which Doc Smith would speak The little church was crowded Within two years its membership had grown to 90, and the parish was supporting an enthusi astic young clergyman This church, in tuin, became a missionary organization, sending its choir to a score of other communities As a result church after church throughout the region has reopened, with a program directed to rural youth

Tolerance and cooperation have been born Previously there were jealouses among the religious and national groups Now Methodist, I utheran Baptist Mormon Eastern Orthodox and Roman Catholic have learned to work together

The influence of the Appleblossom Club carries on through the work of its graduates, 80 percent of whom have gone into rural education in Michigan Earl Seibert is president of the State Farm Bureau Former Appleblossomers, now school superintendents or teachers, have organized local clubs in farm communities to emulate

the public-spirited activities that have made the Appleblossom Club the pride of the entire region. One enthusiastic alumnus, Donald Hilsinger, established an Appleblossom Club among his high-school students on the Island of I uzen. Members of the club at Mt. Pleasant are planning to help their distant namesake resume work now that the Japs are being driven out.

The Appleblossom Club has developed a 30-page mimeographed manual on games for rural schools, another on farm cooking. It publishes twice a month a newspaper covering signific int developments in fur il education everywhere. This publication has been made the official organ of the Michigan Rural Teachers' Asso cration - araic instance of a student periodical being chosen to represent in idult professional organization Recently educators from Guatemala Nic ir igu i and Hondur is visited the college and invited the club to come to Central America after the war 'We desire you shall inspect our education, and we promise you there after there shall be Appleblosson Clubs blooming in every school "

"Any rural region in America could duplicate the success of the Appleblossom Club," says Doc Smith "It's nothing but young America at work as it really wants to work"

Jo MY 73 year old aunt I remarked one day, "I've often wondered if, as people grow older, they feel older in spirit"
"No they don't," she answered "I've asked them"

- Contributed by Mrs John F Trumbo

No matter how you slice it —
it still isn't fit to eat

ur Daily Bread

Condensed from Common Sense

Clarence Woodbury

HEN I was growing up, Saturday always seemed the best day of the week to me Not just because there was no school, but because it was baking day

All during the morning a tantilizing, mouth-watering fragines crept through the house and, by midafternoon, we would all be half crazed with hunger. Then, at about three o'clock, all the children would rush to the kitchen to watch my mother draw six fat, shiny loaves of bread and a big pan of rolls from the oven of the coal range. No food on earth was ever any better than that fresh warm bread!

The six crusty, succulent loaves would usually last until the next Saturday, but now and then, because of unexpected guest we would have to eke out our supply with "store bread" Mother was always deeply embarrassed on these occasions Store bread, in her opinion, wasn't fit to eat

All this happened a good many years ago, but store bread as turned out by our big commercial bakeries is no better eating nowadays. Instead of rich, crunchy, satisfying crust, it has a thin, tasteless flabby coating. True,

the stuff is now wrapped in wax paper. It comes ready-sliced and is "enriched" with synthetic vitamins—which costs little and makes good ballyhoo

Millions of dollars are spent in shireking its alleged virtues over the radio, plastering the landscape with billboard advertising. It is, undoubtedly, pure sanitary, wholesome, nutritious, clean, white and beautiful—but it is utterly tasteless. It's a far cry from the bread of any other land under the sun.

This is not just my opinion. I here is a good deal of evidence to show that the general public doesn't like the big bakers' product either. We buy it—but our national taste has not become so dehased that we have grown fond of the quilt stuffing foisted upon us as the staff of life.

I travel around the United States a good deal and very seldom do I meet anyone who will eat store bread if he can get anything else Restaurant keepers from coast to coast have told me that, if given a choice, their patrons will invariably eat biscuits, rolls corn pone, soup crackers, bread sticks or foreign bread of any description in preference

The sad fact is that the great majority of Americans fill their bellies with store bread not because they like it but because it is difficult for them to get anything else

In many communities it is still possible to obtain real bread by taking a little trouble. On side streets there are little bakeries—I rench, Ital in Jewish, German, Hungarian—which consistently produce delicious hard crust white bread honest black pumpernickel, tangy salt rising bread, and magnificent sourage. Any one of these loaves is a meal which will renew a hungry man in both body and spirit

But most housewives find it simpler to buy the idvertised pap of the big bakers than to shop for really tasty bread or treat their families to ambrosial homemade loaves

At the end of the list will 30 percent of the breid sold in this country was baked by the small independents. I oday they are being squeezed out of business and produce only ten percent of a. The rest is manufactured by about do wholes the producers and chain store companies. Indeed, the ten largest of these companies make more than 30 percent of all the bread we consume

Why, you may wonder, done the big companies bake real bread? Can it be that they don't know how? They employ hordes of engineers, electricians chemists, advertising shark and throaty radio orators but practically no skilled bakers who could, unaided by assembly line gadgetry, so into a kitchen and mix and bake a loaf of bread like mother used to

The 1g compinies simply find it easier to persuide us by advertising that their product is "delicious" than to make it so. They are not primarily concerned with gratifying your pal-

ate. They are intent upon producing lowes which are precisely uniform in size, shape and texture and which will remain "fresh" — meaning soft — for an unnaturally long time. Uniformity inakes it che ip to handle, slice and wrap mechanically, of course, and the "fresh keeping" quality makes it possible to distribute over large marketing are is

Io produce breid that will stay soft, the bakers, first of all, rule out the type of flour which makes the best bread in the world — flour milled from soft or high gluten wheat such as a used in making I rench and Italian bread. In the second place, they do not bake the bread as thoroughly is it should be balled to taste best and, thirdly, they pack age it in moisture proof wrappers.

From a sanitary point of view, such wrappers are entirely unnecessary Breteriologists have assured me that we should be just as safe from germs if our bread was brought home in a paper sack. After all, pies, cakes and cookies—surely better germeatch as than bread—aren't sealed up so claborately, and nobody as seared to eat them. Nevertheless, in all lions of housewayes have been led to believe that bread must be thus wrapped for health protection.

The formulas which the big bakers employ to keep their bread soft account, to a large extent, for its tasteless quality and for the fact that, in warm weather, it may turn repulsively green and moldy in your bread box instead of drying out slowly as decent bread does. Without question, though, these practices produce an efficient article of commerce for blitzing small competitors.

One method the big baker employs to swamp markets far from his plant and to induce the retailer to handle his bread exclusively, or give it the best display, is so-called consignment selling Through this practice, which has been temporarily prohibited by the War Food Administration, the wholesale baker overstocks the shelves of retailers to provide mass sales appeal, and takes back bread as it becomes stale, at no loss to the retailer The stale bread is sold as livestock feed or burned in the bakery furnaces When consignment selling was suspended, some grocery stores were returning as "stales from 30 to 50 percent of the bread they received, and the practice was costing the nation, every day, enough bread to feed 2,000,000 people

There is no sound economic re ison why bread should be produced in laige quantities in a few big cential plants and then delivered to consum ers who live hundreds of miles away Mass production has not cut the cost of the nation's bread The average consumer paid 9 27 cents for a one-pound lorf in 1942 as compared to 8 5 cents in 1922, although the wheat grower's income from that same loaf dropped from 1 14 cents to 1 03 cents during the 20-year period It is a shocking fact that 23 56 cents out of every dollar spent in producing bread goes for distribution

There are signs that the American

people are eager to buy real bread and will pay a good price for it a few years ago, a Connecticut housewife, Mrs Margaret Rudkin, started baking eight loaves a day in her own kitchen and selling them to neighbors It was good, honest bread, and its fame soon spread Today Mrs Rudkin sells her Peppendge Farm loaves by mail all over the United States and at a fincy price. A considerable portion of the public eagerly pays her a premium to get away from the cotton butting put out by the big complinies.

I know a man who has put his two daughters through college on the camings of his little bake shop in New York. When he calls on friends he always brings a loaf of his fresh, crusty bread. A short time ago he dropped in on an old acquaintance who was staying at a hotel with his rine-year old son. The boy got hold of the loaf and are it all, without butter. The youngster was not starying. He had simply never tasted real bread before.

There are, I fear, millions of other children in the United States like that Young and old alike, we have never known or have almost forgotten how delicious bread can be Nobody expects the average housewife to bake bread, as her grandmother did What she can do, however, and should do in justice to herself and her household, is to insist on getting real bread for her money

HE best measure of a man's mentality is the importance of the things he will argue about."

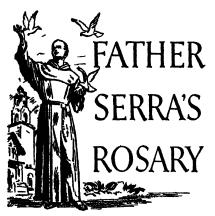

It Pays to Increase Your Word Power with Ed Lunk

EVERYONI knows that words are used for reading for writing for under standing and for speaking to others. But there are very few who realize that we use words for thinking. We cannot think without them. If you happen to be limited in vocabulary your thinking will be limited. There fore the more words you know the more ideas you will invite into your mind, and the more effective all of your thinking processes will become

Here is a vocabulary test based on 20 words used recently in The Reader's Digest. One word a limped may seem absurdly easy. But be careful. Common words often fool us. Now start, and underline the word or phrase a bid or d, that you believe to be necessary meaning to the key word, and check your results as unstable answer on page 63.

- (1) unilateral a a parallel agreement le tueen tue nations le laint flut cone side of a triangle d'undertaken by one party
- (2) commensurate 1 generous be equal in measure c fair and jist d fremost
- (3) spite i a fr shet b a bone of the fool c a slap d a quarrel
- (4) didactic a a type of meter in poetry b overbearing c direct d instruction
- (5) phumiceuticals a drugs b dru 1sts c surgeal supplies d spasmatic contractions of the throat
- (6) morebund a sleep; b deepl; swreeful c betterly caustic d near death
- (7) burg con a o thrust onese's borishly b to send forth buds c to hit with a club d to cause to bulge
- (8) inductions a destitute b nature c an grid lawy
- (9) phogue a a kind of canoe b a ui, c a cloun d a turling the dance
- (10) m tyliem a a disease of the respiratory organs b. an Last Indian title c. murder d will

- (11) on thansas a tripe of asthma born ental dancers of an emetic drug deapurification of the emotions
- (1?) impeccable a well dressed b obstructive unbrahable d faultless
- (13) hmpnd 1 (ater) b relaxed c clear d calm
- (11) tent imount a larger than b equilibrian alu c tepmost d including the whole
- (15) mexorable 3 that which camot be eraid be mixing ble conflictle d very calm
- (16) chulhent i manifesting excliment b o creater c extremely optimistic d silly
- (17) roulade a a vocal flourish b a rell of coins put up in piper c a gan bling game d a I reich verse form

- (20) nadir a a Mogul provincial governor h an Arab tribesman c th highest point d the

THE George W ishington was still a loval subject of King George, and Dan Boone was

oiling his rifle for his first trip into Kentucky, another pioneer, nearly 3000 miles farther west, was explor ng the remotest corner of the future Juited States Fither Junipero Seria n his gray Francisc in robes was no ts daring and resourceful, no less isionary of the future greatness of a iew land, than the English speaking noncers And he was just as much an American is the Marflower settlers or, like them, he had been born in l e Old World and had come a painul way to build in the New a better iome at he age of 35 Serra had cust n his lot for life with the fite of the vild, wide North American continent

It was on July 16, 1769, that ather Serra first said Mass at the pot of a cross overlooking the fine larbor that is today San Diego's here and then he dedicated the first the 21 famous missions of Califor-

Father Serra's rosary" they are affectionately called But the little and of men — fellow Franciscans, a

Despite a tragic history the missions of California are today a monument to the vision and indefatigable industry of a pioneering man of (od

Condensed from The Catholic World

Donald Culvoss Peattre

few soldiers and some Indians from Lower California — were witnessing more than the beginnings of the great "mission system" They were present at the actual founding of California itself neglected as maccessible for 200 years

Better perhaps than even the military commander of the expedition, Caspar de Portola Seria foresaw the vast consequences of the new venture. He dated to dream, there in that and sun-scorched wilderness and hostile Indians with men dying of survy of a land glowing with the orange and appling with Gram, in habited by peaceful Christian people.

I ther Sell i, born in 1713 on the island of Majorca, was not the type one would pick for a pioneer A scholar, a doctor of theology and professor of philosophy, he was a final in in who suffered from chronic bronchitis. He had received an injury to one legginat made walking an agony yet with sandaled feet he was to trudge 6000 miles on his apostolic labors. He hardened himself to sleep on the ground and live on roots and seeds While the soldiers and Indians were fighting and killing each other, Serra passed unharmed among "the gentiles," his "pagan children" as he called them

Not primarily for the saving of pa gan souls had the government of King Cailos III of Spain sent Portola to explore and defend Alt 1 (Upper) California, but to forestall the Russian Bear which was reaching a paw down the Picific Coast from Alaska toward California However, the Crown recognized the value of the Franciscan mission tries in pacifying the Indians, and it planned in its own time to seculiarize the converted red men and transfer them to civil administration But to honest I other Seria all this new land was the Indians Even the mission buildings were to be theirs, and ill the cittle and sheep all the farms and produce of the mission system were to be lickl in trust by the Franciscias, who themselves owned nothing of this world goods

Within a year Serra had founded another mission almost 400 miles further into the wilderness on the slores of Monterey Bay—the Mission of San Carlos Borroneo, known as Carmel Mission. The next year in an oak studded valley of the Santa Lucia mountains, blazing with July heats, the dauntless Serra slung his bell from a granked old tree and tolled it to the unresponding silence "Come gentiles come to the Holy Church come and receive the faith of Jesus Christ!" he cried

Not a pagan was in sight. Let the cry of the bell had sped through the forest. Presently an Indian appeared and looked on with awe as Serra said. Mass under the cross he raised. Given presents, the Indian returned with others of his trake. All grew to love Serra, and he set about learning their language. Logether the men in

gray robes and the men in their bronze nakedness raised the first crude structure that was the Mission San Antonio de Padua

For the mission "churches' of these first, br we, struggling years were not the solid and shapely structures we sec now with their six-foot walls, their carven doors and painted ceiling be ims, their gardens and fountains. their bell and cool closters Such structures blessed old Serra dreamed of but seldom saw completed. The first 'mis ions' he I new were but rude shelters of boughs and bulrushes Let the missions of tod by stand pretty much where Serri and his successors first planted the Cross Not whimsicilly were their sites selected. Seria, realizing that he was fixing the seat of future settlements searched for abund int water, good soil and climate timber, and a location on the construse highway of which he dreamed And on the sites he selected grew up S in Dicto Tos Angeles, Monterey and San Ir neisco. Of the nine missions Serra started, only San Antonio today has no town around it

When So i i had founded four missions and been in California three years trembles that had been brewing came to a casas. The new country had not violded cuick returns either in revenue or converts, the colonies had cost more than was burguined for Freez item of equipment and al most all food still had to be brought an immense distance by small failing vessels The Indians, indignint at the treatment given their women by the soldiers retaliated with arrows and firebrands San Diego mission was burned, its padre killed. All the others were in danger

Dolores Mission - founded in 1776

Both the Viceroy of Ne S₁ (Mexico) and the I other Superior of the I oneiseans back in Mexico City were inclined to retreat So Scient set out for the capital — a round trip of 2400 miles — to save the California venture. For talking points he had no material goins and fev spiritual. He had only his shining vision and the conviction of absolute truth his words seemed to cally.

And he got all he isked for the right to found more missions more money, an overland road to California, and the immigration of more set tlers, especially of families and of women to provide wives for the soldiers Instead of retreating, the Viceroy and the Father Superior were persuaded to pour at fresh blood and treasure Seria returned to found Dolores (San Francisco), beautiful San Juan Capistrano in the hills near San Diego, San Luis Obispo and San Buenaventura on the Santa Barbara channel coast

In the 70th year of his age, having confirmed more than 5000 heathen converts, noble old Pidie Serra felt his last reserves of strength ebbing On foot he made the round of his

nine missions, from San Diego to San Francisco At each he bade a sorrowful firewell to his brother Franciscans and the weeping Indians Death found him at Carmel Mission in 1784. The double tolling of its bells brought the gricf stricken Indians, who came with wild flowers to lay upon the redwood coffin of the Apostle of California.

Scria's successor was Father Fermin Francisco Lasuen who founded nine missions, including Santa Barbur, Purisima Soledad (Solitude) near Caimel San Jose near San Francisco bay, San Juan Bautista near Caimel, San Miguel in central California and San Ternando in the valley of that name

Only three missions were idded after Lasuence used worl. Sint a Income in Santa. Barbara. Sin. Rafael across the bay from San Iraneisco, and Solano in what is now the wine country of the sumps inner coat ranges. To the surprise of all the Russians sent gifts and good wishes to the founding of these last two the padies. Furthest north?

Lather Lasuen an even greater ad ministrator than Serra brought the mission system to its highest peak of influence efficiency and prosperity It was his ambition to make the missions self sufficient. At them the Indians lenned more than 50 trades so that a mission could employ carpenters, stonecutters, shoem ikers, wheelwrights, cowboys and sheepherders The Indian women were taught to spin, weave, and make clothes Tallow, hides, pottery baskets, blankets, saddles, soap cindles and wine were produced The missions grew many vegetables, oranges and lemons were planted and olives almonds walnuts, figs, dates, fruit trees and grapes Great fields of wheat, bailey, corn and oats were plowed and planted Between 1783 and 1832 the 21 missions produced 4 137,625 bushels of food for the Indians and struggling colonies, and they may have had is many as 150 000 head of cattle and perhaps as many sheep

Irrigation works were started by the Franciscans They dammed streams built reservoirs and aqueducts. Be intiful fountains adorned many of the gardens. The water turned too, grain and olive mills. Some of these hydraulic systems are still partly in use by the towns and ranches of California.

The chain of missions spaced approximately a days ride apart became the inns of the vovagers of those days. Clean quiet cool secure from Indian hostility, they must have looked like he iven to the weary solk who came to their doors. And there the traveler could converse with men of breeding and education, or read in the mission libitates.

The location of the missions largely determined the route of the camino real, or King's Highway first worm smooth by the toiling Iraneiseans later broadened to accommodate the trains of carrelas, or wagons, from Mexico. When the United States entered on the conquest of California, it found the footsteps of Serial almost the only line of military communication. Today U.S. Highway for and the coast route of the Southern Pacific railway follow approximately the old camino real.

In I ather Lesuen's day almost all the mission churches began to take

on much the appearance that the best preserved of them have now Without being trained architects, the Franciscans had to solve their own structural and artistic problems From bitter experience they learned that nothing is so likely to fall down in an cirthquake as a wall of stone blocks or of idobe So wills is much is six feet thick, often supported by buttiesses give the missions their air of strength Frequent fires proved that that hed roofs were implactical, and so the Lathers showed the Indians how to inake tiles and now that colorful and harmonious type of 100fing is characteristic

The bell tower or at least a bell frame was a prominent feature of the missions. The padies were addicted to the sound and use of bells while the Indians venerated and delighted in them, too for the language of bells can be understood by all So bells have come to be the very symbol of the California missions. And time has only mellowed their tone. Even to a Protestant like myself the tolling of the mission bells to which I wake each morning chimes its way into the rhythin of living

Within the mission churches the native ait of the Indian was given sway. Most of the original mission doors are deeply carved with parallel waving lines—the Indian's symbolic "river of life." The wise I i incise as a permitted. Indian artists to make their own form of offering to God.

So first and neophyte worked out together a distinctive style in architecture and decoration. With their softly flowing lines and delicately tinted surfaces, the missions are deeply

harmonious with their natural setting They look kind — tranquil, hospitable and strong They have served as the inspiration and model for a whole California style, and if not all of this is equally good, that is no fault of the originals

Just when the missions had reached the height of their usefulness and beauty and had become the one civilizing force holding the frontier com munities together a deadly blow was directed at them first by the Government of Sp un and later by independent Mexico. The missions were seculanzed - reduced to pairsh churenes with a single priest and stripped of everything except the buildings themselves Many of the pioneering padies, men of education and high ideals, were supplinted by inferior frints, some none too intelligent or holy Then the linds which the Fithers held in trust for the Indians and had brought to high productivity were given in immene feudal tracts to settlers from Mexico the rancheros The Indians who had given up then native life for the white man's way were stripped of both it once, and so driven to begging or to acts of violence As the missions fell into desput and were abundanced the governor, Pro Preo sold them off it auction, enriching himself with commissions

By the time the American armics cane, in 1847, the missions were in a sad state some serving as stables and liquor cellars and other profane uses. Only Mission Santa Barbara was never abandoned and never passed out of the control of the I ranciscans. True, only two of their number were left, still they remained in

the neglected shell of the once-great church and cloisters, guarding the precious records of the whole mission movement

By 1888 the people of southern California had become so conscious of the heritage of beauty in the missions, and so indignant at their negleet, that they formed the Association for the Preservation of the Missions, under the leadership of Charles F I ummis, the writer and historian Largely to save the northern missions, the California Landmarks I eague was organized at San Francisco in 1902 and soon the societies of the 'Nitive Sons and Native Daughters' joined in a state wide campaign to pick up the scattered pearls of I ather Serra's 104 11 7

Wills igain were rised and roof less altars covered is in from rain and dust Profane objects were swept away both within the missions and, where possible in the immediate sur roundings Sucred objects once mission property, were rediscovered where they had fallen into private hands and many of their were bought or donated and restored to their place Protestants of the community joined in some who could not give money give their labor. At Santa

Iñes a band of wandering hobos saw the struggles of restoration and worked for weeks to help

Some of the missions which had not actually suffered neglect or outright theft had suffered from exces ive attention. Local congregations and parish priests had sometimes tried to disguise the mission origins, wooden steeples had been added, walls had been breached to admit sickly stained glass, be autiful old Indian murals had been smeared over with whitewish just about every conceivable atrocity was committed with the best of intentions. It was a task to get this undone, and it is not all put to rights yet.

San Rai tel Mission had totally disappeared, Soled id is a hopeless idooe tubble fast melting away, Sonoma is turned into a local museum full of Civil War and pioneer relies. But in the days before Pearl Harbor, millions of tourists from every state made the rounds of those that are left, following a path marked out for them by the State of California, with mission bells

as signs. I ach mission has its beauties and charms, but certain ones — Santa Barbara Carmel and San Juan Bautista for example — have long been special favorites becau e they are so nearly what they were in their great days, both in completeness of original structure and as "going concerns' today with the I rancisc ans again or still in hare with fine libraries and gardens and spacious and interesting settings Others that we off the maintraveled roads have an especial lure, such as Santa Iñes and lonely San Anto no where o long ago Serra slung his bell and tolled it

I ven now with trivel restricted, I see every day in the year, a cro vd of people around the "river-of-life" doors of Santa Barbara Mission service men and their families from all over Anica existing and in or passing through California Whatever their denomination, Americans cannot but find new faith for the fight for Christian democracy in such serene survivals of a pioneering godliness

Some PEOPLF once they adopt in idea, bury it in the ground and go on the rest of their lives defending it, without ever re examining it to see whe'her time and the elements have caused it to decay into a worthless handful of dust. In that way you can be always consistent — and often wrong

- Raymond Clapper Watching the World (Whittlesey)

Lloyd s underwriters thrive on the unshakable conviction that everything will be all right and that you, John Public, are a fool to be afraid

The World's Most Famous Optimists

(ondensed from The Saturday I vening Post + + + + Ernest O Ilauser

X YORD has got round, in the list two indahalf certuries Y that I loyd's London will insure ilmost in thing Hudly a div goes by in which this center of the world insurance trade is not approached by someone in Alaska, South Africa or New York with a request for an entirely novel form of policy, and if the applicant has an ansurable interest' and can pro his premium, he'll receive that policy by return mul 10 pioneer where others shunned the risk has been one of the principal functions of this fabulous institution in my standard forms of insurance now in use all over the world were invenced it Lloyd's

I ew c itastrophes, mishaps and losses occur without I lovd s being affected. The San I i meisco fire, the sinking of the Titanie, the burning of the airship Hindenburg, the death of Will Rogers, the U-boat sinkings in the Caribbean, the Ringling Circus fire, the flying boinbs — all these have cost L'oyd's a pretty penny. And the fact that Lloyd's has not collapsed under the

staggering weight of the world's accumulated woe proves that there's money in optimism

Don't go looking for your local brinch office though. There is only one Lloyd's No 12 Leidenhill Street, a stone's throw from the Bank of England. Inside, in a spicious hall known throughout the world as 'The Room the famous Ciller, dressed in his resolendent red tobe, stands on his rostrum, singing out names and making announcements over the microphone. Around him some 300 underwriters, seated in boxes, say yes or no to requests for insurance.

Lloyd's docs business only with an exclusive group of brokers — as you peer across the braner, you can see them walking back and forth between the boxes and talking with the underwriters. I have boxes consist of rough tables and uncomfortable wooden benches — a hangover from the 17th century, when I'dwild Lloyd's coffeehouse was a meeting place for London merchants and the skippers of sailing ships about to brave the

dangers of the seven seas To this day the attendants throughout the building answer to the call "Waiter!"

American soldiers who sometimes visit the establishment are puzzled when told that Lloyd's is not an insurance company "Then what is it?" they ask The reply is an old one "Individually we are underwriters Collectively we are I loyd's"

The 1877 individuals trading under the name of I loyd's are as loosely tied together as the visitors to a case. Although guided by an elected committee of 12 and a chairman, they do business 'each for his own part, and not one for another." To be sure a single policy, such as the £1,000 000 policy that covered the *Titanie*, may be signed by most of the members, but each is oblighted only to the extent of his specific share.

During the first World Wai, I loyd's made a mint of money, largely by covering land war risks in the British Isles. With the first German Zeppe in buzzing overhead, the British public rushed to I loyd's to insure their belongings against wholesale destruction by icrial bombardment. But only a few tiny and innocuous bombs were dropped, and I loyd's emerged as the ultimate beneficiary. One broker paid £370,000 in excess-profits taxes before the war was over

It's different in this war land war risks as such are no longer accepted at Lloyd's, modern weapons of the air being what they are Buildings and property are now insured by the British Government

However, at the beginning of the blitz, one enterprising group of underwriters evolved a "1000 to-1" monthly insurance sch me, offering a policy

covering the assured against death or loss of limbs ("death and spare parts" in underwriters' lingo) at the moderate cost of one pound a month for £1000 insurance The policy, dovetailing neatly with the government insurance scheme, proved a gold mine The underwriters were able to double the benefits of the policy during the lull of 1942 The arrival of the flying bomb last summer raised the amount of insurance taken out to as much as \$24,000,000 in a single day, and I loyd s \ 1 tot al w as \$120,000,-000 - 15 against a \$36,000,000 stake in the carlier blitz

At present, I loyd's is insuring hotelkeepers and owners of buildings in Britain and America against damage resulting from the exuberant reaction of the public to reports, true or false, of an armistice

The vening 12 was one of the leanest for I loyd's under writers specializing in marine insurance, despite the rict that in Britain, as in the United States, war risk ansurance on shaps themselves is carried by the Government In addition, the British Goveinment carly in the war took over war 118k insurance on cargo en route to and from the United Kingdom E en so, il nost every ton of cargo that went down off our shores and on the ticklish South Atlantic run carried, directly or indirectly, some Lloyd's coverage, and it took in est iblishment that had survived the losses of eight generations to weather the storm

Obviously, large scale commercial insurance requires a large pool of ready cash — enough to buy a new occan liner, a new Empire State Building, a new Golden Gate Bridge

According to Lloyd's constitution, forged into law by an act of Parlix ment, each underwriter is liable down to the last penny of his pe sonal fortune for the fulfillment of his policies Anyone wishing to become a member of Lloyd's is closely investigated and must show free assets of at least \$100,000 besides, he has to deposit some \$40,000 in cash with I love s committee and in annual audit gives the committee a chance to find out whether he is still on the right 10 id or courting disaster. No holder of a I loyd's policy has ever lost a cent through a member sunsolveney

Most of the members never see the inside of The Room Known is the "names' these men merely put up capital. They belong to groups or syndicates each of which is represented in The Room by a professional underwriter who may or may not be a 'nıme' himself 'Iverything I loyd's member will tell you pends on the judement and experi ence of the man in The Room he has to make snap decisions and should be egually familiar with the American oil business the skill of osteop iths in Binzil and the political situation in Palestine "

Accordingly, the underwriter at I loyd's is plud like a movie star or any other kind of professional genius as a rule, he receives a salary of \$1000 a year from each of the 20 or 30 "names" he represents, in addition to a commission which may amount to as much as one fifth of the syndicate's profits. Many underwriters thus carn well over \$100 000 a year, while the average nonactive "name" is duing well if he receives a check for \$7500 at the end of the year.

Underwriters have a soft spot for the romance of their trade famous Lutine bell which hangs over the Caller's head in The Room was salvaged from the Lutine, a Lloyd sinsured frigate which went down in 1799 off the Dutch coast with some \$6 000 000 worth of gold A week ifter receiving news of the sinking. Lloyd's was able to inform the Admiralty that an equivalent amount of gold to it place that lost was it idy for shipment Much of the gold was salvaged decades later and with it the ship's bell which was placed in The Room and rung to obtain silence for important announcements such is the inival of an overduc ship once for had news twice for good news

In recent years radio and wireless have almost silenced the Lutine bell. The last time it was rung — twice — was to announce the sinking of the Bismarch in 1941.

All that is salvaged from a loss belongs to the underwriter. In 1943, when a plane curving \$200 000 worth of I loyd's insured jewe's crished in the Mile in desert near Khartoum, I loyd s underwriters dispatched Williim (Crocker one of the smartest liwvers of the City to the scene By computing the speed of the plane and the momentum which had forced the precious stones out of their metal containers and mail bass he was able to put his finger on an eight-criat emerald in the sand precisely where his calculation had placed the treas-Crocker loaded a substantial part of the surrounding desert into sacks, he washed the sand in his hotel bathroom that night, and salvaged most of the lost jewels - for Lloyd's

Today Lloyd's handles nearly as much in American orders, mostly reinsurance, as the rest of its business put together Catastrophe reinsurance is particularly popular in the United States Under such an arrangement, I loyd's underwriters promise to reimburse American insurance companies for losses caused by a single catastrophe, such as a flood or hurricane, which run beyond the totals Americans are willing to carry alone The Texas storm of July 1943 is still remembered in The Room with horror — \$5,000,000 is no chicken feed. And the recent New England hurricane blew a cold wind through Leadenhall Street

The largest single risk handled at Lloyd's today is the San Iraneisco-Oakland Bay Bridge, insured for approximately \$40,000 000 against collapse or any other hizard Lloyd's underwriters share this colossal risk with a number of American insur-

ance companies

I loyd's American bonanza had its start in the San Francisco fire of 1906, when four square miles of valuable property burned to cinders The total damage, amounting to some \$500,-000,000, was divided among 107 insurance companies, with a share of more than \$50,000,000 falling upon the British insurance market, including Lloyd's Lloyd s settled the claims without quibbling More than that, it was prepared to insure the temporary buildings constructed to house the survivois Such fair dealing paid rich dividends The confidence of American business in Lloyd's did not wane even during the British invasion scare of 1940 and the London blitz "Our American iriends kept right on

sending us their orders," a leading underwriter at Lloyd's said "I suppose they figured there would always be a Lloyd's"

Hollywood is more Lloyd's-con scious than most other American communities A good deal of its real estate is insured at Lloyd's against earthquake, and some Hollywood parents let I loyd's do the worrying about would-be kidnapers of their children—Lloyd's will insure you up to 90 percent of the ransom money in case such money is paid and the insured person returned alive or dead Major movie productions are customarily insured for \$750,000 against losses resulting from death, accident or illness of certain artists

The main sources of transatlantic premium income are fire and accident, including public liability. American railroad business. Lloyd's underwriters complain, has become something of a white elephant of late "Since the beginning of the war," one of them explained, 'exceptionally heavy traffic has led to a general deterioration of equipment and a higher accident rate. We've had to raise our rates three or four times, but even so, we just about break even."

In the field of av ation insurance, on the other hand, great satisfaction prevails in The Room On American air lines a single 20-passenger liner usually carries as much as \$2,000,000 worth of hability insurance per flight. In addition, planes and engines, as well as ground installations, are insured "Now," Lloyd's men say, 'the safety factor of your air services keeps going up and our aviation-insurance rates go down accordingly

After the war our aviation business may reach the proportions of our marine business?

Of all standard types of insurance, only life insurance is outside I loyd's orbit A I lovd policy runs for one year only, and, is one underwrit r iem irked, "everybody dies so what's the fun of writing life insurance? Lloyd's resents the impression that it is a fancy betting institution matter of fact, 'Sir Lustice Pulbrook, churinan of I loyd s, expluins, we do not bet it ill. Only people with a definite in unable interest will get I loyd's to write a policy Besides, the committee imposes certain rules upon the members nobody for example, can insure himself against the death of the reigning monarch, and we will not insure invocedy against the end of the wir it would be immoral '

I loyd's men themselves are notorious betting addicts, nonetheless. Private bets are I ad on the end of the war and if a broker approaches an underwriter in The Room with an exeiting proposition the temptation to sign it is great. Thus, before every American Presidential election, I loyd's underwriters will carry a few thousand dollars of "insurance' for their American friends — the amount of the premium representing the odds

a particular underwriter is willing to

The list of taboos reflects The Room's realistic attitude toward life in general. No one can insure himself against poverty, obviously, it would be a pleasure to go broke and then ik I loyd's to indemnify you with a crisp check. No one can insure himself as unstrem uning a bachelor or herself against becoming a spinster, or ignings a divorce. The success of a Broadway play the enculation of a newspaper, the turnover of a department store he not insurable your job isn tinsui ible either And I loyd's will not insure you against your committing murder This, however, pretty well concludes the list

In June 194, the members of Lloyd's decided to widen the basis for membership by admitting citizens of British dominions A movement to invite Americans to become members of Lloyd's is afoot. Bicad and Butter Letter

AFILE having a bowl of chowder and coffee at a restaurant of a well known chain a New York public relations man was charged ten cents for bread and butter which he hadn to ten. He protested that he hadn to idented the bread and butter but the waters and he was sorry, it was orders from the chain officials. Our hero—and to us he is a hero—saked for the manager, who said the water was right. Orders, sir, you know

I he man paid the dime, very ungracefully Back at his office, he wrote a letter in public relations patter to the chain owners, telling them they were losing good will be charging for bread and butter, willy nilly A few days later he sent the company a bill for professional services — \$5000 By return mail came a letter from the restaurant's Wall Street lawyers pointing out that the whole thing was absurd, since they hadn't ordered any public relations service

Our hero shot off a one sentence reply "Well, I didn't order bread and

PS At any of the chain's restaur into today, you get bread and butter, but — if you don't want it, you don't have to pay for it — 1M

The Government's Waste of Manpower

While the nation suffers from a critical manpower shortage, Washington bureaucrats blithely keep on paving 300 000 unnecessary federal workers to sit out the war

Condensed from The American Magazine + Senator Harry F Byrd +

NF of the most pressing jobs ahead of Congress and the Administration is to reduce sharply the army of civilian Government employes who have been sitting out the war

Today there are more than 3,000 000 federal civilian employe in the United States. Out of this number, at desks in Washington and so it tered throughout every state in the Union, there are 300 000 men and women in jobs created artificially. They draw approximately \$700 000 000 in Government pay each year. These nonessential employes serve no useful purpose and should be dismissed at once.

And there are in addition 500,000 Government employes who should be demobilized to save taxpayers amoney as soon as the war in Europe ends

Although our manpower shortage is still so desperate that we draft fathers and force men and women into war work, official II ashington does nothing about its own surplus of manpower Top executives have shown that they do not want to eliminate such waste Some actually encourage it Others have indicated that when the war in the Pacific ends they intend to have even more men and

Chairman of the Joint Concressional Committee on the Reduction of Nonessential Lederal Expenditures

women in their bureaus. This is one more step along the road to State Socialism.

Recently Lieutenant General Brehon B Somewell, chief of the Aimy Service Forces, stated that our critical programs needed over 300 000 additional workers to get up to schedule I say he can get many of the needed employes from the federal cove nment

In The Incircan Mara, me for January 1943. I disclosed the waste of manpower in Government bureaus, and that article helped the Joint Committee on Reduction of Nonessential Federal Expenditures to save American taxpayers millions of dollars and to furnish more manpower for essential work. The force of public opinion was left in the bureaus and by July 1943 total federal civilian employment actually dropped. However, the effect was only temporary

In the first seven months of 1944, while war plants were shorthanded, Government officials, evidently deciding that the public had forgotten about waste of manpower, increased total employment by nearly 70,000,

reaching a record peak of 3 366 780 in July I has surpassed the high water mark of 1943, the highest federal civilian employment figure in our history

The War Manpower Commission tells us that more men may die in battle unless more men and women leave nonessential jobs and help in war work. Yet this Commission calmly agnores the shocking state of affairs in the federal family.

On September 18 1943 is charman of the Joint Feonomy Commit tee I wrote to Paul V McNutt Wa Manpower Commissioner—Io what extent have you investigated the various Government departments so as to utilize available manpower in a manner most efficient to promote the war effort?

Ih War Manpower Commission was investigating possible waste of manpower in preate business, and I fully expected that it would at least east an inquiring glance at government. I wo weeks later Mr. McNutt replied. In the field of maximum utilization of manpower in the Lederal Service. Lack upon the United States. Civil Service. Commission

The Commission will be glid to give you full details of their achievements in this field

Actually, the Civil Service Commission has continued to recruit intensively all over the United States filling the orders from Coverrment bureaus for 1 ione and more employes, and even increasing its own staff by 1380 in 12 months

I oday thousands of Government employes sit around with nothing to do and the federal government, while urging civilians to further effort, continues to take employes iway from privite employers. An example just came to my desk—a letter from a businessman in Virginia who deals in fuel certainly a necessary business. He wanted to give his experienced secretary a ruse of \$10 a month, but the War Labor Board refused the request. So he writes me, 'she went upstrues in this building to a Govern ment office and got a job at an increase of \$10 a month.

Wir Inbor Bould und Itersury Department regulations that forbid salary increases do not affect Covernment bureaus Our Committee has found innumerable cases in which Govern ment employes have received rases that would not be allowed by the WIB in private business. For example six OWI imployes have received ruses of \$1,00 in the list vent. In the Loreign Leonomic Administration, 104 employes received \$8000 a year and 40 percent of them received in iverage increase of \$1790 in the first 11 months A college professor who was carning \$2000 a year joined the Covernment when will stirted to dry although he has never had anv business e penence he is getting a business specialist could recite innumerable C 1505

In one Government department the top in in winted to 1 use in employe's sillury from \$4700 to \$5600. To justify the 1 use the employe's id to have an issistant so an unnecess ary assistant was hired it \$3800 a year, and the employe got a \$900 raise.

Non-Government white collar workers refused raiser by Government orders, are struggling desper ately to meet the increased cost of

ing Even though their employers, int to raise their salaries, the Government won't permit it. On the ther hand, many Government employers and employes who know the opes find that their raises are eagerly approved. It is monstrously unfur on the Government to have one rule on itself and another completely opposite rule for private business.

I want to give full credit to the housands of Government workers the are laboring long hours it esential work Some departments, such as the Post Office, are undernamed Many an executive works all d v at his office and many hours at home in the evening Most of these conscientious Americans join me in my protest, for they know that fedral employes who are needed in war work are sitting idle on the floor above, or in the building across the street but their bure in chiefs won't ive them up. The reason is that if incse chiefs employed only as many is they actually needed they would bsc face, would perhaps be forced to take a reduction in salary, and thus would have to accept only what they ue worth

A Chicago businessman engaged in war work writes me 'We we not getting so many questionnuites these days from Washington, instead, there is a great increase of young men of druft age who come to inspect our books and records. At one time seven young men from seven different Government departments were working on our books. The young men have become more of a nuisance than the questionnaires!"

Our Committee has believed that, through our investigation of useless questionnaires, we had eliminated some waste But now we find the bureaucrats have cleverly evaded our efforts. Instead of sending out questionnaires, they hired more men and are sending them through the country, helping to crowd railroad trains and hotels, to annoy businessmen even more, and at greater expense.

Our files are jammed with letters from Government employes who volunteer information about waste in manpower Our investigators report that when they talk with employes from various departments, who aren tali ind to tell the truth, nine out of tenstate that their department is overminned Many left good jobs in their home cowns believing that in a Government position they could help in the war effort. Phousands return home One of them writes

I or days after I arrived in Washington I sat and looked out a window. I maily I couldn't stand the waste, disorg inization and idlenes, and resigned. When I did so the head of the department said. You're a fool You might is well have some of this money. If you don't take it, someone clse will.

I rom a Government office outside Washington, an employe writes In our office is a \$6500 a year lawyer who comes in for an hour or two every day. The rest of the time he is in his own office taking care of his private practice. He was with WPA, and was transferred to our department, although we already had lawyers sitting around with nothing to do

A stenographer in the War Department in Washington told one of our investigators 'In my office there were nine officers and each had a secretary — nine girls, but there wasn't really enough work for three Another officer moved in, and do you think he was willing to use the nine girls? I should say not! He had to have his own secretary "

According to the latest available figures, there are over 6,000,000 on public payrolls, which means that one person for every 11 employable persons (ages 18 to 64, inclusive) is employed by the federal, state and local governments, eliminating those now serving in the armed forces. Excluding the teachers, in every state except West Virginia there are more federal employes than there are state or local workers.

In some states the great concentration of Government employes of course, is caused by war work, navvards arsenals camps, anticlds, and shipping centers but our investigations show that most of these are overmanned and the executives are hoarding labor that is needed elsewhere

On September 19, 1943, I addressed a communication to Government departments and agencies requesting information as to their postwir plans and their personnel requirements. The replies revealed the amizing fact that nearly all except war agencies plan to increase, rather than decrease, their personnel in the postwar era. In fact, the decrease in the work of certain programs and the expanded work of other programs will result in a proposed net increase in the postwar era of approximately 95,000 employes in nonwar agencies!

It is apparent that a huge payroll will continue to dran the federal treasury. This will enable govern mental bureaus throughout the nation to har iss further the citizens of our country with various forms of federal regimentation.

A TY ACIII R at a California school located near a large aircraft plant received this note from the mother of an eighth grader

Dear Midim Please do not keep my son after school any more I work on the fternoon shift, and my clock does not work. When I see him coming home from school I know it is time for me to leave the house."

IN THE Orderly Room of the organization responsible for Incoming and Outgoing Processing at Shepp and I icld, I exas, there is a large wall clock. The men in the room have been working untold hours, day and night, seven days a week, for mon hafter month. Finally this sign appeared below the clock. "Is I his Clock Necessary?"

— Contributed by S/Sgt. Benjamin Slavin.

future, Marshal Georgi Konstantinovitch Zhukov (pronounced Jzoo' kui) will go down in history as one of the greatest generals of World Wai II Stalin's choice is conqueror of Berlin and perhaps is the chief Russian in the future Allied government of Germany Zhukov has a record of military achievement without parallel in modern was

No single counterpart for him can be found in either the Allied or Axis armies. His role can best be comprehended if one imagines an individual officer simultaneously holding the responsibility of General Marshall, General Eisenhower and General Bradley. For the last four years he has shuttled betwee the Kremlin and every battlefield of the Russian front, alternately planning grand strategy and commanding armies in the front lines.

It is Zhukov's philosophy that offensive strategy must be fluid and flexible and cannot be definitely envisaged at a table in the Kremlin That is why he habitually takes great personal risks in order to observe his troops in action and to compare backroom strate, with front line tactics. As a striff officer he has proved humself cuming amaginative and prophetic. As a field general he has been and erous, imperturbable and unconquerable.

Thukov's most di imitic performances have been in his recurrent role is. Russia's Horatus-at the-Bridge Muscovites call him Spasite!, or savior In the bitter autumn of 1941 when German armies almost encucled Moscow Stalin relieved Zhukov of his desk duties as chief of staff and entrusted him with the defense of the capital. Thukov assued an impassioned hold or-die order "Not a step back!" he commanded "Halt the fascists! Every man must fight like ten!"

The Russian retreat slowed and Zhukov won time to concentrate powerful reserves from the east He deliberately sucked the Wehrmacht into his trap On November 27 he sprang it, following up with an offensive which split the Nazi spearhead

and sent 50 German divisions streaming westward in defeat

In a raic piess interview Thukov outlined a few reasons for the Gerin in shambles at Moscow They were used to easy victories? he said 'For them, war was merely maneuvers They have neither cavality nor skiers then tanks cannot pass over the snow ' As he talked he sparkled with sarcasm and occasional wit — he was relaxing for the first time in months 'The stubborn resistance the Ger mians offer in towns and villages has simple explanation They no airaid to give up warm houses for frozen fields

With the Germans stabilized on the central front, Zhukov was transferred to Stalingrad, measured by the minics of von Paulus and von Mannstein. The epic battle of Stalingrad went on for 21 weeks and exceeded in violence any previous battle of the war Under Zhukov's direction what had seemed to be a Raissian disaster was dramatically furned into a victory that probably will go down among the decisive ones in history

Stalin then hustled Zhukov to Leningrad, where he organized a new offensive which lifted its long blockade. A few weeks later he was named Marshal of the Soviet Union the first field commander of the war to be so recognized.

With Stalin and Voioshilov, Thu kov planned the 1943 summer offen sives which swept the Germans out of Kursk, Orel, Belgorod, Kharkov, Smolensk and sent them back across the Dnieper Early in 1944, General Nikolai Vieutin was killed at the height of operations in the Ukraine Rather than entrust the sector to a

less experienced commander, Stalin put Zhukov in active command

Everything was against Zhukov's success. One of the earliest spring thaws in memory set in His troops sank to their knees in greasy mud But time was all important March 4 Zhukov's artillery opened up. Then the tanks slipped forward through the mud on a 150 mile front Inspired by Zhukov's presence the Lirst Uki iinian Army outdid itself After two days of bitter fighting 12 Carm in divisions were smashed and the enemy was driven across the Soviet frontier and onto Polish soil For his achievement the Supreme Soviet awarded Zhukov the Order of Victory a magnificent bauble of diamonds rubies and platinain worth Stoo ooo

The climactic offensive which beg in January 12 this vear is the fault of Zhakov s planning. To invest Berlin, destroy Hitler's armies and end the wir Zhukov deployed in estimated 200 divisions twice the reported total strength of the Anglo American armies in the West - along a 400 mile front from I ist Prussin to the Cupithins Chilacteristically he nimed the main weight of his attack straight down the Warsaw Frankfurt highway to Berlin And characteristic illy he gave command of that most critic il most difficult sector himself

The speed with which his forces advanced (15 to 20 miles 3 day) attests not only to the efficiency of the Red Army's fluid supply system, which I hukov helped evolve, but also to his own tactical skill I hukov is a wily field soldier, a student of Clausewitz and other military

analysts, and an authority on the campaigns of Hannibal. He has repertedly outguessed and outmaneu vered the Germans' shrewdest commanders Two winters ago example, he took Rzhev by orderin his engineers to throw an 'invisible" bridge across a river. It was built en tirely by night, with its roadw ly sub merged 18 inches below the surface of the water On Rzhev's D Div the Nazi grifison saw Zhukov's tanks miraculously breasting the stream like a flect of old side-wheelers In iccent fighting, the Red Aimy his attacked from inexpected directions all up and down the front Retreating Germans have found Russians al icidy dug in behind them. By passing strong points and leaving them for icii echelons to mop up, Zhulov hurled his spearheads across more than 300 nules of swampland and woodlind in the first 18 days of his campaign — the fastest advance of the war far exceeding the record of the Germans against the Russians in

In appearance and manner Zhukov is a unlitary man from his appeared tive eyes to his polished boots. He speaks directly, sharply and precisely in a calm, low voice. He dislikes vaciliation. His strong face is so expressive of willfulness that few men dispute his views. In upholding his judgments he can be extremely stubborn, but on occasions, when he is outvoted by other members of the supreme command. he executes their plans as solicitously as he would his own.

Son of simple persant folk, Zhukov was born in Strelkova, a small village in central Russia, in 1895 He left school at an early age and became

apprentice to a furtier. At the outbreak of World War I he was drafted into the army and saw two years of active service, then was invalided home. By the time he had recovered, Russia was out of the war and Lenin was in power. Army life appealed to Zhukov, so he abandoned the fur trade and joined the Red cavalry. He also joined the Communist Party.

His ability attract d the notice of Red Army commanders and he was picked to attend I runze Acidemy the Soviet's combination of West Point and General Staff School In the years that followed Zhukov obscurely but effectively prepared himself for his later responsibilities. He had few intimate friends and spent his off-duty hours studying Marxist literature writing tactical disquisitions and learning foreign languages He speaks some Spanish and German and is very fluent in French For a while he lectured at Franze Ac demy During the pre-Hitler period he visited briefly in Cermany, attending lectures given for Russian and Chinese officers by the German General Staff. In 19,6 Stalin dispatched him to Spain as the Soviet Union's chief milit iiv observei

When the Japanese attacked the Mongolian Republic in May 1939 the Soviet Union rushed several tank divisions under Zhukov's command to their assistance.

It was here as the Red Army underwent its first real test by fire that Soviet newspapermen first glimpsed Zhakov's superlative self assurance A group of war correspondents were interviewing Zhukov in a blockhouse on the Manchurian frontier one day when two Red Army scouts rushed in

to report that the Japanese were massing large units in preparation for a counterattack. The correspondents braced themselves, expecting a galvanized commander and a cascade of excited orders But Zhukov, unperturbed, calmly informed his scouts that the lips were in no position to deliver an offensive blow. His words changed the atmosphere instantaneously A few days later the forces under his command wiped out the Japanese Sixth Army it Khalki Gol His daring and guild established him in Stalin's eyes as a military genius. He shot upwind through Red Army ranks

Thukov helped with staff work ui der Timoshenko during the not very brilliant Linnish campaign and upon its conclusion was appointed Commander of the Kiev Militury District with the rink of general of the irmy, next highest to marshal. He drew up plans for Red Army reform and in a speech delivered before a Party conference he outspokenly ittacked the Red Army's 'political commissais' for their interference in purely military matters, and charged the army's high command with fulure properly to train young officers rising from the ranks. He closed his audacious speech with an oblique warning against the Nazis, the Russo-German peace pact notwithstanding

In the winter of 1940-41 Stalin brought Zhukov to Moscow is chief of staff Racing against time and Hitler, Zhukov welded the Red Army into an orderly hierarchical organization, whose respect for discipline has been intersified in the last four years of wai to a degree unknown in Czarist days. It is a far cry from the

rapt dream of a Communist fighting force of happy comrades who vote on every military decision

Although he is twice a Hero of the Sovict Union, Zhukov's face and broad, balding brow are unfamiliar to the average Russian citizen. The General has a pretty dark haired wife, tiller than he is, a 13 year old diughter and two sons, 12 and nine. The older boy is nicknamed "Zhuk" by his classifies— he nates this, for zhuk means beetle

At the front /hukov leads a Spartan regime. In the Ukiaine, he habitually galloped his charger before he ikfast and worked a 12-hour day without lunch. For additional excress he would fence with his aides, usually wearing out several of them before he had had enough. Since he subjects himself to such rigors he does not shrink from demanding as much from his men.

Stein disciplinarian though he is, I hakov nevertheless is solutious for the welfare of his troops. Time and as an he has said that it is the common denominator that counts the simple soldie who shoots the bullet and stops the bullet. In a pamphlet which he sent to other commanders, he commended these words of Suvorov "Regardless of what happens to me, the soldier is dealer than myself. I neither sleep nor lest so that my army may have sleep and rest.

Thukov is a good Communist He does not believe in God But he does believe in history, in progress in decency For these things, for his home, his wife, his children and for Russia, he has fought an unbeatable kind of war

Uncle Fazz grew the best watermelons in Mason County — but somehow they lost their flavor after

The Melon-Patch Killing

Condensed from Southwest Review Fred Gipson

"HIN CI INSISH DOSS CIME INTO
the MISON Herald office that
Saturday afternoon to innounce that Uncle I azz Bolten had
brought in a hackload of watermelons, I was dumfounded Nobody exer
had ape melons before the Lourth of
July, and this was only the middle of
June Besides, Uncle I azz had given
no warning

Criwfish was 11, my age He had a shy way of talking to grown people that they had a line is how he could round up nearly half the news that Papa put into the Herald every week Crawfish had a sharp mand

I dropped the type I was cleaning and we went out to look. Sure enough, Uncle I azz had tied his mules to the hitch and in front of McDougal's trading post.

Crawfish and I stood around, our mouths watering. We felt cheated Always before, when Uncle I izzhad inclons about ready, he d show up in town with a lone barieled shotgun in the crook of his aim, as a warning to thieses. It was also the tip off for me and Crawfish and Lode Turner. We knew then that Uncle Tazzs melon patch was ready for raiding

After a while, Lode showed up Lode was 12 He had treekles and a

shirtful that hung out He stood with me and Crawfish, but we didn't say anything. When Crawfish couldn't stand it any longer, he eased up close to the hack

"I ook Mi Bolten" he said 'If you was to just happen to drop a little one could we cat it' He nodded toward me and I ode

Git! 'Unck I was shouted 'Been stealing my melons for your Scen you in my patch list night. Let me git my hands on my shot un. I ll blow a hole in you a man could patch a dog through!

We didn't writ. We could hear mending and hollering is we tore fround the corner to hide out in old mandiates when vaid and suffer the misery of wronged innocence.

Sure, we described writermelons out of the old skinflints patch. But Mason County folks just sort of lumped watermelons with water and an exits of God, and free to all Neighbor we inclose out of neighbors patch without bothering to ask. Lyen a stranger was welcome to a melon. That wasn't stealing

Not to anybody except old Uncle

But the rinkest injustice of all was being accused of riding Unck Tizzs patch the night before. That was a flat-out lie We hadn't even known he had a melon getting pink around the seeds yet

Crawfish was busy thinking After a while he said, "I got a plan figured out"

UNCIE TAZZ'S farm was about a mile from town and it was a job packing our straw man all the way out there that night The straw kept slipping out of his pant legs and we'd have to stop and shove it back. In about an hour the moon was due to come up. We had to get our dummy set before then

We climbed up on the slab rock fence at the far corner of Unck Tazz's melon patch and looked toward his house Yellow lamplight glowed at the window

"We got to be quiet now" whis pered (1 iwlish, or we'll stir up his old hound dog"

We hopped down and waded into the lush vines already dew damp and cool to our bare feet. Crawfish whis pered to Lode. You locate us a tipe one to eat on while we re waiting

An, body can tell a tipe miclon in the divitime viten he can look for dead curls on the vine or roll a melon to see if its belly is turning vellow. But it takes a good car to locate one at night when you got to depend on thumping. I ode had about the best melon-thumping car in the county.

We set up the dumniy on a slight knoll in the middle of the patch, bent over to make him look like a man reaching down for a melon. We wanted him to stand out well against the moonrise. Then we crawled back over the fence.

Lode called softly We followed the

sound of his voice into a thicket "I wasn't sure about the first one," he said, "so I brung out a couple!"

We squatted down Crawfish lifted the biggest melon and hammered its bloom-end against the ground The melon split up the sides, almost as even as if he'd cut it with a knife Crawfish was a good melon-buster

We crushed the Juscious melon into our mouths and let the juice run off our chins and elbox s, onto our bare feet. That's the only way to get all the good out of a watermelon.

The top edge of a moon big as a wagon wheel sneaked up over the mesquite ridge back of us. When it was high enough we crawled out of the thicket and looked over the rock lence. We did done a good job on the dumms.

The light still clowed in Uncle Fizzs window Criwlish said "Get him out Hop"

I stated squalling and snarling, like a couple of fighting liver coons. Uncle Tazz's black hound dog set up a loud baving and headed for the inclon patch. A moment later Uncle 1 122 came out on the run.

"Git out of them incloss you thicking scum!" he hollered "lech ary one, and I ll blow a hole in you a man could pitch a dog through!"

He was leaping over the inclons shining in the inconlight

'I m telling you, you better git!"
he shouted, waving that big old shotgun I said I d shoot and I aim to
do it!"

The melon thicf didn't move Uncle Tazz stopped suddenly and brought up his gun It seemed to me the whole earth shook with the blast The shot must have caught the c'ummy dead center It jerked sort of flung up its arms, and pitched sidewiss to the ground

I felt something like a cold-bellied snake run up my spine. What if that had been one of us? Uncle Tazz was staring at his kill

"Dang amighty! he said Gosh,

d ingamighty!'

He wheeled and headed for the house, running as hard as he could

"We got the britches seared off that old tightwad said Crawfish He thinks he's done a killing?"

In a little bit we heard the clutter of hoofs in the line. Uncle Tizz was headed for town

Lode and Lwanted to leave, but

It's getting better all the time 'be said 'No telling what he ll do how!'

In less than an hom Unck Tazz tame back, bringing Sheriff Cabbs and old Doc Grandberry with him Doc and the sheriff hurred across the melon patch. Unck I azz trotted along behind

"He's laying right up yonder on hat rise," Uncle I wo chattered I idn't um to do it, Sheriff I swe ii I lidn't I just lost my temper and blowed him down before I knowed!

Doc grunted The sheriff didn t

say invthing

What II they do, Sheriff' I tell vou, it was just an iccident!' Al! the bite was out of Uncie Tazz's talk now He was plenty so ired

Sheriff Gibbs said 'Il you've kilt him, Tazz, it's liable to go hard Mason County folks don't look on a stole melon as a killing matter!'

"But, dang it " the old man shrilled

"Ain't a man got no rights' He's got to pertect his lawful owned property'

They were at the fillen dummy now, and Uncle Tazz hung back. The sheriff and Doc reached down to turn the corpse over. But now both straightened up and looked at each other. Then Doc threw back his head and his bawling laugh could have been heard clean to town. Sheriff Calbbs sank to his hunkers and rocked. Uncle Tazz straed at them like they were crazy.

What is it? What've y'all found?"

He came up walking mighty cautious and bent over the dead man

Dangamighty!" he yelped He snatched up the duminy and let it fall 'Somebody's made a fool out of me! He fought the an with elenched fists. Why, if I knowed who the scoun is was I d blow a hole in 'em a man could patch a dog through!

"Wat ll Humon Hightower gets hold of this! bawled Doc "He ll spread it all over the front page of the Heald!"

I hat stopped Unck I azz so quick he still held one fist in the ur He let it fall

Doe!' he pleaded "Doe, you can't do that to me Harmon'd git me laughed out of the county! I'm too old to start over so ne place else I'll pay you for your trip, Doe I'll make it right with the sheriff—"

He was crying a little when he fi nally talked them into a promise

When they were gone we hugged cach other and rolled on the ground and laughed. Then Crawfish hatched off another idea.

When Uncle Tazz showed up with a hackload of melons the next Satur-

day, me and Lode and Crawfish were his fir t customers

"We want to buy a melon, Mr

Bolten," Crawfish said

"I et's see your money!" snapped Uncle Fazz The old man looked raw-edged and jumpy

Crawfish showed a quarter, and Uncle Tazz started pulling a melon

out of the hack

"That one ain t got no blood on it,

has it?" Crawfish asked

Uncle Tazz jerked around like we'd stabbed him "Blood!' he yelped 'What dyou mean, blood?' His whiskers stood out on his chin like the bristles on a mid hog

"Why," Crawfish said 'when you take to shooting down folks all over a patch you're bound to scatter blood on some of the melons. We don't want to eat no melon that's got blood on

1t 1''

Uncle Tazz's face turned purple I never saw such a wild, crazy look in a man's eyes

"That confounded Doc Grand berry!" he snarled "I knowed all

along he'd tell it around!'

"It ain't been told around," said

Crawfish "Not yet - "

Uncle Fazz's mouth fell open He stared at Crawfish He turned and stared at me and I ode Suddenly his chin whiskers wilted

'All right boys' he muttered "Take your melon Keep your money Go visit my patch when it suits you'

We felt mighty smug and smart

when we stest

But when we raided Uncle Tazz's patch the next night something was wrong Somehow those melons didn't taste any better than anybody else's melons. Seemed like all that special flavor was gone out of them.

Aerial Climixes

AN INSTRUCTOR at an Army airfield in Horida had to fly down the line on business and took one of his students along as pilot. Coming back he dozed off for a bit. When he woke nothing below looked familiar. Picking up the intercom he said to the young pilot, Are we on course?

Yes su

'All check points okay?'

'Yes sii "

'How soon do you expect to land?'

I cn ininutes, sir '

There was a click but apparently the intercomfailed to disconnect for he heard the boy say under his breath, I hat s what I keep telling myself?

ಌ

RECENTLY the control tower at Gunter I seld, Alabama, received a message 'Cadet Jones to tower My fuel gauge shows empty What will I do?' The operations officer envisioning the plane about to make a forced landing rushed to the mike, shouting, Take it easy son! Don't get excited! Where are you? The cadet calmly replied, I'm sittin' in my plane down on the flight line I haven't taken off yet" — Sidney Skolsky

The Most Unforgettable Character I've Met

By Jules Romains

Novelist poet and dramatist author of Men of Good Will'

TIRST met Jacques D in 1931 at the house of a mutual friend in Paris, and had many intimate tilks with him there But it was not until after his death in 1936 that I learned the complete story of his remarkable avocation

Judges was the owner of a chain of dry-goods stores. He lived alone, with three servants, on an income of about 1 000 000 frances a month

The son of poor parents, Jacques had worked for a small shop as attendent of its outdoor stalls. During this time, something happened that influenced his ideas of infe and humanity, and was the cause of the rather extraordinary actions which, out of modesty, he did not like to have called 'good deeds'.

In those days the lot of the average vound Parisian employed was hard A stall keeper spent ten hours a day on the sidewalk, exposed to all kinds of weather. In winter the only way to keep warm was to stuff one's hands in one's pockets and stamp one's feet.

One bitter winter day Jicques then 15 years old, was shivering it his stall, clad only in a threadbare suit and a flimsy scarf Suddenly a well-dressed man stopped, examined him closely, and then entered the store. When he reappeared he held out to Jacques a warm overcoat and a furcap, saying, "These are for you As a aft Put them on right away, and lon't isk me to explain I am doing

this for my own pleasure Good-bve, my friend" Then he hurried away

The incident made a great impression on Jacques. That man had revealed to me, he said, how rare a quality is the completely self efficing goodness that asks for nothing in return. Better yet. I felt as if he had handed on to me some sort of secret formula, and that it was up to me to apply it and use it in my own life."

Judgues secret formula was this fair to give to strangers one of the greatest pleasures of their lives. He was convinced that such a pleasure should be neither sought nor expected but should come as a gift from the skies.

Judges had calculated that out of his million a month meome he could set uside 200 000 frames without disorganizing his budget or giving less than his usual amounts to charity 50 every. Thursday he became in communication to his employes and his servants. Slightly disguised by dark glasses, he would set forth his pockers filled with bills of various denominations. He also took with him form letters suitable for half a dozen stock situations, with blanks that he could fill in by hand

Then the adventure began

At a corner of the Chainps Llysees, he came upon an old peddler with her basket First making sure that she had the face of an honest woman, he approached her

"Excuse me, madame I'm in a great hurry I have to take a present to some children What is your whole basketful worth?"

"My whole basketful?" The poor woman could not believe her ears

"Yes, madame Add it up"

"Let me see — twelve caramels at five sous apicce — three francs The peanuts — six times eight, 48 — oh, Lord, I'll be sure to make a mistake" He helped her calculate In the end she said, "It comes to something like 30 francs"

"We'll make it 40 But I ll need your basket too How much for that?"

'I can't get a new one under 20 francs But my goodness, it's old, give me ten"

"Forty and 20 make 60 Here's 100 Keep the change, since I m making you go to a lot of trouble"

He hailed a taxi 'Take me to the nearest school," he told the driver

At the school Jacques asked for the principal "Madame, I want to make a gift to the children Share this among them, will you please? Just say it's from an unknown inend'

Before midday he found time to give several poor people a delightful surprise, and left them reflecting on the strange funds of kindliness this dreary world holds in reserve

Some of his undertakings required more patience, more study I or instance, he would notice a young woman walking down the street holding a child by the hand. Their faces appealed to him, and so did the tone of their voices, the air of comradeship between mother and child. He followed them, found out where they lived, and through discreet inquiry of the concierge learned that the hus-

band was a hard-working man and that the family s reputation was excellent Satisfied, Jacques filled in one of his form letters

Dear Monsieur and Madame Girard

I have become very much interested in you and it makes me happy to give you, small token of my friendship. Enclosed is a money order for 10 000 francs. Please use it in whatever way seems most likely to bring happiness to your little family.

I am if iid that I shall never have the opportunity of making your acquaint ance for I lead a very busy life. So do not try to thank me except by sending me a

friendly thought

Sincerely yours,
Signed [Illegible]

Jacques soon found that he could not go through his weekly 50,000 francs except by frittering it away on little kindnesses, unless he expanded his system. Accordingly he rented an office under the name of Balanchard, and engaged an intelligent young man as secretary. Then he ran a series of advertisements in the newspapers.

'Loans granted without security, on exceptional terms to per sons in temporary difficulties and able to offer unimpeachable character references Balanchard, 17 bis rue Cadet'

During the week the secretary interviewed applicants, picking out the few who seemed really deserving

On Thursdays Jacques would question the selected candidates, quickly trying to size them up If he was satisfied, he would ask, "How much do you need to get out of your difficulty?"

"Two thousand francs at the very

least Three if possible But — what ue the terms? What interest?"

"Don't worry about that Three thousand will be enough?"

"Oh, yes"

"Here you are, then"

"Isn't there a paper to sign?"

"If you like" Jacques would hand the applicant a printed form "I, the undersigned, have received of the Bilanchard Agency 3000 francs which I shall repay when I can"

The applicant usually studied the paper uneasily, wondering what the catch was 'There's no date set for payment," he would stainmer "and the rate of interest isn't stated'

Jacques would reassure him "I un the intermediaty for some wealthy persons who want to help honest people like you, he would say 'These persons consider you is a friend in need of help. One doesn't ask a friend for interest.'

"The awful thing, Jacques once

said to his secretary, after the latter had discovered his employer's identity, "is that these poor people are forever coming in to repay loans, and I can't always manage to spend my 50,000 a week!"

Such were the secret pleasures of Jacques D He once explained to me the theory which inspired his odd philanthropics "There are a lot of unlucky people in the world,' he said "Quite naturally they begin to think that in Evil Principle is lying in ambush, waiting for them at every turn This notion sharpens their miscry and paralyzes them, making them all the more vulnerable to missortune Don't you think that one can do them a gie it service just by getting them to believe that there is also a Good Principle and that around the next turn it may as easily be the Good Principle as the Evil which is lying in wait, to give them a surprise ""

Better Man Wins

PRIVATE JONES, an inveterate and invariably successful bettor was such a demoralizing influence in his unit that his heutenant after trying unsuccessfully to end his gambling sent him before the captain. Viter the interview, the lieutenant was summoned

"I've shown Private Jones he can lose a bet," the captain said 'I asked him why he couldn't stop betting and he said 'Sir, it's a habit I can t seem to lose Why, I'll bet you \$10 light now you have a mole on your left shoulder' Well, I knew darn well I didn't so I took off my shift and showed him He admitted he had lost and paid the \$10 I guess that II hold him!'

The lieutenant was so noticeably silent that the captain asked "What's the matter? Aien't you pleased?'

"No, sir," replied the lieutenant "You see, on the way to your quarters Jones bet me \$25 he'd have the shirt off your back in five minutes '

WHY WE MUST BOMB JAPANESE CITIES Facts about pla

Facts about Japan's family factories and our plans to blot them out

By Frederick C Painton

War correspondent now in the Picific

Hu oshugi I here are five of them, the husband, his wife two children and a paupe relative from the country. They exist and work in some ten square feet of space in the old section of Tokyo not far from the river. They work from dawn until far into the night, their busy hands never still. In days of peace, Hiroshugi's family produced wooden to ye typical. "Made in Japan galgets that used to cause us to wonder how people could work for so little. But Hiroshugi's family isn tanking toys now

Out of his 1 it-witten habitation comes 1 stream of immunition boxes. He cuts and sizes the wood his wife nails the butts, the relative screws on the hinges, and the children stencil and paint the finished product. They work with feverish intensity because a district supervisor has given them a scroll for excellence and they now stave even haider to be worthy of this high honor.

There are some 50,000 funders working on war production in this manner in the Fokyo area alone. There are hundreds of thousands in the other key cities. In Fokyo, Osak 1, Yokohama Nagoya, Kobe and Yawata there are crammed 15,000,000 Japanese, which is two thirds of all Japanese war workers. And up to one fifth of all Japan's war production.

comes from such little handiciast factories as Hiroshugis. These individual trickles of war material be come a cushing torient of shells and bullets, guns and planes.

Consequently, any plan of strategic bombing to destroy Japan's espacity to make wir — particularly her since if industry — must include the destruction of these thousands of family factories. This is not making wir on civilians A bir el examination of the Japhandici ift industry and its origins will show you why

Cottage weaving spinning and ironmongering are feud at methods of production which we in our industriali zation have long since abandoned I rud il Japan had a vast and prosper ing handicult production system When Japan began to modernize she tried to concentrate this production into factories but the system of home work persisted. When feudal noblemen like Mitsui and Mitsul ishi became heads of modern industrial empires they found they simply had to go along with the old methods Iven in the 1930's when Japan launched her campugn of aggression, efforts to centralize this handi craft industry failed As the huge concrete factories grew, so did handicraft production In 1940, 53 percent of the entire Japanese worling population was employed in establishments of not more than five persons
But this feudal hangover is not a
sign of weakness it is Japan's strength

These little families produced nearly 60 percent of silk textiles, over half of all wooden articles, 62 percent of porcelain goods and 95 percent of ill lacquer ware. The Japanese National Mobilization Law of 1938 gave the government absolute power over this vast family industry. The silk textile people made parachutes and delived action bombs and flares, the porcelain people inade spark plugs for motorized vehicles, and so on

So it can be seen that when Radio Tokyo declared that all of Japan is mobilized cither to fight or to provide munitions and food it stated the literal and positive fact. Boys and rils of high school age work in shipyards munitions plants or home freiories. Grammai schools have rooms set aside where children volunteer so nany hours a day to make ancielt ourts. One school in January turned out a thousand nuts for the Nissan Motor Company and in March made 1000 A school for the deaf and dumb that once made knitted goods now makes parts for the Fukikura ameraft industry. Even sixth grade children tlid such splendid work making gauges that 92 percent of their product passed

ill inspection. In Maich it was announced that all school children, save the six-year-olds in first gride, would be subject to call to do war work exclusively.

The handicraft effort has invaded Japanese religious institutions. One temple proudly describes it clf as the 'Kooya Temple Machinery Corporation' and makes airplane parts. In Tokyo the iniddle-class housewives

go to the M yuro temple to work half-day shifts in the temple workshop Each woman makes about 700 cartindges Four families out of every five belonging to religious groups in Nagova are reshaping copper and steel springs and make mosquito netting for Jap soldiers fighting our troops in the jungle. Fan makers with world-fimous names now make airplane parts

Not is this all The Japanese have set up the Tonarigumi of neighborhood social unit, which secures space and equipment so that they can pool their joint efforts to bolster the war production Tapanese radio broadcasts constantly praise their enormous contributions In the comparitively small locality of Intchikawn 49 neighborhood units created 40 such workshops to make unplane parts for the Tatchikiwa meratt factory. Seventeen of these are located in what were once give fee The geish i girls who once frequented them are now all war workers. All the geish i call offices are war plants. The Mukwouma Geisha Hall has 100 such girls at work Women's groups (like American women's clubs) have a membership in one city of 15,000 and from dawn until dusk they sew buttons on uniforms

Knowing these facts, then, you can understand how it is possible for our pilots and gunners to shoot down more than 10,000 Japanese warplanes and find that the Japs still have an air force. You can see that to fail to destroy this handier ift industry is to permit the enemy to continue making war weapons.

The bombing of large city areas causes demendous dimage to home industries. It prevents millions of

workers from getting to their jobs Many have to be evacuated Living farther away, they lose hours getting to their work place. They must fight fire, clean up rubble, give first aid to the injured and help in reconstructing the bombed-out area. The Japwar industry loses millions of mamonths of labor that can never be replaced. For Japan's wir michine is operating at full capacity and there is no labor reserve to draw upon

We know what happened in Hamburg where for a time even the excellent and methodical German arraid precaution system was overwhelmed and social chaos resulted. To destroy one third of Germany's arreinfi industry we had to pound 2, cities. In Japan we can achieve a two-thirds destruction by pounding six cities with a similar weight of bombs.

The factories are, of course pinpoint precision targets. No other triget in the world is haider to hit The weather over Japan is the worst in the world and this includes Mount Everest Cold polit misses which originate in Siberra move down over Japan Here the icy mass encounter the warm humid air from the trade winds over the Japanese current. The result is chaotic. Winds of 200 miles an hour are not unusual. Gushing up. drafts cause an turbulence more violent than can be found anywhere else The problems of precise bomb ing under these conditions are of course enormously difficult

For example, a homber triveling 300 miles an hour and riding a 200-

mile-an-hour tail wind is only seven seconds over a target that is one square mile. In training and practice 20 seconds is considered fast time for the bomb run. Not can this problem be solved by having the bombing plane approach the target into the wind. A plane making only 100 miles is a sitting pigeon for ground flak.

Thick cloud layers frequently blot out a target completely. We have precision instruments to bomb through such overcast—and we do—but obviously we can get more bombs into the target area when we can see what we are trying to hit. In point of fict, the weather over Japan his proved more of a hindicap to our efforts to bomb out Jipan's war industry than have her anti-inerials bitteries and fighter planes.

Yet bomb them out we shall Our first B 29 operations must not be considered anything more than experimental initial attacks in a long-range program. As the number of B 29 s increase we shall adhere to a plan of high priority targets that will destroy Japanese industry. As our bases move closer to Japan we can stage huge mass rads that step up our bombstrake tonnage to the weight necessary to destroy all indust y in the six key cities.

We are mixing war on the enemy's means of production, of which the handicraft industry is most vital—and the almost daily strikes of the B 29 s are only foreshadowing what is to come. The enemy knows we shall not fail

Strong Men of God

Condensed from The Sign

Daniel 1 Poling

Pastor of Baptist Temple Philadelphia editor in chief of Christian Herald

T 12 55 a m on February 3, 1943, in the North Atlantic, a torpedo blew the heart out of the cargo transport Dorchester Within 25 minutes the ship went down, and of the 904 mcn on board 278 were lost Among these were our young chaplains of three faiths 1 Roman Catholic, John P Washington, a Jew, Alexander D Goode, and two Protestants, George L Γοχ and Clark V Poling

Clark was my younger son

Engineer Grady Clark, perhaps he last man picked up alive, had stood on the careening deck within a cw feet of one of the young chapains He told me The four chap ains quieted panie, forced men frozen' on the rail toward the boats and over the side. They helped others adjust their life jackets, and at last give away their own They themklyes had no chance without life rickets. Yet I saw ore of them force his jacket over the head of a protest ng enlisted man who said, 'Damn it, don't want your jacket!' I got over ne rail and swam away from the up The flares now lighted everying I watched as she sliq under he last I saw of the chaplains, they "cre still praying for the men"

Recently, the four chaplains re-

Chaplains who have shown their hero isin and devotion under fire are great for the morale of their men

ceived the Distinguished Service Cross posthumously They worthily represent 8000 other young American clergymen of the three faiths who, wearing the uniform of their country and their holy emblems, share with the service men the physical ordeals of battle and give to them the spiritual strength which religion alone provides

Almost none preaches a selfish partisan Gospel Anyone who does should be given his ticket home. But I have been in all the war theaters, I have ince personally more than 2500 chaplains of every futh, and I have found just five men who needed that ticket

Again and again in battle storics we find the Dorchester note of supreme sacrifice, with chaplains risking and giving their lives for their men Francis L Sunpson, Catholic chaplain, of the Parachute Infantry, was awarded the Distinguished Service Cross in December 1944 When a small force of his organization had to evacuate its position in France, on D Day, Chaplain Sainpson remained behind with 14 seriously wounded men En-

emy artillery fire demolished the house in which the wounded were lying. The chaplain administered blood plasma and first aid. As three shells scored direct hits on the building, he flung his own body across the men in an effort to protect them from splinters and flying debris. Then, in spite of a second degree burn, he continued to care for his patients. Limilly a rescue party arrived and the survivors were started toward a hospital Sampson went along, and en route gave one of the seriously wounded a liter of his own blood.

In Tunisia, Chaplain Chase, Chris tian Scientist, with the 26th Regiment of the First Division was cited on the field of battle. I met him it the Grisi Military Cemeters where Chaplain Mc Avov a Catholic Chaplain Stone a Jew he was help ing to bury the dead. I iter Brigidier General Theodo e Roosevelt Ji told me how Chase disobeved orders When Rommel broke through and the Liest Division was in dan er of being outflinked a jeep came boom ing down the road with two soldiers in the back. I nemy strafate places eme over. Disregarding orders to stop and take cover the draver kept on going Roosevelt said slowed when the driver saw me but didn't stop. I jumped on the running board And then I recognized (hap-I am Chase. He pushed the accelerator down and shouted "I've waited six months, sill to get this jeep and I m not k aving it behind now! Then he jerked his he id over his shoulder, and Isaw that the passengers were wounded enlisted men "

Two A my nurses, Willa A Hook and Juanita Redinand, who were on

Bataan during the March days of terror in 1941, described the courage of Chaplain William T Cummines when their hospital was bombed 'Suddenly the chaplain appeared in our ward 'All right, boys,' he called 'st by quietly in bed or lie still on the floor I ll pray' The screams stopped as the prayer began Soon a bomb landed right in the middle of that ward Beds swayed and buckled But through it all we could hear Chaplain Cummings' cle it voice in prayer He went through to the end then he turned to us and said quietly 'Now you take over Put a tourniquet on my arm' We saw then that he had been hit

At Sileino Chiplian Kuemin volunteered his services to a unit that having no chiplian land not buried its dead. Often under machine gui and artiflery fire he refused to permit anyone to accompany him because of the danger. In ten days Kueman buried 17 Miled soldiers and ten Germans dieging the graves himself.

But of all of the front-line chap lans I have known, perhaps Dominic Lernan in his dying gave the perfect picture of Christlike devotion. He knelt by a wounded soldier who had asled for a prayer shielding the man with his body. A burst of enemy fire struck him in the back Lilling him instantly.

One of the most discriminating tributes to these men of the Cross and I iblet comes from Private George Scheller who writes "Cnaplain Stroup is a man's best buildy over here—no one else gets so close to you We can open up and tell him everything because he understands and won't let us down We would go

crazy if we couldn't talk to some-

Generally, the senior chaplains are career men. And to them goes the credit for making the Chaplains Corps in World War II immeasurably more efficient and more highly regarded than it was in World War I. Major General William R. Arnold, Chief of Chaplains, has spent 31 years as a priest of his church in the uniform of his country. His Deputy Chief, Briga dier General George Rivey, has been in the service 27 years.

In the Southwestern Pacific I visited 15 forward islands with Senior Chaplain (Colonel) Ivan L Bennett General Douglas MacArthur speaking of Chipliin Bennett siil, "He has carned the highest honors his country could award him haps the General was thinking of Bennett's first tours of fo ward positions when the malairi swept jungles of New Guinea had not vet been tamed. I ran into Bennett in Wish ington list winter. After three years he was back on a 30 day leave only because he needed 147 more chaplains! He got them, too and after using only five days of his leave was off again for the Pacific

As to organizational morale, I icutenant Colonel Arthur T Sheepe of
the 29th Division, speaking of his
Chaplain, Fugene Patrick O'Grady
who was killed in action in Normandy, said "Without exaggeration,
the greatest single contribution to the
morale of this battalion's personnel
has been the work of Chaplain
O'Grady He landed on the beach on
D Day with a rifle company, and
stayed in or near the front lines until
he was killed"

The latest available figures on chaplains' casualties show that 42 have been killed and 110 wounded Chaplains have won 326 awards and decorations

In far, strange places, under every cucumstance of conflict, the chap-I un remains still what he was before he left his home church — a minister of religion. He rides the invasion planes and drops with paratroops He drives a bulldozei during an emagency in the Aleutians He becomes a temporary cook for a hospitil in the Picific He gives his life belt to enlisted men, and, praying still for their silety, goes down with the ship. He leaves a leg at Cassino and says, "I brought it along to give to my men and if I had it back. I would give it ig iin He is no superman, but he is quite a man

A young friend, Private Joseph Fugelhardt Ji wrote me a letter from overseas. One Sunday his battilion was in the field under fire. It was impossible to answer church call. But then chapt in crawled out to the fosholes with New Testaments. He had marked the passages he thought would be helpful, and he said. "Read them men, and pass them on to the next foshole. Fingelhardt sletter concluded. "So when we couldn't go to the church the church came to us."

It is this deeper note of religion that you hear when you listen for it. On every front and in every branch of the service I have found religion "pure and undefiled."

Perhaps harmony is the most significant religious achievement of World War II Will returning soldiers find this at home' Catholics, Protestants and Jews will not worship in the

THE READER'S DIGEST

same churches and synagogues, and chaplains of all faiths will not officiate before the same alters. But if we would keep in peace what we have won in war, we must continue the

equivalent of the hai mony which mer find in waitine, the harmony which is not uniformity but which gives u common ground and holds us to gether in support of a common cause

Picturesque Speech and Pitter

Down to earth advice to returning service men

Before Staiting Your Own Business

Condensed from Forbes

W R Jenkins

TOTR independence and your ambition are great. Joe Only about one man out of 15 has the courage, foresight and the means to go into business for himself. And those are the men who have largely built industrial America creating jobs which have enabled millions of other Americans to live. Every year 11 peacetime 300,000 to 400 000 men branch out for themselves, some 16 000,000 new businesses have been started since 1900. What we know about them will be interesting and helpful to you.

The vist majority of all businesses are "smill businesses" according to the U. S. Department of Commerce Nearly 85 percent of these are in retail trade or service. Over 90 percent of all retail firms and nearly 99 percent of all service businesses have a gross annual intake of less than \$50,000. About 60 percent have an annual intake of let than \$10,000. That is annual intake, not frolut for out of it must come all expenses.

W R JENKINS, formerly a business man agement counselor, has for years been in close contact with small and la ge enterprises, and knows the problems of the in dependent business man. He is now vice president of Northwestern National Life Insurance Company, Minneapolis, Minn

which are usually 97 percent or more of the total intake

If you establish a small retail serv ice establishment — a store, restaurant or shop of some kind — you will have, let us say, gross sales around \$_5,000 a veir. It will be a pretty smill living for yourelf. You will hive hird work long hours, sleepless nights few vacitions and none without worry and may be not even much home life Any fellow who s sot the stuff knows that such sacrifices are a part of every worth while achievement in life But there are three important other things which you may not be able to supply quite so readily capital, business know how and a market

How much cipital is required? Well you can start a business on a shoestring and a praver you can also start with too much capital for your own good. Many a successful business has been started on a shoestring and many a failure was heavily capital ared. Of course the GI Bill provides for easy loans to help you get started "if you have the experience and qualifications to succeed." But anyone who has studied new business enterprises shudders in his boots when he thinks about the loan provisions in the GI Bill, because debt and

excessive use of credit are an underlying cause of innumerable business failures Liberal credit is not the solution of the difficulties of small business men

The records show that a healthy business must be established and operated at least 75 percent on capital saved by the owner and not more than 25 percent on credit or borrowed money. A business which uses as much as 50 percent borrowed or credit capital has a very poor chance to succeed. So get into a business whose capital requirements are within your reach or postpone your venture until you have accumulated adequate capital.

Business know how is a big subject Take for example the keeping of proper accounts. Some years ago William O Douglas, now a Justice of the U S Supreme Court, analyzed nearly 1000 bankrupt enterprises and found that less than 25 percent of them had adequate records, about 66 percent hadn't even sufficient records or none at all, and about nine percent hadn't even sufficient information to set up records

Dun & Bradstrect's Standard Ratios for Retailing (1939) shows that 13 000 retailing got only 2¹/cents' profit out of each dollar they took in I hat 2¹ cents is the 'taiget for today," every day, when you are in a business of your own And you can t hit so small a target often if you haven t adequate charts and records to help you navigate

Enough know-how will sometimes overcome lack of adequate capital, but nothing will take the place of a market Γ ndamentally, most businesses fail because they aren thecded

badly enough by enough people So don't establish a business just because you want to be in business for your self Find the time and place where enough people need something you can provide

I mentioned that about 60 percent of all retail stores or services have a gross intake of less than \$10,000 a year. When people buy only \$10,000 worth of what you offer, there aren t enough people, or they don't need what you have hadly enough for you to make a living by providing it, or someone else is already providing it at reasonable cost and in a satisfactory manner.

That's what's called competition Too many enterprises trying to provide the same thing for the same people usually result in none of them

in iking much money

So much for what it takes Now what are the rewards for all the caurage hard work, sacrifice of personal life, capital ventured, debt assumed know how, and experience gained the hard way in an attempt to provide for people something they may not want or need? The fact is that the rewards don't always measure up to anything that looks like justice to the guy who has gone through it

First of all, taxes are quite properly high these days Government bureaus will add to your worries Inevitably you'll be hounded for contributions to this and that in your community, and you'll be labeled a heel if you don't come through generously. If you employ other people, you may have a brush now and then with a union. You may have to join associations and what not, to keep up vour business prestige and contacts, clse you may run the risk of becoming unpopular But all that is part of the game.

About 30 percent of small business ventures fail in the first year, and 15 percent more in the sec ond year. If you get that far, your chances for success are better, but at the end of ten years only one out of five fellows like you will still be in business.

Let's assume that one will be you so we can consider the money reward of owning a sin all business. In 1939 Dun & Bradstreet made a survey of 1,000 average retailers, and in the average case the 'owners and offices.

ers together were found to have received \$2,81 as total wages for their verrs work a little under \$200 a month

That's two percent of those 13,000 made no p ofit. The average profit was just over \$600 — but you can t very well add that to the \$_381 the owners spent their profit, they may not be in Lusiness tool by for a business cannot grow unless some of its profit is put into improvements or expansion. Another part should obset aside as reserves against emergencies. So there goes that extra \$600.

The money rewards in business can be great, of course. Yet the chances are about 1000 to one that the money rewards over a lifetime will not be much sereater than those you would

170 FEWER than 480 000 C Is plan definitely to set up for themselves in nonagicultural entripies after the war with the aid of Covernment backed loans, according to a poll taken by the Morale Division of the Army Service Lorces This figure does not take into consideration the Navy Coast Guard of Maines If plans of gobs and leathernecks were considered, the total number of small new businesses contemplated by men in uniform would probably reach 700 000

The Army is determined that its men go into their postwar business ventures with their eyes open. Census Bureau data will be made available to soldiers to show them that being in business is not a bed of roses. They will be warned that self employed persons almost in variably work longer hours than employes, and that it is one thing to open a business with borrowed money but quite another to keep it open and solvent in the hurly builty of competition.

-Ir m Fred v kly litter i Il Continentil Bank v Iru t Convit v Yrk

carn by working and advancing in someone clse's business

The real rewards which you must ne something quite lool to loc different. Independence of spirit, freedom from having your life dictated to you the zest of the long chance, the freedom from having semority rules placed on your efforts, the realization that your money rewards will match VOIII CHEIEV ability and effort these are 1 few of the real new urds The knowledge that you can't be arbate arrly fixed will give you a deeper sense of security than you can gain on a job. And above all, if your business grows and you employ others, you will gain the feeling of having made life in the for some other people, of having helped your community state and nation to grow, and of having scrved well the needs of your fellow

- Those are the real rewards, and shelieve it or not, Joe the, are worth all that it takes, and more But you see, now, what we've been driving at Big money rewards come only to the rare success So before you plunge into a risky adventure, be sure you answer fully to your satisfaction these questions
- *1 Am I prepared to make heavy personal sacrifices, or an I really expecting that being in business for myself will be a bed of roses?
- 2 Have I enough capital of my own, without borrowing. On should I take a job, save every space penny and make the try after I have saved adequate capital?

3 Have I the know how or a means of getting know how quickly? Or should I first go to school or seek a job where experience will be my!

4 Have I an idea, a thing or service that's badly needed, am I in a place where many people need it, and have I a sound means of giving it to them at low cost and with good service? Or must I search for a better idea?

Those questions don't suggest that you should forget the idea of getting into business for yourself *Never* give up that idea Fight for it, work for it and eternally search for the spot which provides the right answers to these questions *Then* take the big step. For then you will be properly aimed. And no matter what the out come you will have the satisfaction of knowing that in peace as in war, you will be fighting the kind of fight which has made your country great.

WILD WISDOM Selected by Alan Devoe

Prize Winning Letters - VI

THE WISDOM OF WILD CREATURES differs from our rational intelligence by being largely intuitive, but it has long amized outdoorsmen. The following observations are selected from hundreds sent in by readers

Battle Stations!

High in the Sinti Cruz Mountains of California, we were hiking along a ridge that looked down upon 1 gre it sweep of meadow in which a herd of deer were feeding Suddenly the whole herd tossed up their heads in alarm. Following their gize, we made out the slinking figures of two mountain lions at the far side of the meadow. We expected the whole herd to bolt in terror. The big bucks at le ist could have made an casy getaway. But that would have meant leaving the fawns to the mercy of the big cats. Not a single buck bolted, instead, the herd executed a tactical maneuver that was sonderful to see

The five biggest bucks fell into a V formation. While they did so younger bucks riced iround the sides of the meidow, driving does and fawns into a compact central mass, and then took places at the edge of the company. The herd was thus transformed into a formidable phalans, speache add by the V of giant closes. All faced the mount in cats. Il en, is at a ignal, they charged

As they thundered forward, the two hons heat and for only one panicky, bewildered instant. Then they turned and fled for their lives. The fying formation of deci stimped and milled it the meidow's edge then broke ranks and returned at case, to their -Relet Rall MD ndl gi Wiii

Shell Game

I MADE friends with a little Yoseinite squirrel which became so tame that he would run up my hunting boots and onto my lap to take the wilnuts I offered him He would scamper off with a nut dig a hole, and bury it

One morning I delightedly watched him outwit a thieving bluejay. The blue my would watch the squared bury a nut and, when the squared had left, fly down and dig it up. The performance was repeated several times. Then the squirrel got wise to what was happening

When he took the rest nut from my fingers he scampered off a little way as usual, dug a hole, and then just pretended to bury the nut. The jay, waiting watchfully, came swooping down, dug where he had seen the squirrel digging, and found nothing While he cocked his head and scratched and due some more, the sourcel was off behind a tree, hastily burying the nut unseen

- Rose Gill Bak r

Three times I watched that squirrelly hocus pocus The bluejay never did see through it After the third try he gave up and flew away

The Blackburds Fund a Way

WAI KING one autumn morning near a western mountain town, we noticed a flock of red winged blackbirds congregated on the ice which the night frost had left on a roadside pool. They were obviously excited as they tried to puncture the ice in order to get a drink. They would peck repeatedly at one place, then try another but the ice was too thick

Then, to our surprise, one of the redwings abruptly lay down on the ice We thought he had fillen, and must be injured But no In a moment he was up — and mother blackbird took his place. I hen another, and another, taking turns pressing their warm bodies against the same spot in the ice We watched,

hardly believing our eyes, until the ice had been almost thawed Then the birds joined together to peck through the remaining film of ice and the entire flock gathered around the hole and - Sla Ayr Mathill drank

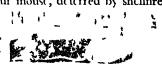

Mouse Methods

On an earthen ledge in the cell if I placed a small cube of cheese as lure for the mouse that had made his hole in the top of the ledge. I neconced in the shadows a friend and I waited with BB suns for our small quarry

Several times the mouse came up out of his hole and started toward the cheese and s veral times we fired out little pellets kicking up the dust and sending him scurrying back to shelter. The list time he retreated to his hole, he stayed there. We decided our near misses had so frightened him that he wouldn't be coming out again for quite a while We were about ready to call off our mouse hunt for the day, when suddenly we noticed the cheese. It was wobbling It wobbled a minute and then a mished

We ran and looked at the earthen ledge. Our mouse, deterred by shellfire from crossing the open no man's land to get his morsel had proceeded to dis a tunnel up und r it Perfectly safe from langer he had mined his subterranean way until the treature dropped neath do n to h m -Cill D lintur

The Way of the Translator

It is easier for a camel to go through the eye of a needle than for a rich man to enter into the kingdom of Cod. This scriptural saying has been repeated inillions of times, but it is a mistranslation from the original Greek

The ide tof a camel going through the eye of a needle was striking. The Greek erigin il of the Cospel however merely spoke of the difficulty a rope would have in passing through the eye of a needle. The Greek equivalent of rope is kamilos but mother Greek word, kamilos means camel The man who translated the Gospel into Latin confounded the two words - and from the Latin translation his mistake has passed into all the other languages of the world - Max Nomad in The American Mer ury

War Workers Who Ought Here B news from the home front with Stories ab exciting as battle action narratives to Have Medals

Condensed from The Roturian + Morton Ihompson

From newspaper stories about strikes, slowups and shutdowns, you could easily get the idea that our factories are filled vith callous win dodgers whose aim is to do is little is possible for as much is possible. But that s because the right people aren tinews'. Here are some stories from Army and Navy files that you don't see in the papers.

The Johnson M inufacturing Conp my in Scittle makes Diesel engines In early May 1943 they deciched peak war production and on May 30 the plant burned to the ground Before the ishes were cool the companys machinists were working at eight nearby plants where improvised machinery was made wailable to them in odd corners. As fist is they recorditioned a burned machine, a hut was thrown up around it, and these open air machine shops clanged away three shifts a day. The work was done as quickly is if the plant hadn't burned

'If the bombed out workers of China, Russia and Britain can do it, so can we," the workers said, and they delivered There are many such cases of unselfish devotion for every one of greed that makes the neadlines

Have you ever heard, for instance,

of a little outfit called the Illinois Glove Company? In peacetime it had a couple of hundred employes making men's kid gloves A few days after Pearl Hubor the Army sud, Make its some gloves to protect the

Make us some gloves to protect the hands of the men who string barbed-wife baricides

The company had never heard of them. It had no models. But 12 days later the first batch was on its way to the Pacific! Then came orders for linemen's cloves to be sent to Chungking, one finger mittens for our men in the Arctic, and mittens for submittine crews. Delivery was always made on the date specified wait a minute the Navy report says ausually months also id of schedule."

Who did it' Writies es housemads, girls without the slightest experience in this production field

The Richmond Refinery of the Standard Oil Company has what they call a Victory Shift 'Scientists and clerks pipe fitter, stenographers and junitors put in a full day at their regular work, after supper they come back, put on overalls and work three or four hours filling drums with fuel for the armed forces

Not even the Army and Navy knows all the home-front battles quietly waged by solitary civiliansoldiers Kenneth Spangenburgh ran a concentricity gauge in a Buffalo was plant, measuring shell parts for the Navy The blockading snowdrifts of last January marooned many a war worker from his job Spangenburgh usually got a share-the-ride hitch to his work. On the morning of the worst storm Spangenburgh's "ride' didn't show up

"I guess we have to walk it, Sweetic," Spangenburgh told his Sceing Eye dog Together the blind m in and his dog plunged into the storm They made it to the plant Spangenburgh was pleased. He dinever missed a day's work since the war began, and he hadn't spoiled his record

It can be told now that liench warships helped in the Normandy invasion, shelling the coast of their own beloved France They got the shells with which to go into action because some unsung worker in an ordnance plant got the bright idea of a slight adjustment by which American shells ould replace I rench projectiles Navy planes bucked time and the weather to pass the ammunition to the French ships just when the fire of their guns was most needed

About the time our men were wading ashore it Makin, the Navy was telling a builder of tank lighters in Minnesota that an impending operation against the Maishill Islands made it imperative to have an unexpected quantity of additional LCMs in New Orleans — five minutes before right now

The engines were installed while the lighters were being placed aboard a special train But the LCMs were far from complete Volunteer workers stampeded aboard, and a gondola

full of electric welding equipment was coupled on As the long train rolled south, the men worked day and night When they reached New Orleans the last LCM had been finished They drove them off the cars and up the ramp of a ship and then they took the next train

back to start all over again

Then there is the story of Task Force X and a juke box company, the J P Seeburg Corporation of Chicago, Ill converted to making radio devices. For the imminent Mari anas campaign the Navy wanted a brand new radio sadget that would enable our planes to find their way back by night to their carriers. From Washington, an officer got a prame contractor on the phone at 4 a m on June 26 and the contractor burned up the wire to the Seeburg plant. He got the watchman On the Seeburg bulletin board was this sign "Due to the splendid efforts of our employes in completing the Navy contract ahe id of time, a vacation is ordered from June 25 to July 5 "

The Seeburg executives were hastily iwakined 'I he Navy must have 385 units of X equipment at once," the contractor told them

How the hell we gonna get them the foreman of Seeburg's back?" Karlov plant demanded 'It's the first vacation they we had in more than a year They're scattered to the four winds'

But already the plant manager had the phone company chasing down the men And the local radio station promptly started broadcasting the emergency

They got the workers — off trains, off planes and boats, and out of bed

A Navy heutenant was at the factory is they streamed in I he Navy has picked a bad time to need this stuff, he told them. We don't know what it is for All I can say is this A Navy plane is writing to fly it to the Pacific the instant you're through?

There were 6, employes at Secburg's Karlov plant. Every one was at his machine when the lieutenant fin ished. They worled the day through the following day the company was advised that the order must be in creased to 500 units. And the whole order must be finished in eight days. They had just about recovered from the shock of this appulling decree when a message came to double the order to 1000 units. and to finish the job in five days instead of eight

They stood there beside their in ichines and worked substantially 120 hours straight through Wiles brought coffee. They are and slept by their machines I milly the list piece of precision mechanism passed the inspector. The lieutenant tacked a Navy and alongside the vacation notice on the bulletin board "Well done" at said. The devices went aboard the plane the plane roared off into the night.

When I isk I orce X steimed into enciny witers all their planes were equipped with the new device. They flew 3436 sorties. They shot down 484 enemy planes, sank 32 ships and damaged 18 more. When it was over, 45 planes of all that vast arm id a had falled to return— and most of these were lost by enemy action.

What these workers did is going on all over the United States. This is what's back of the miracle of one country keeping Russia going and Include going and China going, in addition to its own forces. These are the real worlers of America.

Cutabury Tile

Two American soldiers standing at the bar in an Inglish publinated an elderly, benevolent looking centleman appin and issof beer at a table in a corner of the room. One of the soldiers studit o his pal. Do you know who that dismined old in in 15? He is the Archbishop of Canterbury.

You receive The Archbishop of Canterbury wouldn't be in a publing positive it is a said the fire soldier. The seen his picture many times, and I know I in right

Ill bet you a pound you ie wrong

The bet was accepted, and the soldiers tunidly approached the table "Excuse us so for intruding but would you mind telling us something. We were wondering if you might be —"

Co to hell and mind your own damin business!' the old gentleman roared

The two soldiers quickly retreated to the bir stunned. After a moment, one said to the other. Isn't that a shame! Now we'll meer know."

Harnessing Black tight"

Condensed from Science Illustrated

+ + + Itailand Manchester

Author of New World of Machines

Ordnance Department, a line of tanks, wet with paint from the spray cans, lumbers into a close-fitting tunnel. When the drivers bring the tanks out of the far end four minutes later, the paint is completely dry. The job is done by infinited axis streaming from scritted batteries of electric bulbs.

This is only one of many new uses of a long neglected portion of the spectrum Infinied rays are delived attemp fruits and vegetables germinating seeds, falling weevals in wheat and fleas on dogs casing pain for arthurts and sinus sufferers. They make it possible to take pictures in the dark or through haze to detect forecrises of paintings and manascripts to spot enemy camouflage. Around scores of war plants invisible fences, of this so-called black light warn infallibly of the approach of thieves and saboteurs.

In 1800, Sir William Herschel passed a beam of sunlight through a prism and placed a thermometer in the various color of the spectrum. He found that the red end of the spectrum was warmer than the violet end, and when he placed the thermometer just beyond the red end, the mercury s of upward. Thus he discovered there were rays too long to

be seen — heat rays, just beyond visible red

Whether heat comes from an electriclight africor andrator, it is composed of infrired rays But rays from different heat sources vary widely in their effect. Those from lindintor, ons flame or electric coil heater have little penetrating quality. The socalled near infrared rays (those back beyond the threshold of visible light) tend to peretrate objects in then path These rays are produced ediciently by electric bulbs with filiments of tungsten or cubon. The l imps look like ordin irv electric bulbs and they do give off a dim hight, but that is a more by product

It is because of their penetrating quality that near infrared waves dry point in a matter of minutes. A coat of paint, no inatter how than, is composed of a vist number of submicroscopic layers. When the painted object is "baked in in oven, the outside layer dries first and for ns a tight film over the still-wet layers underneath, thus greatly retarding the drying time. The infrared rays penetrate all the layers of point multaneously.

In commercial dehydration great quantities of wa'ci must be removed from fruits, vegetables and meats, and the shorter the time of diving, the smaller the loss of vitamin content and flavor. At V anderbilt University, Professor. I. M. Tiller and others have built dehydration ovens lined with batteries of lamps. Here carrots, sweet potatoes, turnip greens, pork and beef are thoroughly dried in five to 30 minutes instead of the many hours needed in steam heated ovens.

An infilted bread baking machine has been invented by Irinklin H Wells of Hackenstek, N J. The lowes move slowly on a conveyor through a lamp lined tunnel which saves about a third of ordinary oventime and is said to bake more uniformly.

Many of the clamps are being used by doctors and even in private homes to replace hot water bottles and electric heating pads because the lamps give better penetration. Unlike ultravioletrays in racedrays do not tan and with reasonable caution there is no danger of burning.

Inc Philadelphia Liansportation Company has found infrared rays of value in Leeping bus engines with in cold weither. Unable to build new Lages for its growing flect because of war restrictions the company dug a row of small pit in an open parking irea and installed lamps in each pit The buses are driven over the pits, and the rays projected upward keep the motors warm between trips. Simi In pits in the floors of private gai ages have been suggested. By the flip of a switch in the house, i min could virin up the engine of his car for an easy start on a cold morning

Antifreeze lamps, strung from over head wires and thermostatically controlled so as to go into operation when the temperature drops dangerously,

have been used in orchards and truck firms. I here it was shed like light, fall directly on stems and leaves and keep the sap flowing. Alfalfa and other forage crops can be direct by artificial means instead of relying on the slow and fickle sun. Here ig an the quickacting informed lamps may find a new field.

Infrared lamps are used to kill larvie in tobacco processing plants, and in endless belt incihod has been perfected for killing weevils in grain and cere ils before packaring. Portable infrared units have been used to delouse soldiers, clothes and blankets without harm to the fabric.

Infrared rays have opened exciting new vist is in photography Pictures are actically taken in the dark. The film used is made sensitive to the long, invisible rivs. I ven a flaticon will emit enough rays to make a picture in a blacked out room. There is a m grequality in landscape pictures taken through a filter which screens out all other rays and capture infrared image. Grass and leaves of trees uppear white is though covered with snow disk skies and soft, deep shadows heighten the dramatic effect Many Hollywood moonlight effects ue mide in bright sunshine with infrared film

Pictures made by infinited rays are also useful in medical diagnosis. As the rays penetrate the skin, subcutaneous networks of veins are brought out. Such red-filter photos have enabled doctors to observe the progress of healing beneath a scab.

Infrared photography has become a stand and tool in scientific crame detection and in testing the genuine ness of documents and paintings. Stains on

garmente, invisible to the naked eye and unrevealed by ordinary photography, stand out sharply when photographicd with film receptive to infrared rays. The hand of the clever faker has been shown up in many altered wills and purported first editions.

In this war infrared his permitted photo reconnaissance men to work at high levels and get phenonienally clear photographs. The long infrared ravs pass freely through the atmos-

pheric hazu

The long rays also have in un canny knack of showing up cannou flage An ordinary photograph of a meadow or a forest may appear quite innocent But in an infrared picture a dark geometric form may leap to the eye, betraying a camouffaced gun emplacement or supply dump 1 his is because the green paint used to simulate foliage comes out dark not white as natural foliage looks. There has been feverish search for special paints which will match surrounding teriain even under the prying eyes of the infrared caincra. But this double marching job complicates tremendously the 10h of the camouffcui

Invisible beams of infi ired are used for the protection of scores of war

plants throughout the country. The beams can be made to turn corners by directing them at inconspicuous mirrors, so that two of the beams can completely encircle the grounds of a huge factory. If one of the rays is broken by an intruder, an alaim sounds, and guards rush to the indicated spot. One aircraft plant covering several square miles is protected by 28 cleverly concealed beams of black light which interlace at various elevations and angles.

In one test, black light from two ordinary 20 watt light bulbs transmitted a signal to an electric eye four miles—away. Engineers say that the only limit to the effective length of these beams is set by the curvature of the globe, since like visible light, they travel in straight lines.

All these amazing uses of the light that can table seen came about be cause curious scientists explored a new portion of the great electromagnetic spectrum—a nibbon of vast length of which visible light is only a tiny sliver. Xriv, radio and tele vision got their start from similar explorations. And plenty of uncharted fields await the adventurers of temotic.

That's the Man!

Till I BI igent in a western state was hot on the trail of a fugitive. When word came that he was heading for a small town, the G man called the local sheriff. You send me a pitcher of that guy and I'll git him good," the sheriff promised. I hat night the Government agent mailed the sheriff not one but a dozen pictures of the wanted man—profiles, fullface, standing, sitting, and in various costumes. Within 24 hours he received an electrifying telephone call.

"We got 11 of those crooks locked up already," the sheriff boasted "And I guarantee to jug the last one before morning!" — Contributed by Fulton Oursler

Duccting traffic under fire rounding up imbush gangs of the cnemy and keeping order in conquered territory is no soft job

The MP's Lot Is Not a Happy One

ondensed from Iruc

Frederic Sondern 71

🖪 ALLING Sugar Dog'squiwled th jeeps ridio 'Six German prisoners escaped from cump, he ided for Phis on the Chil tres road in stolen truck. They are heivily timed - And Sugar Dog 🖝 the Senior Duty Officer of U.S. Military Police in the French capital round off with his MPs on the eleventh call within a few hours. It

had been a busy night already

With drawn guns we had raided a black market cellar stacked with cans of American gasoline and cases of ci_irettes which should have been it the front. Then we had wided into a Montinatre cafe to rescue some CIs it icked by Pinsi in hoodlums with knives and broken bottles. Another cill had sent us to the other side of town where a GI had been stabbed ın a holdun

Now we were rounding a coincr on two wheels after the escaped Germans Ahead of us an MP riot car had intercepted them and tommy guns were chattering is we screeched to a halt The prisoners were already coming out of doorways where they had taken cover, with their hands up "A routine evening 's aid Sugar Deg "but it'll give you an idea of what we have to do — and all over the globe

This world wile police force is managed from an office in Washington by Major General Archer I I cich -- shrewd, soft spoken Provost Mushil General Between New York Colorne and Chungking from San It incisco to Melbo une ind Manila, the 8000 officers and 200 000 enlisted nien of the Corps of Military Police protect every American communic itions luc and battle front

I o many (Is behind the front, the MP is in officious busybody whe isks for passes, objects to unbuttoried blouses interferes with imusement and othe wise burdens a soldier's life generally But men in the line have a different view of him MPs are in the spearhe id of every advance, they locate roads over which troops move, they direct traffic, and take over prisoncis. They guard supply lines behind the front, and have the difficult task of making a foreign population obey a whole set of new laws. On them, the policing irm of our Mili tary Government will depend to a large degree the success of our regime in the American held part of conquered Germany

Divisional MPs — combat policemen — were with the first issault waves ashore on the Normandy beaches, handling the huge volume of traffic landed from the invasion fleet. They had prefabricated sign-posts, and maps showing routes, head-quarters and dumps. There were surprisingly few snarls, even on the narrow side roads of the Cherbourg Peninsula Since then experience has perfected their technique.

Bridges and crossroads, the main bottlenecks of an advance and therefore the principal MP traffic posts, are always priority targets for the enemy The famous Remagen bridge across the Rhine was under German fire for days Every five minutes a barrage of shells would crash into its approaches But the MPs stood like statues, keeping the long line of trucks moving across the bridge with vitally important reinforcements and supplies "Keep coming Keep coming," they bellowed to the drivers above the din As on, MP fell another would take his place. They figured out a way of spacing the convoys noving across the 1200 foot hotspot so that they would avoid the worst of the precisely timed Nazi fire I hat firm. bull-voiced and heartening 'All right, come on" will be remembered by many GIs for a long time have been many posts like that

Specially selected and trained, the MPs are taught to be models of soldierliness in discipline, dress and carriage—an example to the troops. There are many professional police among them Besides basic combat training, they are given stiff courses in traffic control, riot techniques, town patrolling, street fighting and

booby traps They frequently get into the battle itself Near Brest last summer, 50 MPs of the Sixth Ar mored Division fought it out with 1200 Germans who tried to rescue a valuable prisoner — Lieutenant General Spang, commander of the 266th German Infantry Division "All hell broke loose," as one MP understated it, but the lightly armed policement stood firm against tanks, mortars and artillery for sever il hours until rein forcements could be brought up. The General was not rescued.

Handling German prisoners is al ways a dangerous assignment. A group of Nazis will approach an American position with raised hands then is unsuspecting MPs leave cover to take over, the Germans fall flat and a machine oun opens up Nazi officers wear small pistols hidden in their uniforms. They carry miniature, egg sized grenades which can be thrown at very short range. These are concealed in their hands, clasped behind their necks in surrender.

On every road leading into the Reich the MPs have posted a sign "You are entering Germany This is enemy country heep alert' The experience of our troops indicates that the signs will stay there for a long time. One of the nastiest of the Nazi in novations is the small "ambush squad," operating immediately behind our lines, sometimes in civilian clothes, often in American uniforms, with captured tanks and cars Generally one of the squad speaks fluent English

A favorite trap is to stall a farm cart at a point where traffic must move slowly The unsuspecting GI driving by sees what appears to be a harmless group of farmers wringing their hands over a spilled load of potatoes. If he stops to help a machine gun hidden in a nearby hedge starts chattering. There are dozens of viritions. One is the ambuscade airanged by turning a signpost to point traffic into a lonely side road where mines are planted and guns writing Another trap is a wire strung across the road, if hit it any speed it can knock in the windshield of a jeep and deceptive every man in it.

The first task of the Provost Marshal in a conquered city like Archen or Cologne is to round up all key members of the Hitler Youth, the I abor I rout, and other party organizations. The MPs work with the Counter Intelligence Corps a highly efficient outfit which combats German espionage and sabotage behind our lines CIC men have lists of the leading local Nazis, and unless these people are able to evacuate them selves with their retreating army, they are not hard to find and arrest

More difficult to uncurth are the underground operatives which the Getapo leaves behind Lquipped with filse papers, they organize espionige irrange for the hiding of am bush squads and escaped prisoners and spread rumors to create all possible friction between the population and our troops. They have a strong grip on the people To strengthen this hold, Himmler has revived the te ror of the Fehnigericht, a grim or-Sanization originating in the Middle Ages and reinstituted after the last war for the systematic assassination of German democratic leaders modern Fehmgericht is a Gestapo or ganization and its executioners are

Party gunmen 'Anv official obeying enciny order," announced Himmler, "is cert iin to be found presently slumped cold and stiff over his writing table.' This is not regulded as an empty threat

It has been hard for the MPs to make the naturally friendly GI obey the strict order against fraternizing with Hear Schmidt and Frau Schultz, who produce a bottle of schnapps and tell how they hated Hitler all the time. These are often the same people however that the MPs find nightly signaling from church steeple and scrawling Puty slogans and threats on the walls of houses.

As the combat MPs foll forward with their units, the Militiry Police of the Communications Zone move in and et up the primanent police administration. Their officers are picked for experience and sober judgment, and they have been trained in special courses at the Provost Marshal School Experts from leading universities have trught them German lineuige liw, local conditions and peculiarities, the mechanics of the Nazi police system and government They have also learned undercover police work, the tricks of observing and following suspects, wire tapping and other techniques to be it the Nazis it their own game

The permanent Provosts and their MPs in Cologne, Frinkfurt and other German cities will face probably the greatest military police job of all time. The Military Government officers, with whom the Provost Maishals work closely have directions to supplant all pro-Nazi officials. Experience has already shown that to be impossible. Capable men without Party

records are hard to find Most of them are dead G-5 will have to leave a large number of doubtful people in positions of considerable responsibility, and trust to the vigilance of the MPs to keep them in order

Besides the Gestapo and its underground cells, whose future strength is yet to be gauged, they will have to deal with a hungry, bitter, turbulent population accustomed to violence and in political chaos. It will be the American military policeman, pounding his lonely and difficult beat, who will have to handle this situation.

Fortunately, a good many of the MPs who will serve in Germany had valuable experience in I rance. I here Major General Milton A. Reckard — Provost. Marshal of the European Theater of Operations—had on his hands a police job of huge proportions. With the French police system in ruins, the French underworld descended on American supply lines for gasoline, rations and cigarettes. I hey offered GIs 100 francs (\$2) for a package of cigarettes and 500 francs (\$10) for a five-gallon can of gas

When this ource dried up shady Parisian characters picketed the Red Ball Highway to the front, offering the track drivers funtastic sums and tempting entertainment for loads. I hen some criminal elements in our own army saw the chance of easy pickings and began organizing on a large scale. One gang, complete with truck, deserted its transport outfit, bought civilian clothes, and lived in style with their French friends Twice a week they put on their uniforms, an' with their truck joined a convoy loading gas They filled up with five-gallon cans on a forged

requisition, then made deliveries to a regular circuit of customers — and netted about \$20,000 in one month Soon whole freight cars were being cut out of U S Army trains in French yards There were dozens of such gangs Out of one convoy of 150 trucks bound for General Pattons Third Army, desperately in need of gas only 40 arrived fully loaded

Colonel E G Buhimaster, Provost Marshal of the Paris Area, a lawyer in civil life, and the chief of his Crimi nal Investigation Department, Cap tur Thomas Gueders, formerly a suburban policeman, organized then handful of MPs and agents into a typical American police system Prowl cars and raiding squad trucks were controlled from a central radio sta tion Systematic raiding of entert un ment areas turned up the American deserters who were selling the goods Colonel Buhrmaster got over a hundied court-martial convictions, and the Paris black market in American goods was broken — within a few months of its beginning

"It is unazing," a veteran French sous-prefet reductantly told me "But your military police have attained greater respect among our or minals than we ever had, even before the war"

The Corps of Military Police has come a long way since the last war when untrained MPs were chosen for their brawn. Despite its importance however, it has remained a stepchild and promotions have been slow. But in France MPs have already become the symbol of American decency and enjoy enormous prestige. In Germany they will be quite a stumbling block for the enemy's plans.

New Proneer of the Land

Cosmas Blubaugh's neighbors said he was crazy, but he restored a worn out farm to such rich productivity that its fame has spread far and wide

condensed from St Louis Post Dispatch

I ours Bromfield

beautiful furn in America You see it best from the top of the hill where the whole furn lies spie id out in an amphitheater of plenty, with the contoured fields in semicircular strips dyed various greens—forest on the crest, then a strip of orchard, then rows of black rasp-berries, and alternating strips of light-green corn and emerald-green altitles

At the bottom of the bowl, in a grove of black wilnut trees, sit the neat white houses, the big barn, the apple storage house and the corn drier. The big spring pond, blue is the brilliant Ohio sky above it full of bass and bluesills, spreads its beauty in the very doory and and near it graze fat cattle and hogs. Children play under the trees neighbors and freends from nearby villages work in the fields and orchards.

All around is a country of abandoned or run-down farms, houses and barns fallen, the fields a wilderness of weeds. Underbrush and forest seedlings are reclaiming the once rich land. This country is the victim of bad and greedy farming. In the midst of it the Blubaugh place is like a jewel in a tarnished setting.

A big put of the beauty of this farm is Cosm is Blub iugh himself, in his blue denim pants, checked shirt and old hat - 1 slight, spry min with graying hair, a sunbarned wrinkled free and a pair of the brightest blue eyes I have ever seen. There is a dignity in the small, wiry figure which makes him seem taller and more impressive than his size. That is because he is his own boss in the midst of a security is nearly absolute is is to be found on this earth. He has brought employment to the people working there about him. He has turned a fum which was once a liability into a productive asset. All over Ohio he is known is one of the state's good citizens. The state university has conferred upon him the title of Master I armer

Blub high is as much a pioneer as his grandfather who, long ago helped clear these hills. There are farms in Know County which since Indian times have belonged only to Blub highs. One of them now abandoned, lies just over the hill. Sometimes Cosmas will drive you over the long curving road to see the sick fields and the wrecked buildings. That was the way Cosmas' farm looked a little

more than 20 years ago when he left the city to return to his own

county

On the farm where Cosmas was born the buildings are in pictry good condition, but the hilly fields have been allowed to go back to grass and hay By the time Cosmas was 20 years old it was clear to him that the home place could no longer provide a good living for a whole family. It was like that all over the county. The young boys were going away to the towns and cities.

So Cosin is married and took his young wife to Akron. He worked for a while at making rubber tires for buggies, then went to selling insurance. He worked hard and saved his mones, and there been to grow in his mind a dream of returning to the wild open beauty of the hill country.

In 1924 (osn as found a worn-out, ab indoned 140-act firm and bought it on time with part of his savings No one had lived on the place for 20 years. The burn needed repuis and the house had long since fallen down During the first writer and spring the family lived in a sagging shack on a neighboring abandoned farm while Cosm is repaired the barn and laid the foundation for a new house When wirm weather came his wife rebelled She said she would rather sleep in the barn on mattresses stuffed with fresh clein wheat straw than stay longer in that wretched shack And so while the house was being built with lumber cut from their woods, the family slept in the ban Jo the children the experience was like playing "pioneers" They didn't understand until yours later that they actually uere pioneers on the frontiers of a new wilderness. The first years were hard going The soil was miserably poor in min erals, and in humus — that residue of decayed and decaying organic material without which all soil is dead soil. Cosm is spent some of his precious cash on fertilizers, mostly phosphates. The crops were miserable. The witer supply which, within his memory, had been excellent, both in springs and wells, no longer field up through the summer. There were

ilways troubles

Most discouraging of all was the mockery of neighbors. Most of them were past middle age, for the voung ones had long since gone off to the city Many of their furns were very near the end. They told Cosmas he was cray to believe he could build back that worn-out I um and make it pay But Cosmas was learning from his land. He said. I was feeling my way but I did know enough to pile on that soil every scrap of manuae and trish and litter I could get Chemical fertilizer helped but it would have done no good if there was ne good rotten humus in the soil. We hauled old straw and spoil d hay and corn fodde from neighbors firms and put it on our land A big coin sheller in Dinville gave us 5000 bushels of corncobs. We had a big studust pile in the woods Everypody sud suwdust would poison the ground, but we used it to mulch the tices in our new orchard. Pretty soon all that stuff plowed into the fields beg in to pay dividends"

Cosm is on his own had hit on the system of conserving soil and water that has made such striking progress in the past five years — building

afresh the topsoil which nature needed hundreds of thousands of years to create, and which we have destroyed at an appalling rate. By returning the lifegiving humus to the land, man can now build an inch of topsoil a year.

"But I found there still wasn't enough stuff in the soil to stop the hillsides from washing awiy, sud So one day he made a trip to the U.S. Soil Conservation station some 40 miles away. There he saw hillsides planted on the contour in alternate strips of row crops and haysod so that even if soil and water broke away on the cultivated strips it was crught by the sod strips and the water seeped into the ground instead of running off. He saw trish firming, which chops manufe and rubbish into the soil and makes it porous is blotting paper. He saw wide shallow ditches running on contour around hills to impound inv run-off water

With the help of his boys and workers Cosm is remade the whole pattern of his farm. The old square fields give way to strips and contours. There was no more run off water carrying off each year the tons of humus and topsoil he had worked so hard to create from then on the revolution in that worn-out farm went ahead two or three times as fast.

In a little less than ten years, coin yields leaped from 15 bushels per acre to 100 bushels wheat from 18 to 35 bushels Another miraculous thing happened Springs which had nearly dried up began to flow again as they had done when the first proneers cut down the primeval for-

est The wells, which had dried up during his first years on the place, yielded an inexhaustible flow of water. Ihe two ponds were full of water, even last summer during the worst drought. Ohio had known in 50 years. The water trapped on the hillsides went into the ground and came out again in clear cold springs instead of running off to the Gulf of Mexico, carrying with it tons of precious topsoil.

The orchard flourished and gradually the fain began to provide a good income and a good life, not only for Cosmas Blubaugh but for two sons and their wives, a daughter and her husband, and five grandchildren Another house was built and improvements made on the first house so that today the women on the place have every convenience of a city apartment

Gradually the story of the reclaiming of that old farm from wilderness to productivity special through all Ohio and neighboring states. People came to see it from long distances. Once 500 experts and notables visited it on a laboratory tour of the I riends of the I and * People came from neighboring farms and villages in the evening to swim and fish in the spring ponds.

I his year the original investment of \$,800 ar savings, plus hard work, produced from cattle, hogs, wheat, hybrid seed corn, fruit and forage seeds a gross income of \$20,000 divided among Blub rugh and his children and grandchildren Recently the family has acquired an adjoining farm of 160 acres. The \$20,000 is

^{*}See Friends of the Land The Reader's Digest January 44

only part of the story, for with it has been the best of diets, good and spacious living in one of the most beautiful spots on earth

What Cosm is Blubaugh has done is no miracle. It was accomplished by brains, hard work, and willingness to learn. He has done a great job and already has taught countless others how to do it. He stands on his own feet, secure and economically independent as every American should be. He has a great pride of achievement and that human dignity which is the greatest reward democracy can give. He is one of the New Pioneers, so badly needed to restore our agriculture and husband our precious natural resources.

There are in the armed services thousands of young men who are hungry for land and economic in .dependence and security and the dignity which comes with all those things There is no more free, rich virgin land to give them, and the naturally rich land, if for sale at all, commends prohibitive prices But scattered from one end of this country to the other are thousands of firms in need of sidy iging, farms like the one Blub ingh brought back to A score or more of agencies, state and federal, will give advice and information and even physical and to help do the job of restora ion

What we need is a race of New Pioneers like Cosmas Blub high

Operatic Medley

IN THE dazzling white armor of I obengein. I mustz Melchior once sang his sad farewell to I had moving step by step with the surging music toward the swan boat which would carry him away. But something happened off stage, and the mechanics pulled the swan into the wings before Melchior could step into it. I mishing his son, and a softo core plainly audible in the fifth row, he asked. What time does the next swan leave?

Mission Beyond Darkness

Condensed from a forthcoming book by
Lieutenant Commander J Bryan III,
USNR, and Philip Reed

In simple, unforgettible human detail, here is the story of a few hours in the lives of 64 brave young Americans members of the carrier Lexington's Air Group 16 No other book his so vividly described what it is like to be in one of those narrow lonely cockpits, winging out over the vast Pacific to strike at the Japanese, and back again through danger and darkness to that little sliver of home which is a carrier flight deck. This is a book with heroes but no heroics, a book which tells with deep honesty what these fliers felt and said, how their superb training and tough wills brought them through when they were confused and afraid and in despair and weary beyond mortal endurance

The narrative covers part of the first Battle of the Philippines on June 19, 1944, when United States Navy planes from Task Force 58 attacked a Japanese fleet They sank one carrier and four tankers, probably sank another carrier, another tanker and a destroyer, and damaged several other ships Our losses were 96 planes and 49 men

Air Group 16, based on the USS Lexington, was typical of the dozen or so groups that took part in the attack. Thirty four of its planes took off that afternoon, 11 single seater Hellcat fighters, seven

1

Avenger torpedo planes with crews of three, 16 Dauntless dive bombers with crews of two The average age of the crews was just over 23 years

This account, say the authors, "is derived wholly from narratives by the survivors, from statements by officers and men of the *Lexington*, and from the authors witness No incident has been fabricated No word or thought or action has been ascribed to anyone without his own authority

Twis June 19 1944, and these were the list hours of the list div of the hunt. I veryone in Tisk Force 58 knew it. Somewhere over the western horizon its scout planes were searching the Philippine Sea for a fugitive Japanese fleet. On the Halbinge of the USS Lexington, Vice Admir il. Mare A. Mitscher commander of the Lisk Lorce wated for their report. Around him were his other carriers, their decks packed with planes waiting to attack but darkness would fall in four hours. And tomorrow would be too late.

Mitscher setaff guthered about the radio, filtering its gubble for the words that would fire them into action, finally heard its sy, I see em!

Mitscher quetly ordered Get

In the ridio shick two decks below monitors were typing out every word that came through their carphones. In to the west, a scout pilot, almost at the extreme end of his scarch sector, had noticed strange dots and ripples in the sun's blinding path. For all his dazzled eves could tell the dots were only small clouds or cloud shadows. He pointed them out to his crew. Their eyes were sharper. The radioman reached for his key. In emy force sighted. Position—

The transcription was taken to the Lexington's bridge and spread on the chart table. The navigator measured distances and then wrote a figure on a slip of paper. Mitscher asked, 'Well, ean we make it'

In a moment, none of the staff officers answered. They were think in a of the same things, the savage Japanes defens the long flight home areas in empty occur, with exhausted pilots watching the needles on their fuel gauges sink toward the I that me untare a shall inding in

the blief water and the dangerous meht landings, in the dark, on the carriers decks

We can make it 'said one, at last but its some to be tight'

Muscher give the order fumly

His decision went first to his superior, Adm 11 Raymond Spruance, communder of the Lifth Lleet, on his flagship nearby. I wo minutes later teletypes began to stutter behind illuminated screens in the Lexington's ready rooms, in ready rooms on the Interprise and Princeton, the Bunker Hill and Hornet, the Wasp and other carriers

The pilots looked up from their imagazines and accy-deucey games Since morning their chartboards had

been filled in with data for the flight weather information, time of sunset, recognition signals, etc. The only item missing was the one that now tripped across the series in the enemy's position, course and speed.

In the ready room of the Lex ngton's fighter pilots. Sy Seybert found that the position fell outside the perimeter of his navigatine where He peneded a dot on the marein of the board and stated at it incredulously. I we of to fly out to her?

Check, brother they told him We've got to fly out to there?

The pilot begin to bucklon then thight gear. When the squawk box usped 'Pilots, man your planes! they picked up their helinets chart boards and the note pilots that clamped to their knees, and trooped up to the flight deck quietly. There was none of the usual jostling and kidding I veryone knew that this mission offered nothing to joke about

Meanwhile, the scout pilot who I ad spotted the enemy fleet was dodging in and out of clouds, sending idditional reports of what he saw blightly south of him, another scout pilot was also reporting, and the

TBS (Talk Between Ships) phone announced

'There are three groups of enemy ships an one group is a large entirer, two or three heavy cruisers and eight destroyers. Len or it, miles southeast of this is a second group consisting mainly of tankers and their escorts. The third and largest group, we do the other two consists or carriers, buttleships and a large number of light and heavy cruiters and destroyers. The primary objective is the carriers.

I from the *Lexington*'s flight control bridge came the order. Start engines!

The engines caught quickly and ricleted to full power with halos of pil vipor stremm from the propeller tip. The in blast glided the deck crews dunctices to their podies Men in the cityalks shielded their eves and cars. The faunching signal officer took his position at the star board ving up of the first Hellert tighter in line. Clu tered behind the fighters were the torpedo bomber Avengers behind them the divebombing Duntlesses The wind was moving across the starboard bow Pre ently it blew down the deck, and the Lexington steaded on her course

The bull horn roused "Launch planes" and the Launching officer be, an to whirl a small checkered flag

The first Helle it wa Henry Kosciusko's As the checkered flag whirled faster, he gunned his engine until the tail quivered and the tires on the locked wheels bulged. Then the launching officers irin dropped, pointing toward the bow, and the fighter's wing tip sliced over his head. Kosciusko gathered speed leaped into the iri and swerved to starboard, so that his slip stream would not but fer the plane behind him.

Sy Scybert led the next division of fighters. As he wated for the flag to drop his mouth seemed strangely dry. He patted his pocket for reasonance. They were both there a silver dollar, the first he had ever carned and a cheap rusty lighter. They had gone over the side with him when the old Wash was sunk in the Coral Sea, and he never hew without them.

When the 11 Heller's had gone Iom Bronn tool off in the first of the Avengers. Among those who followed was Kent Cushman, who carried in his pocket in English suspence—the suspence—this wife had worn in her shoe where they were married.

Clint Swinson was next. As he traced up to the lane he lanced down at his ring. His uncle had curved it for him, and Swinson always made sure that it was strucht on his finger before a take off or a landin.

Norman Sterrie's was the seventh and last Avenger. He was loopedo 16's skapper the most experienced pilot in the squadron and one of he most during. At the Battle of the Coral Scaline had dropped his torpedo nto a Japanese carrier, then turned back and made mother run to divert the fire from a squadron mate. For that, they gave him a gold star to put on the Navy Cross he had already won

Behind the torpedo planes came Ralph Weymouth in the first of the Dauntless dive bombers. As a lieutenant commander, he was senior officer present and therefore leader of the whole attack by the *I eximpton*. An Group. The leader of the second division was Dorald Kinkpatrick. On his 41 previous aftacks, his plane had been shot up 18 times and shot down once.

As each place rushed past, the crews in the citwalks cheered and ive it the thumbs up sign. Gunner Harry Kelly saw them: Thumbs up hell! he thought. What they means, So lone sucker!

Tor once Admiral Mitscher had not writched the take off. He and his staff were debating whether to launch the second stake

The afternoon before he had been on the Hall Bridge vien the fighters returned from intercepting a Japanese in attict. I issuing toward the bowne en of them had grinned at him and had put up fingers to show how many enemy planes he had shot do yn one two four even six.

Mitscher had said then, You know I in proud to be in American a Only the finest country on earth could produce boys life thise

Now he trought of the strike he had just functed and the night landing the id of it—in orderly that much take a heavier toll than the at tack itself. He thought of the second strike, and the double toll

No! he said 'Hold that second stake I can t sacrifice any more of those boys lives, not even for the Japanese fleet. Our punch tonight ought to do the job, and well get the rest in the morning"

I Bombing 16 s icidy room, after the take off one of the pilots scheduled for that second strike tuned in Radio Tokyo in time to hear a news broade ist about yesterd as a ir battle.

Turther details of our great variative west of the Marianis, Tokyo's amouncer was swing reveal that two American curies have been suit along with a battleship of the 5 uth Dilota class, and two cruisers Several more curiers were damaged, and at test 300 of their curier planes were destroyed

The listeners hooted. Not only had the fighters shot down more than too Japanese planes at a cost of only 17 of their own but not a single ship in the task force had been suck or even scriously damaged.

The Japanese fleet had been prowl ing north for nearly a weel before that battle of vesterday June 13 1914 Nivy pitrol planes had seen it weigh anchor from Lawi Lawi in the southern Philippines and had tracked it until a few nights before, when it had been lost. In Lish Loree 56. Admical Spruance and Admiral Mitscher commanded in umida powerful enough to confront almost the entire Imperial Navy If they could engage this one fleet, the might advince Japan's surrender by many months But on June 13, American soldiers and Marines had begun to invide Supin, and Tisk Lorce 58's primary mission was to cover the amphibious force

As long as the exact position of the Japanese fleet remained unknown, Spruance and Mitscher could not afford to seud off on a blind search, and thereby expose Saipan to attack

by carrier planes or bombardment by surface forces

But since the in battle of June 18, the Jap curies presumably had less than 100 plants left. Sup in no longer stood in danger of an attack and I isk Torce 58's radius of search could be safely extended.

The Japanese fleet had been reported heading for a point close to the maximum combat range of the Lexington's dive bombers and to pedo bombers so the pilots knew that the fleet was only one of the enemies lying in wait that afternoon the other was exhaustion of their fuel

They were half in hour on their way when then group leader Weymouth heard a scout plane call ng

Ive got a corrected position for you. The new Jap position was 70 miles further than before! Weymouch altered course and started to climb gently musing fuel. Cookie Cleland had been waiting for that move He was the squadron's eager beaver? It was impatient until they eached bombing altitude Before the take off, he tolet his guinner, Bill Hisler, It's our chance to show em what a real dive bomber can do. This is the job the Daunt's was made for a fleet action. Watch our smoke!

Now there was something else to watch the fuel gauge Cleland was flying one of the squadron's oldest planes. Its emburetor had always been greedy, today it was draining the tanks worse than ever Cleland didn't tell. Weymouth, who would certainly order him back. He looked at the gauge and hummed "As I was sittin in O Reilly's bar and looked at the gauge again."

The glare of the setting sun was deceptive Twice pilots reported ships ahead, and even catalogued them—so many carriers, so many battle-ships, so many cruisers and destroyers—but both times they turned into small clouds low on the water After that, the ridio was silent until a voice exclaimed "Look at this oil slick! It was a pilot from one of the groups which had taken off a few minutes ahead of Group 16 Presently another voice asked, "Is this the force to it tack? My gas is half gone!

Weymouth sucsed that they had sighted the tinler force. He was sons for those planes — half their gis already gone the attack still to be made, and then the long flight home into a 14 knot wind. He was sons for them but proud at the same time. I have guys knote that the score is a lot of 'emknow they are going into the dual tonight, but still they reset to make that attack!'

Then he saw the oil shell himself a bronze strip laid across the oce in It wasn't the sort of raged patch left by a sunken ship at was a trail. Furdently the enemy waiships had been refueling there when something allumed them and they had torn loose while the hoses still sushed. The tankers had left this trail but it would lead. Weymouth straight to the waiships

In a few minutes, a fighter p lot reported, 'Ships ilicad!' Weymouth glanced at his clock 6.23. At 6.35, he saw the tinkers. They made a beautiful target, and he was tempted to hit them, but his intelligence officer had said. 'Your primary objective is the carriers.'

He pressed on In front of him loomed a huge, anvil topped cumulus cloud At 6 45 he altered course to pass under its overhang Presently at awed voice came over the air "Look like we found the whole damn' Ju navy!"

The Jap ships were in three groups. The main group, ten miles ahead consisted of three carriers, two battleships, two to feur he avy cruisers, and four to six light cruisers and destroyers. The second group, 12 miles to the north, consisted of a Shokal u-cl is carrier three to four heavy cruisers and five or six destroyers.

This northern group was already under attack. Dupe Dupriee saw several bombs hit the Shokaku and leave her smoking. When Duritless to pedo bombers from the Interprise and Hornet began making runs on the leave cruisers. Hink Moyers of Au Croup. 16 thought. They can't get through that fire It's impossible!

45 Weymouth and his bombers ap $oldsymbol{\Lambda}$ proached at was dusk below them and the Jap ships seemed to be ablize so incessintly did the cun muzzle flash and twinkle. In the sun light above the bursts formed a solid roof Thermite and phosphorous shell flung out streamers. The heavy cruis cis were firing their main batteries white hot particles crupted from then shells is if 'iom a volcano. The vol ume was terrifying --- worse than any thing the Americans had ever met but the colors were more terrifying green, yellow and black plue, white pink and purple. The planes bucked under the concussions, but none went down Weymouth presed on He saw his target now, the southernmost currier, and started the slow turn to port that would bring him in from the west

He gave the right-crossover signal - right hand up, fist elenched — and waggled his wings for 'execute' 'section leaders repeated the signal down the line Weymouth took a last look below. The carriers had been heading north. Now they turned we t, and a westerly course would cancel the easterly wind. He was at 10 500 feet when he pushed over in his dive the other. Dauntlesses behind him. The time was 7 04 two hours and 28 minutes if er the last plane had taken off from the Lexington.

Weymouth's dive begin in sunlight and ended in twilight. Nine thous and feet spun off his altimeter before he dropped his bomb another thous and before he broke his dive. All the way down a rhythm was drumming in his head. Cotta get a hit! — Cotta get a hit! — Cotta get a hit! — Ind he held his sights on the target until a hit was certain. His guinner Mel llinney saw it a spout of black smoke from the deck, close be side the superstructure.

As Harry Harrison pushed over a thermite shell burst below him spraying its white hot particles. Involuntarily he shaink down in his seat. He thought If not get through this - you can t but if you do - you're going to be the best little boy in the could. So much snoke hung over the carrier that he could see only her outline. Three splashes were close about He self a surge of price in Bombing 16 eight bombs, and only three misses! He dropped his own bomb and pulled on the stick.

Presently he called his gunner, Ray Barrett 'How d we do?'

'Near iniss, Barrett said "About 40 feet off the starboard quarter' Harrison's disappointment lasted only an instant. Never mind The five hits before us made a lot of those bastards jump over the side, and I bet I got some of cm!

By now the anti-uter it had the range and deflection cold. A 20 mm shell hit Cleland's right tank. A 40-num hit his starboard wing, ripping a two foot hole. Another 40 tore out the floor of the after cockpit. His gunner Bill Hisler screamed, "My God! I we got the Purple Heart and no left leg! But he wasn't huit. The hit had only made his leg numb Cleland kicked the plane back or line and planted his bomb ten feet forward of the stern.

Almost before invoice realized it the attack was over. Now they faced the long flight home the battle against darkness and empty gas tanks.

At the a bombing attach it is stand and doctime for planes to rendezvous on their homeward course. We smouth had two choices. The direct course to the rendezvous would bring his formation under the fire of at least two destroyers and two cruisers. A round about course would use extraças that might mean the difference between getting his planes home and having their engines die. He chose the direct course and the enemy's curs.

Almost it once he regretted it Shells of every caliber sere uned towind them and burst around them, from 20 min to the cruisers' eightinch tracers, shi ipnel, solid shot, and the thermite shells that eat up metal like a fiery cancer

I to n Weymouth's rear seat, Me Elliney sprayed tracers over the deck of the nearer destroyer until one of the cruiser opened up with eight-inch incendiaries, and red-hot particles groped for his cockpit. He huddled behind his armor plate, huddering and praying. The other cruiser was firing its main battery into the water, hoping to knock down a plane with the spouts.

Cook and Conklin had hardly slid into place behind Weymouth's section when a heavy cruiser, two light cruisers, and two destrovers fired on them. Two shells burst close astern A fragment punctured Conklin's emopy and rapped as must his helinet. He subbed his fingers over his head. Wonder if I'm dead and don't know it? Nuts! It couldn't be as easy as that!

Don Reichel had pulled out alone between two destroyers which turned as he approached so that they could give him broadsides all the way. They had brack ted him with waterspouts in front and buists behind that made the tail of his plane buck and shudder. He could hardly believe that some of the spouts reached up to his altitude, between two and three hundred feet.

Several Zekes peeled off on Shields and Sedell. I om Sedell had roomed with Jay Shields for two and a half years, ever since they had enlisted. As a Zeke darted at Shields, Sedell saw him stiffen back in his cockpit. His goggles flew off, and he looked as if he were sere iming. I hen he slumped over the stick, pushing it forward, and the plane nosed down. His cunner, Leo LeM by kept firing until the splash rose around him.

Thirty planes from Air Group 16 had reached the target area. Of these, three had been shot down. The surviving planes started their long flight home. The sun had set. Ahead of

them, the sky would soon be dark, for tropic nights fall swiftly Thecrews began to hear their own thoughts paing a solitary cell Will the fuel last? Will it? Will it?

In normal flight at economic il cruising speed, a smooth-running Avenger or Dauntless could make the distance But most of these planes had been in combat, off and on, for ten months. Their engines were old and Eas greedy. Nor was it a normal flight First there had been the climb to more than 10,000 feet with a bomb ord I hen came the full-power jinking from the pull out to the rendezvous while running the gint let of antianeraft fire. Full power burns twice as much fuel as cruising speed. Now they were not only buck ing a 14 knot head wind, but when they reached the task force there would be an indeterminate period of cueling - again under full power to meet the diag of lowered flaps and landing gene - before they could go aboard their ships

Figh pilots calculations were we using identical grooves 300 miles to go ground speed 1.0 that s 21 hours allow half an hour more, maybe 45 min tess to find the I ex and get into the circle and take my turn coming abound It's going to be close

It was already close for some of the pilots from other groups, lost, and their fuel dwindling Panicky or plaintive or defiant, their voices came over the air

'I ve got ten minutes of grs lett, Joe Think I ll put her down in the water now So long, Joe!'

'This is 46 Where am I, please? Somebody tell me where I am!"

The voices kept on "Can't make it,

Kul -

(cllows! I'm going in Look for me tomorrow if you get a chance, will you?

Five of them were overheard discussing their situation is matter of fietly as if they were holding a business conference. Should each of their leep going to his last drop, or should they ditch together right then? They agreed to abuck by majority opinion and took a formal vote. It was four to one for ditching

That's that! said the chairman OK Here we go!

Soon a proud voice spoke from mother squadion. I we got 60 gillons!

A cruck voice—You expect to get home on 60 g illons?

There was no answer But a pilot still in the air saw three unidentified planes glide down. A moment later there were three dim splashes.

Weymouth heard a cilm voice sw. Ive got five gallons left. I m getting ready for a water landing

Another calm voice. Well I ve got 17 but I might is well go in with you.

The first voic Thanks pal Much obliged Ready?

Weymouth shut off his ridio. He felt is if his life were being supped in it.

Now physical fatigue and nervous strain beg in to take toll in a form that few of the men had ever experienced vertigo. Darkness had anut down completely. There was no visible horizon, and no moon. Low clouds occasionally obscured the stars. The only reference points were the small lights of the planes themselves, turned on to avoid collisions, and the

pattern of these was unstable Some blinked on and off some fell below and belind, as a pilot switched from an empty tank, some lights were missing altogether

Kirkpatrick's tail light was gone, and his port light was the only guide his wingin in Conklin had. There were moments when Conklin couldn't tell whether it was jo yards away or 50 inch's liwice he kicked his rudder just before their wing tips swerved together. His sense of balance became numb. He began to doubt the evidence of his instruments telling him that he was in level flight when he would have sworn that he was in a climbin, turn I hank Cod for Kak! I ook at him stealy as a rock! If I lose

Kill patrick was flying by muscular memory. His artificial horizon was out of order and vertigo rushed over him in waves. He oriented himself on a star only to find that it was a hight on another Dauntless, as faltering as his own.

The pilots and the sunners could it least look around and get some reassurance from the lights of the other planes. But the radiomen in the torpedo planes were confined in tunnels with no escape for their eves. Not only vertico found them there but hypnosis induced by the vibration. The bulkheads blurred and swaved out and in, expanding and contricting the enclosure Sterrie's radiom in, Klingbeil propped them up with his hands. He was hunched 11 his seat with his nerves drawn doubly taut, scainst the deception of his senses and against the imminence of a disaster that would strike without warning — the explosion of si

lence that meant the last tink had run dry, or the shock of a crash into the sea

Hypnosis rode with the pilots too, sitting alone in the diskness. Their engines beat out rihythin, the rhythm became a drone, and the drone became a lullaby, stupefying and perilous

Sterrie jerked back from the very edge of a trance and drove himself into a frenzy of industriousnes, shut thing his attention around the circuit of his cockpit purposely complicating the simplest procedures – anything to keep another trance at bay. He twisted his head from side to side so that his eyes would not be trapped by the clow of any one in trument. He touched buttons and switches cased his straps, patted his poelets. He made an elaborate ceremony of taling out his flishlight, and examining his fuel gauge.

Wherever a pilot termed his eves and however often he always brought them back to that fuel gauge needle Dauntless dive bombers have four tanks. By now the planes, that tanks were running dr. Some pilots did not see the needle fall in time to switch over smoothly. Then engine died and their of mes diafted down until fuel pumps revived them.

Ad ans let his engine suck the list few drops of fuel from his third tail. He switched and pumped it back to life, then called Kelly his gunner. Next time you he is us run out of gas, you'll know we re going in the drink.

Kelly inswered calculy. Roger? Gunner estrada heard their engine conk and caten. He knew what it meant, but he didn't care any more.

He was tired out, tired of thinking about the three plates he'd seen shot down

And then they begin to catch the horning signal Sterrie caught it when he was to miles out. He and We mouth had both been holding cours, a bit too fai to the north. Now they swung to stuboard and headed in on the beam, with their squadrons following.

I with at 0.30 they made then first visual contact with the task force on a vertical searchlight from a ship in the bunker Hill's group. The pilots because telling themselves. We no because of the late of the supplies of t

But their troubles were just begin

The chiles in I isk lone, 8 were speed over hundreds of squar indes of oce in Each pilot had to find one of these chiles in the dark and having found her he had to execut without a fault the complicated routine of 1 inding his plane.

I ven in dishight this routine is difficult. It begins with the squadron eaching it a safe altitude until the circle has furned into the wind and has so rated, I am ready to receive planes? A soon is the leader of the first section gets this signal he shake he wings for the 'break off,' lower his wheels and flaps and drops down into the landing circle, with his wine men trailing him. The other sections follow in line.

I he landing 'circle' is shaped like the rim of a bathtub and its sides are called legs.' The first, the upwind leg, begins aftern of the carrier, and leads past its starboard side. When the pilot has gained a mile or more he turns to port, flics a crosswind leg of half a mile, and turns to port igain. He is now entering his down wind leg, on a course reciprocal to the carrier's

Opposite her stein, he begins to curve to poit. If he executes this last turn correctly, he finds himself 'in the groove, overhauling her from dead istein. The closer he approaches however, the more of the deck is sereened by the nose of his plane, and it would be almost impossible for him to complete his landing without guid ance during those last critical seconds.

A suide is there — the landing sig nal officer, whose job is one of the most import int and most delicate on the entire ship. His station is a small platform on the after port quarter of the flight deck. Behind him is a square c my as p and to shield him from the teady pressure of the wind down the deck and from the slip stream of a newly landed plane gunning its enging to taxi forward. Beside him is a i urow salety net for him to dive into if a plane vecis too close. If he should spill over the fter edge of the net he would fall six feet into a gun mount over the forward edge, 50 feet into the sea

To guide a plane it for a divlight landing the signal officer uses a code of gestures emphasized by two bright colored paddles or flags. At night he uses fluorescent wands. His arms form a V if the plane is too high, or an inverted V if it is too low arms horizontal if it is properly level, arms tilted if it is not. At the proper point in a correct approach, the signal officer draws his right hand across his throat 'Cut your engine and land'

The pilot drops his plane to the deck, his tail hook catches one of several parallel cables stretched athwartships, and he is dragged to a stop. If his hook misses all the cables, his plane will be checked by fencelike wire barriers which can be quickly raised or lowered athwart the deck.

When the approach is not satisfactory the signal officer holds his paddles (or his winds) overhead crossing and uncrossing them, is a 'wive off, and the pilot swerves to port and takes his turn in the landing circle ig an Awive off must be obeyed A pilot who ignores it will be grounded

The Isolator s landing signal officers vere John Shuff and Lugene Haison, both experienced pilots the first of the returning planes uppeared over the task force at 8.15 Haison looked at the sky. No moon tonight he said 'That ought to fix us up proper.'

Shuff sud, Moon or no moon it would be ristrice

I chatype of plane has to be landed in a different way, according to its characteristics. An Plot had already notified Shuff and Hanson that these first planes were Helldivers, a type which An Group 16 did not include

Shuff had I inded only two of them visitors but Hanson had not had even this much experience. He told Shuff, 'You know those babies. You might as well start out."

Shuff switched on his fluorescent wands, and glanced across to the opposite corner of the ramp, to see if Bud Dering was at his post Dering had two jobs to warn Shuff when a plane was off line, too close to the island, and to put a spotlight on each approaching plane, to see if its tail

hook was properly extended He blinked his red flashlight to show Shuff that he was ready

The Lexington was steadying into the wind The bull hoin sent the voice of Commander Southerland, the air officer, thundering over the flight deck "Land planes!

Twice during the evening Admiral Mitscher had left I lag Plot for the Flag Bridge Both times he had stood there alone staring at the sky The staff knew his dilemma and knew that only he could make the choice Turn on the lights and risk the ships' Or leave them off and risk the

pilots'

He had brought thous in Is of men and a billion doll are worth of ships into enemy waters. Five nights ago enemy planes had dropped four tor**pedoes** at the I-canging, and two of them had passed within ten vards of her hull The Texington had been blacked out then If she and the other ships were lit up now any enemy tor pedo plane Lomber or submarme in the area could hardly miss. On the other hand, might landings were haz ardou enough under full hights Some of the pilots now aloft had never made a night landing, and even the best pilots were out of practice. The pros pect of several hundred planes funi bling for those narrow decks in the dark —

Mitscher returned to Flag Plot and dropped onto the leather couch I or a minute or two he smoked in silence Then he pushed back his cap and rubbed his forchead

'Turn on the lights" he said

Captain Burke sent the order over the TBS, and searchlights flashed on, some vertical as signposts to the force, some horizontal for spotlight ing the carriers in the cark

THE first plane was dead astern L Shuff caught it with his wands lowered it slightly, held it, then drew the right wand across his throat The hook caught the second wire, and i big plane crunched to the deck, its wheels smoking and its tail bucking against the counterweights that diagged it to a stop. The time wis 8 50

'I hat some of 'em an, anyhow Shuff said

The plane had hardly stopped when Mitscher asked, "Whose plane was that?

The Hornet's, sir "

"Hornet? She s not even in o ii tisl group. If the boys are having that much trouble finding their ships, we might is well tell them to land wher ever they can We can unseramble them tomorrow morning?

The pilots heard it it 8 12 'All planes, from Commander 1 isk Force 58 I ind on any base you see?

Shuff brought in the second plane a strayed Helleat then almost a is Mitscher's order took of feet - he i it as if he were under a struming ittack. Instead of the orderl file that should have been approach ing him, pairs of planes, even plane in flocks, routed up the groove to gether, elbowing and jockeying for his favor

It was impossible to single out any one of them. The pilot beside it of above it might mistake the signals is meant for himself, and if two of them attempted a simultaneous landing both planes would be wrecked both crews killed, and the deck would be

fouled up her an hour Shuff waved them all avay. He realized bitterly that among frem might be planes with insufficient gas to make the circuit again, but there was no help for it

He waved off the next bunch and the next, landed an *Interprise* Hellcat, and waved off another bunch The 24-inch wands, loaded with electric batteries, were diagging at his arms and still the clotted planes came on He landed a third Helleat, then picked up in Avenger It was almost at the ramp when its engine conked, the port wing dropped, and its tip swung tow ird Shuff's chest like i seven ton seythe. He dived into the net and lifted his head in time to see the plane splash into the seal three dim figures crawled out. They waved as they fell astern

Only ten minutes had passed since Shuff had landed the first plane, but the pilots anxiety had already risen to desperition I after they had accepted his wave offs at once, but now they were boring in to the very edge of the rump apparently hoping that then rivils ould quit at the list second. Some of them skimmed over the deck so low that time after time Shuff had to sn ip down the cany is screen behind him or they would never have clemed it. Others cut to starboard, almost ser iping their wing tips on the five inch turrets aft of the isl ind

Every man who was off dity that might had come topside to watch the show They were clustered on the island, along the catwalks, on the bridges and searchlight platforms, even in the 40-mm gun tubs When the first few planes were waved off, they had called, "Never mind! You Il catch the brass ring next time!" But soon they still quiet Planes that landed safely were cheered all the way up the deck, but nobody joked any more, sew even talked When the Avenger splashed into the ocean, a bos ns mate sud, "Nobody ordered me to watch this I m going below" Other men followed him

Shuff brought in a fourth Hellcat and waved away several planes at its heels. One of them plunged into the water. He thought it was a fighter and he thought he saw the pilot bob up but he wasn't sure. Still no plane from Air Group 16 had come aboard.

Another bunch of planes was starting up the groove. As they melted as we with a wave off they revealed a plane behind them — a Helldiver with no lights, flying fast straight for the ramp. Shuff waved his hands. A plane that hit the deck at such a speed would tear out the whele barrier system, and the Texangton could not land mother plane that night. The plane did not swerve or slow.

Shuff waved ag un, more franti-

Up at the bow, Plane Handling Crew Number 6 was securing the Helldiver that had just landed. An aviation machinists mate, William Long, stood in front of it, beckoning it forward the last few rect into its parking space. I wo men stooped close to its wheels, waiting to chock them with heavy wooden cradles Light more men were pushing on the wings, helping to fold them.

As the rogue plane shot past Shuff, Commander Southerland spun the handle of the crash siren I reutenant Verne Prather chief of the Flight Deck Crew, yelled, 'Clear the deck!' and fell flat, an instant before a wing tip slashed at his head. I ong yelled, "Six get clear! Six get clear! Some of his crew managed to roll into the catwalks Some flung themselves down and wrapped their trins tround their faces. The chockmen held their posts

The rogue plane skimmed over the barriers and struck with a prinding crash Every light on the deck went out A bubbling sere im broke through **the** blood in somebody's throat Some body shouted, Loose bomb! And then there was no sound but the hiss

ing of the fire extinguishers

Prather was already sprinting forward Close behind him ran Dr Neal Baxter, the Air Group's flight sur geon, with two corpsinen and two stretcher bearers. A green spotlight flashed down from the bridge. One of the corpsmen stopped dead and whis Muy Mother of Jesus! ther followed Prather and Baster into the hot tangle

The six plines that Shuff hid brought aboard had been parked at the bow four of them in the direct line of the crith. Rearmost was the Helldiver which Shuff had just landed Its pilot and gunner were still in their seats, writing for the wheels to be chocked The roque's propeller sliced through the car cockput and cut the gunner in half. The tail assembly was telescoped into the front end, pinion ing the pilot, and the whole mass slammed into the three planes ahead, completely destroying them as well

One o the chockmen was mashed to death I ong was unconscious with a concussion Four other crewmen were injured. The pinionad pilot had a crushed foot The plio, and gunner of the rogue plane were unhurt

Oil and gasoline from the shattered tanks had gushed across the deck and splashed into the portside catwalk and gun mounts A single stray spark and wildfire would wrap the ready aminunition

Baster dragged out the injured men, bandaged them, and gave them morphine Long, in his delirium was morning 'Six get clear! Six get cle u! The acid light made the dead men's blood as black as tar

An ensign in one of the five inch gun mounts was wiping oil from his eves when he felt someone tug his cloow Acrewman in carphones was mouthing it him but no words c unc I in ally the crewm in simply pointed A 250 pound bomb, fused, had come to rest a few feet away

Prather stumbled and slithered around the heap of planes estimating how long it would take to break them apart and shove them over the ade The powerful deck or the had already trundled forward. Prather gave in structions to its ciew, then ran back to the island and shouted up to Southerland I on minutes!

Southerland shouted back, "Do your best!

The moment the Helldiver crashed, Southerland had pulled the master switch on the light panel, to black out the ship and wain planes that her deck was foul. None could be landed until the wieckage was removed and every minute's delay brought them nearer to the unninent exhaustion of their fuel

Southerland glanced at the sky Even the semblance of a landing cir

cle had van hed Planes were stam peding in arrangmal panic, blind and he idlong, crowding and shoving to be the first in line when the lights went on again. They seemed to hover over the stern until the last split second before a stall, then they would spurt away and circle back into posiion.

Four nimites passed. The crane dipped into the jank pile and wrenched. Something came free dangled over the side of the ship and splashed. I are minutes. A Dauntless skittered along the waves only a hundred feet off the port beam then stopped abauptly and sail. No one of our Another plane went in too far stern for South aland to identify a light minutes. Since

The Helldiver had crashed it 9 to At 9 to the Termoton's lights went on a un Shuff picked up his winds. A lone Avenger was coming up the groove. He gestured it downward slowed it a few linots, and brought it in. When he looked back to the croose six planes were hurtling to wird him. The stampede had resumed

It was in full cry when the planes of An Group 16 be in to show up the fighters were the first. They had

heard Mitscher's permission to land on any base but most of them felt as Sy Seybert did I want my own signal officer to bring me in to my even ship, so I can sleep in my own sack. They had been fairly confident that once they found the task force they could find their own task group but their confidence fided when they saw the scene below them.

I wordinised bulbs, the truck lights, showed on each ship's foremast, but whether they marked a carrier or a cruser a pilot could guess only by their illitude and too often he did not know his own. I ach carrier burned a glow light a foot square and individual in color but it could be seen only from dead above, and although the flight deels were priched out by tiny bulbs, they were viable only from close istein.

The pilots saw them in climpses, when they's withem at all Between climpses they were blinded. Searchlights flashed on and off. If nes blazed from the watar mark in the spot where omegne had plunged. Starshells were bursting. When one of them burst near, one felt as if one were miside a gigantic electric bulb. And through the confusion flickered the lights of the planes themselves red and green and white and

yellow, bobbing and weaving and crisscrossing like neon confetti in a whirlwind

Fighter pilots Seybert and Wendorf split apait four times to let stray planes slip between them They spotted a carrier, lost it, and lost another A formation of bombers rushed at their head on, driving them almost into the water Seybert beg in to talk down his rising panic Damn you you've been flying these things for quite a while now' I ou can get aboard' Just keep ,ow head' Now get in there and pitch'

He found another currier and was in the groove on his first approach when a plane with no lights suddenly appeared to port. He had to pull up to starboard so quickly that his wing tip missed the island by inches. The ship was a mile istern before the knotted muscles in his belly would relax. The second time around, he was making his last turn when a search light beam showed him that he was only ten feet above the water. He zoomed up, overshot the groove and veered straight over the island as an Now who did I do that?

He was halfway around on his next approach when the ship turned off all its lights. At the same time he noticed that his fuel gauge was stuck. He tried to talk down a new assault of panie. Take it easy, Sephent! Lasy not! Lasy! The ships lights came on again, but the plane in front of him tangled itself in the barrier, fouling the deck, and he was waved off Lasy, Sephent! Lasy nou!

He braced himself against the back of his seat and started his fifth approach the signal officer gave him a cut He saw two familiar turrets and knew it was the Lexington He didn't

want to tax forward, be wanted to jump right out of his code pit and kiss the deck

Someone called, "Here's old Sey bert! Hey, Sy!" and pounded his shoulders He couldn't understand it until they told him that he was the only fighter who had landed aboard

"Where's Wendy" he asked "He ought to have been here long ago! Where is he?"

No one could tell him

When Seybert had started in, Wendorf waited until he had enough in terval, then lowered his wheels and began his turn into the downwind leg Suddenly he saw two pale blue flames streaming toward his starboard wing—exhaust flames from a plane with no lights. He shoved his stick forward, saw the blind plane's wheels sweep four feet over his emopy and hauled the stick back again. It was too late His left wheel struck the water, then his left wing tip. The Helleat leaped forward wing over wing, in a series of grant cart wheels.

INTO HIE lexington's ready room Di Bixter brought the pilot of the Helldiser that had crashed on the deck Bixter's khaki snit was streaked with blood. The pilot's shirt was torn across the shoulders, and the tear was bloodst uned.

Bixter pointed to it 'Shrapnel," he said 'This kids hid a rugged time I want him to tell you about it Sit down, son It'll do you good to get it off your chest "

The Helldiver pilot looked like a man in a nightmare. He kept his eyes on his shoes. When he finally spoke, the words came in a spate, but so low that they could hardly be heard.

'We cautht a hell of a burst over the Jip flee] - 4thermie I guess it was It ripped this hole in my port wing, and the edges turned red hor and strated to eat away I kept watch ing it melt. I was hit in the back, here I di lii t know how bad at was, but I could feel the blood running down my had This hole in the wing got larger and larger, and she fell off on that ide and we started to spin I figured 'd better mike i witer linding be ion the whole wing was eiten iwiv, but pretty soon I saw the edges weren tred any more, so I decided to tiv to make it home. We got back, but I don't know how. I found the curier but the linding circle was jummed I didn thise but i hindful of cas left and no lights. I couldn't have made it fround up in I knew I couldn't I pushed my way into the encle I saw the wave off but I couldn't make myself tale it, I just I wish to Cod I had now I d ive invthinthose men Lkilled

He got up and walled out

Swenson in de two pisses it one of the big enriers—he couldn't tell which—ind wis about to I nd when a plane cut inside of him so suddenly that he had to pull cut to starboard. The carriers huge looming island blotted out the sky as he brushed past it. His g is gauge reported 15 gallons. He told his crew to get set for a water landing.

Just then he spotted another carier, with a landing circle the treemed
empty. The sign all officer waved his
in Swanson had already straightened
his lucky ring. He settled down to the
best landing he'd ever made in his

life The carrier was the Princeton His was the first plane aboard

They took him to the officer of the deck but all he could say was 'Take care of my crew, please' He repeated it in a daze, Take care of my crew.'

Another officer led him away and helped him get to bed. Presently the officer came back "We re going to gas and aim your plane tonight. Will you be ready to fly in the morning?"

Swin on couldn't believe what he was hearing 'No!" he cried No! Not me!

He turned his face to the pillow It was next morning before his nerves let his a sleep for half an hour

Win I om Bronn located the I variety she was blacked out with a food deck. His gas was low, and he considered pulling away to find another entire but decided to gamble on the lights coming back on in time. After two swings around the landing circle he had gas enough for only one more. When he made it, the I exactor was still blacked out, and the needle of his fuel gauge was on.

Bronn had already heard Buzz Thoma say, 'I in going in the water Now he felt like replying Hel'o, Buzz this is I om Bronn I in joining you

Just the id and to port Bronn spied a destroyer. He curved toward it, blinking his running lights to attract attention, and let the plane settle. His exhaust flames gleaned back from the water, brighter and brighter. The plane hit and crushed to a stop I uckily it had be a seen and the crew were soon picked up.

MEANWHIIE, the Dauntless dive bombers were coming in many of them with only five or ten minutes of gas in their tanks. We wouth took them across the destroyer screen and down in in S turn. He had brought them home, and now his responsibility was finished. Livery pilot would have to take care of himself from here to the groove

Cookic Cleland started down Slip streams from stray planes tipped his wings and knocked him off balance and off course. He felt is if his brin were turning to dust. He made mis takes in jud_ment knowing that he was making them. He tried two land ings on the Princeton two on the Lex *ington*, one on a destroyer and two on the Interprese He had no recollection of finally landing about the Inter p ise He didn't come to his senses until he was taxiing up the deck and his engine died. He winted to jump out right the e and patiold 39's cowling She did it with her last gasp Cod bless her!

A deck handling crew shoved him the rest of the way to the bow shout ing at one inoth i to look it the pagged hole under the sunner's cock pit, the long rip in the scurbo and I ip the 20 mm hele under the starboard tank They were all distraught A few minutes before something had hap pened which no one had believed possible The signal officer was waving in a fighter when a Dauntless wathour lights dropped almost on top of it The men in the city ilks ducked The firemen grabbed their extinguishers and tushed in There was no crash, no explosion The fighter's tril hook caught t a second cable the Drunt less, the lifth Both planes came to smooth stops, unharmed

The Enterprise deck cree'vs were still nervous from their proper A plane captain dashed up and tried to pull Cleland and his gunner Hisler out of their seats 'Get out!" he yelled "Step on it! We've got to push this damn thing overboard!"

Clelind remembered the attack on Palau Old 39 had been crippled there too, and he dlinded on the Interprise then too and then, too they had wanted to push her over the side. He had talked them out of it, and he started talking now

Can't help it—the plane captain said 'The old crate is busted to hell and we haven t got room for her. Get clear!

Clelind reached for his pistol 'Dann vor he said, 'that plane stays abound!

The Interprise plane captain said "OK sir If that's the way you feel about it

The next plane to appear in the Lexington's groove had something stringe about it something in its value silhouette wis different wrong. At the same moment, the signal of ficer saw something else wrong the tall hook was not extended. He threw a flashlight beam on it to warn the pilot. The beam lit up the fusclage and a large red circle. The plane was a Jill, one of the newest Japanese torpedo planes.

The sign if officer snatched up his wands and waved them over his head. The plane veered away, toward an other carrier where it was given an other frantic wave off. Then it appeared close by the Bunker Hill, who shouted her alarm over the air 'All planes on this frequency get clear of

our landing ircle! There s an enemy plane in it, ahe we ie going to open fire!" But befor, the Bunker Hill could lire, the Jill was gone i anging toward

fourth carrier Every ship in the task force snapped off her lights. Gun crews were ordered to be ready. The might's hysteria was now complete.

The Japanese pilot may have been lost, and as desperate for a deck as my American pilot in the air that might. His obedience to the wave offs suggests it. But no one dared assume that he came in peace, and now no one will ever know. A cruiser caught him with her searchlight, and saw him tagger, and pin into the sear.

I stracts from the Texington's logfor the hour after the Helldiver crashed on her deck tell part of what happened that might

2124 (9 24 p iii) Plane ditched on port be iii

2134 Messige from a destroyer One in the water off our starboard quarter Do you see him?

'2136 Plane ditched on port beam
'2144 From a destroyer We are
come to pues up plane that crashed on our
stanboard bean

2146 Avenger in witer on port

2154 I rom a battleship We hear a ry for help on our port marter

"2157 Plane in water on starboard beam

2158 From a carrier A plane just uent in the water about 500 yards astern of us

"2159 I 10m a destroyer I am in line to pick up that man

'2214 From a cruiser to a destroyer Puch up a man on my port quarter"

Shuff had given up hope of linding planes smoothly All he wanted was

to get them aboard, right side up, and if they were within filling distance of the deck when they crossed the ramp, he cut them down He dived into his safety net five times. After a while, H inson took over the winds. He had to piv them loose from Shuff's stiff fingers.

MENNIHE pilots ilready landed on the *Enterprise* were in the ready room writing inclously for the missing Pinky Adams had been the first Dauntless about 1 hey gave him a stiff brandy but he couldn't limish it. I vegot abellistudowar,' he said and no room in it for drinks?

When Cookie Clelind the Squidion's eiger beiver,' entered, Pinky pushed him into a coincr and demanded 'Cookie, have you had enough'

Well it was pretty gram out there. Cleland told han

That int what I isked you Have you had enough?

"It was pretty hot, all right

Adam persisted, That still isn't what I isked you Have you had enough?

Cleland said soberly, Yes Pinky I ve had chough

When Hink Movers and his cunner, I ce V in I tten, shuffled into the room, V in I tten threw his comera into ech ii. I ake the damn' thing!' he cried. I ll never use it is iin! I ll never fly again! Never!"

The last two Dauntlesses in the formation were Kirkpatrick's and Conklir's They found a carrier and passed her on her starboard side Conklin caught a glimpse of the alhouette and told himself happily, That's her' That's our little home from home!

Kirkpitrick circled twice and started in when the full hook ciught, his carphones seemed to explode. It was his guiner yelling. Aippee! Kirkpitrick similed and rubbed his stomach. Good old safety belt! Cood old tug in the guts it gues you!

In the ready room, he saw that the other pilots were staring at him queerly. He didn't understand until they told him that his forehead was bleeding. He I new that he had kept his seat high and shoulder straps loose so that he could watch for stray planes and he had probably lurched forward into the instrument panel when he landed. He didn't remember

When the squadron intelligence officer isled him for his story. Kirk-

puncl sud

June 1915

Jetters from a Hospital

Cond used from The Catholic World

Dorrs Schwart~

Lieuten and ANC

These letters were written by I witenant so it to a friend a hose son I id be not teratroeper fulled in I wrope. I witen it so cortes son duty it the Army Hospitule Mitenel I ield. I one I sland, where is reled arrive from I wrope by transitant optime.

voungsters came in One of them a mee-looking kid of 19 it stains into space, quite un aware of the dinner tray in front of him I ded him if he didn't feel like cating a dihe said—ith a stait, I at? Oh are! I guess I was too busy looking out of the window at the United States? From his bed all he could see vis a patch of lead colored sky and one dead tree. But it didn't in after—t was home!

Most of the boys in this group are not seriously injured but they had to try in bed, and shelp me they beekle us to death. They toss bools, upples, chewing guin, from bed to bed, and you ilmost have to crast down the ward on your hands and thees to expect the onslaught.

his month of front-line combit one of these boys picked up i Ceimin cimeri contuning i roll of film which had been half used He and his buddles shot the rest of the film and it was developed here Increwere four prints of our patient and his pals, grimy and bear led and tour prints of a blood German of perhaps a, with a wife gazing at him idorin 's ind a towheided baby in his lip. The boys looked it them i lon time vithout speaking. It was ilmost too ironic i few week our whole widdful had been out to exterminate these Cerman opponents and now here they were wishing quietly that that wife had some how jot her picture

The bey who owned the camer's shuffled the pictures is in I never six my fid he said softly. He vis borr when I went over and he died a coupir months later. Slowly he tore up the paints. And some body turned on the radio very loud.

tents phone call home today. This boy who had a be off, was unusually featful of letting his young wife know

He called first and said his leg was broken Later he called again I walked down the ward just in time to hear him say nervously, "Hey, honey, I was kidding ya before Y'know that leg? Well I haven't got

it any more

"Ya thought so! Ya don't care? Gee, honey, you're takin' it swell Naw, I don t mind It's just you I was worryin' about I can get another one awright Golly, honey, I can t get over how good you take it Naw, I in not cryin' about that — I m just cryin' 'cause yer like you arc

He rubbed his eyes roughly with a pajama sleeve I noticed some of the other boys doing the same thing

An Awi ui i y cutc youngster, whose brain injury had left him totally unable to speak, has been here this week Bright and alert, he got a kick out of the way I tried to in ike him speak, but it just wouldn't come

During the afternoon he fell askep and one of the other boys came tearing out to my desk to tell me that he was talking — swearing, in fact! - in his sleep When I woke him up and told hun, he was incredulous, but the others convinced him I held up a glass of water He looked at it, frowned mightily, and finally said, clearly and distinctly, 'Glass' That was his first speech in more than two months

The whole ward applauded He laughed like a baby with a new trick and managed one after another several sing e-syllable words A gang of 44 eager instructors kept at it, coaching him until bedtime By then he was handling long words, to the delight of the whole ward

A couple of weeks ago we had a boy here who had lost both hands Though he will be able to manage pretty well for himself a year from now, his next six or eight months are no fun to look forward to

'Wish I could write a letter," he

mumbled disgustedly one day

"Can't you write with a pencil between your teeth?" I asked, in the tone of one who always wrote that way — though the idea had just oc curred to me

"No — can you?" he asked

"Sure," I lied gallantly 'All you

need is practice"

The next day, after some mighty hard privite practicing, I gave a pretty sorry demonstration However it was legable and he looked en **co**uraced

He was transferred to a Michigan hospital I od iy I had a letter from him — primitive to be sure, but pre cious beyond words. He told how well he was coming along and what a good tune he was having in the hospital And every word, though like the writing of a child, was perfectly easy to read

You feel so dain proud of kids like that Sometimes I think awards for heroism should go not only for battlefild courage but for the endless months of struggle to achieve a semblance of normal life again

Louis was an uncommon'y appre hensive soul, even for a boy with a diagnosis of "combat fatigue" One night about 2 a m he appeared at the office looking sleepy but worr ed

"Lieutenant," he said politely,

though in uncertain tones, 'could you do something about the goat under my bed?" 'I he what?" I asked Please," he repeated, "I think there s a goat under my bed"

None of my suggestions about shadows or dreams shook his certainty Would you feel better, Louis, if we flashed the light under your bed so you could see for yourself that nothing is there?" I said He thought that would be fine So I took my flash light and we crept softly into the ward without waking the others Whispering a heartening, 'See, Louis," I flashed the light under the bed

Iwo large cyes, peering out from beneath two long and well formed horns, looked up at us with interest, and there was a distinctly goatish odor. As I stared, spellbound, the coat stretched out his neck and with a great show of nonchalance sampled my shoe laces.

Louis, with a faint sigh of relict, mumbled that he 'hadn't thought he could go crizy that quick," and immediately went back to bed and sleep, leaving me with the goat. We never found out how the animal got into the hospital, though we suspected he had been collected by some young officers returning from a gay purty.

Last evening I was sitting at my desk when the door opened and a per it city beautiful little colored child of about three walked in and looked at nie appraisingly "I's George," he announced quietly I inquired about more specific details "George," he repeated firmly, wriggling up into a chair and surveying the top of the desk He had no wish to be entertained, he was quite self sufficient

I called the information desk, which reported that one of the patients had lost his visiting youngster and would be right over Shortly thereafter a big soldier, one leg amputated, arrived on crutches, followed by a plump wife and a raft of the cutest, most polite cherubs you ever saw

We were talking pleasantly when a great giggling broke out among the small fry I hey had discovered a new amusement flapping the empty trou ser leg of their father's pajam is Mischievously they tried it again in I again, laughing with delight. One of their looked up at the soldier, her grin almost reaching from ear to eir, and announced triumph intly, 'It sho is gone"

There was a moment's awful so knee. The mother looked at her husband I groped for something to say that would distract him, but in the pause you could feel him accept the inevitable for the first time. He grinned at the youngster and put a gentle hand on her head "Yep," he agreed cheerfully, "it sho" is"

THE BOYS usually come in from overseas dirty, in need of a shave, and with a thin protective air of toughness to cover their pain and the emotion of being back home again. But our latest batch is different. They are a lovable lot, but oh, so very young. The usual clamor for razor blades is absent, the familiar banter is missing too, no whistling or howling when a pretty Red Cross gal or Nurse's Aide scurries through

These are frightened, homesick children, startled by the suddenness of it all, facing pain for the first time and failing miserably in their pathetic attempts to do it nonchalantly These are the boys who only a year or two ago were playing at "soldiers," who went to the movies on Siturdiy ifternoons, and loved war pictures and westerns and comic books

They are the boys who delighted the Army in basic training—eager, alert, taking it all as their first adventure away from home. You've seen them dozens of times on their furlough before going across—important for perhaps the first time in their lives.

We start to make our rounds, rolling the dressing cart from bed to bed The surgeon questions each boy

so very kindly. Ag in and ag in he isks, How old are you, son? 'Nineteen, sir' "Nineteen ' 'Nineteen' How long were you in combat?' One day, sir' "Just a week' '

A boy from Georgia, forcing a matter of fact expression as he marcates his shattered feet, says. Reckon they ll have to come off, don't you, sir'? The surgeon doesn't answer for a moment and then puts his aim gently around the boy's shoulders You knew that, didn't you? he isks, and the boy nods violently and turns and smothers his sobs with a pillow

Tonicht the boys all got gift prekages from a nearby war plant and they opened them with the eagerness of puppies diagong for a bone. Pete both of whose legs have been amputated, unwrapped his box beamingly, and brought forth a pair of bedroom slippers! The outside visitors looked horrified, but Pete, followed by all the others on the ward, shouted with laughter. He rewrapped the

slippers separately, and tore over in his wheel chair to present the leftslipper to a boy who had lost a right foot, and the right slipper to a boy whos left foot was in a plaster cat But that girl never thought three

of us would be getting her package, he erinned cheerfully

How can you help loving kids like that or look forward to done any thing else as long as they need care?

"WHY?" 'Why?" "WHY?" Mu textry visiting fimily expect you to explain why it had to happen to then boy? They look at you ple idingly—as though you could change the racts. They seem to hope against hope that you've mixed him with somebody else on the ward. You want to see an that it doesn't matter if you do mix them up—they are ill couldly tragic. But you say what wonderful work the doctors are doing and you are Main's some aromatic spirits, and tell her to be sure and tease her son about that GI harrout.

She clutches eagerly at the idea for she wants to help make the next couple of minutes go smoothly. And you yell down the wird, 'What a lucky guy you are, Johnny Your folks are here." The other kids knew it is a hind moment and they all help out. Gee, Mom you look just like your picture." 'Y know, you're kind a like my Mom, too." "Bet Johnny gave those gray hairs to you—he sure give 'em to our GO."

And suddenly they're all laughing and talking at once, and you give a sigh of relief for they don't need help any more. You think what swell people they are. All of them

President of the Chamber of Coma are of the United States

and hould be the most resplendent economic era in human history—the era of the industrialization and modernization of

backward peoples

The profit to the United States would be producious. Industrialized countries are by in on best customers. Britain has a population of only 17,000,000. In the last year of world decetime prosperity—1929—our exports to Britain were \$841,000,000. China has a population of 450,000,000. In 1929 our exports to China were only \$124,000,000. Main reason Britain is industrialized and has a relatively high income per person. China is unindustrialized and has a wretchedly low income per person.

More that half of the world's population — more than 1,000,000,000 human beings — live in a state of miserable industrial backwardness and poverty. That is an immense thallenging new frontier for modern economic audacity and development.

At the outset, let me point to some of the tremendous possibilities for vastly expanded world trade. If these seem fantastic, remember that I am not blueprinting the proximate future I am looking beyond that, to a world inhabited by the generations which will follow us. To them, the limitations of the 1940's will seem as unreal

is the of colonial America seem to us to any

to instance, if people everywhere used is much cotton per person is we use in the United Seates, the world's production of cotton would have to be trebled. If people everywhere used is much so up per person as we use production would have to be quad-

rupled

The United States has some 27,000, 000 telephones. It would be necessary to manufacture 350,000,000 telephones to bring the rest of the world up to the American standard of telephone use. The United States has some 57,000,000 radios. It would be necessary to manufacture 600,000 000 to equip the rest of the world equivalently.

One of America's greatest opportunities for its own pocketbook has in the promotion of world wide wealth

and welf ire

Almost every backward country wants to rise up out of its backward ress. Our fellow American William D Pawky of the Intercontinent Corporation recently built Indias first a rplane plant. A committee of in quiry had reported that Indians were not yet able to do such work. Mr. Pawly said he would train them to do it alle got together some 400 educated Indians, many of whom held degues from universities in Britain,

the United States, Germany, France "They took to reionautical engineering," says Mr Pawley, 'like ducks to water"

I he American members of the staff numbered only 38 The Indian employes (engineers and workmen) were ultimately 14,000 They established India's first real assembly line, and came to rival American records of production per man hour At present the plant — Hindustan Aircraft — is used by the U S Aimy Air Force for the repair and mainten ince of its aircraft in India

"My experience in India," says Mr Pawley, 'has convinced me that India is destined to a tremendous industrial development"

There is no doubt that almost all biel wild peoples are mentally and physically capable of doing higher work and more remunerative work than they are doing now. What they need first is capital. They all have some, but not enough. And where is capital most plentiful? In the United States.

IN THE United States we have surplus capital One of the basic criticisms of our economic situation during the last two decades has been that we have surplus capital that remains idle. The backward countries are calling for it

I'm not talking about ifts Nor am I talking about loans In loans the moncy gets spent by the forcign borrower with little or no control over it by the American lender I am speaking of what is called direct investment I am speaking of American moncy that goes into a foreign country and builds a plant which re-

mains substantially under American direction and is operated with American skills of engineering and man agement. This is better for us because then we can watch our money. It is better for a backward country because then it gets the productive benefit not only of American capital but of American know-how.

At the outbreak of the war we Americans had ilmost \$10,000,000 000 in such direct investment abroad I am convinced that this sum can be multiplied advantageously many times in the near future

Every Latin-American country has a "Commission of Inter-American Development" proparing projects devised to be attractive to capital from the United States. The Joint Mexican American Commission for Leonomic Cooperation has approved projects which in Mexico alone would require a capital expenditure of some \$400,000 000

On behalf of Chin 1 the Chief Engi neer of the U S I oreign Economic Administration, Alex I tub has com piled a list of some 1000 projects in nuning and manufacturing and other fields — offering an investment in China of approximately \$1,000, 000 000 The Chinese Government itself has projects which it believes could profitably use an investment of \$1,000,000,000 in each of the ten years after the war That sum seems huge but it would have to be multiplied many times to give the Chinese as much industrial equipment as we Americans have

If China had been thus industrial ized in 1929, our exports to China in that year, instead of being \$124,000,000, might have been over \$8,000,

ooo,ooo I see profit in that thar hill, even if it should rise only to one half or one quarter of that height, profit for the dividends of American investors and profit for the wages of American workingmen

But all this can happen only on one condition No longer can surplus cipital countries, whether British, France or Belgium, the Netherlands, Sweden or the United States invest in undeveloped countries and then suck out all the dividends. That kind of economic imperialism" is everywhere either dying or already dead The industrially backward countries resent it and will no longer tolerate it What they want now — and what they should have — is a partnership of their local capital with foreign capital in the risks and profits of new enterprises on their soils

The change thus indicated is one of the most momentous in all the world's long political and economic history. The age of the mere ploitation" of backward countries is closed. We move into the are of croperative effort by advinced countries and undeveloped countries together for mutual profit I am happy and proud to say that this principle is ilready recognized as cardinal in the future economic development of the Americas It is a principle which is already in broad action. For instance, the W R Grace Company of New York, famous for its pioneering work in transportation and trade along the west coast of South America, now has textile mills in Colombia Peru and Chile, vegetable-oil and paint and sugar plants in Chile, and flour and cement mills in Bolivia But these enterprises are not sumply United States enterprises They are also Colombian, Peruvian, Chilean, Bolivian enterprises In all of them there are substantial stockholdings by local investors. In some of them, though the Grace Company provides the managerial direction, the local investors own a stock majority. These enterprises are not just transients from abroad. They are rooted in the local earth.

In Chile the America Cyanamid Company has a joint enterprise with the local Chile in chemical company, Sanitas In Mexico, Pan American Airways is operating through a local company in which the manager is from the United States Mexicans hold 4, percent of the stock and occupy eight out of 11 seats on the board of directors

In Argentina there is a large class company owned jointly by the Corning Glass Works, the Pittsburgh Plate Glass Company and Argentine citizens Dividends therefore go to citizens of both countries But the big point I want to make here is not dividends but wages. The glass company's 3800 employes, with the benefit of North American machinery and management are carning roughly 60 precent higher wages than they ever earned before

What then? Then they can buy more Argentine goods, and than they can also buy more imported to aid States goods

Is this a matter of "profit seeking" American business? It is Is it a matter of "profit-seeking American labor? It is American labor leaders are interested in expanding American exports because our export industries tend to be our most developed in-

dustries, and tend to pay the highest wages. Outstanding illustrations are motorcars and rubber thes and machine tools. Labor leaders know that when we expand our export trade we increase the number of our best paid workers.

The investment of our surplus capital abroad enlarges our exports in two ways First is what are called "producers' goods" — machinery and equipment This wave of exports to undeveloped countries could go on for many decades But it is the second wave that brings real human welfare with it for the peoples of these regions

This second wave almost instantly overlaps the first. As soon as the people of an undeveloped region begin to get the higher incomes that industrialization generates, they begin to buy more consumers' goods' clothing, furniture, kitchen appliances, intomobiles radios and all the "gadacts" of modern living

We Americans are good at manufacturing both producers' tools and consumers' gadgets. We shall there fore profit handsomely on both waves of exports. Let us constantly remember we are the country that stands to win most out of an energetic industrialization of the total world.

So MUCH for exports Now for imports They are essential The foreign world cannot get the dollars with which to buy our exports unless we pay dollars to the foreign world for in ports I then make two points

The first is that world-wide industrialization will increasingly diminish our fear of imports. What makes that fear? 'Cheap foreign labor' But industrialization abroad, as we have

seen, raises wages As foreign wages are raised step by step toward the American level, we shall move up step by step out of our fear of imports

The second point is that we need numerous raw materials from abroad to go into the products we manufacture for export. We shall export more telephones. In every American phone there are 18 materials from foreign countries. We shall export more automobiles. In every American can there are 300 materials from 56 foreign lands.

We lack certain raw materials Others, which we have had in abundance, are rapidly becoming lessabundant. We have been one of the world's greatest iron-ore countries. Now, though we are building the world's biggest and fastest iron ore cirrying ships to fetch us iron ore all the way from Chile. Our exports of manufactured products will compel us to import larger and larger quantities of copper, lead, zinc, petroleum, and many other materials.

I make no idealistic, approach to the problem of imports. I think that in the coming decades we shall take more and more imports not at all because we shall need to and want to in order to p omote our own prosperity.

This policy ultimately will move the millions of backward people for ward. And in the process let us not forget that we are helping ourselves, not only in the matter of p offits and jobs and wages but in the matter of international good will and cooperation. Americans are going to be more genuinely and realistically interested in international affairs when they have more international interests.

But the road ahead is not a cle in highway It is mined and moated I am referring to the inclination of many contemporary governments, including our own, to intrude themwhes unnecessarily and excessively into international investments of capit il and exchanges of goods. This inclination, if unchecked, would turn every government into a bitter cconomic competitor of every other govcrnment It would change all the private trade contests of the world into contests between nations. It would change them into contests not of 11telligence but of force

World development, if it is to be peaceful must be accomplished by private effort. The capital of the investing countries should go abroad amply as personal private capital, not is in arm of nationalized economic and gression. A private risk is personal but a government risk involves a whole people and their national honor.

Behind every diplomat stands the soldier, the sailor, the flag Ne₂otil tions between governments are necotiations between rival arrays of national pride, prestige, power the world has suffered enough from power bolities. It could not possibly survive power economics. That road is the road to unending wars.

Let's have an utter abolishment of

all "spheres of economic influence American capital should be welcom in Burma, even if over Burma flot the Union Jack British capital should be welcome in all the American Republics, even if over them floats the Monroe Doctrine. In world development for human happiness let as operate not as nationals of this or that country but as human beings.

I homas Jefferson is reported to have said 'The less intercourse we have between governments, and the more between peoples, the better 'As usual, he used extreme langua c As usual, he reached through it to wind a great truth Peace must spring from the state of mind of peoples. All the things that I propose in this uticle me by and for peoples.

These proposals are economic steps toward world prosperity. Without them I am convinced, no political steps can ever lead us to assured world peace. Peace can come only when peoples walk the ways of work and we alth together.

The future is ours We can so into it with our faces toward the past, reluctantly, stumblingly backs first. Or we can go into it chests first, with our eyes on the golden sunrise of a new day. I contend that the most intelligent and most manly and most profitable way is chests first and eye forward.

HE WAS VERY, very old, the farmer with whom I fell to talking but his eyes still sparkled with an inward happiness. I inally I said, I wish you'd tell me how you've kept the twinkle in your eyes?

At once he replied, 'I make the most of all that comes and the least of all that goes' —C ntn! utelly Fish r I ill r

Iransfer to the East

Why it may take ten months after VE Dw to get our veterans from Germany ready to fight the Jups in Asia

Condensed from Colliers + Quentin Reynold

Streets and joy in our hearts It's all over in Furope we shout now mopping up the Japs will be casy. And say what about a new car, a new radio?

but, such optimism is founded only on 1 dream The boys who beat Germany will have to join in the war against Japan There ll be no homecoming for them, no cars or electric iceboxes for civilians, for a long time to come

Lve talked with General Brehon Somewell commander of the Army Service Torces, who with his stiff is been working for more than a ye ii on the gigantic problem of mov ing troops from I drope to the Pacific The first step will be to release permanently 1 500 000 of our men, on the basis of total service overseas scivice, combit service and number of dependents They Il come from both I mopean and Pacific was the aters. It is quite possible that men in the Picific theater will reach home in t as ships returning from Luiope will be he wily laden with material Top priority, however, has been al iotted to the wounded

But the bulk of the Army will not be released, for, to defeat Japan, we shall and 5,000,000 men in the Pacific Suppose we take a division in Germany on V E Day and try to follow it through to the time when it finds itself in combat against the Japs. The men will be combat weary tited of mud and Army rations Gen cral Eisenhower has already picked several spots to send such divisions to rest. He is, for instance, taking over the Riviera and our division will fird itself basking for a spell in that lovely part of the world. The mer will live as they haven t lived since they entered the Army If you find it impossible to buy golf balls or tenni bills don't feel too bad. They're cumualed for men who need them more than you do

The USO will send units to sich of these recreation centers, and there will be entertainment and new mo tion pictures every night. There will be lectures and libratics. And plents of other means of relaxation

Micrits rest, our division will go to a mobilization center. It will be surprised to find that its equipment is there, every bit of it reprocessed repaired and as good as new Worn out material has been replaced. We are not leaving in Europe any equip ment that can be used General Som ervell hopes to save 75 percent of it

Our division is now regrouped to bring it up to its combat strength of about 19,000 men It heads then, let 115 say, for Antwerp There time is 16 quired to crate and load the equip-15 int Everything is boxed Why? Well, you can't pile three uncrated 15 geps on top of one another Then, too, this material is going to face a long sea voyage and must be pro16 cted against the corroding influence of sea our and salt water

Nearly three months will have chipsed since V-E Day That is about as first as a division can be rested, regrouped, ie equipped and loaded It will take about 30 large ships to carry our division and its material that seems a lot? Well, a combat division has to bring along (hold your breath) seven and a half tons of material per man! The necessary items include liuson aircraft, ambulances, carbines, rifles, machine guns, antitank guns, mor ars, howitzcis, field kitchens and 1700 vehicles (everything from jeeps to four ton wreckers)

Certain divisions, luckier than ours, will be routed through the United States. These happy lads will be given 30 days' leave at home. Then they will go to concentration areas for 45 days of training for combat in the Pacific. They will sail then from West Coast ports.

But our division will have to bypass this country We'll go from Antworp to Panama and, perhaps, to Manila or Okinawa It's a long trip— 14,000 miles to Manila—and we're not a fast convoy That trip is going to take around seven weeks So, by the time we land and our equipment is unloaded, some five months will have elapsed since V-E Day Those months are going to be rather trying for the folk at home They may get impatient at the lack of invasion news

Our division, however is one of the very first out of Lurope and has only just arrived at Manila. We unpack our equipment and carefully go over every bit of it. Then we get the additional equipment we need for Pacific operations—things we never needed in 1 urope.

We get new radios, for instance, radios that have been moisture-proofed Practically none of the radios we used in Germa by can withstand the damp tropical weather of the Pacific We get new cotton uniforms, light underwear, mosquito nets, special boots to protect our legs from insect bites, special jungle camouflaged raincoats

After that we are put into training We'll gruinble about this at first We ve fought for three years all over Europe Why train now? Then we find out For one thing, the terrain is a lot different. Here we'll have to plow through rice fields and swamps. How can we ever drive jeens through such stuff? Then we see our old equipment being refashioned. We see tractors and caterpillars taking the place of the wheel

They show us motion pictures of Jap troops on maneuvers, and we see how they hindle the movement of heavy guns and supply convoys. We see pictures of the ground over which we are going to fight. And we listen to men who landed on Gundalcanal and Leyte and Iwo. Yeah, we reluctantly admit, we do need 45 days of additional training.

Dozens and dozens of other divisions arrive at this and other staging areas and go through the same process And LCIs and LSTs and all sorts of troop- and material-carrying craft have been gathering

Then we hear runors We are going "up forward" Where? Nobody knows Perhaps straight for Tokyo Maybe it ll be Shikoku or Kyushu, or Taihoku on Formosa, or Nagasaki, or Saishu. These names are as familir to us now as the names of Cologne and Aachen were nine months ago when our division was fighting in the Rhineland Nine months? I hat sright It's nine month is after V E Day, and our division has tifted a shot

People at home are grumbling Why don't they do something? Our military leaders are still crying for more production. Some workers and industrialists are bound to ask, 'I or what? Your army is just sitting around those. Pacific islands taking it easy."

But our division won't know about that They only know that the rumors they we heard about moving forward' have become actual orders. The weapons of war are loaded, not 'corvoy loaded' but "comb it loaded". The vehicles aren't crated this time. And one day our division bon ds these craft and were off to I olyo or on the road that leads to I okyo. It's ten months now since the war with Germany ended.

Yes some ten long weny months will clapse before we can invade the three big islands that make up Japan proper And the invasion won to be a soft touch

Let's take a look at Japan's strength So far, we haven t met her first line troops, but only men placed on islands to firl t a delaying action. They did so, and you know how costly they made our victories. When we go into Japan, and possibly China, we'll find some 6,000,000 Japanese troops spoiling for a fight Richt now they have 4,000,000 men but, in addition, they have one million Manchurian and Chinese puppets organized as auxiliary inilitary units And during the past few months the Japanese have accelerated conscription and are training an additional one million young men They libe is ady for us And if you doubt the courage and aggressiveness of the Japanese soldier, ask any Marine who was at Tarawa or Iwo

In Japan there is severe rationing and virtually no production of consumer goods. That means that all Japanese industry is geared for war production. And during her two and a half years of exploitation of East Asia, Japan has accumulated a hune stock pile of strategic materials.

The job in Asia will be infinitely harder than the job in Europe Our European base was Britain, a few hours from Normandy by ship. In the Pacific it will be different. It is 6200 nautical miles from San I i in cisco to Manila, 1650 more to Tol yo We'll have to bring every weapon, every bit of blood plasma, every can of C rations along that oute or routes of similar distances.

All of this adds up to thy we can't move immediately against Japan when victory is wor in Lurope We are going to have to overwhelm Japan with superior for and it will take ten months to & t those superior forces ready to ittic. Any attack or a smaller scale would be suicidal

We d be fools if we didn't face the realities of the picture and lock up our dreams for a while

The Fate of the World @@@@@@@

B) Max Eastman and J B Powell

Is at Stake in China

Periodicals in Allied countries do not heritate to publish blunt opinions when their national interest is at stake Criticism of Imerican policy and of individual Americans by official Russian journals, for instance, has been extreme the can hardly expect to keep the respect of the other United Vations if our press—supposed to be the freest in the world—does not speak up just as boldly I specially in relation to our friendly neighbor China, a plain spoten report of the facts and a frank discussion of American policy are imperative—The Author

Luger than all lurope its population is one fourth of the human race. And this grant is waking up. Following the example of Japan and Russia, it is entering the industrial age.

Therefore, the question whether China goes democratic or totalitarian is the biggest political question of today. In war or peace the weight of this grant of manpower may well be decisive in settling the fate of the world.

China at present is split into three parts. Manchuria and the castern half, including most of the scaboard, are occupied by Japan. A north western region not far from the Soviet border is held by the Chinese Communist Party. The rest of China is still under the Chinas Karshek povernment, which commands the loyalty of an immense majority of Chinese everywhere

Chi ing Kai shek is the successor of Sun Yat Sen, father of the Chinese Revolution and founder of the Kuo mintang (People's Party), which is

dedicated to these three aims mation il independence political democracy and the people's welfare I rom 1927 to 1937 Ching defeated the war lords, crushed the attempt of the Communists, Moscow-led, to seize power and united under the Kuominting practically ill China except the small northwest region into which his irmies drove the Communists Though popul it and powerful crough to make himself permanent diet nor, Chiang set a date, November 12, 1937, for a Constitutional Convention Japan attacked in July of that year, and the Convention had to be postponed With victory now in sight, he has set the date as un -November 12, 1945 - Sun Yit Sen's bu thday

Just before Japan's aggression in 1937 the Communists formed a united front with the Kuominting and promised to fight under Chaing Karshek But they cooled off after the Stalin-Hitler pact, and finally renounced their promise Explaining that they were "revolution are not reformers," they declared themselves

J B Powell, born not far from Hannibal Mo graduated from the University of Missouri and taught four years in the School of Journalism there. He was in China throughout the period between the two world wais as editor of the China Weekly Review a liberal journal known all over the world. He was at the same time correspondent for the Manchester Guardian and other papers and edited for several months the daily China I ress in Shanghai. (He says he worked about 20 hours a day.)

Mr Powell was taken prisoner by the Japanese in December 1941 The story of the inhuman treatment he received which resulted in the loss of the greater part of both feet, appeared in The Reader's Digest, November 1942 Mr Powell has just finished a new book which will be published soon by Macmillan under the title My

25 Years in China

MAX EASTMAN is an outstanding American authority on Marxism and the Communist Movement. He edited the Communist weekles The Ma ses and The I iberator from 1913 to 1922 and thereafter lived for two years in Soviet Russia — where he became thoroughly disillusioned with Communism in action. Speaking Russian and reading the Russian press, he has continued to follow closely the development of the Soviet regime and the Comintern.

and their Red Army independent They now have their own govern ment, coin their own money, run their own Party controlled news papers and suppress all others. They recently declared a boycott against Chiang's effort to produce a democratic republic, denouncing his Constitutional Convention, six months before its delegates are elected, is a "slaves congress."

Such is the present state of China's hope for democracy Japan, we are now sure, will be driven out, but whether Manchuria and North China which hold the principal makings of great industry, will fill to the Communists and thus ultimately swing the whole gig intic nation down the totalitarian ioad, is undetermined We Americans cannot evade our responsibility in this, for the question which social system prevails in China is identical with the question whose leadership pievails — that of democratic America or of totalitarian Russia

American modes of influence are cultural persuasion, the example of

prosperity, skilled technical assist ance capital investment, and above all military and economic supplies Russia's v capons are conspiratorial organization and Party-controlled propaganda, leading to seizure of power and a liquidation of all demo ciats, and if necessity arises, military invision in the name of "liberation Russia cannot furnish capital, an example of prosperity, technical as sistance, or supplies on a scale conparable to ours. This gives us the trump cards if we play our hand with clear understanding of the forces involved

The Communists know this, and are doing their best to cloud our understanding of these forces. A flood of books articles, reviews, news dispatches, lectures and radio broad casts is pouring across our country, dedicated to the sole purpose of confusing American public opinion about the situation in China. There are four main points in this deception now being practiced upon us—all equally false and all aimed at persuading us to abandon another 450 million peo

ple to the totalituran infection spie teling from Russia

Deception 1 That Russia is a 'democracy" and that China can therefore safely be left to Russian "influence.'

OWEN LATTIMORE is perhaps the most subtle evangelist of this erroneous conception. Mr. Lattimore appriised the net result of the Moscow Itials and the blood-purge by which Stalin secured his dictatorship in 19,6–3c as "a triumph for democricy." He now urges our government, in a book called Solution in 1sia, to accept cheerfully the spread of 'the Soviet form of democracy,' in Central Asia. His publishers thus indicate the drift of his book on its jucket.

He [Mi Lattimore] shows that ill the Asiatic peoples are more in terested in actual deinecratic practices such as the ones they can we in action across the Kussian border than they are in the fine theories of In lostion dimensions which come coupled with ruthless imperialism

This deception was set going in Moscow in 19,6, when a new constitution was filled with pizzed-up phrises from our Bill of Rights so the it could be ad crused is more democratic thin ours. In cad of establishing popular government, however, it legitin ized the dictatorship of the Russi in Communist Party (Article 1.6) Stalin himself addressing the congress which ratified the draft of the constitution, frankly stated this fact

I must admit that the draft of the new constitution actually leaves in force the regime of the Dictatorship of the Working Class and preserves unchanged the present leadIng position of the Communist Party In the Soviet Union only one party can exist, the party of Communists (*Pravdu*, November 26, 1936)

In the 'clections' held under this constitution in 1937 and 1938, only one candidates name appeared on each billot. He had been endorsed by the Party, and the "voting' consisted of assenting to the Party's choice The ceremony has not been repeated, and would make no diffcience if it had The constitution is nicrely a facade for dictatorship, and inyone who protests the fact is shot or sent to a concentration camp In Siberia whole regions are given up to these concentration camps where from 15 to 20 millions* of Russim citizens are dying a slow death at That is the kind of had labor democratic practices" the Chinese would see "across the Russian borif they could look But looking is not permitted by totalitarian states

I list of all then, if our policy in a list of all then, if our policy in a line is to be wise, we must hold in steady view the fact, frankly admitted by Stalin and once vigorously stated by President Roosevelt a follows 'The Soviet Union is a dietatorship as absolute as any other dietatorship in the world

*Alexander Barmine former bugadici general in the Red Army estimates that the number is about 12 000 000 Boils Souville Liench historian of Bolshevism estimates 15 000 000 Victor Kravchenko icentiv resigned from the Soviet Purchasing Commission in Washington, who his wisted in my camps and had official relations with their managements says these estimates are low, and puts the figure at 20 000 000

If this dictatorship spreads its tentacles across China, the cluse of democracy in Asia is lost. As is well known, these tentacles need not include invading Soviet troops, but only the native Communist parties now giving allegiance to the Sovict Union, and taking their directives from Moscow When these Communist parties get control of a neighboring state, the Moscow dictatorship and its fellow travelers call that a "friendly government." It is by means of these Communist-controlled "friendly governments" — not by overt military conquest — that Russian power and totalitarian tyranny is spreading from the Soviet Union, in Asia is in **Furope**

Hence, for those who cannot swallow Deception No 1, there is another We shall quote it from a recent book, Report from Red China, by Hartison I of man

Deception No 2 "The Chinese Communists are not Communists — not according to the Russian definition of the term I saw not the slightest tan gible connection with Russia"

FORMAN is bracked up by Fdg in Snow, the best-known popularizer of the pro-Communist view, with the tem it k that the Chinese Communists and their leader, Mao Tse-Tun,, "happen to have renounced, years ago now, any intention of establishing Communism in China in the near future"

To unmask this deception, you need only go to the Daily Worker's bookshop on 13th Street, New York City, 19 25 cents for Mao Tse-Tung's book, China's New Democracy (1941), published with an introduc-

tion by Earl Browder (1945), and read the book You will find that the "Lenin of China" is a devout, orthodox and obedient disciple of "Marxism-Lenin ism Stalinism," and gives unqualified allegiance both to Soviet Russia and the Communist world revolution

Here are a tew quotations from Mao's book

The world now depends on Communism for its salvation, and so does China

We cannot separate ourselves from the assistance of the Soviet Union or from the victory of the anticapitalist struggles of the proletariat of Japan, Great Brittin, the United States, France and Germiny

No matter whom you follow, so long as you are a iti Communist you are traitors

Mao explains learnedly that Communism in China has two stages first, the present stage of "New Democracy," which is but a preparation for the second stage ie, 'proletarian revolution" and the establishment of collectivism on the Soviet model Mao excoriates those who do not understand this, and insists that 'the second stage must follow the first closely not permitting a capit list dictatorship to be inserted between them" ('Capitalist dictatorship" is Mios term for democracy as we understand it)

How different this is from Edgar Snow's dulcet assurance that the Chinese Communists "happen to have renounced, years ago now, any intention of establishing Communism in China in the near future"!

Mr Snow also says, "Long before it became defunct, the Comintern ceased to have much direct contact

with the Chinese Communist Party " The fact is that Mao Tsc-Tung was one of three Chinese members of the Trecutive Committee of the Comintern from 1935 to its dissolution in 1943 At the last congress of the Russian (ommunist Party the growth of the Chinese Party was enthusiastically reported and the Party congratulated on becoming "tempered in the fires of civil war and national war," and on building a Soviet regime" Mao sent the congress a "flaming Bolshevik greeting" lauding the Russian Soviet system and concluding with I ong live Comi ade Stalin!"

The Chinese Communist Phity is the darling of Moscow and of Coinmunists all over the world. Its national congress has actually met in Moscow All its mancuvers, even the most "reformist, 'have been executed under orders from the Kremlin A stance in the Moscow Party press is enough to prove that there has been no letup of this intense concern with the Chinese Communist Party Obviusly, the success of the Chinese Communists in building a Red Army and establishing in independent nition just over their border—a nation whose leader declares "We cannot be separated from the Scriet Union would only intensify the interest of the heads of the Soviet Union

To complete the record of this deciption. In the translation of M 10 s look, Earl Browder omitted words and passages which would, if printed in America, expose his own game of playing democratic patriot in order to get his henchmen into positions of power. In the Chinese edition Mao is outspoken in advocating the dictatorship of the proletariat," and

explaining that democracies like England and the United States are "capitalist dictatorships," which "have become, or are about to become, blood stinking military dictatorships of the capitalist class" "On the point of death, ' they have become 'imperialist" and will soon be replaced by "the newest Soviet-style socialist republic, a dictatorship of the proletarist' He explains that in this respect there is no difference be tween the 'Eastern (1 e, Japanese) imperialists" and "the sob imperialists of the West" (The Chinese epithet is fouler, but so b will do) All this, which is of the essence of Mao's orthodox Communist position, is omitted from th American edition

The Chinese Communist Pirty is more honest. Lite in 1944, t passed a resolution "accepting American demands to establish military bases in the Northwest but adding "We are hear to the orthodoxy of Mar and Engels which calls for a class revolution of the workers and persuats."

The cooperation of the Chinese Communist Party with the United States is a temporary strategy

That disposes of the propagandamyth that the Chinese Communits are not Communists

Deception No 3 That the Chinese Communists are fighting the Japs and that the Chinese National 11my is not

IHE TRUTH is that the Chin so Communists are fighting the Jups enough to hold their border, but not enough to make it worth while for the Japs to move in and clean them out This can be seen by a glance at the map. The front east of Yenan, where

the Communists claim they have in army of 450 000 soldiers heroically fighting the Japs, is stationary. It hasn t moved since Japan came up to the Yellow River in 1938. Although the Japanese have attacked in some areas, there have been no real battles. American military observers agree that a virtual truck has existed in several front sectors, especially along the railways supplying. Japanese for es fighting. American and Chungking troops in the south.

Where Chiang Kai-shek's National Army fights, the record of bloody and heroic battles has been spread on the pages of the world press for years We all know of the great struggles in 1937 and 1938 in which the flower of Chiang Kai-shek's armics was lost together with such modern aimaments as China possessed China has reccived only a trickle of aid as against the flood of lend-lease sent to Russia, but Chiang's aimies have fought on There were at least 100,000 casualties in the battles they fought last year on Chinese soil, and certainly 85,000 in the furious Burma campaign which has broken the blockade by reopening the Stilwell Road

Casualties among Chiang's troops run to over four times the total number of soldiers the Communists claim to have

The tragic fact is that while fighting the Japs a little, but never enough to menace J spanese communication lines to the war against Chiang in the south, the Communists are also waging 'revolutionary war" against the Chirese National Army When the war began, the Chinese Communist Central Committee declared 'In Chinese politics the decisive factor is

military power We must in the course of the war of resistance, expand as far a possible the military power of the Party as the basis for capturing the revolutionary leadership in the future. Since Pearl Hirbor Mao naturally has been willing to let the "sob Western imperialists" finish the Japs while he concentrates or "capturing the revolutionary leader."

ship "

This makes less astounding the statement of Lin Yutang 'For every Japanese the Communists claim to have killed they have killed at leas five Chinese, for every town they have captured from the Japanese they have captured 50 towns from other Chinese" It explains Confressman Walter Judd's statement that when last summer, the Japanese armie r nded down from the north through four to six hundred miles of country the Communists claim to control they got free passage. Not a single one of the hundreds of trains carrying Japanese soldiers and supplies wa der aled (Congressman Judd of Min nesour served ten years as a medica missionary in China, and saw Coin munism firsthand. He revisited the country last September and October

While this process of Communis revolution is going forward according to a published schedule, such fibles a the following are related by Harrisor Forman and solemnly quoted in a review of his book by Edgar Snow

"In the seven years of war the Communists have fought over 92,000 battles. I hey have killed and wounded 1 100,000 and explured 150,000 of the enemy. For the same period, the Communists suffered over 400,000 casualties."

Ninety-two thousand battles in seven years is 36 battles a day, or one battle every 40 minutes In these battles the Communists, although a good number of them were aimed only with "old blunderbusses, mines, or any weapon at hand," are alleged to have knocked off enemy troops at the rate of 20 per hour, or one every three minutes — this without allowing for mealtime or rest hours, night or thy, for seven years running Beside hese astronomical achievements, the leeds of our Marines at Talawa or ruadalcanal are, of course, mere hıld's play

It is doubtful if a more fantastically was ever told with a straight face to the American people. And we report To expose it, you have only to look up the documents as dusc your

bi uns

In ception No 4 That Chiang Kaishel is a fascist, and that his totalismian regime is preventing the Communists from establishing democracy. What kind of "democracy" the communists iim to establish we have beind from their leader a "Sovietlyle dictatorship of the proletimat" not only Chiang Kai-shek but everyte in the world w'o intelligently phoses this kind of dictatorship is knounced as a "fascist". This has ken the Communist smear-technique er since Hitler broke his pact with stillin

Chiang's regime is not democratic When he assumed power in 1926, it was the opinion of the leaders of the uomintang that only a military dicatorship could achieve the unity and independence of China Until that should be achieved China, thanks as

much to the Communists as to foreign intruders and war loads, could not create a democratic republic. Whether they were right or wrong, it is certain that, except for the Communists and their subservience to Moscow, Chiang has achieved both the unity and independence of China, and he is moving toward a democratic republic

He once remarked to Amb issador Hurky "If I become a dictator I will be forgotten, like all dictators in our history, within 48 hours of my death But if I sincerely work to return power to the people, I will be remembered as the George Wishington of China Can there be any doubt of

my choice?"

Ching's speech of list Mirch in which he set the date for a constitutional convention, is sensible and convincing It concludes

Upon the inauguration of constitutional government, all political parties will have legal status and enjoy equality. The Government has offered to give legal recognition to the Communist Party as soon as the latter agrees to incorporate its army and local administration in the National Army and Covernment. The offer still stands.

I am optimistic of national unification and the future of demoeratic government in our country

No one, compairing Chiang's speech with the schedule of steps toward proletain dictatorship drawn up by Mio Tse-Tung, could fail to see which of the two is on the road to democracy Chiang has permitted the publication of a Communist daily in his capital throughout the war while Mao will no even admit a corre-

spondent of any Kuomintang, or non-Party, newspaper in his capital There is a maddening press censorship under Chiang, but under Mao there is no free press to censor That is a rough indication of how things stand

The Chinese Communist regime is a ruthless party dictatorship, camouflaged like Russia's with ceremonial elections, but ruled with executions, purges, concentration camps The Chinese National Government has tabulated, with name, place, date and circumstance, the persons known to have been officially murdered by the Communists as "traitors and Trotskyites" from April 1939 to October 1944 They total 34,7,8, of who 1 26 834 were military personnel, 3069 government officials, 1387 Kuomintang Party workers, and the rest civilians. This does not include the unnumbered Chinese soldiers killed by the Communists in combat action against Chiang's troops

I he fact that China under Ching is not yet democratic is the very thing that makes the Communist danger so great If the Chinese knew freedom and possessed it, they would be less it adv victims of the totalitarian infection Having known little but the aibitrary rule of rival war lords, and then the equally arbitrary enforcement of national unity by the Kuomintang, they are as open to this infection as the Russian peasants were who had known only the regime of the Czar They are possed at a crossroad, ready to go either way — the way of the Russian totalitarian state toward which Mao and the Chinese Communist Party are pointing, or the way of American democracy toward which Chiang and the Kuomintang are pointing That is why the Chinese liberals, as even pro-Soviet reporters admit, while fighting for more free dom under Chiang, are not for the Communists

What Chiang needs is our political understanding, technical assistance, loans, investments, munitions and supplies in support of his plan to in troduce constitutional government and make China democratic. The two most important items on this list at the moment are supplies and under standing. Supplies our State Depart ment has recently to the relief of all wise men, decided to give to Chiang and not to the Communists. But we must give understanding too

It shows no understanding to de mand of an anti-Communist govern ment that it 'unite" with Commu nists An American foreign policy based on this mistake may very soon prove fatal, not only from the stand point of democracy but of every American interest in Asia. Put your self in the place of Chiang Kai-shek and you will see why Chiang his foucht the Communists in bloods was and desperate intrigue for 20 years He sained his power by saving China from a Communist revolution in 1927 He knows the Communists He knows that one word from Stalin — and no word from anywhere else in the world — could preduce the "unity" some critics are so 1 ritatingly urging him to pull out of a hat

Chinese courtesv will survive a lot of irritation But Chinese patriotism has a limit beyond which it will not go And there lies behind our pressurupon Chiang for a "unity" he cannot achieve, an implication that can only infuriate Chinese patriots. The init

plication is that the Roosevelt-Churchill pledge at Causo to return Manchuria to China at the end of the war may, if unity fails, be interpreted to mean turn over Manchuria to the S'alin-dominated Communist government of Tenan

Washington rumor, reported in the New York Times, even says that Stalin was promised a free hand in Manchuria for his help in the war against Japan But Stalin may never have isked for Manchuria That is not his method of expansion All Stalin needs in order to establish his power in Manchuria is a "friendly government" a quick march in there by Mao s Red Army, followed by the usual made to order puppet state Our acquiescence in that operation will be sufficient to sell out Chiang sell out the hope of democracy in (hing, and the hope of a strong independent American ally in Asia

Chiang's loyalty to the Western democracies, and to America in paiicular, throughout the long war for Manchuria has been inflexible. It survived our unlimited export of war materials to Japan, it survived our 'deleat Hitler first" policy and the loss of Burma and Malaya, which enibled the Japanese to blockade hina, and prolonged her sufferings interminably, it survived the Stilwell incident, it has survived the recent, Communist-kindled flare of anti-Chinese slander in the American piess, it has even survived, so far, our mane demand for 'unity' with armed revolutionists who are waging war against him But it will not survive the knowledge that we propose to turn over to Stalin, through the agency of these revolutionists, the richest lands of China about which essentially, the wholewar with Japan has been fought

Chiang, because of his belief in Western institutions, has stood like a rock against those in his party who advocate a rapprochement with Russia as against his close friendship with the United States But should it become apparent that we intend to bargain away all North China for the sake of Russia's help in the war, will Chiang be able to resist this pressure? With what arguments can he answer those Chinese patriots who will suggest that China do her own baigaining with Russia, and renounce the policy of special trust in the United States? Only the smoke-screen of deception laid down by the Commu nists and their fellow travelers blinds us to this momentous question, and all it entails — for us and for world democracy

These pro-Communists are playing the same game in Asia that succeeded so brilliantly in Eastern Europe In Yugoslavia, for instance, on his principle of "arining anybody who will kill a Hun," Churchill sent munitions and supplies to the rebel Tito, veteran Comintein organizer and agent of Moscow, enabling him besides killing Huns to wage a civil war against our ally, the legitimate government, whose troops were commanded by General Mikh illovitch Mikhailovitch was also killing Huns, but he had not the backing of Moscow, and he had no propaganda machine with which to counter this same four-sided ne Russia is a democracy, Tito is not a Communist, I to is fighting the enemy and Mikhailovitch is not, and Mikhailovitch is a 'fascist'

Except for Chiang's loftier position

THE READER'S DIGEST

as head of his government for 18 years the situation in China is ominously similar And the choice for us is inescapable. Either we face the facts and side with the stouth of democracy, or we swallow the lies and endorse the totalitarian strangulation. There was never a plainer or more simple issue before a United States Government.

But there is one big difference—that is the size of China To sell out Chinas Kai-shek to the Chinese '1ito" will not add a paltry 13 million to the totalitarian Colossus. It will bring under totalitarian regimentation 450 million people. This vast population, united in their policy with the Soviet totalitarian empire of some 200 million, would cert unly threaten the hope for a democratic world. When Iran and India fol-

lowed China, as they almost certainly would, that would mean a solid block of one billion people under a totalitarian regime

Facing such a prospect, it seems obvious that as intelligent democrats we must abandon the whole policy of meck appeasement toward Commu nist propagand a and power in China Even Russia will have greater respect for us if we make unmistakably clear our loyalty to those free institutions which have enabled our American n ition to arm, equip, feed and rescue from destruction a half of the planet If we really believe in democracy, let us implement that belief with a peace able but clear-headed, informed and resolute campaign to promote the democratic way of life throughout the earth

"Case Dismissed"

Authorities predict a crime wave after the war. Can our courts protect the community if they continue their present trend toward unreasonable lemency for the criminal?

Condensed from The Atlantic Monthly

RIME waves have followed almost every war, and we have hid sufficient waining that ifter the present conflict we can expect unprecedented lawlessness Yet few communities have heeded the warnings. In many cities the law enforcement agencies are helpless to function efficiently because of alliinces between politicians and criinmals And there is another aspect of law enforcement which has received too little attention. Even strong enforcement agencies cannot fulfill their responsibility to the public unless they have the backing of the courts. There must be a more realistic attitude toward the Constitutional rights of cuminals The Constitution was never intended as a refuge for the guilty

I wo years ago, in Chicago, Edward Damiani, a criminal with a record of prior conviction for armed jobbery, was again found guilty of the same crime. He was sentenced to the penitentiary. As often happens, while an appeal was pending his bond was reduced by the court and he was released. Nine days later, armed with poison gas as well as guns, he and his associates held up a

Virgil W Peterson

Operating Director Chicago Crime Commission former special agent of the FBI in Milwaukee St. Louis and Boston

currency exchange in Chicago. The cashier, Agnes Olsen, a woman of 52 did not comply with the demands of the robbers speedily enough. Poison gas was released and she died.

It is time to give some thought to the rights of the Agnes Olsens is well as the Damianis Damiani had his alleged rights preserved. But it cost the life of an innocent victim. Surely law abiding people must be protected, too. The strained reasoning by which courts have sometimes freed lawbreakers would be humorous if the results were not so tragic to society.

In Illinois officers received information that on a passenger train in Cook County there were men who were illegally in possession of heapheasants. The officers boarded the train. They saw pheasant feathers protruding from the pockets of Sigmund De I uca. The officers searched him and found that he had four heapheasants. De Luca confessed to the

officers that he had killed the birds

Here was a perfect case — to everyone that is, except the Illinois Supreme Court The court held that, when the officers saw the pheasant feathers sticking out of De Luca's pockets, they could not tell whether they were the feathers of hen pheasants or cock pheasants Consequently, the officers had no reasonable ground for believing De Luca was implicated in a crime The search was, therefore, unreasonable and illegal Evidence of guilt thus found was inadmissible The conviction was reversed

This case is unimportant. But such decisions pave the way for the immunity enjoyed by the hoodlums and thugs who endanger the security of the citizens in many communities. The pheasant-hen case can easily serve as a precedent to turn murderers loose.

Having progressed from the situation in colonial times, where crimin als had few rights, we are approaching the equally untenable position that criminals are entitled to a good measure of predatory privileges. Social protection is the principal function of penal law, but the trend has been to place more and more emphasis on the rights of the individual criminal.

We pride ourselves on the strides we have made in the science of criminology. We have behavior clinics, psychologists, psychiatrists, sociologists, biologists and social workers to give expert aid and treatment to the individual after he is convicted of a crime. But only a small minority of criminals reach the experts for treatment. Because of legal technicalities

that frequently benefit only the law violator, the odds are that the professional criminal, if arrested, will never go to trial, let alone be con victed

Several weeks ago two Chicago police officers observed an automo bile loaded with merchandise The conduct of the occupants of the car aroused their suspicion The police men stopped the car and questioned the occupants It developed that these men had just perpetrated a burglary, and that the car was loaded with several hundred dollars' worth of stolen goods When the case was heard in court, a motion to suppress the evidence was sustained on the ground that the arrest, search and scizure were illegal. The burglars were set free The judge who dis charged them was not responsible for this ridiculous protection of the crim inals' alleged rights. He was merely following decisions that have been handed down by higher courts

Neither the U S Constitution noi the state constitutions prohibit all arrests, searches and scizures without a warrant Only unreasonable searches and seizures are prohibited Never theless, the courts have been constantly placing limitations on the definition of "reasonable"

One of the most notorious gangsters in Chicago was Two Gun Louis Alterie After the gang slaving of his pal, Dion O'Banion, Alterie frequented various night spots, flourishing guns and challenging the killers of O'Banion to shoot it out The police arrested him one night, with his gun cocked, ready for action When he wis brought into court, the judge castigated the officers Disregarding

the reputation of this gangster, the judge stated that citizens had to carry runs to protect their homes from obbers. Such judicial attitudes, besides immunizing the professional immal, thoroughly demoralize the honest and efficient officer of the law

We sometimes hear protestations at illogical jurisprudence of this and is necessary to protect individual ights. We feel impelled to inquire, as all Judge John F. Perkins of the Boston Juvenile Court, "Which individual." The individual who breaks the law in reckless disregard of other people's safety, or the individual who be having himself as he should and entitled to protection?"

A confession freely given affords i hly credible testimony, the truth of which may be easily verified. On priny occasions a culprit will fully tonfess upon the arrival of the ar ting officer Later he may deny lit his confession was voluntary is ironical that courts frequently ive his denial more credence than officer's assertion Mr Justice kson of the U S Supreme Court ently spoke out against this unmanted yet commonplace tendnev He said, "We know that police lindards often leave much to be esired, but we are not ready to clieve that the democratic process lings to office men generally less thevable than the average of those ccused of crime?

App irently any device used to free

a person accused of a crime is considered part of the criminal's natural rights. Witnesses against the accused are intimidated or mysteriously disappear. Dilatory tactics are pursued until the witnesses are worn out, disgusted, and made hostile. Defense coursel frequently look upon phony alibis as part of their stock in trade. If any of the numerous devices succeeds in defeating justice, the state is through. It has no right of appeal With the defendant, the conviction is just the first phase of the proceeding.

25

There must be a distinction between the rights of an accused person and license. He does not have a right to have the people's witnesses intimidated or bribed. He has a right to a fair and impartial jury, not to a jury fixed in his behalf. The defendant has the right to have the truth brought out at a trial. He does not have a right to the exclusion of relevant and competent evidence. And he does not have a right to have all witnesses who testify against him harassed, humiliated and confused.

The Constitution prohibits unirasonable searches and scizures. The accused is not entitled to have a reasonable search declared unreasonable through absurd legal theorizing.

The person on trial is entitled to a fair administration of criminal justice. But that does not mean the one-sided system of criminal jurisprudence which we are gradually approaching.

ONE OF MANY

ATTER the death of President Roosevelt they words - death

After the death of President Roosevelt, these words—deeply moving in their quiet restraint, and eloquent in their message—appeared in Mrs. Roosevelt's syndicated column.

When you have fived for a long time in close contact with the loss and grief which today pervade the world, any personal sorrow seems to be lost in the general sadness of humanity. For a long time all hearts have been heavy for every service man sacrificed in the war. There is only one way in which those of us who live can repay the dead who have given their utmost for the cause of liberty and justice. They died in the hope that, through their sacrifice, an enduring peace would be built and a more just world would emerge for humanity.

While my husband was in Alb my and for some years after coming to Washington, his chief interest was in seeing that the average hum in being was given a fairer chance for "life, liberty and the pursuit of happiness". That was what made him always interested in the problems of minority groups and of any group which was at a disadvantage.

As the war clouds gathered and the inevitable involvement of this country became more evident, his objective was always to deal with the problems of the war, political and inilitary, so that eventually an organization might be built to prevent future wars

Any man in public life is bound, in the course of years, to create our tain enemies. But when he is gone his main objectives stand out clearly and one may hope that a spirit of unity may arouse the people and their leaders to a complete understanding of his objectives and a determination to achieve those objectives themselves.

Abraham I incoln was taken from us before he had achiaved units within the nation, and his people failed him. This divided us a an ation for many years

Woodrow Wilson was also stricken and, in that i istance, the peoples of the world failed to carry out his vision

Perhaps, in His wisdom, the almighty is trying to show us that a leader may chart the way, may point out the road to listing peace, but that many leaders and many peoples must do the building. It cannot be the work of one man, nor can the responsibility be laid upon his houlders, and so, when the time coincs for peoples to assume the builder more fully, he is given rest.

God grant that we may have the wisdom and courage to build a peaceful world with justice and opportunity for all peoples the world over — A United Features Synticate release

NOW IT CAN BE TOLD

ow the Rhine BattleWas Planned

Behind the scenes with Lisenhouer and his staff

By Edwin Muller, Roving Editor The Reader's Digest now in Europe

MARCH 7 General Eisenhower was dining at Advance Headquarters with a group of his nerals. They were putting the finning touches on plans for crossing. Rhine two weeks later. Just before seert, the General was called to the ione. As he listened, the famous conhower grin spread over his face.

They did' Wonderful, wonderful'

c! Throw everything you can

ross, as quick as you can Divert

—" and in the discussion that fol
wed divisions were reshuffled, air

res shifted, supply lines rerouted.

I he General returned to his des
rt 'That was Bradley," he said.

I hey've done it! They got a bridge.

h one at Remagen.—"

Most Americans at home thought Remagen crossing was a stroke of or luck that changed the course of war. In reality, the possibility of that break had been fully prepared. The General was ready to take lyantage of it

wo weeks later the curtain was out to rise on the second act. Up of the Montgomery was poised on the ver's edge with an immense concention of a tillery and armored force. Down south the situation was different. There, Patton had just reached Rhine. There had not been time, prepare either an artillery or air.

barrage Nevertheless General Essenhower, talking to Patton on the phone, said "Yes, get over now Any way you can Get a bridge if you can, or use boats Swim, if you have to"

And so, while the Germans watched and waited for Montgomery's much heralded crossing in the north, Patton slipped across surreptitiously. There wasn't even an artillery barrage. At the signal of a low whistle, little boats slid out from the dark bank into the moonlit river. They were paddled to avoid the sound of engines, and reached the other side without a shot being fired. Within 24 hours Patton's bridgeheld was ten miles long and four deep.

Again the crossing was called a lucky break. It had an air of bold and asky improvisation. One British correspondent wrote of the contrast between 'Montgomery's full-scale small and the impromptu enterprise of the American Third Army's crossing

Nothing could be further from the truth Pitton's crossing was in fact no more impromptu than Montgomery's Both were directed from the same source, part of the same plan And so was Remagen

For there was a plan, a plan as carefully calculated as any in our military history From February 23 a month before the principal cross-

ings of the Rhine, the whole thing was in the bag

We're likely to think of this sort of calculation as a presogative of the German General Staff—those coldeyed, nonhuman faces that state arrogantly at us from the pictures But this plan, which beat the best that the Germans could contrive, had as its directing genius a very human guy from a smill town in Kansas

There has been a tendency to underestimate General Eisenhower as a strate ist. But not among the men who are in the best position to know. His field commanders and chiefs of staff, British and American say without reserve that it's Fisenhower who has run the show, that the battle of the Rhine was his concept and that it was he who carried it out, that, it he isn't a military genius, they don't know who is in this war

The concept of the Rhine bittle goes back to December 1941 — when the hulks of our warships were still smoldering in Pearl Harbor. It was then that the fundamentals of our strategy were decided that Cermany should be the first enemy to be attacked in force, that the principal attack should be across the Channel into Liance, that the objective should be to crush the German armies west of the Rhine.

Eischhower was in on the plan from the start. As early as 1935 he had begun an intensive study of the German Army. In the summer of 1942, as Chief of the War Plans Division of the War Department, he worked out the design of crossing the Channel and driving to the Rhine, there to fight the decisive battle. He

took it to General Marshall The litter, who was all for it, catechized him on it for hours, trying to break it down Then, convinced, Marshall took it to the President and subsequently to the British

But in the summer of 1943 there was a serious crisis in our strategic planning Something of it can at last be told

Eisenhower, now Supreme Com mander, still planned to break through from beighheads in Normandy and push on to the Rhine while another force was to land in the South of France and drive up the Rhone Val ley The two forces were to join alon the whole length of the Rhine, and there engage the enemy in an effort to destroy him there as an effective fighting force However, an alterna tive was put forward instead of land • ing in the south of France, we should attack Germ any through the Balk ins and Austria Our main force, striking through I rance from the west, should not deploy on the Rhine but should thrust across at one point and drive tow and Berlin

Creat pressure was put on Eisen hower to adopt this alternative

But I isonhower stood firm There would be too much ding I to our exposed flanks if we drove across the Rhine It only one point And the chief objective was not to reach Berlin but to destroy the German Army That could be done more easily west of the Rhine than east of It

His view prevailed

There was one big if Would the Germans stand west of the river? From a purely military point of view it seemed logical for him to withdraw and take up positions east of that

obstacle But the Nazi doesn't decide things from a purely military point of view, and Eisenhower has always been exceedingly skillful at reading his opponent's mind Again and again he had watched the Germans do what he calls "fantastic" things They had stood in hopeless positions and lost thousands of men in vain attempts to hold a few square miles for reasons of prestige Would they repeat the same mistake in front of the Rhine? Eisen hower figured that they would

And they did After our landings and break-through in Normandy, they fought in front of the Scine instead of returing behind it Likewise, with his back to the Rhine, von Rund stedt dug into the Siegfried Line Then came the grinding, wearing period of the war Progress was by inches Through November and December of 1944 it rained dismally, day after day Mud was knee deep, toxholes half full of slush and icy water For weeks at a time the men's clothes were wet or frozen, day and night Millions of words have been written about this war but not yet has an adequate picture been given of what the GIs suffered in those days

Eisenhower suffered with them For a while nearly half his time was spent visiting troops, talking to this group and that of dripping, shivering privates They say that he really comes to think of himself as a GI The GIs reciprocate his feeling They mean no disrespect when they shout "Hiya, Ike!" as his car drives by

The battle of attrition dragged on through December Casualtics were heavier than the public realized at the time. But they were a price we had to pay They had a bearing on the final battle of the Rhine, for the German casualties were far higher than ours, and that steady attrition finally wore von Rundstedt down. It forced him to commit himself to the desperate gumble of the Ardennes attack.

General Eisenhower foresaw the possibility of that attack two months before it happened. He could have limited its scope by reinforcing his thinly held line in the Ardennes. But he didn t have men enough to hold the Ardennes securely and at the same time to attack in force where the plan for the Battle of the Rhine called for attack. So he took the risk, a 'calculated risk.'

It was calculated very precisely Six weeks before von Rundstedt's at tack, Eisenhower and Bradley sat down together and drew a line on a map. It marked what they thought would be the German's maximum penetration. As it turned out, the line they drew differed by only three or four miles from the actual contour of the "bulge".

When the attack started on December 16 there were three anxiors days. On the 19th there was an historic conference at 12th Army Group Headquarters. The field commanders and the Chiefs of Staff were there. There was some gloomy talk Eisenhower looked around the group and said, "I want only cheerful faces here. We ll deal with this attack and make capital of it."

Patton was in great form "Let him get through! All the way to Paris if he wants. Then we'll saw him off at the base!"

The counteroffensive was mapped Montgomery to thrust down from the north, Bradley up from the south The General went back to Supreme Headquarters easy in mind He says he never got scared of the Ardennes attack until he read the headlines in American newspapers, two weeks later

Our counterattack was successful Major General Hoyt S Vandenberg and his Ninth Air Force smashed the tips of the German spearheads Montgomery and Bradley squeezed the flanks When the battle was over the Germans had lost two to one in casualties. His last chance of stalemating the war had vanished

The plan moved to its final stage The attack was one, two, three, from north to south

One was Montgomery On February 8 he struck between the Mans and the Rhine His task — the haldest of the three — was to break the Siegfried Line on a narrow front

Two was the American Ninth Aimy under General Suppson, together with part of Hodges' First Army Their objective was to cross the Roer Rivi and drive toward the Rhine attack was set for February 10 But there were heavy rains, and the Germans were able to manipulate two dams so that the Roer became a swirling, impassable torrent. It was a time of anxiety for Eisenhower But his anxiety was modified by a piece of luck In January we had captured from the Germans a map and a plan of the dams From them our engineers had figured it would take 14 days for the river to become passable Actually it took 13 On February 23 Simpson thrust across and drove the Germans toward the Rhine

Three was Patton's Third and Patch's Seventh armies in the south Patton

pushed the enemy back along the north bank of the Moselle But before he reached the Rhine he stopped Suddenly he swung south, crossed the Moselle, and lashed into the Germans' exposed flank. He drove them against Patch's army driving up from the south. Between the two the German formations melted away. The retreating columns were strafed by our fighter bombers until whole but talions would halt and start waving white flags. A quarter of a million prisoners were taken

The German armies facing Patton and Patch had ceased to exist as a coordinated fighting machine. That was why Fisenhower knew that when Patton came to the Rhine he would need no artillery or air barrage to cross it. He could swim across if he wanted to

Meanwhile, vast preparations were being mide for the crossings farther north On one army sector alone a million reconnaissance photos were taken On the service of supply, already burdened with the moving of imine use quantities of material, a new task was imposed, the transport of bridge-building equipment and boats Along the road of I rance and Belgium there was one of the strangest sights of the war, long columns of landing craft of all kinds, moving overland, hunded do of miles from the sea. For months their Naw crews had been practicing with them, some on the rivers of England, others as far away as the Columbia The Rhine was crossed first in Oregon

While the battle on the ground continued west of the Rhine-another great battle was fought in the air to the east — to seal off the enemy ap-

proaches Eisenhower had considered knocking out the bridges over the Rhine itself But there were more than 40 of these difficult targets in the bittle area. To destroy them i'll would have taken more air power than he could spare from other tasks The 10b could be done in another way A det aled study had been made of the rail and road approaches from the east, and it was found that the whole no twork could be paralyzed by destroying 16 of its key li lees behand the Rhine The An Torces got every one of them, then tackled railways and marshaling yaids, then the artillery and anti-aircraft that inight hinder the crossings

So the plan, all its mynad threads, drew together to its calculated climax

The crossings had been planned for the third and fourth weeks in March I hen on March 7 came the lucky break at Remagen, thanks to that alert and audacious handful of men of the Ninth Armored Division

It was a mignificent achievement But from a Staff point of view it was a headache. The plan had been working so smoothly Should it be pulled to pieces now? One general, who was on the scene at Remagen, advised against exploitation of the crossing there—especially as there was difficult, hilly terrain on the other side. That was why Bradley phoned Eisenhower.

One of the latter's qualities is his power to readjust quickly to a new situation. At that dinner at He idquarters he had readjusted to Rei lagen before his dessert got cold. The Stiff had its headache, but Remigen was exploited to the utmost. The bridgehead there made doubly sure

the success of the main crossings that were to follow

Those crossings went "according to plan" Nothing impromptu about them. In the south, Patton slipped across silently, while in the north, where the Germans were massed, expecting assault, Montgomery pounded his way over with big guns, Buffilo amphibious trinks, a great fleet of sinill boits. Next day, the greatest an borne army of all time took the German in the rear 1 or miles transports and gliders filled the sky flying layer upon layer as far as the eye could see The parachutes came down like drifting leaves.

After this, German resistance disintegrated. The decisive phase of the wir in the west was over

General Eisenhower took a moment of relaxation. With Britain's Prime Minister and Montgomery he had a pienic lunch on the bank of the Rhine, green with spring. Then while Churchill went sailing on the river, he went back to Headquarters to review with his staff the final phases of the war.

Those men on the staff are the ones who can best appraise Eisenhower Their feeling for him is twofold a profound respect for his strategic gains and an unbounded affection for him as a man

The Deputy Chief of Staff, Lieute ant General Sir Arthur Morgan, put it in words for me He is the reserved type of Englishman, the last man in the world from whom you would expect emotional praise

As I left his office he called me back "Do you know what I believe?" he said "There was a man sent from God and his name was Ike"

HARRY S TRUMAN

The Man from Missouri

Condensed from a forthcoming book, "Inside America'

John Cunther
Author of Inside Furope

Inside Latin America etc

practically everything on earth—except their respect for Hirry Truman—told me early this year that, if he became President, he would (1) choose as able a cabinet as any in our history, and (b) let it alone Hirry S Truman's single most valuable quality is his knack of picking good men—and then backing them up His greatest asset is that he knows what he doesn't know, and his highest viitue is his humility

I ike (eneral Eisenhower, whom he strongly resembles in some respects, Mr Truman is a perfect "chairmin of a committee" He listens and takes idvice, he correlates divergent points of view, he gives everybody an even break or better, he incourages those who need encouragement, and he can, if necessary, he plenty tough in making decisions

One of Harry Iruman's best friends, Barnet Nover, the distinguished foreign affairs editor of the Washington Post, gave a dinner party last March and, since the then-Vice-President of the United States was coming, our hostess had place-cards at each table airang d with proper regard to protocol I at to arrive, the Vice-President paid not the slightest attention

to this formality. He circulated around in is comfortable, unpretentious and agree the a minner as could be. He was lively and animated, he wishiply a guest among other guests.

I writched him with growing interest. In impression of what you might call bright grayness. The clothes and hair neat and gray. The gray framed spectacles enormously magnifying the gray hazel eyes. But no grayness in the mind. He talked a lot. Good talk too. His manner held a combination of contented humor, alertness, a wide and fluid range of interests, playful ness, and above all, a deep hum in interest in everything that went on

His voice is reasonable, very reas suring, and without much Missour twang His conversational manner is alert and poised. He talks very swiftly yet with concision. You have to listen hard to get it all.

I asked him when he had first met Mr Roosevelt

"In 1929, when I was a county judge in Missouri Roosevert was then Governor of New York, and I thought he was the greatest man I ever met Pause 'And I still think so"

Later there was a contrary note The Vice-President happened to mention an eminent politico "He's in ass You understand me? You know the word' An ass'?

Mi Trum in evidenced not the slightest sense of the importance he might feel as Vice-President They clevated me to this job, that's all, and here I ain"

MR TRUMAN served in the Senate from 1934 to 1944 and of all 96 Senators he became probably the most popular One anecdote tells the story. On the day he took over as Vice-President, no fewer than 40 of his colleagues dropped into his office. It was like old-home week. It is no derogation of Henry Wallace, Truman's predecessor, to say that, in all his four years, he had not similarly been a Senator, he never quite got to be a member of the club.

Here are some of the judgments on Mr. Truman Senators give me, before he became President

Hatch of New Mexico "He has the most valuable asset a man can have — courage He wants to be right, and when he decides what is right, nothing can deflect him"

Thomas of Utah "He knows the kind of men to pick His internationalist ideas are splendid And he has the proper concept of morality in government"

Bill of Minnesota "A swell capt un of a te im

Kilgore of West Virginia "The secret of Harry Truman is his ability to delegate authority, to organize committee work, and to back up his own men"

Pepper of Florida "His humanity is his biggest asset And he gets things done"

One of the new President's closest as ociates said 'Whatever he under takes to do, he does well. And you can be sure there's absolutely no difference between him now and when he was a county judge. He hates stuffed shirts"

Another comment was the following 'If you busted the door in and sud, 'Hirry what the hell, you're nuts! he'd quietly ask you to come in and explain exactly why "This sime friend added, after a serious pause, "If you bounced him in the nose, hard, he might blink, but you'd never see him ueave!"

Let it not be forgotten that, while he was Senitor, a poll of Washington correspondents by Iook Magazine named Harry Iruman as one of the ten most viluable men in Wishington He was the only member of either branch of Congress to make the first ten

The new President's chief relixation—if he has my time to relax now idays—is music. He learned to play the piano as a boy, and he plays quite well, though he calls it 'messing around at the keyboard". His tastes are Chopinesque and classical. What he likes most is to play the prano while his 21-year-old daughter Mary Margaret sings.

Mi Truman is also fond of reading When he was a boy he read strught through the public library of his home town, Independence, Mo I or years he read the Congressional Record every night before going to bed Now, of course, his time is taken up with official reports and so on

His mother — who is still alive, a staunch old lady of 92 — taur ht him

to read Mr Truman told me A book she give him when he was 12, Great Men and Famous Women, had enormous influence on him It taught him something of the relationships of men to government and how political leaders were shiped and made, though he had absolutely no idea of ever becoming one

The President was born on a Missouri farm in 1884. He is of Scotch-Irish descent, with a little French mised in His grandparents had come west in about 1840, out of Kentucky He met his wife Bess Williee, in Sunday school, when she was five, and says he has been in love with her ever since

It is an extraordinary thing that, in this day of universal education, the President of the United States should not have gone to college. The reason is of the best, his family was too poor, and he had to earn a living I or ten years, after high school Harry worked on a 600-acre farm that 'grew everything, these years, he says, were the best of his life. After that came jobs in a drugstore and a small bank and command of a field artillery battery in France during World War I

I he President has never had much money When he arrived in Washington he was in debt, he has since paid off every cent, while living on his salary

Mr Truman didn't engage in sports as a boy, because of defective cyesight "So they made me an unipure," is the way he laughs it off One eyeball is flat But with glasses, the Chief Executive sees perfectly His health is, in general, excellent

Mr Truman has been accustomed

to getting to work very early. He executive screeting, Matthew J. Connelly, told me that in years he had beaten the boss to the office only once. Mr. Connelly added "And he always took the day home with him too. Always Mr. Truman's brief case was full of things it was imperative to read at night, so that he could meet adequately each new day.

Be one Peul Hubor Mr Trum in went to General Murshall and asked how he could be of service Irum in hoped to get into uniform again But Marshall told him in elfect, while appreciating his gesture 'Senator you're 55 This is a youn man's war We can't use you

I ruman respected Marshall's point of view, but he was hurt. He hated to think that he was too old to be of use. In the winter of 1940, he made a tou of Army camps then being built throughout the country. He traveled in his own car at his own expense he covered about 30,000 miles. As a country commissioner in Missouri he had spent some \$60,000 on 10 ads—— the best darned 10 ds in the United States." He knew a lot about contracts and construction. And what he saw being built didn't please him.

So Mi Iruinan mide one of his rare Senate speeches. He introduced a resolution calling for an ir vestigating committee. This was approved and in April 1941 the committee got to work. It has been estimated that the Iruman Committee probably saved the country between two and three billion dollars, and a good many thousand lives, by its insistence on strict standards in war contracts and the like

MR TRUMAN did not want the job of Vice-President He went to the 1944 convention in Chicago with a speech nominating James I Byines in his pocket He still had it in his pocket when, trying to think fist, he had to make a speech of acceptance on getting the job himself! Not till after his nomination did he see the letter from Mi Roosevelt suggesting him for the post

He hated to k ive the Senate "I liked being a Senator I wanted to stry in the Senate all my life But when I get a job, I try to work it it?"

A month before the convention, I ruman chatt d with a newspaper friend about the impending nominations. Truman said, I wouldn't be President of the United States for a million doll us!

Mr Roosevelt winted Frum in to be Vice President for a single's ipremere ison. He was concerned that the peace treaty should cet through the senate, that the United States should pair a new world order with teeth so that the tare dv of war could never be repeated. Fruman, Roosevelt felt, was the most effective person he could find to this end if invbody could put the treaty through, in the vent of a staft in lit. Trum in could main ich as he was extremely popularly tables.

Mi Fruman has been soldly in two of world cooperation from the unit he entered public life. He looks back to his historical reading as one thief source of his internationalist ideas. The oreatest political experiment in the history of all government was, Mr Truman thinks, the American Constitutional Convention of 1787. He hop 5 — though he didn't

say so in so many words — that the work of this convention can, in our times, be somehow 1 ojected on an international scale in full maturity

President Truman had a good deal to do with the BH resolution in 1943, pledging the Senate to international cooperation. Button Ball and Hatch were all members of his own committee, all were close friends and it was easy for all to meet under his baton. And it was I ruman who in the earliest negatiations, suggested that it anything at all was to come of the effort, it must be bi partisan. True to that acter, I cremained out o the limelight.

Immediately after his mane uration is Vice President, Mr. Trum in held a lunch for the freshmen Senitors. At the lunch Iruman was careful to invite all the BH boys, and also Iou Connilly, Charman of the I oreign Relations Committee The ider was to let Ball and Hali and Hitch talk to the nev concis about Duributon Oils Then Iruman, mostly by personal persuasion, got all 16 freshmen (include) Cibeliart of Indiana and Hickenhooper of Iowa strong midwest Republicans) to silv a round robin to the I resule it pl da Administration s ing support of the force a policy

Not always did the Roo cyclt Administration sinds on I um in I or instance he got no support whin run min for its lection as Ser itor 12 1940, though his record was completely loyal. The reson was the impending prosecution for income tax existion of Boss I homas J. Pendir. ast in Kansa City. I runnin was in no way implicated in any Pender ast seineal, but

he had been a Pendergast man Truman's friends explain the Pendergast association more or less as follows. The machine, though certainly corrupt, usually sought to pick candidates who wouldn't get them into trouble, as front men it had to have people of unimpeachable integrity. Since World War I days I ruman had been a friend of Jim Pendergast, the boss's nephew. And, besides that you couldn't be a dogeatcher in Missouri without Pendergast support.

Trum in's friends are careful to say that, when he went to Washington in 1934, he told Penderg ist fraully, I rom this time on, I'm a Senator Once Pender, ist's friends put extreme pressure on him to change his point of view on a forthcoming vote I ruman refused. He said, I cll the boss I m not budging "

ONL DAY List March I dropped in at the Senate Office Building for an appointment with the then-Vice-President His receptionist said that, having had to go to the dentist he was a bit off schedule" At 9 8 he sailed in 'Lite late," he muttered, whizzing through the outer office. He called me in, and talked till a little after 12 Once a secretary interrupted He twinkled at her, 'Wint to see if I m really working?" Once Mr Connelly dropped in This son of a gun, Mr Irum in pointed to me, is tiving to find out what kind of a son of a gun I nm!'

I asked Mr Truman what he pelieved in most He said right away, 'The Sermon on the Mount — and that isn't just a religious answer' He went on to assert that no individuals, communities or countries ever got

anywhere that didn't observe the Golden Rule, that didn't maintain 'a sense of decency" about other individuals, communities and courtires 'Look at Hitler His word wasn't good, so he got nowhere finally "He added somewhat rule fully that, human nature being what it is, a lot of folks just can't help being 'praces at here to But let's try to help 'em get over it"

I asked him what he liked most He answered without any hesitation People — and to do things for people? Then (with a laugh) Without expecting anything much by way of teward either!?

Mr I rum m's political philosophy seemed to run like this TI e art of science, of government depends on the int, or science, of politics and politics depends first, last and all the time on human relationships which in turn depend in essence on doing things which will benefit the people and which they believe to be right

But what Mr Trum in talked about most was Missouri, and he talks of a with loving pride. He stood for a quarter of in hour before a large map of Missouri, demonstrating point in its geography, history and agricul ture with zealous erucition Missouri is, according to its most eminent li ing son, the only state in the Union which could get along self-contain if you built a fence around it. And Missourians are, he laughed orners folks, against everybody What ar tney for? 'I asked Missouri!' Mr Trumun was delighted to reply

It was easy to see that Missou 1 the crossroads of the nation, the heart of America, is also the center of Hair Truman's heart

The Woman with a Broom

Condensed from

The New York Times + Inn O Have McCormick

I've A DEVISIVITED town behind the fighting line a corresponde at saw a woman cinerge from a cell and, though her house was a ruin, proceed to sweep away the rubble on the doorstep

In every will-invaged country the woman with a brook is a familiar isight as ruin itself. In one flatt in d. Dutch village after another dized old men stood in the shell-pooled fields, but the women with working in the doory ields that a fiw hours before hid led to hours. Several were rety in clays tachering it iff to the poles — rying to inverse one whole it in all it surial claims it clays in the country of the country.

In Execuse is bittered so minds one ble I send is norming a woman was maken a broom stack attack upon the crumor distones that I seriod a may patch of guiden Someone a distribution with a broom in the wake of 2000-pound bomb. Who stosaye the cabbages and onion is I don? They reall that sleft of all the work of all my life, she said facetly. And somebody has to begin cleaning away this mess."

Then there was the old woman sweeping out a cowshed. The house was gone. In a 50 mile radius not an animal was left. The farmer looked at us with hopeless eyes, but the

wom in kept on clearing a little space in the wicekage to begin life and

It's pretty tunle to start attacking the runs of great cities with a kitchen broom. Yet everywhere before the monster bulldozers arrive to clear paths for the unites through the debits left by war women instinctively serve than brooms in this age old gesture of cleaning up the mess the men have made.

There's no issume that they can clear it up his time but today to e are more worken that men in Lu top wrows of soldiers and hostages widows of the hist war, and they are bound to try. In Paris an association of vidows or aren executed by the Cemins is headed by a lovely git. We are the trustices of the future, she as cried. We can the average they won thave seen what we have seen."

It isn't chince that women have been named in the first time to a conference called to set up the finine-worl of international order. There should be more of them for they are in the wars now, and millions of them have no hing much left but a broom. Whether they can do better than the men is a question, but they are some how angiver over destruction, and at least there's not intending role of doing voise.

TAILOR-MADE LIVESTOCK

1 sensational feeding discovery by which animals can be made more productive or slowed down and fattened — at will

0 1 1 1 1 1 1

Condensed from I mm Journal (with additions by the author)

Carroll P Streeter

menters have relied principally on two man tools breed mg and feeding, to mere use production of milk, butterfat, menters production wool. Today, with an entirely new approach, they may be able to step up production by ten to 50 percent, depending on the product and the animal. They have found out how to put their finger on one of the bady controls—on the throttle of the engine itself.

The control is the thyroid clind, which in a daily cow is no July turn a good sized plum. But it controls growth. It determines the rate it which the body burns food and turns it into energy, milk or other livestock products, and it influences breeding ability.

The experimenters have found how to regulate thyroid action by two drugs. One gives the same effect is though the gland were speeded up. The other slows it down

Let's look first at the speed-up process

In 1934 D. W R Graham, Jr, a Canac in scientist, discovered that by feeding dried ground up thyroid gland to daily cows he could cause

sensational increases in both milk made butterfat. Scientists at the University of Missouri, led by Drs. C. W. Turne and I. P. Reinere, were excited by the possibilities and tried at on the possibilities and tried at on the university head. They got the surresults. The trouble was that 'thy road powder' cost bio to but pound No farmer could feed a maget his money but at the rull possible function of a cheaper drug.

They finally alt upon a special method of adding iodin to slam mill and got a brown shapowder some thing life brown such which they called thyroprot in alt contains the iodine—the identical hormone of thyroid gland secretes but 20 time more powerful. It does to a tarrily speed up the gland but it his the same. The top the book

same effect on the body

The first commercial thyrop of a is now in the pilot plant stage of Cerophyll aboratories in Kan as Cit Dr. Turner e timaces that the cose to feeding may run about three cents day per cow, within the means of every farmer. Lifteen state agricultural colleges are now testing dosages and observing effects. Their results agree roughly with Turner's

Here are some things thyroprotein

docs

1 In three cut of four dury contribution tent to 20 percent Butterfat shoots up 33

the jo percent Within a week after the roprotein feeding is started, many a Holstein that normally gives milk containing three and a half percent butterfat will boost it to four Jerseys that were giving five percent milk often quirch at to six. All this was demonstrated over four years of constant testing with the University of Missouri dairy cows and on several ordinary farm herds.

Suppose a fourth of the cows in the United States were fed thyroprotein. The minimum gain would be abillion quarts of milk and a quarter-billion pounds of butterfat a year over the

production for 1944

2 Thyroprotein increases egg production in chickens ten percent largely by preventing the usual hot weather slump. It also hastens feather growth, which is important because it is related to early laying. If a fourth of our present number of heas were to get thyroprotein they would lay nearly two billion more eggs than last year.

3 Thyroptotein speeds up growth of young animals by at least ten per cent bringing them into production culici or getting them to market sooner

4 It improves the breeding ability of any male animal Furner has done it with beef and dairy bulls rains, jacks and buck goats. Less experimenting has been done with temales but thyroprotein may be just as effective for them.

These experiments may change the sheep business. From time impressional she p have bred only in the fall or early winter. Should tests with twee be successful, we may soon be producing lambs the year around

The I ood and Drug Administration has given thyroprotein only him ited approval to far Recently it has allowed its use in poultry feed but before approving the drug for cattle it wants to be sure that cows will not secrete thyroxine in milk. If they did, people drinking the milk would be speeded up just as the cows were

Dr. Furner and his daughter have repeatedly drunk milk from thyro protein I deows and have run metabolism tests on themselves without finding any effect. He has tried the drug extensively on guinea pies. A three-months test has just been completed on 20 babies in the New York Post-Graduate. Hospital with milk specially produced at the New Jersey State Collège of Agrici luic. While results of the test are still being analyzed the doctors have discovered no effect on the babies so fur

But you may ask won tall this burn up the cow? Won tat wear out a hen?

No," says Turner, "not if given in the right dose Any cood herdsman can tell now much to give each cow by watching her weight, her coat, and her n reconsess. And we have ted thyroprotein to hens for two and a half years without all effect. They laid more eggs the third year than they did the second."

Ju t as astonishing as thyroprotein is thiourical, the drug that slows the thyroid Eventually it may make most toxic-goiter operations in humans unnecessary Dr Furner finds that in I vestock it stops growth and hastens fattening By adding as little as one tenth of one percent of the drug to poultry feed he has found that he can fatten Leghorn I roilers

as much in two weeks as he used to in ten l'antastic as it seems, a farmer can feed thyroprotein to a steer calf to speed his early growth, then substitute thiouracil to stop this growth and fatten him in a hurry. Thus he can tailor his livestock to meet market demands

More research will be needed, both

on farm animals and human beings before widespread use can be made of either thyroprotein or thiournel And the Food and Drug Administration must first fully approve them. But it looks as if the researchers in animal physiology are hot on the trail of one of the biggest finds since the discovery of vitamins.

Guardian Angels

Among the guests at an Arizona dude ranch was an advertising executive who, while relaxing in the Arizona sunshine, kept in touch with his business through the pages of nine large daily new-papers. These dailies came regularly for about a week, then each day several were missing Considerably annoyed, the man rode by the Post Office one day to discover what caused the irregularity

The postmistics was a stern little old lady who distributed justice along with the mail When she had heard his complaint, she cycd him sternly for a moment, then said, "Young man, certainly I know what has happened to them Nobody in the world has time to read nine big daily papers I've been putting some of them into Max Brown's box He gets no papers at all!"

A YOUNG matron in a Birmingham, Ala, suburb was attempting to mow the family lawn. Her most interested spectator was the bus driver whose run ended exactly in foot of her house. Here he stopp d for ten minutes, then begin another trip "Can't you get anybody to cut that for you any more," he asked

'No, all the men are either in war plants or the service," she replied

'Looks like your lawn mower is pretty hefty for a mite of a person like you I et me have a try at it"

He cut a wide swath, then went back on his run. The housewife, hearing her baby cry, went into the house. When she returned, 40 minutes later, the bus had made another round trip and there was a wider swath. This continued all morning. By three that afternoon the lawn we completely cut.

^{*} Kuchin is accented on the last syllable,

a bid to join a finternity Officers from this outfit were looking for candidates in the trining camps back home. They would tap you for a little talk 'Would you like to see some quick action — haz indous, of course' 'Are you pretty good at taking care of yourself." And then a question that made you think twice 'Are you willing to make a parachute jump behind enemy lines — alone?"

'I got my first hint as to where I might be sent when I was called into a room in Washington and isked to make a list of things I would want if I should find myscli alone in the jungle Knowing that the Army use ally gives you about half what you ask for, I mide a real list three revolvers, two knives two flashlights, tominy gun, grenides, comouflaged clothes, and so on for half a page. They produced every nem on the spot, and said Tike it away! I hid to load it ill on, and go back to my hotel look ing like a one man task force. When I went through the lobby women screamed, strong men turned pale and I felt like a fool. But I learned then and there that this outfit is preparca to let you make a dama fool of yourself in your own wiy. They give you what you ask for

RALPH F HENDER ON has traveled a tensively in the Fir Fast and was tamiliar with the Burma hill country before the wir Returning in 1944 as a war correspondent he rode with the first truck convoy to go through from Assam into China over the newly opened Stilwell Road With a kachinguide he followed some of the trails described in this intele to visit advance Ranger bases and American officers who had parachited into the jungle. His guide, significantly knew only two words of English carbine and Kration

"A few days later I was on a boat, and in officer told me where I was bound for '

The Buima hill country boidering Assam is one of the wildest neas on carth. I nom a plane it looks like a gigantic green plush carpet flung over a rock pile. From the ground there is usually no view at ill, only a sense of sunless, choking vegetation. The few trails used by the hill folk seem to emphasize, rather than relieve, the impenetiability of the end less surrounding jungle.

Along these truls, early in 1942 the besten Allied forces had node their escape from Burma into Assam Along them, after that retreat, crouched the Japanes, denying any hope of a return Every path became the entrance to some little green hell, some secret and well aimed Japanes.

strong point

The Jipanese conquest of Burmahid, moreover, isolated China by choking off the Burma Road Unless a new way could be found to end in supplies, China was doorsed. The task of digging the Jips from the Neith Burma mountains and seeming a route for a supply road nearly in thousand miles long was a signed to Ceneral Joseph W. Stilwell. As one of the units under his command, the American Kachin Rangers were to play their spectacular part.

On July 4, 1942, a small group had gone ahead to set up the Rangers headquarters in Assam. There had been only 20 of them at first, a currous little army of 11 officers and nine men. A hand-picked group of special ists, including not only experienced Army officers but others whose at tainments seemed peaceful enough.

scographers, linguists, lawyers, even a jeweler (his skill with precision insumments was to prove invaluable in designing tiny, durable radios)

The plan of operations was simple, ci izv, ' some conventional militury minds called it A wailike hill tribe called the Kachans back there in the Jap held mountains, was known to dislike the I manese. The plan was for American volunteers to organize the Kachins in fighting units, and supply them with weapons and leadership from a plane flying at night deep into Jip territory, an America i vol unteci would parachute down ne ii 3 jungle village A second chute would carry food, weapons, drugs, a tew presents for the natives, and a small radio sending set

From the moment he leaped (often his first parachute jump) the volunteer would be arrevorably on his own. He must make friends with natives whose language and customs were totally unfamiliar to him. He must make himself then leader trust them not to betray him for a high reward. Once he was securely established, the night flying planes would bring him more food weapons, supplies. And then he could begin his own little war, a campaign of raids and ambushes, as an table. Tapanese

The plan certainly lacked nothing in audacity. It might have been regarded as foolhardy but for two important racts. This, the country was so wild and densely jungled that there were many remote villages to which not even Jap patrols had ever penetrated. Second Kachin refuge a had reported that men of their race liked. Americans as much as they hated. Japs.

Tur Kachin warrior, as many American boys were later to discover with something of a shock, does not fit the comantic picture of the noble savage. He is usually no more than five feet tall, with stringy hair, crooked teeth, and a returing manner easily mistaken for stupidity. His clothes look like something given to him, a long time ago, by destitute relatives, and he wisely refrains from wishing them lest they disintegrate altocether There is nothing in his appearance to contradict his history of blood feuding within the tribe and robbery beyond its borders. Dr. Cordon Sea Burina Surgeon ' 10 knowledges his debt to the Kachins as the first valling candidates for his their general fondness for SUILCIL kn ves made them welcome any exper ments in cutting even upon their own persons. The Kaenin's taste for bloodletting is hereditary and natund his fondness for Americans was a quired It grew out of a bit of history

In 1878, when Burna was ruled by King Thibaw, in American mis sion ity named William Herry Poberts sought an audience at the pilace in Maid lay Into the Presence he crept on hands and knees and bow me his forched to the floor before the Perceck Throne, as was required, made his plea

backward, warlike race known to the Burmese as 'Kachins - "robbers No traveler was considered safe among them The American missionary sought permission to enter this country. King Thibaw consented. It was no concern of his if a

foreigner wished to devote his life, which promised to be extremely short, to his own brand of religious lunger

Roberts' labors among the Kachins produced two notable results which were to play a surprising part in the future I ust, he won the gratitude of a large number of tribesmen. Then first unselfish friend, the first foreigner willing to teach them and live among them, was from a distant land called America With a simple and primitic logic, these hillmen extended that friendship to other Americins who followed Roberts, and gridual transferred it wholes it to a great country they had never seen Second Roberts give the Kichins i written Imaurice. They had no alphabet of their own and so he captured the sound of the native words, is nearly as possible, in our own letters and set up village schools to teach the VbCs Many Kachins, there forc, le reed to read their language mor '' i'st I hit fict of in iden no Let tet his mide the truning idio operators very easy of baca

It of the standard volunteers to the standard line in the unline with a second they admit it seed of a pure of sources of sidness seared most of all of being called the Japs.

"My first jump or coll them told me went off all near 11 in led safely near a Kachin vill 12, and they found me next day. They were perfectly friendly and give me borked rice and eggs. But I knew a Jap force was nearby and I was about ready to cool off my life. I sure was a lost ball.

in the high weeds. You see I didn't know, then, that you could just hook your hand in the nearest Kachin's belt, and he would take you to some place where no Jap could ever find you. Perhaps he couldn't understand a word of the few plaines you had tried to learn—it didn't raitter. He would hide you, and feed you, and stry with you till it was safe to move again.

The volunteers, at first were not at all concerned with fighting. They had enough to do in learning to exist in the jungle, in setting up radio communications with their home base, in getting acquiunted with the language and cu toms of their hosts. They fa milimized themselves with all the juncle trals in their areas, the roads used by the Jipinese the tiny paths and some tracks which only the Kichins knew The Jips were in it of their presence by now, of course, sometim's of their precise position Jap patrols were often able to chase them from place to place But the Japs could nevel catch them

The Kichi is were joyfully willing to enlist is lighters. Good ally each American organized his own band of tough little warriors, and log in to equip a force. The radios reported positions called for supplies, and the transport planes dropped the packages on mount in rice field clearings or into secret forest glades. The standard supply was one third of what would be required for usual army units, Rangers were expected to live two thirds off the country.

To the Kachins, stripped of nearly all necessities by the years of war, the bounts from the skies was miraculous are salt (unobtainable in the

bills, and valued like silver), medicines, tobacco, lamb oil machine guns, rifles and fine jungle knives

Before long these forces were beginning to make contact with one inotlier, and to infilirate deep in lap territory They elerted small, andden funding strips in the jungle, where tiny lisison planes could slip in to take out sick or wounded men They be an to repay their debt to the Air I orce by sending back, alive and well pilots whose planes had crished in enemy territory. They crusht a Jap pilot who bailed out almost over his own airfield, and sent him to herdquarters he was a valu the prisoner, the first Japanese of ficer captured in Burma since the british reac it

THE American boys who had kaped into the unl nown were now veter in camp ugners, they had learned a lot bout living in the jungle, and about Kachins. Let us take as an example more or less typical, the experience of our young captain who had made the one man invasion of the Washington hoter lobby.

About two months after his jumpin he had been given the word, over the radio, to start fighting?

'I be deaplate on or so of Kachin featers at my back by that time," I course, and had picked up a pretty sound idea of the surrounding roads and trails. We be, in to ambush trails, dynamic bridges, blow up I in immunition dumps.

in a juncle unbush, the Kachins can do terrible things with sharpened bamboos. They fill the bulles on both sides with needle sharp stakes, cleverly hidden. When a Jap patrol.

was fired upon, and dived for the timber — vell I hardly like to talk about it After a few ambushes like that, the Japs never took cover when we fired on them

"Of course the Japs tried reverse operations on u, and my life wouldn't have been worth a mickel if my men hadn't been about ten times as alert as any Jap in the juncle. They just seemed to know when Japs were around. I have no idea how they did it, when I investif couldn't see, he is, or smell a thing.

'Only once, in months of hideand seek fighting, were we ever surprised by Japs. We were going to blow a bridge and perhaps we were too busy with our own ideas. Anylow a volley of rifle shots came at us from very close range. How they missed us I ll never know, except that shooting in the jungle is tricky. And what saved us in the next few moments was even queeier.

The Kohin is a born jungle hunter, and he has never had inything to hunt with but crude home made muzzle loades. He always shoots at the closest possible range, and then runs forward to finish the wounded animal with his knife. So now, like hunters, every Kachin around me sprinted forward. The Jap ambushers got confused and jumped o their feet to meet a charge. And then the Kachins dropped down and murdered them with their tommy guns.

Even so, it wisn't only lick that saved us The Japs had rifles but every Ranger child a quick shooting intomatic, so that by comparison the fire power of our small group was overwhelming. We have always tried

to give our Kachins the most modern we ipons and they on for them the way little Johnny goes for Supermin stuff. They le iin to assemble a michine gun so fast it makes your head spin.

'What about all that equipment I chose for my one min with Well I ieft most of it at base, of course But a good knife is always very hand, When the leeches are really thick in monsoon time, you can sort of peel them of your legs, like shaving once they get their heads in deep, you have to use the knife point to dig them out Rations couldn't always reach us in the jungle, and the Kichins trught me to cat some things not served in the best restaurants. Unfamiliar roots, bernes and fruits, of course, but also monkey, tiger and elephant ment Fried termites and young white baby bees are a bit crunchy, but not so bad Rats — a nice clean paddy field variety - are very good indeed

'In exchange I taught the Kachins a trick I could never in ister inviel! to like K rations. We got Whitin in s candy, once, in a tin printed with the New York sky line They loved the candy and talked for days about the big American pagod is shown in that picture One div two of them brought me something they had just finished, and asked when we could get more of this good new intion I jumped when I saw the red can mured Poison' It was solidified alcohol, 'canned heat. I was terribly would for a few hours but they showed no ill effects, just got happy I begin to see that Kichins are not only mendly, but very durable?

Add a few variations to the Cap tain s adventures, and multiply them by several score, and you begin to have a notion of the extent of the operations which were chewing up the Jap rear areas. It was grim destruction, on a wide scale behind the whole 600-mile-long Japanese front

In Ichiurry of 1944, when Merrill's Mai auders, a force of specially truned American jungle fighters, struck toward the Japanese base at Myitkyina, the Rangers supplied an advince scieen for the column Three months later, when the Marauders closed in on their objective after a m ignificent march, it was a Kachin guide who led them in The Kachin had been bitten by a poisonous snake that morning, but he refused to get sick until he had taken the Ameriby one of those jungle truls which only a Kichin could follow, to surprise and seize the airfield. The desperate battle that followed, the agony of mud and blood in which the Rungers shared, was a turning point in the campaign. But Myitkyina fell, it list, because the airfield had been captured, and was never relinguished

liles at heidquirters give other glimpses of individual Rangers in action. Here is a southern boy who had been in the jungle alone for months. He now speaks kachin perfectly. Among other activities, he has captured ten elephants from the Japs. An elephant is extremely valuable because it takes the place of truck and tractor combined in the jungle.

Here is an Am tien serge int who has become a specialist ir blowing up bridges and even has a troop train to his credit. He has wilked more than 1500 miles, mostly over the steepest trails, and has lived for long periods on rice stolen from Jup food dumps.

Here, strangely, is a Navy surgeon, who went in like any other volunteer, to give medical aid. Four Navy pharmacist's mates went in with him. Between cases — and much of their work would have been difficult even in a modern hospital — they hid or iam as occasion demanded. Many a tough fighter, American and Kachin, owes his life to that gallant Navy team.

One of the most heartening details of this whole amizing adventure is the excellence of the medical care, and the fact that Americans and Kachins have always been treated exactly alike. There is a first class hospital in Assum now staffed in part by former nuises of Colonel Cordon Seagrage's famous unit. Many of these factouries are Christian Kachinguls. The pilots of the unit's tiny ur loce fast their lives as readily to bring out Kachin casualties as they do for Americans.

No one outside the organization would deny that the American Kachin Rangers take high honors for all intry, no one inside it would deny that andividually, they are strictly and wonderfully out of this world

At he adquarters I happened to fall into conversation with a tall, bluctered officer, fresh from the jungle. He wore a battered hat, unrelated to any inform ever seen, with a long silverphe is ant feather in it, Robin Hood style. His fine red beard glinted in the sun.

"That's a handsome feather," I said "There seems to be something about this organization that makes the boys wear feathers in their caps I eathers and odd uniforms"

"Yes," he said, "some of these guys wear any damn thing" (He evidently considered himself a model of conventionality) 'Some of them get along with nothing much but boots

'It's a lonely life, I suggested "Bound to develop eccentricities"

"Lord yes!" he igiced "Of all the screwball bunches you ever saw! I sometimes think I'm the only man in it who keeps both feet on the ground'

"Wasn't someone telling ine that you have become rather interested in Kachin superstitions?" I asked "Evil spirits, and divination with chicken bones, and that sort of thing?'

'Cert inly," he stild "Anvone who has had any real experience with divination is bound to see that it makes a lot of sense. The Kachins use chicken bones to choose a safe trail for instance, if I had disregarded them, we would have walked into a Jap unbut himore than once. I don't go for all their evil spirits, but it see son able to throw a few coins into a river before crossing it.'

Uh, huh 'I s id "But some of the boys re " are a bit eccentric"

'Some of many the sud, 'are definitely jurgle-happy Why, I know a guy who claims he was bitten by Kachin evil spirits. The sores on his legs wouldn't cure up until he began to wear little elephant hair bands below the knee, the way the Kachins told him to. What do you think of that''

'Very odd" I said

'You ought to talk to some of these gues You know we've not one who says he sa member of the Confederate Cavary"

I knew the officer he referred to—a young Virginian who states flatly

that he is on "detached service from the Confederate Civalry" He always we are crossed sabers on his collar, and rolls up his hat brim, cavalry style But he never cares whether the damny inkees believe him or not. His pies ent job is jungle fighting, and they all

agree he knows about that

'Cert unly we're a bunch of screwhalls," said the young commander of the American Kachin Rangers "We h ive one officer — he came over from a British unit — who always wears his monocle on p it ichute jumps. And another who can't shave, even in the jungle, without a valet to lither his face and hand him the razor And there is a boy who specializes in frightening prisoners into talking. He has an enormous bushy black beard and a scar from eye to thin like a pirite, and he shaves his head bare really the most horrible sight in the jungle Any Jap he grabs begins to habble like a public relations officer

'But remember, the outfit was hand picked, for this kind of job we had to have men who would try invehing, men who could stand on their own feet and handle things their own way. Original ideas never huit anyone, they just make life more inter-

esting

'What I have to watch out for and worry over, is something entirely different I onely men can crack up in the jungle. The trees close in till you seem to be fighting for space, for light and air You are in a prison, you are breaking your heart to get out, but you ll never escape—

'All this gets worse in the monsoon months. You are wet most of the time, the leeches mosquitoes, and a million other biting and crawling things get to work on you Fog scent to pull the trees and mountains ever tighter about you, and the sun never shines to break the gloom You get sores on your legs, and perhaps fever chills, and you bleach out till you are an awful pure white You can t tell anybody your troubles (remember that these men haven't been able to write even their wives a word about what they have been doing) and it grows on you that nobody ever were through such hell before—

'I he tension becomes unbearable You are on the wrong end of an eter nal man hunt. The Japs are after you you can t get free Sleeplessness —

nightm ires -

When things like that begin to happen you can detect it in his radio messages. Then it's time to get him out fast. With a little rest, he ll be ready to go back, more sure of him self than ever."

THE Japs have now been dislodged from their mount in strong points driven south to the plains of Burma. In January of this year the truck convoys began rolling over the completed Stilwell Road on the long pull to China. Many heroic workers and fighters contributed to that victory indispensable among them and lith cito unheralded, were the American Kachin Rangers, prodding the enemy from his hidden lair, filling his own secret trails with terror and sudder death.

"And one of the most wonderfu things about the whole operation, said the Commander, 'is the amazingly low record of American casual ties Of all the boys who have gone behind the lines—and it makes long roster — only seven have been killed

"There is just one explanation for it — Kachin loyalty, and Kachin jungle-craft. Why, they just wouldn't allow our boys to get hurt, and they spotted every Jap ambush. People ask how they do it, I have never found out But I do know that we tried out war dogs, specially trained for patrol work. The dogs were wonderful, but the Kachins were keener."

"The Kachins descrive a special medal," I said

"They have one, the 'CMA' award But that s another cockeyed story'

The medal was created, I learned, because an officer in the jungle mis read a ridio message. The message said that his Kachins, for a particularly gallant action could be rewarded with food and new clothing. After the word "food" in the message appeared the letters CMA, the ridio abbreviation for COMMA. So—the officer forgot that was just punctuation, and joyfully held a little ceremony to decorate some of his leaders with the "CMA. Award." The actual medal, he said, was on its way.

When Headquarters heard about all this, they were in a quandary They couldn't break in American officer's promise to his soldiers, and they couldn't in vent decorations—or could they' Well, maybe they could Let's see, what could "CMA" stand for' When someone appropriately suggested "Citation for Military Assistance" the thing was practically done So now there is actually a handsome silver medal,

bearing those words, and worn from a green ribbon embroidered with white peacocks, a special American award for Kachins only Irregular perhaps, but very highly prized

The Kachin homeland is free of Japs now The hillmen are again planting the rice and the giant cu cumbers in their highland garden patches Along those dum trails they are following the wild boar and the sumbar

'When I was a boy," an old Kachin headman told me, "I saw the first Americans come to our country. They came on foot or riding little pones and they carried books. This was good. We are jungle dwellers, and our need for learning is very great.

'Again when our country was in bitter trouble, the Americans came. They leaped from the skies and they carried weapons. This also was good. Our knives were of no use against the Japanese. Our friendship for the Americans is very strong.'

The regard is mutual Many a young American found among his

jungle hosts not orly wonderful fighters but steadfast friends Several are determined to take Kachin boys to America for schooling and technical training ifter the war When those bright young Kachins get their first look it America they may feel lost, bewildered, frightened But no more so than the Americ ins who dropped into their own land I hope they will be treated as kindly That would make the fine conclusion to one of the most remarkable episodes of the w ir

The Ultimate Security

By Dan i Lirnet

Short story writer and playwright

TIFN a New Yorl business min-whom I shall call Stanley Baker—lost everything in the crash that preceded the depression, he was completely knocked out A group of his friends, inch who had been able to weather the storm, offered to back him in a new business venture, but he refused He told his friends that he was physically ill, and indeed he looked it

His wife, Alice, a charming and devoted woman, had a few hundred dollars in her savings account, and with it she took him to Oriental Springs, a quiet resort in central I fortid, where she found a small cottage in the pine woods overlooking a lovely lake.

The region was comparatively primitive and rich in beauty and birds sang in the tops of the straight-boled, lofty pines. The road that ran past their door was a winding ribbon marked by twin ruts in the sandy soil. Their nearest neighbor was I rank Searles, manager of the local celery packing plant. Their other neighbors were typical backwoods. Florida "crackets"

In this remote and apparently peaceful environment, Stanley Baker's

he is improved, at least his body responded to the simple life he wis leading. But his trouble lay deep in his mind. He'd I nown failure, he had lost all feeling of security, fear walked with him by day, and lay with him at night.

He spent many of his waking hours in a cypress grove at the edge of the late, where the bank dropped straight down and the amber water was deep He would sit there for long periods, in a kind of trance, staring down into the water

One noon, walking home from the grove, he saw two boys fighting in the 10 id. The smaller boy he recognized as the son of his neighbor, I rank Scales The bigger boy, a stranger was giving the younger one a bad beating Baker, stepping in to stop the fight gave the bully a shove that sent him sprawling The boy fell, bump ing his forehead on the root of a tice Blood spurted from his nose, he jumped up with a howl and as he backed away he shouted at Baker, 'My papa'll fix you fer this! You see if he don't, you damn Yankee furi ner! '

The Searles boy had streaked for home, and Stanley Baker walked on

alone The young cracker's threat seemed only another straw added to the burden of his own somber thoughts That afternoon, while Alice was shopping in the village, the bully appeared at the Baker's cottage

"What do you want" Stanley

asked

"My papa savs to tell you to git out o' town by sundown tomorrow evenin' or he's goin' to shoot you," the boy blurted out "Says ain't ary man goin to by han's on his youngun an' bloody him without he'll draw blood to pay fer it My papa's Jed Colby, an' he sure kin shoot straight" Then the boy ian down the road and vanished into the pine woods

Baker laughed The thing was ridiculous. Then he thought of Alice Suppose his wife should hear of this absurd ultimatum! He knew enough about the community to realize that in a few hours Jed Colley's threat would be a matter of common gossip.

Curiously, in his first reaction, he did not think about himself at all, but he did later that evening when Frank Searles and his wife came to call Mrs Searles went directly into the kitchen to help Alice Baker with her dinner dishes Frank gestured toward the porch "Let's go out there I want to talk to you alone" Stanley followed him in silence

"Mr Baker," Frank Searles said, "I'm obliged to you for rescuing my kid this noon, but I'm mighty sorry you interfered, because Jed Colby has been down to the village, and he's making his brag about you He says that when you touched his boy you insulted him, and he's going to run you out of town or shoot you"

Stanley said, "Yes, I know He sent

that warning to me But I just can't believe he means it I didn't hurt his bist I think he's just talking"

"I ve lived here 20 years," replied Searles, 'and I know these crackers. They're as hotheaded as they are ignorant"

"But what he's threatening is murder! Isn't there any law in this town"

"Yes, there s law here," I rink Searles said gravely "But it don't ilways cover what these people consider a question of honor"

"Well, what do you advise me to

do³ Baker isked listlessly

Scarles turned and looked at him "I can tadvise you, Mr Baker I here are some things a man has got to decide for himself."

All that night Stanley lay awake, trying to find a way out of his dilemma. The vague terrors that had haunted his mind for months now took on a new and concrete form. His fear of life had become the fear of death I ving there motionless so that he would not wake Alice sleeping be side him, he pondered Should he sive himself by running away?

Then in a surge of despair that was also relief, he came to a decision. The cracker's bullet would be the best solution of his problem, and just be fore dawn he got up quietly, diesed without disturbing Alice, and left the house.

Soon a glorious sunrise was flooding the pine woods, the birds were striking silver from the morning still ness—and as he walked the sandy road Baker made a startling discovery life was still sweet to him he did not want to die Yet he went on

He found the cracker's house, mounted the single step of the sagging

porch and knocked on the door After an interiminable wait Jed Colby, a lank, bearded man in undershirt and faded blue jeans, opened it

"I'm Mr Baker," Stanley said, "the man you've thre itened to kill"

Swift is a snake striking Jcd Colby reached for a rifle stinding just inside the door, and held it igainst his hip with its inuzzle almost touching Baker's chest

'I'm not armed," Stanley said

The cracker stared at him "You came here to see me, with no gun? You must be a brave man, stranger!"

"I don't know whether I am or not," Stanley said "I guess I came here to find out. Then he added out of the strange serenity that now filled him, 'Mr Colby, I came because I couldn't do anything else and go on living with myself. I'm sure you can understand that"

Colby looked down at the rifle in his hands. Hell I can't shoot a min while he s stindin' on my doorstep Coinc in and let's talk this trouble over I got to admire your guts for comin' here to face me'

It was still very early when Stanley Baker got home. He tried not to in the any noise, for he expected that Alice would still be askeep. But when he opened the door he saw her standing, fully dressed, in the living room, waiting for him.

"I hank (od," she said softly, as he

stepped into the room. The next moment she was in his arms and they were clinging to each other as they had not done in a long, bitter time

"How did you know?" he asked

finally

'Mrs Scarles told me last night Frink didn't want her to, but she thought I ought to know" There were tears in her eyes as she looked up at him "I was awake when you got up before daylight I watched you leave the house and I knew where you were going"

"But you didn't try to stop me, Stanky said in wonder

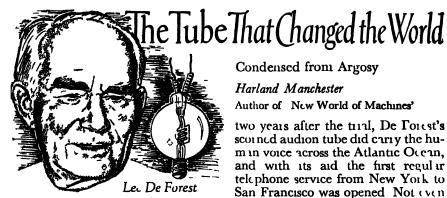

"No I prayed instead"

His arms tightened around her "You asked God to give me courage

'I did not," she said "I l new you didn't need that I only asked Him to look after you"

He laughed and kissed her When he spoke, his voice was evultant "Darling," he said, "I made a friend of Jed Colby this morning, but better still, I made friends with myself again your worries are over I'm all right now, and I'm going to stay all right

In a few weeks the Bakers returned to New York In a few years Stanley Baker was again a successful man the head of his own business, prosperous and respected But better than that, he has a new set of values, the most important of which is that a man's ultimate security will always be his faith in himself

How the vast new electronics industry came to be born

THIRTY YE US AGO IN NEW YOLK A district attorney confronted a Ican shabby inventor who had been haled into court on charges of using the mails to defraud. The prose cutor held up before the jury a glass sidget which looked like a small electric light bulb with wires protruding from the top. He accused the delendant, Lee De I orest of claiming that this 'worthless device might some day transmit the human voice icross the Atlantic Ocean, and stated that gullible investors had been persuided by such preposterous claims to buy shares in De Forest's company He urged prison sentences for this man and his partners Two of De I orest's associates were convicted, but he got off with a severe lecture from the judge

That "worthless glass bulb" was the audion tube, the greatest single invention of the 20th century It is the foundation of today's four billiondollar electronics industry. Less than Condensed from Argosy

Harland Manchester

Author of New World of Machines'

two years after the trial, De Forest's scorned audion tube did carry the hum in voice across the Atlantic Ocean, and with its aid the first regulir telephone service from New York to San Francisco was opened Not even its inventor had a proper appreciation of the tremendous magnitude of his discovery It was a key to colossil wealth and undying fame, but De Forest could never quite make it fit that particular door He knew a good deal more about electricity than about finance or business relations

Since early childhood, Lee De Forest had been absorbed in invention He built bitteries, compasses, electric motors, even a blast furnace that worked He built an electroplating outlit, and earned his first doll ar iculating a neighbor's silver

At Yale's Sheffield Scientific School, he was a moody, brilliant student Poor and socially awkward, he made few friends, lived in unheated room, and ate 15 cent meals. He god uated from college after only three years of work, then enrolled for further work in electrical engineering Inspired by a lecture on Hertzian waves he developed an almost fa natical interest in the phenomenon now labeled "electronics" His end less experiments irritated a number of people He was always blowing out fuses, and one night an auditorium

went dark during a lecture He was dismissed from the laboratory

The war with Spain had just begun, so De Forest enlisted, but when peace came he returned to Yale and resumed study for his Ph D Yale's mathematical genius, J Willard G bbs—whose lectures were so profound that after 30 years of teaching he said that perhaps six students had profated by them—volunteered to conduct a special course for De Forest along

I caving Yale, Do Forest plunged into the long grand which led to his harm ssing the clusive electron

When dot-and dash whicless became the sensation of the day, the best device known for picking incs-sages out of the air was a clumsy tube full of metal filings, which stuck together to form a circuit when a sign if came in, and then had to be tapped loose with a haminer before another signal could be detected. De Forest set out to avent a better detector

He was subsisting in Chicago on various small daytime jobs, but his real work began when he came home to a hall bedroom cluttered with apparatus

One winter he lived on \$10 a week enned by translating French technical papers. He went barefoot in his 100m to save his shoes, and penned in his drary a thoughtful note that if he stood up as much as possible his trousers might last until spring 'Oh the loneliness, the difficulties' he wrote gloomily "I am dwelling in a new realm. No precedents. No apparatus. No co workers. All things to be tried out and tested."

Ihe tide turned at last De Forest went to the Armour Institute and arranged to teach three hours a week in return for the use of the Institute's electrical laboratory. With the help of Edwin Smythe a young telephone engineer, De Forest finally completed his 'responder' — an automatic de tector of wireless signals which was a distinct advance over the tube of metal filings.

Lipton's Shamrock II was soon to race the yacht Columbia off Sandy Hook De Forest proposed to the Associated Press that he report the race by wireless from a tug Informed that the AP had signed a contract with the Marconi Company he maned up with the Publishers' Press Associa tion. In the few weeks before the race he had to rent a shop, buy materials and build his equipment, and he was broke as usual A businessman ad vinced him \$1000, so he founded the American Wireless Telegraph Company and began a day and night grind to be it Maiconi

I he result was a fiasco. It didn't occur to either pioneer that it was necessary to use different wave lengths so they jammed each other's signals. No wricks reports came through at all, and the papers got their news by wigwag.

De Forest plunged into a promotion scheme to finance his new firm with a grandiloquent promoter named White In 1903 the Providence Journal engaged De I orest to set up a wireless station on Block Island to give the paper up to the minute news. This was so successful that the Navy got I im to report maneuvers by wireless. Then he was called to England, where he pioneered in establishing wireless service between Wales and Ireland. He set up

a station at Shantung, China, from which the Russo-Japanese naval war was reported His demonstration at the World's Fair at St Louis captured the imagination of the country Then came a great triumph when the U S Navy awarded the De Forest company contracts to build five stations in Florida and the Caribbean area But before the work was done, his company got into a serious financial iam. Its plans were too ambitious De Forest got out His wireless-telegraph period was over. He took with him only \$1000 in cash and the rights to an incomplete invention, the audion tube, a gadget which his partners considered worthless

For years he had been fumbling with an clusive idea. It began with the curious behavior of a gas flame one night in 1900, back in Chicago Working over one of his early wireless signal detectors. De l'orest was operiting the transmitter when he noticed that the gas light in the room brightened and dimined in response to the sparking of the coil Here, it seemed, was the clue to a marvelous new device for receiving air waves Tests eventually proved it was the sound of the transmitter, not the wireless waves, which had disturbed the flame within he cas mantle. Yet De Forest clung to the notion that heated gases could be used to detect electric waver

He mounted a gas flame between two electrical terminals. He went on to a gas filled bulb with a flame beneath it. Soon he abondoned the flame for a filament bulb with the addition of a met il plate separated from the hot filament by a narrow gap Years before, Edison had devised such a bulb, and had found that when the plate was positively charged a tiny stream of energy (transmitted as we now know, by electrons) leaped across the gap and set up a fruil cur cuit J A Fleming of England built this Edison effect" into a bulb which would detect wireless waves but would not amplify them

By adding a little piece of bent wire to the two elements in the bulb, Lee De I orest changed the world. After trying bits of tin foil and strips of met il in various positions, he finally twisted a piece of platinum wire into a design roughly resembling a kitchen grid, and inserted it in the bulb be tween the filliment and the plate. That did the trick

I his grid has been compared to a Venetian blind By manipulating the cords of such a blind in your window you can alter the sunlight pattern on the floor and might even work out a clumsy communication code De I orest's electronic blind vorks a millior times as fast and is far more accurate The I id from your ridio actial is connected to the grid, and the tiny amount of energy which comes through the air from the radio station pulls the cords of this "Venetian blind, to increase or diminish the flow of electrons through the tube Thus the feeble radio sign ils impress their pattern upon the much greater curient which flows through the tube from your baseboard light socket a current powerful enough to operate your loud-peaker By hooking up several audion tubes in a series, so that the increased output of the first tube operates the gr d of the second tube and so on, any amount of amplification can be obtained

De Forest's genius provided the missing link which gifted research men the world over had been seeking M my improvements have since been made and the principle of the little tube has been used to construct a vast array of glass and metal giants which are doing new jobs every day

As it radio, long-distance and wireless telephony, telephoto, facsimile transmission, talking movies, television and radar were not enough, these tubes are entering industry on

m unv fronts

Puts of laminated plastic plywood, used in making gliders and trainer and cargo planes, once had to be baked in an oven for many hours to secure a firm bond. Now the photion, descendant of De Forest's audien, shoots a stream of heat producing, high frequency radio waves through the material and heating time is cut to a friction.

The same type of tube is used to 'suitch' the Army's synthetic treated raincoats by fusing the seams with radio waves, to vulcanize tires, and even to bake hams!

The most widely used "electric eye" which opens doors, guards warehouses and sorts packaged goods, could not see without De Forest's invention And when secret wartime inventions are applied to the arts of peace, electronic eyes will pierce fog

at sea, planes will land surely in storm or darkness, and trains will not collide Wireless telephones may be installed in automobiles Power may be broadcast by radio

Lee De Forest has been notably absent from the electronic band wagon When the radio booin came in the '20's others reaped most of the fame and profit He missed out on the exploitation of talking pictures and television. He received several lump sums through the sale of various rights to the audion tube, and with prudent investment would now be a millionaire But he has been involved in long and expensive lawsuits, and when he had money he eagerly splurged on the luxuries so long denied him. In 1936 he filed a peution in bankruptcy, listing debts of more than \$100,000 against \$390 in asse ts

Yet I ee De Foiest at 71 is hearty and optimistic. He runs a prosperous small plant near Hollywood where he makes diathermy machines, and he is as full of new ideas as ever. His fame is secure at last. Rich with medals and honorary degrees, he is recognized as the "father of radio" and the pioneer genius of electronics. And he has the satisfaction of kno ving that his audion tube made possible the machines which form the backbone of our technical civilization.

During a recent war bond drive on our destroyer escort somewhere in the Pacific, the ship's paper asked, Why are you buying war bonds?" One of our more alert seamen answered, 'Freedom from fear, freedom from want, freedom from oppression and freedom from the Navy'

Close-Ups of War in the Pacific

By Francis Vician Drake

Francis Vivian Drake, one of The Reader's Digest roving editors, has recently returned from a trip to Pearl Harbor, Kicajalein, Guam, Saipan and way points His impressions of the vast Pacific war theater are high lighted in these recentles

Tale Off from San Francisco

THE ROAR of the engines wirming up is shattering drilling into spine, scalp fingernails, bringing against the fillings in your teeth. Inside the great double decker hull, figures are sprawled, prone or curled up in serits on the floor. Average, ige is about the same as college Destination Luzon, Guani, Kwagalein, Supan, New Guinea.

Men for MacAithur, for Nimitz, for Towers The engines idle now A few hoarse shouts Doors slamming Here u e go I of ty tons of metal, g is and oil, of men, in iterial, storming out across the Bay like an enriged cormon int, struming like miad for You made it - atta gul! flight Miles of tiny glares Up, up, up from the war plants recede, vanish There's a bracing memory to take out to the fighting men Remainber that — America worling under the arcs, America working the clock around

The Arsenal

HAWAII, languorous isles of grass skirts ukuleles and surf rides, now converted totally into the mighty powerhouse of War Here is not just Everything but fifty, a hundred, 1 thousand of Everything Here is the answer to your worn out car the second rate leather on your shoes, the lick of me it and butter on your table You name it, we have it Cuns, tanks, bulldozers, medical supflune throwers refugerators, parchutes, plane blanket under-Scores of miles of wavehouses, mountains of packing cases, avenues of supplies, binked along roads disappearing on either side into the distance Millions of gillons of gisoline, millions of cigniettes, acres of canned or ange juice. Hundreds of thous inds of people at work

Honoli lu a fluctuating blur of white clad sailors, crowded off side-walks by more sailors, crowded back on again by honks from trucks and jeep push, shove, jostle, step on, step off, step on again Stores, movies, poolhalls, jun packed, 20 minutes in line for a beer Every square mile is filled — barracks, training camps, repair shops, hospitals, forests of tents, and affields, airfields. Ships stacked

six abreast against every square foot of dockside, every deck swarming with men, 700 ships in one navy yield

All day the island roars with noise, all night the noise roars on under the clare of floodlights. No time to fool with blackouts — four thousand miles away the Battle I leet is readying an operation soon to flame into headlines, but Pearl Harbor has already finished preparations for the next Strike, is hard at work on the one after that

No hula hula for Hawan now, no ukulcles Just work, sweat, work

I rom Hawau West

The grizzled Negro sergeant motions at the plane's port window with his free hand as his lips form a word This is the first time his huge imp is sive bulk has shifted since sundown, since the sailor beside him let his sleeping towhend slide onto the Ne grosshoulder The seige ant sleft um is still around him the towheid snoring placelly against the seigeants ribbons Heven hours, since Per l Hubor, of engine roar, of good we other and bad of statlened muscles of endless darkening sea. The floor is littered with strange lumpy shapes, 2, or 30 of them corpsclike in griy Navy blinkets. The sergeant's face, herry with fatigue, breaks out a giin He points again

" Il otje, his lips form "Japs"

Island spotting in the dark — that's a knack that comes only with practice. Now you see it — not a glow, not a blur exactly something in be tween under the port wing and maybe 30 inites away. Wolfe real estate attached to the Rising Sun subjects of Hirohito gamacing little apes down there, scurrying around

their isolated nest, cut off, but still alive and venomous Suppose they spot us? Suppose already their fighter planes

Ain t got a plane left," the ser geant remarks tactfully "We just leave 'em stew"

The towhead opens his eyes, dopily, and mumbles He's still back on the farm with Maw and Paw, 6000 miles away. The sergeant grins again and tightens his numb left arm around the youngster. His deep, musical voice numbles again.

'S awright, bud — 5 wan back to sleep Won't be long now "

Way Station

Four years ago they startly thought of death — or at they did at was ally and without concern the way one considers problems still yo verus away. Death was for the old the ailing But then death abruptly overtook them — right here, on Grunn So here they lie hundreds and hundred of American youngsters wrapped in blanket buried in coral graves, only a few yards from the beachheads on which they fell

Above them, on a tall most flies Old Clory, and over them at planted tow upon row of little crosses that crowd a fit perspective Name, rank, number. But sometimes there is no name or number, only that empty word I nudentified Scarcely a sound is heard beyond the slapping of the halyard on the flagpole, the rumble of the sea which torever separates these men from everything they loved. Here on this narrow little beach was one of our costlest thrusts against the enemies of freedom, and, right beside it, the price we plud for victory.

Almost every day, Marines en route for combat, or returning from the new triumphant theater 1500 miles farther along, come here to visit for a while Cap in hand, they walk among the graves in silence, looking for a familiar name, or they remain standing expressionless, beside an unmarked grave

After while they turn and walk off by themselves along the beach, stain, at the sea. Their heads are still uncovered. No one but a fool would try to talk to a Manne just then.

Menbership Liniced

The Oliceis (h) at Saipan a single room perhaps 20 by ten The thing you notice right away 1 1

timosphere. No pin up girls, no booke woome. Very discreetly, a phonoke up plays. Inc. Blue. Din upe. I or meny ho must endure end less hours of noise, a prime requirement is quiet. In one corner a mid et homem ide bar, behind it in enlisted man, his face solemin with responsibility although no drinks are cosmer than a nickel and his whole stock is beer cokes, eignettes and gum. For turn tely, the Members aren't the kind to worry about vintage wines.

To these very clean, very tanned young men, sitting around in white shirts and khaki shorts, their club has entium There is The Writing Room—those two rough planks on trestles and pen and ink for letters home. The Tabrary—over there on the wall, that two shelf supercharger case stuffed with in gazines, all old, all do earel, all become price. The Cab Shower—rain barrel and perforated piping. And notice The Arm chairs—not hifth Avenue specimens,

perhaps, but the best you can make out of packing crates. And even The Club Ashtrays out here in the middle of nowhere—sets of discurded permuterins, filed smooth and shallow and uniform.

Rating in the Social Register isn't one of the member hip requirements for this Club. Fo get in, all anyone has to do is to gamble regularly with doth in the air over Tokyo over shoicless wastes of water, my day, any night, in any weather, at a moment's notice. To stay in, all that is necessary is to keep surviving those 16 pitiless hours to Japan and back, to beep reappearing through a cloud hole over Supan

Ad in all, you might call this Glub pictry do niced exclusive

Lightlorise

What should be stringe about it, after all, a small American chapel on Kwajalem and one of the bloodiest Pacific battlegrounds? More than three centuries ago the Pilaims first concern was for a place to worship, and here, on this distant atoll, after the Japanese had been removed, Americans still wanted the same thing With their own hands with lumber bought from home they too—Trotestant, Cathoae, Jew, white men and colored—put up a house of worship

Architecturally it is simple, but there is nothing rough or jern-built about it. The pews are finished expertly and strined by hand. Some engineering wizard has even contributed retract ble footiests that swing out and make a ledge on which to kneel

Surrounding it, a sea of tents plan's, jeeps, tanks, trucks, bulldozers,

shattered pillboxes, still black from battle fire, the endless bustle of men it was And yet, incredibly, inside the little chapel there is a sense of peace, of home Here is comfort for every troubled spirit, surcease for every heart made heavy by the strain of war

I his morning a special service is in progress for the dedication of a tablet that is to hang here permanently. I he chapel is crowded to overflowing. The tablet is one which these men have conceived themselves, and on which they themselves have carved these words.

THIS CHAPEL

IS DEDICATED TO THE MLMORY OF THE GALLANT OFFICERS AND MEN OF THE ARMED FORCES OF THE UNITED STATES

WHO (AVE THEIR TIVES IN THE (AFFURE OF KWAJALE) TEBRUARY TIRSE TO TEBRUARY THEFILA ONE THOUSAND NINE HUNDRED AND FORTY FOUR

REST IN PEACE

Preacher, priest and rabbi, khakiclad, are assisting at the Service. The spoken words are honest, simple, deeply moving. These men who have buried comfades, who know the courage, the pain and bitterness of battle, need thoughts a man can get his teeth into. The words flow out over the bowed heads, over men kneeling in the coral dust, over huts, and trucks and planes, over the impassive sea.

Greater love hath no man than this, that a man lay down his life for his friends

Nonstop to Tol yo

The General eyes his wrist watch He is standing in the high control tower on Saipan, while a technicolor dawn, in crimson, purple and gold, puts in a bid for his attention But right now the General's mind is on one thing only, and it has nothing to do with art appreciation Below him, spread over miles of recently bulldozed ground, the giant superfortresses are assembling for a raid agunst Japan Shimmering in the early light, threading along their taxi strips toward center runway, like rivers flowing to the sea, their size seems fant istic. Hundreds of idling propellers merge and interlace in queer ski igraph patterns against the horizont il rays of the sun. The noisc is appalling

The General looks at his watch again Still a minute to go 30 seconds. The scene is like a movie film caught in its track. Hold every-

thing ten seconds

The General seyes lift. A mile away the sign ilman drops his flag. A de ilening rour, a flash of propellers, and the first Superfort comes thundering down the runway I ister, faster, faster Can those sn irling engines, laboring under 60 tons of plane, gas gun, bombs and crew ever hoist th it monster off the ground? A blown tile an engine filter, and — curtains The Superfort races part the control tower, shaking the wooden structure to its base. On down the track it speeds, wheels spitting our crescents of coral dust higher than the wing tips Abruptly, near the end of the runway, the crescents fill away the wheels are clear Almost inch by inch the overloaded plane lifts it to the air Before the tension can slacken on the control tower, a second bomber is already dashing down the wake

Behind that, propellers gle uning, comes No 3 On and on they come, one after another

An ugly oath breaks from the General Over on nearby Imian Island, one of the racing monsters, almo t in the clear, is swerving sickeningly. It plunges off the runway. The whole sky trembles with the violence of the explosion Bombs, incendiaries, ammunition, gisoline — gient belches of fire and smoke shoot skyward, a thousand, two thousand feet, as though in some grisly continuity of purpose There can be no hope by hand such flames. Lleven lives grams with stars for 11 American families, whose hearts, hopes, I appines are also due for death

The runway is clear again. Along thunders the next Superfort, streaks past the flaming wicel, gains altitude, is clear. More and more and more

Another hour before the whole procession is over, before the final bomber is out of sight. The wreck on I main is still smoking. The sun is up. There is overpowering silence broken only by the sound of feet clomping slowly down the wooden ladders of the control tower.

The Old Man

Admiral Nim 7 sits at the head of his luncheon table at Guain his khaki shirt, with its little circle of five stars, open at the ne k. His skin is so tained that the eyes seem unnaturally blue, the hair unnaturally white. The lines on his face support his universal reputation for kindness for all that, it isnot the sort of face to trifle with It's kind, but it isn't soft. He speaks economically, without gesture, in a voice that is level and slow

Most of the guests are wearing two or three stars, top men of the CINC-PAC staff Liveryone is aware of the div, the probable hour, at which the in in at the head of the table will give the sign il. and the Fleet will start on one of its boldest undertakings of the wir The atmosphere might well be tense, but it isn't The Old Man keeps the luncheon conversition revolving around little things. His guests have to work on the war, think of the war from dawn to night. Even now Marine sentines passing and repissing outside the windows have their fingers on the triggers of their cubines, their eyes on the jungle below the hill from whence I Jap was flushed only yesterd by

Looking at the Old Man, it would be hard to guess that on him rests the ultimate responsibility for the rappending Strike, for its thousands of vital details, for its success or its failure. In a lesser man the sit un might give itself away in edginess, mascibility impatience, but the Old Man join in the conversation importuibably, and his wrist lies relaxed on the edge of the table, the eighrette motionless in his hand

Only rarely do the kindly blue eyes seem to withdraw for a moment. Very briefly a look comes into them, and it is a dangerous look touch, hold challenging, the look of a man gauging the last fraction of an opponent's hand at poker — before he raises him yet again

Cluc Sale Surrender

Jap soldiers still roam some of the larger islands, mon his after our conquest. They used to snipe, and now starving, find that surrender to our quick-shooting Marines, Seabees and GIs has become a problem

But one Jap recently succeeded in giving up safely. He had evidently spent several days peering out of the jungle, studying the habits of a certain officer. Now, at the correct moment, he dashed with hands up into a familiar little structure and caught the officer in that classical situation. Marines are not supposed to be caught in The officer was alarmed and furious, but the bowing, hissing Jap was delighted, he'd made it!

Curtain Going Lp

The atmosphere at the secret anchorage is electric. Over miles of sea, expectancy is reaching such a boil that, whatever men are doing, their eyes keep traveling stealthily toward the Hagship Grapevine and scuttle butt have made no inistake Target * Japan'

The panor in a is so breathtaking that even veteran scainen gize at it wordlessly. The I nited States Flei! Here it is, 40 miles of closely an choied warships 40 miles of steel-clid might. Here at list is the accounting for all that has gene before—the toiling minland factories, the sleep-less aisenal at Pearl Harbor, the costly islands, the rows of small white crosses, the endless patient planning the devotion of million, of men and women

This is the blinding symbol of American power, mastery over 30, 000,000 square miles of the Pacific If only all the people who helped build it, who supply it, feed it, support

it, who have sent their sons to it, could see it now, what a pride would be theirs! Not a state, not a city, per haps not a village in the Union, whose men are not aboard these ships whose name plates are not riveted somewhere on these millions of tons of equipment

How can anyone convey an idea of its size? From the Flagship's high bridge, the distant ships are hull down, only masthead and superstruc ture visible above the curvature of the ea th Everykind of warship is present, squadion upon squadron of the most powerful combat ships affoat — but tleships, cairiers, cruisers, destroyers by the hundred Hardly a ship in these endless lines was affort three years ago, not one man in five had ever been to sea Yet the Task Force in this anchorige today is mightithan any the world has ever seen be fore And it is only part of the vast panorama of American power in the Pacific — the Army blasting through the Philippines, the Marines i imortalizing Iwo, the submarines lying in wait around Jipan, the Superforts pounding Tokyo, the endless convoys sticaming from Anicrica

The eyes of the Fleet are glued to the Flagship, awaiting the signal that will mark a famous moment in history

It last' A string of flags snaps to her vardarm. The mighty arm ida begins to move. The great ships file out, spring whips along the decks as they gather speed, and they head toward Japan, toward the thunderous doom of an I impire

Secret Weapon

Condensed from Look

Lt Col Beirne Lay, Jr

DON'T KNOW the pilot in this picture. Yet there was something about him that rocked me back

on my heels

His helmet and goggles are those of a fighter pilot. The back of his hand has the brief reference data for an early-morning mission, from S. E. obit (start engines at 6 it a m) to the course home (330 degrees). His skin is grimy from dust and sweat, and darkened by the sun. In his fingers is a half-smoked eighrette—the eighrette that refreshes a man after a long and tough mission like a dash of ice water in the face.

He s a youngster, probably in his middle 20's, because he wears a licute nant's bur on his collar. Yet his face could be any age. I hose steely eyes remained open under tensions that tried to save them from sights never seen in previous wars. Those cheeks bear lines that didn't come from salendar-measured years.

It is the fice of a boy who has absorbed more in his year of flight training than his peacetime predecessors absorbed in many years. He graduated into a complex fighter plane that would have awed the best pilots in America five years ago. He was thrust into combat in the toughest

war of all time against a veter in enemy, and shot him out of the sky. He has perched alone in his cockpit acting as his own pilot, gunner entined and navigator, in untaining formation, ceaselessly diedging the hemisphere of sky for the enemy.

He has drawn on a bottomless well of fortitude to overcome the anesthesix of enormous fatigue while support-

ing doughboys in comb it

He is more than a match for any weapon that an enemy can bring against us Like the Norden bomb-sight, even if he is captured intact by the Germans or the Japanese, they cannot reproduce him

He is our secret weapon, an American boy

lowa

INDIA'S Insoluble Hunger Behind Indias economic medita is less is in gle ominous fact there are too many Indians

Condensed from Huper's

John Luscher

Former representative of the U/S 1 or 15n I conomic Administration in Indi

during India's most recent great famine, I stepped off a trun at Howrah Station, Calcutta, and saw that the floor was covered with huddled bodies, most of them naked. They were crowded hip to hip and as I picked my way toward the street I couldn't help stepping on many of them. Only a few grouned or whimpered. Even the babies—and there were hundreds of them—lay limp and quiet, apparently too weak to cry. It was plain that some of those people were dead.

That week the newly formed Municipal Corpse Disposal Squad removed 112 bodies from the streets More—nobody knows how many—were taken away by charitable organizations and private citizens Still others hay for days on the sidewalks and in gutters, no one can tell the caste or ich ion of a naked cida er, and few Hindus or Moslems cared to risk spiritual defilement by touching the body of a possible infidel or outcaste

For many weeks starving families continued to pour into Calcutta. The stronger ones fought for garbage, the weak begged silently by slapping their bellies every time an Englishman or American passed. The famine was still worse in the country districts. An official of the Friends' Ambulance. Unit reported from Contin that 'a fight between vultures and does over a corpse is no a me sight.

there are not enough able-bodted men to burn the dead, which often are just pushed into the nearest canal

Through all these months hundreds of white Brithman cittle wildered through the streets, as they ilwish hee, stepping plicidly over the bodies of the dead and near-dead No one ever ate a cow, I never hird of a Bengula Hindu who would not perish with all his family rather than tiste ment. Nor was there any violence. No warehouse or restaurant ever was threatened by a hungry mob. I he Bengalis just died with that bottomless doculity which, to Americans, is the most shocking thing abou. India.

How many died? No one really knows After comparing many different estimates, my own guess 18

that the 1943 famine, plus the epidemics which followed it, probably wiped out about 3 000,000 people

the Indian Nationalists blamed the famine on the British Many of the British blamed the corruption and bickering of the native provincial politicians. Everybody blamed 1943's hurricane and floods, and the Japanese who had cut off tice imports from Burma. Yet beneath these explanations lay another fact more ominous, more difficult to cure. It is simply this there are too many Indians.

There are some 400,000 000 of them, crowded into a land which cannot at the moment support half that number on the barest level of decency 1 or every square inile of farm I and there are 423 Indi ins, and eight out of ten depend for their living on firming Moreover, the Indian peasant is one of the worst firmers in the world. His incthods are incredibly primitive, his plow is a crooked stick diagged by a water buffalo, his soil has been drained of fertility, his home is a one-room mud hut, which is guite likely to wash awiy, every rainy seison. Normilly he is up to his ears in debt, on which he may pay up to 100 percent interest, and he could not afford better equipinent if he v anted it

The result is that more than half the people in India are always underfed Probably 80 000 000 of them never once get a full belly from birth until death. Yet every year there are 5,000,000 more mouths to be fed, somehow, from India's warry, eroded land Since World War il begar, the increase in India's population has nearly equaled the total population of England. And if present trends

continue until 1960, India's growth will reach the neighborhood of 12,-000,000 every year

Under these circumstances, famines are inevitable—and are likely to increase both in frequency and in severity One Indian summed it up in these terms

From a strictly economic point of view the 1913 famine was a failure. It killed only three or four inillion people which me ins that it still lugged far behind the birth rate. And that me ins a few handfuls less rice for everybody next year.

This relentless fertility, with all the economic consequences it entitle is the basic problem of India 1 he political problem, which is absorbing nearly all the attention of educated Indians and their British rulers alike, is almost trivial in comparison

Is there any answer?

Not from the British I questioned scores of officials, from the Viceroy's still down to local tax collectors, without finding one who thought he could see a way out

It is true that in the past the British have made strenuous efforts (in cert iin limited fields) to fight off the constant threat of stirvation I hey have carried through the greatest system of irrigation projects in the world, they have built a rail network capable of shuttling food supplies from surplus to shortage areas, thus elim nating minor, local famines, and have started a rudimentary public health program, which already has had a notable effect on the death rate The net result has been merely a spurt in the rate of population growth Con sequently, the British economic program has not meant a better I fe for the average Indian, it has just me int more Indians

The Indian Nationalists have an answer, or think they have industrialization, plus a tremendous increase in agricultural production. The objective of the Bombay Plan's is to double farm output a latep up industrial production invelod within 15 years after the war Allowing ion a constant population growth during this period of 5,000,000 a year the plan calculates that the per capita income would be doubled.

Unquest orable I adia has many of the raw materials for building a modern industrial state. Moreover, it least a faw India's have decronstrated a genuine expects for industrial operations. The I at a steel mills for example, are the lar stan tac British Empire, and some of their most modern departments operate, more efficiently than any in the United States Good machine tools are being made in India already, and the country has produced competent engineers, chemists and mechanics.

Yet I do not think the plan is likely to achieve its basic purpose to create a higher standard of living by sho mig production well the id of the rise in population and keeping it ahead. Indian Nationalists are fond of pointing to the Russian example, and in many respects the Bombay Plan is modificantly after the Soviet Five Year Plans. The Indians however are likely to gloss over the methods Russia had to use A Lice India government is likely to find it cannot follow the Russian example, for four easons

1 India lacks a sufficient supply of some of the lay raw materials —

notably petroleum and coking coal on which Russia (and every other modern industrial state) has built its economy

2 In Rusia even after the devastation of World War I and the Revolution, the people as a whole had a standard of living considerably above the subsistence level. The Sovi is carried through the i live Veri Plans by sharply cutting the consumption of the people and throwing the resources thus sived into an and builting up of industrial plant. In India there is no such margin.

3 Incre is little prospect that a Ince India would have a government strong enough to impose great sacrifices on its proof even if they had anything much to sacrific. At best, my independent Indian a vernment is highly to be an unciss coalition, constantly proceuped with balancing and compromising the conflicting acrounds of scores of different radial, religious and political groups. Such a government could not afford to act ruthlessly if it did, it would be tossed out of office overnight.

4 Finally, the Russians stated then great experiment with an energetic people, braced by a rigorous climate. In contrast, the great mass of Indians have been energeted for generations by hunger, tropical discuses (at least 2, percent have malaria), and a climate which will almost wilt a buildozer. No one who has not lived in India can quite impane the effect of that climate—a smothering bone-meiting heat in which every movement requires a seconate effort of the will

Let's assume, however that by some miracle the Bombay Plancould

carried out on schedule Would he resulting rise in living standards k tually slam an automatic brake on c rate of population growth, as its apporters believe? The answer aljust certainly is no The Bombay lin is intended to lift the average come to 135 rupees or \$45 a year t is hard to believe that such an inome would be large enough to set in otion those sweeping changes in living standards, habits and education which have been responsible for a declining birth rate in the Western World Moreover, no matter how large a rise in income there might be, Indi sculture and religions favor a high buth rate

The great emphasis which both Mohammedanism and Hinduism place on the family and on sexual relationships would probably rule out any widespread practice of birth control. The creation of a son is the first duty of every Hindu the sexual actaiself is a religious rate. With many Induins, sex seems to have become time than obsession.

Doctors missionaries, public health workers, ociologists — Indian, British and American — all told me the line story any attempt to change the Indian's breeding habits can show results only after generations of persistent and tactful education. For these cultural patterns are more regidly fixed, more resistant to change than those of any other major people.

Consequently, it seems likely that a successful Bomb by Plan might well lead to a rising by thate, i affect than the expected deline. At the same time the death rate presumably would slump, since the plan calls for a great expansion in sanitation and public

health facilities. If this should prove true the Bombay Plan would arrive at the same result as the Britishsponsored ring ition scheme — a still faster population growth a still sharper pressure on the means of subsistence, continuing poverty for the average Indian

Does this mean that there is no solution for India's economic problem?

It probably does — at least for the predictable future. I arrived at this hopeless conclusion reluctantly over a period of mary months, and the process was one of the most painful experiences I have ever undergone

When I went to India, I believed that there must be some solution for every problem. I think nearly all Americans feel the same way—we venever yet been up against anything we couldn't lick, somehow. It was a considerable shock therefore to run into a situation to which I could not find even a theoretical inswer. Nor in, one who believed with real confidence that he had the answer (I ven the most enthusiastic of the Bombay Plan's proponents have a few private doubts.)

I has is always a hope, of cource, that some new kind of solution may yet turn up. I want all Nehru leader of the left wing of the Indian National Congress, demands a revolution. He proposes nationalization of heavy industry collective farms to replace the present tiny persant holdings, and—by implication—a frontal assault on the waok archaic social structure of It has, with its incrustations of easter and superstation. But there is no prospect that his program will get a trial within the foresecable future be-

cause the big industrialists who dominate the Congress Party are implactably opposed. And during his present term of political imprisonment Nehru apparently has lost much of his in iss following.

The essential thing, which Nehru's program (like all the others) lacks is the injection from outside India of a tremendous stre im of equipment and capital and technical skill. Incalcula ble amounts of money and energy would have to be poured out first of ill on a campaign of education and public health in the thousands of Indian villages. Such a campaign in the very long run might bring the birth rate under control, clean up the milini and cholera and typhoid and prepare the Indian people physically and mentally to remake their own destiny. On top of that, more billions would be needed to get a modern industry under way on a scale capable of filling the needs of 400 000,000 people

The mere statement of these needs indicates how little chance there is of meeting them. No nation of group of nations would be willing to make such an investment, because much of it—certainly that part spent on education and health—could never be repaid. Furthermore, India would not be willing to accept really large-scale investment from abroad be cause both business and political lead.

ers are profoundly suspicious of foreign economic penetration (They are especially wary of American "dol lar imperialism")

So it appears probable that India will have to tackle her reconstruction lingely on her own steam — and it also seems evident that there just isn't enough steam there.

This dismal account may at least cast some light or the peculiar be havior of many Americans handling war jobs in India When they arrive they generally are eager to engage in the time-honored American pastime of British buiting, particularly after they get their first good look at the licked usical performance of British bure judgacy About six months later however, the gibes tend to fide to a whisper, and sometimes stop alto gether For sooner or later, nearly every American begins to wonder what he would do if he had to run India — and lapses into a thought ful and chastened salence

One morning during the worst of the hot weather, an American general sat down at my breakfast table looking uncommonly haggard and worn He said he hadn't slept well, and added. I we been having a perfectly horrible nightmare. I dream d that all the Englishmen quietly slipped out of this country during the night and left us Americans holding the bag Can you imagine anything worse?

Requestr five day extension of leave Just met an angel 'a sailor on leave wired the Personnel Officer of a Wes Coast Naval air station. The officer wired back, I wo-day extension granted for you to come down to earth."

It Pays to Increase Your Word Power wilfred Funk

When we speak of the importance of building a large vocabulary this doesn't mean that we should use only big words. Abraham I incoln knew the strength of short words and he used them with immortal effect in his Gettysburg speech. Winston Churchill learned the efficacy of the small word too. But when we read the speeches of these two inen, we are stopped now and then by an adjective of grace and distinction or by a dynamic verb that has an almost physical impact upon us. All leaders who command men know the power of important words.

Here is a test of your word power based on words chosen from The Reader's Digest Underline the word or phrise lettered a b c or d that you believe to be nearest in meaning to the key word. Check your results against the answers on page 72 and find your vocabulary rating. A

leading dictionary is authority for the pronunciations

Four years in the United States wrought some disconcerting changes in the British child exerces — but created the best of good will imbass idors

Tome from America

Condensed from Better Homes & Cudens + + + Patricia Strauss

URING the German air assault on Britain in 1940 and 1941, the parents of some 5000 British children sent them to the bombfice safety of friendly American homes Recently sever il hundred of the youngste sacturned to their fundles—and there were many surprises on both sides

The years and American clothing styles had changed the children's apperrance — so much so that when a batch of 200 of them arrived at a Lontlon railway station some parents fuled to recognize their offspring When Eleanor Fry, 13 stepped down from the train, a wom in tolded her to her bosom. Elemor responded ith equal fervor I hen, bleakly, they realized they were kissing strangers A young man from the Admi-1 alty came to meet his little sisters, 11 and 13 when he last saw them While waiting he noticed two alluring girls in gay outfits and give them an ai proving glince. They grinned, and suddenly he realized that these snappy numbers were his kid sisters Too surprised even to greet him, he

PATRICIA STRAUSS IS the wife of a member of Parliament and author of several books and many magazine articles. She voites a weekly column from I ondon for the New York Heald Tribune.

stood gaping, exclaiming over and over, "Good Lord"

There had been a fear in some British homes that the children inight come back talking like Damon Runyon characters The fear was unfounded Most of the parents find the rhythm and intonition of the Aniciic in accent ple is int, but a few phr ises - such as how come' for ' vhy required explination When Ann Watts's mother asked her if she preferred pic or tart, Ann replied 'I don't care Mummy 'In Inglind that is a discourte ous answer, carrying the suggestion that either alternative is unpleasant. But Mrs. Watts is now accustomed to the ide i that I don't cire" is only American for don't mind "

In England girls remain in the inky-fingered, parent-ridden stage until they are 18 or more. No wonder parents whose daughters were 1, or 13 when they left are astonished at the return of self-possessed young women of 1, using make-up, we aring becoming hair styles, and possessing a social case and grace not usually attained in Ingland until the early 20's Some f their are uneasy about this, but Mr de Iongh discussing his daughter Rachel 16, voiced a widely held opinion 'She

has far more style and poise than girls of her age here," he said "She is never tongue-tied or all at ease. It's true she looks like a girl of 20 in our eyes, but her self-confidence gives me confidence in her"

Oddly these girls, who appear so grown-up for their age, find English boys more adult than American boys "I nglish boys are intellectually more mature," one girl told me "More scrious and therefore more stimulating" I suggested that this might be the result of five years of war 'Only partly," she said 'I think it's because this is a man's country, and America is a woman's country, and naturally the young people reflect that difference"

The children loved their American schools. They talk with enthusiusm of the fine buildings, the easy classwork the freedom and the full social life. But the standard of scholarship here as so much higher that the returnees are far behind their contemporaries. Many of them have had to have three or four months' tutoring to eatch up

All the children miss the American drugstore Mention Coca-Cola or a banana split or a milk shake, and their eyes shane I or them the drugstore symbolizes the ease of companionship, the friendliness, the openness of American life

In the States they all had such a good time — part is, dances, groups of friends, dates, freedom of movement — that they find life in England a bit flat As Bernard Harris put it 'Only rownups have a good time here In the States young people have their own life and adults aren t allowed to interfere"

The absence in Britain of group activities for young people is partially a manifestation of total wire But it probably also arises out of a different family attitude. Here in England the family functions as a group within the home rather than dividing up in groups outside.

The returnees also find life more formal Owen Scholte, 17, said ruc fully, "You can't drop in on a friend You have to writ for an invitation And you can't chat with people you don't know" Actually, the dangers and discomforts of war have melted English reserve noticeably, but the English reserve noticeably, but the English his still not so outgoing as Americans With more than 700 people to the square mile (compared with 44 in the United States) they must exercise some social restraint, or life in their crowded island would be unberrable.

While in the Stites, many children found part-time jobs. When the parents first heard that their sons and daughters were working as baby-minders, newsboys truck drivers or soda jerkers, a tremor of apprehension i in through many respectable professional-class homes. Having recovered from the first shock, however, parents express pride in the variety of their children s jobs, and hope that we'll do the same thing here after the war

Returnees are appalled by the drudgery of housework. The English have always depended more on employing domestic help than on using laborsaving devices. Now domestic servants have virtually disappeared. Both boys and girls are impatient at the lack of mechanical aids. Mothers are hearing of the joys of central

he iting, refugerators, toasters and, above all, washing machines

For children to leave their parents and live with strangers in another country is a bewildering and challenging experience. It is a great tribute to the people of the United States that the children have come back entimes stice admires of America. I have listened to dozens of them telling of the wonders of life in the U.S. A. When I we asked, 'What didn't you like about the States'" they have frowned and thought hard, but found no answer

List year several of the returnees took part in an exhibition called Young America," sponsored by the British service organization, Too H. They worked in shifts from ten in the morning until nine at night, explaining the photographic and other exhibits, and every afternoon for two hours they served as quiz experts answering their contemporaries' questions about American life. I ater the exhibition went on a three months' tour and was seen by 80,000 British children.

Few of the parents have ever been to the States, but they feel a ace p kinship with the country which harbored their children. The intimate link of gratitude and fixed ship widens into a warm feeling toward the U. S forces in England. In the many clubs run by the Kinsmen, an organization formed by the parents in 1940, hangs the notice. This is a Thank You service offered to members of the U. S forces by parents and friends of children evacuated to the U. S. A.

In 1942 the Kinsmen Fducation Trust was formed to give children from the USA and the British Commonwealth the opportunity of scholarships and hospitality in England after the war Scholarships have already been an aresed at many schools

Irraties and trade agreements are all to the good but real friendship between peoples can come only through direct personal contact. The generosity of the American families who opened their homes to I rights children in 1940 has given the United States a vast store of invisible wealth in Britain — the wealth of good will. The children, who have returned enthusiastic and sincere ambass idors, are an important and perm nent tributally of the broad river of Anglo-American friendship.

Where There's a Wind There's a Wish 3/2

When a good wind hits kin galein scores of windmills been to whill noisily among the tents and Quonset huts. But they do not pump where instead, they force plungers to churn busily in soaps tubfuls of middy socks and oil splattered coveralls. Throughout American held islands in the Central Pacific, the wind is laundry man for every service man who can take a claim on wood or metal for blades a broomstick for a shaft, and a funnel for a plunger. New Triumphs of Disease Prevention

Condensed from Hygera + Lors Mattex Miller

THE greatest wartime achievement of medical science, overshadowing in its long range possibilities even the development of such miracle drugs as penicillin, and new wonders of surgery, has been the tri umphant progress in prevention of discase.

Your blood donations to the American Red Cross have opened the way for the practical conquest of that scource of childhood, measles Ut der the direction of the Office of Scientific Research and Development, Dr. Edwin J. Cohn of Huvaid began a search for useful by products of blood plasma production. One of the most important of these turned out to be a substance called gainma globulin A full dose of this blood fraction will prevent measles in any child who has been exposed to the disease, a smaller dose will cause a subsequent attack to be milder. At present doctors favor the second procedure, because the light case of measles, which leaves the child only slightly ill for a day or two, builds up an immunity to future attacks

This new substance prevents measles for the simple reason that nine out of ten blood donors have had the disease valobulin is being processed and distributed to local health de partments by the American Red Cross for free distribution to children everywhere. It is estimated that the present supply from wartime donated blood will last for the next five years, after which the globulin will be man ufactured commercially

Whooping cough has long been recognized as a haish, dangerous disease in young children. About 85 percent of all children levelop it be fore the age of seven, nearly 50 percent get it before the age of two Every year 5000 children die of it, and countless others are left handicapped by complications that follow

Last September the Council on Pharmacy and Chemistry of the American Medical Association announced that, after years of discouraging research, a vaccine is now available which prevents whooping cough in many cases and reduces the severity of those it does not p event

The effectiveness of the vaccine was demonstrated not long ago in Iceland, where conditions are peculiarly adapted to such a trial. In determining the value of any vaccine the chief problem is to iscertain whether the vaccinated person is susceptible to the disease or, if so, is ever actually exposed to it. In Iceland an epidemic of whooping cough occurs about every seven years. Between these outbreaks not a single case of

the disease is to be found. Thus when in epidemic comes no child under seven has any natural immunity to the disease, and all of them are exposed and susceptible to it.

Before the last epideinic outbied, Dr Neils Dungal of the University of Iceland vaccinated about 5000 children in Reykjavik Almost 30 percent of their escaped the disease, nearly 50 percent developed very mild cases there was a minimum of severe in I fatal attacks. In a group of children not vaccinated, less than five percent escaped the disease and there were many severe cases.

Whooping cough is particularly dingerous to infinits under six conths old, who cannot be given the accine direct. Drs. Samuel Scadion and Philip Cohen of New York recently announced that by giving six accine shots to an expect int mother becaming three months prior to childbuth, they can protect the baby igainst whooping cough for the first six months of his life. In a five-year study, the doctors failed to find a ingle case of the disease in any baby whose mother had been so vaccinited.

Practically all children today escape diphthena because inoculation in inst the dread disease is nearly universal. Now Dr. Louis Sauer of the Northwestern University Medical School has introduced a combined vaccine, equally effective against whooping cough and diphtheria, which may soon afford simulatineous protection against both

The long-hoped for protection against influenza emerged from the laboratory stage last year and was amply vindicated by full-scale trials

conducted by the U S Aimy's Commission on Influenza During an influenza epidemic, 12,550 men from 13 chili rent truming units in New York City were vaccinated, half of them with an influenza vaccine, the other half with a sterile solution

When the epidemic was over, tabulation of the results showed that in some units there were six times as many flu cases among the nonvaccinated men as among those was about two to one. Those viceinated who did have the flu had it in imild form and had no complications.

The Army's experience indicates that influenza viccinition may be held in reserve and applied only when an epidemic threatens. Recently the office of the Surgeon General announced that influenza watches" have been set up in all Army installations. At the first sign of influenza all personnel is viccinited with the new vaccine, now available to the aimed forces in large quantities.

After the war, public health au thorities may set similar watches for whole communities and supply vaccines through schools, business firms and local health departments

Mal 1112 once the most dreaded of epideinic diseases in large are is of the United States, has been reduced to a minor and controllable problem here at home Malaria incidence in domestic Army encampments was cut down last year to a new low of only two cases per 10,000 troops. In addition to the customary measures for wiping out the malarial mosquito, the Army used the sensational new insecticide, DDT DDI has also

been used successfully in the insectridden islands of the Pacific,* and in combatting typhus in Italy

Greatly improved techniques using ultraviolet irradition and glycol vapor to kill air-boing germs are bringing fine results They tremen dously reduce and sometimes completely eliminate from a room the ζerms of mumps, pneumonia, chicken pox, measles and general respiratory infections including colds. A six-year test at the Germantown Friends' School and a three-year test in two schools at Swarthmore, by Dr W F Wells of the University of Pennsyl vania demonstrate conclusively that properly irradiated schoolrooms will prevent two thirds of the usual cases of childhood discuses

Dr Max B Lune of the University of Pennsylvania placed healthy rabbits in cages next to those containing tuberculous rabbits, so that the air of the two cages was constantly mixed Eleven of 15 healthy rabbits con-

*See Conquest of Our Worst Picific For —Disease The Reader's Disease April 45 tracted the disease Then repeating the experiment, Dr Lurie submitted the air of the cages to ultraviolet rays. Not one of the healthy rabbits acquired tuberculosis Says Dr Lurie "It is probable that ultraviolet irradiation may control the air-borne contagion of human tuberculosis"

All these measures point hopefully to disease control and prevention in a better postwar world. The warting maishaling of scientific resources, the free exchange of new ideas, and the close collaboration of medical field forces and laboratory workers have produced results.

Brigadict General James Stevens Simmons disclosed recently that since Pearl Hurbor, almost 30,000 Army officers and enlisted men have been trained in special phases of public health work which they can turn to the service of their communities when peace comes 'I he nation," he remarked, 'faces a great opportunity to place the public health on a broader and firmer basis than has ever yet been achieved by my nation in history

💠 🍁 Pride Without Prejudice 🍁 🍲

The Reward dignity in Mes Allen's gaunt, we thered New England face that you never forgot. Ever since her husbands death left her with two boys to raise she had run Allen's General Store on Main Street. With the help of her older son, a conscientious, hardworking boy, she built up such a good business that the younger one was able to go through college. He became a famous Chicago surgeon

A few years ago a summer visitor arrived who "had no idea that the mother of the great Dr. Allen was right here in town". The moment she found out she hurri d down to the General Store, where Mrs. Allen was waiting on custom ers. After purchasing some sun glasses and chatting with Mrs. Allen for several minutes, the customer assuming her most ingratiating smile, said, And of course you must be so proud of your son.

Which one asked Mis Allen

A project for those who like to think and talk! Watch for examples of reaction my practice in whatever pursuit and express yourself! You have a stake in an ever progressive America

The Real Division Among Us =

Condensed from The Memphis Press-Scimitar

Edward J Meeman

Editor The Press Scimitar

is not between capital and labor, between employer and labor union, as the illiberal businessman and the illiberal labor writers say it is

The real division is between *liberal* businessmen and *liberal* labor union men on the one hand, and *illiberal* businessmen and *illiberal* labor union men on the other

In the development of capitalism there have been two kinds of businessmen — the liberal and the illiberal

The illiberal businessmen went out to crush competitors by unfin competition. They ground down labor by low wages and long hours, beat down labor unions by espionage and oppression. They sought high tariffs and monopoly. They cheated the consumer by inferior, misbranded, overpriced products. They hood winked the investor by misre presentation and froze him out by chicanery. They bribed and buildozed politicians, and used Government to obtain special privileges.

The liberal businessmen were not afraid of competition. They said 'Let that business win which serves the public best.' They said "Certainly labor has the right to organize

to protect the interests of workers, just is we businessmen organize" They saw that workingmen with high wages would be good customers They made an honest, full value product, and priced it as low as possible, saving 'We will make our profit through volume of sales " They told the truth about their business in their labels and in their advertising and gave investor an honest state ment They would not seek or accept favors from Government believing that Government should be one of laws which apply equally to all Moreover, they thought that Government should be kept as simple and economical as possible lest it become an oppressor of the people and a builden to the taxp ivers. They favored free trade so that other nations could prosper, so that nations would regard each other as customers and friends rather than rivals and enemics

In recent years there has risen a strange misconception of what liberalism is Many writers and speakers have come to apply that term to anything connected with the labor movement, and the term 'illiberal to any criticism of any measure favored by any labor union or labor leader

The truth is that the growing labor movement has the same division into liberal and illiberal which has characterized business tien and capitalists

The illiberal labor union in an wants to free the worker from domination and oppression by the einployer only to put him under domi nation and oppression by the labor union or its leaders. He wants to free the worker from fe ir of the employer o ily to put him in fe ir of offending a labor boss. He wants to make a man so dependent on the union that it will be difficult or impossible for him to change jobs if he wints to He wants abuse the power of the labor umon by indulging in unnecessity strikes and slowdowns. He wants to use political power for the selfish advantage of labor instead of for what is In to everybody. He wints to get fivors and special privilege for labor from Government. He wants to get the Government into so many things that the workingman will be do pendent on the Covernment is he vas in this country under the WPA, and is he is in Russia all the time

So we see that the illiberal union man is seen similar to the ill beral businessman

The libe if union man tights hard to get more money and better conditions for the worker, but he never hurts the business he works for because he knows it sathe cow that gives the milk. He does everything he can to make the business more prospe ous for he knows that the more it prospers the more money he will have the right to ask for He works as hard as he can and does the best job he can, and he expects the employer, in the same spirit, to pay him all he can afford to pay aim.

He coesn't want to destroy capital, for he knows that if there were not private capital to employ people, then everybody would have to work for Government — and wouldn't that be hell! He wants wage workers well paid so they can save and buy stock in the company they work for, and in other companies, and become capitalists, too He thinks it would be fine if every worker were a capitalist and every capitalist a worker. He thinks it would be good to have some extra private income in old age so is not to have to depend entirely on a Government or company pension. He thinks labor unions should have justice not special privileges, from Government.

He doesn't think that all union men should be in one political party for he knows that it's the two party system that has in ide America great and kept her free. He doesn't want Communism or Socialism and he ir is to spot those guys who sail they re not Reds but who want the Government to run business just as the Communists do

Thus the liberal union man is very much like the liberal businessman. Let the liberal businessman and the liberal labor union men get together in a tirm and friendly understanding. When they do, they will render the reactionary businessmen and the trouble making labor men harmless. For the reactionaries and trouble makers are really only a small minor ity of us

If the liberal businessmen and the liberal liber men get together, that will be a mighty big union." United they will be able to give 'his grand "Union" of American states—in which the word "liberal' will have found its true definition—greater freedom and prosperity for all than it has ever enjoyed

The War from Inside a Tank

By Ira Wolfert

DITORE WE WEIG SENT OIL tink mineuvers in Ameica, the Incutenant said give us written field orders that told us what we were supposed and not supposed to do, where to go and how to get there, what to take with us and where to place it and not to please knockdown invitelephone poles ilong the way. But when we came to doing business or a live battlefi ld-nobody had time to write anything down The battalion commander Treaten ant Colonel F 1 Mc onnell, just drove up to my tank in his jeep and sua to me, I want your platoon to be the point today. I ake off and leep in touch with me

This was carly last August near Avenches in we tern I rince at the ime General Patton was beginning his drive toward Germany

The Lieuterant is 20 veu old George Hook of Middletown Ohio, son of Charles R. Hook head of the American Rolling Mill Company From the day on which Gener I Patton's sweep began until it ended outside Metz. I reutenant Hook more often than not rode in the lead tank. The day a German shell lacke two vertebrae in I reutenant Hook's neck vas the day the whole Third Army ground to a halt, before German positions too strong for i

Luccept for the fact that Lieutenant Hook was at the very front of Pat

The vivid personal story of a tank officer who rode in the point of one of Patton's great drives through and behind enemy lines

ton's forces his story is not unusual. It is in fact typical of the fighting done ovall tail in n — the Russians who went from Stalingrad to Kuestin the British who pushed Rommel across. Africa the Americans and British who finally broke out beyond the Rhine.

When we started the I uten int said 'we were just told what road to tale and to keep come until er dered to stop. The tanks went tearing The Germans can after us and our army ran liter the Germans. This kind of war seems confusing to the people back home, but its casy cnough to follow if you look at it this A defending army puts its thick belt in front of strength into itself. I hat s'the line' But they can t be equally strong everywhere and somewhere your infinitry makes a break through and shakes the tanks loose. In the area behind the line are headquarters, supply dumps, re serves communications When tanks get into that kind of stuff, everybody sta ts chasing everybody else"

An army advance of is a terrifying spolit, immense with power, fuling the fields, cholling the roads, streaming across rivers, a clacial crust inching across a nation. But in the forward areas, it thins out until finally its just a few men or one main fumbling along in a worried way. That is, the point, short for 'point of fire'—a probe thrust into the enemy to stimulate has a postion and strength.

We took off into flat, wooded country, said the Lieutenant 'The woods could have hidden anything The standard solution for such a problem is to use two tanks for the point, follow them with a platoon of infinitive in half tricks, and then close with the three other tinks. On a road there is always a rise of cround or a curve or something to hide behind and the first two tanks play leaps og with each other while one stays behind cover, ready to shoot whatever shows the second tank dishes on down the road for the next bit of co cr And so on, until a battle starts and you have to commit your inf intix

We plived leiphrog quite a while, until there was no use in doin; it involon; et because we were in woods where a tank that stood still was just as vulnerable as the one making a clish. So we threw the schoelbook away and everybody stepped on the cas. Every time we got down to 18 miles and our the Colonel was on the ratho wanting to know why. Our job was to beep one and steam roller—path for invoody coming behind.

When we got up behind Argentan, word came that the air force was

going to bomb the German ammunition dump there but we were not to wait for the air, we were to keep noting. I saw about ten I hunderbolts diving down on the dump far ahead and then six bicycles turned into the road a mile ahead of us. The cyclists saw us, and really started pedaling.

'I was traveling with the turiet open — unbuttoned we call it Nearly every tank commander travels that way When you button up your tur iet, you have to depend for vision on a periscope Your vision starts a 20 feet from the tank-you are bline to invthing closer. If you overleaked a Cerman in a hole or behind window, all he d have to do is hold onto his nerve and writ until you were within 20 feet of him you d never know what hit you Be sides from the turiet periscope il you can see is ground slipping toward you there is nothing to orient it wit' and tell whether you're going back wird, forwied or even sidewiys. That made me even more nervous than thinking of possible Cerm it's

We closed on the cyclists to about 300 yards Just as I give the order to fire they threw do yn their breveles and leaped to the woods. We got one Je iy in midin. The others

di appened

'I jumped up on the turiet seat and velled Jerries! to the infantry back of us and pointed to the woods. They got the idea. Their half tracks stopped the men piled out and be gan worling into the woods, low and crouched over

"About 1000, ands from where the town begin some 50 Jennes jumped out of a ditch and ran across the 10ad and toward a rise of 4 ound. We

opened up on them They were crews of two 88's that had taken shelter from our plan s. We got some on the run and some while they were trying

to load their guns

'When you is the point, the question isn't who will fire the first shot (that's almost always the enemy) but who will hit his target first Soon ifter we pased the Germans in the ditch, there was the terrible z nimg of in antitank shell going past my cars. I was looling at the spot where I would have set up an intitank gun if I d had the job of protecting that road so I caught the flash of the 76 mm gun Corpord Robert M1thris the gunner of our tinl, the Anxious Annie, had time for one shot before the Germans could try another. There was a rell burst, and I say black pieces—d bus of the cun or the men firing it — streaking through the flish

We stopped then It was plain that the town was defended and it seemed to real to have the infantry clean it up before the tanks went through I told the Colonel as idea.

Fretty soon our infinity begin coming up in the ditches longside the road. I could see artillery shells gone into them. Then Serge int Griffney e in erunning up along the ditch to say that our No. 4 tank had been hir I grabbed a fine extinguisher and i in 1,0 yards to it, so excited. I didn't drop when the shells hit close but just i in through the blast of them. Four of the five men in the tank had got out. I tried to pull the driver out, but found he was did. His body leo'ed as if it had been put through a chopper and then burned.

"Awful things can happen to a

man in a tink It's always heavy shells that get through and if one of them hits him it's like a hydraulic hammer smishing him. And when a shell goes into a tank it always sets your own immunition off.

"A Germ in panther tank was firing at us now and had got our 'priest' (a tank with a 105 mm howitzer), so I started toward him I told the No 2 tank commanded by Serre ant William Wielham, to move off the road to the left and I went strucht

down the road

"There was a high brick wall on the left that much hide something and we stopped just ahead of it and wated. I mally we heard the squeak ing of tank tracks. It sammy how far that squeaking carries. I venil tanks motors are not me and their cans blusting the sound you hear first is the squealing of the tracks. A combat command of tanks advancing sounds life a multion mice squeal me

When the Jerry trak took its no rout cuitiously beyond the will Wickham was waiting for him, and with yery line abouting opened his

whole side up

'Then things got quieter Orror ders were to keep going so I told all the trinks within sound to follow me I had lost my maps while running to our No 4 trial so I went on memory It visiteally black maht now I went under a ruliford reduct and saw near the road a Cerrain half trick that had been strafed by our planes and was burning. By the light of the flames I saw a column of German trucks and two half tracks parted there and we shot them to pieces.

We came to a square in the town, and went acros at shooting Λ (11-

man command car scuttled into the street theid of us and we threw a shell into its hind end. It rolled over, burning We went crunching over it because there was no room to go regard at I in ally we got outside the tow n

Now one after another out tank commanders started calling to me that they were out of gas. We pulled into a field and I got Capt iin Milcolm O Allen, our company commander on the radio

Withdraw he said 'Well take the town in the morning with infantiv'

Hell I told him, 'it's done been tooken already! '

COMBAR COMMAND A of the Seventh Aimored Division of the Third Aimy now lay across the eastern approaches to Argent in In the Argent in Talaise area the bulk of the German army of the west was trapped When the Germans lost this aimy they lost the Buttle of and Belgium, though this was not clear at the time to those on the ground there. The next line along which the Cermans could make a fight was the Seme River

"We breached the line there" Lieuten int Hook sud it a place called Port Seme. The Cermans held the cast bank, our job was to hold the west bank and cover our infantiv when they crossed

' There was a high ridge with a lot of tices on it. We sneaked in among the trees took our axes and cle wed fields of fire for ourselves

"At two oclock I hunderbolts strafed and dive-bombed the Ger mans we cut loose with our 75 s and machine guns, and the infantry ass sult boats paddled across the river Then a Cerman machine gun hidder in a clump of trees caught the infan try in the lack. We cut loose on a and put it out of action

'Some of the infinitivist lited work ing up the east bank of the river We knew there were still Jerries there and M yor John B own and I screamed to warn our men. Of course they couldn't hear us A tall, thin boy was in the lead. He saw a Jerry in a foxhole, and turned around and started marching him back. Another Jerry popped out of a hole and scrambled after them as if to say 'W ut for me' Then the doughfoot began looking in forholes for sou venirs. I couldn't believe my eyes He kept throwing this away and keep ing that and looking for places to put things in his stuffed pockets while his two prisoners waited patiently

" Well, Myor Brown said, the s cool You've got to say that for him

With the infinity safely across the Scine we criwled under our tanks and slept until the engineers could throw a pontoon bridge across for us. We went over the next morn ing Mortus and machine guns be empopping it us from all directions I went up the road into a hall of muchine cun fire. It turned out to be from our own infantiv the hell are you shooting at, I asked one 'Somebody fired at me' he sud But don t you know your own troops are down this road? 'Listen 11,' he told me if somebody fires at me, I fue it them That's ipso facio

We went up to Povins from there, cleaning the east bank of the

user for further crossings, and turned eist Then Cuptum William Powers said to me, 'I ve got a job you'll There was a company of Gerinn infantry coming into Provin that night and he wanted nie to sit outside the town and gice them ints Wickham and Jan y bought that the salong with mine and we hilip toon of infantry. The intintry had been working over Gernin positions all day and was well supplied with champions and cognic We writed in fields along ide the road Every once in a white the crowd would start singing. I d 20 down and expluin to the serge int in command of the doughfoots, 'Shut the boys up You can't hunt buds this way

Then we heard singing coming from down the road, and for a cruzy minute I thought some of our boys in town were coming to join our party. But it was from the other direction and I knew these people must be Germans. Ord is were for nobody to fire until I fire I. I could make out i mass of forms 200 yields away, dense picked and singing with a roar. I waited until they got within 50 yards, then opened up with my tominy gun, and all our machine guns followed. It was a in 1853ete?

The Germans hadn't known that the Americans had crossed the Seine. They didn't even know where their own troops were, and as our tanks lanced and trampled their rear, their chances of finding out grew less and less

'I was next told to take off for Chatenu Thierry and to cross the Marne and secure a bridgehead And do they we of me to bring back Hit ker's mustiche, too" I thought It seemed or 174 to expect a tank platoon to ride in three without getting its block knocked off

We lept running head on into German command cars and truels all day. The trucks were full of toops feeding toward the Seine. They does us and try to turn, and we diget them broadside. Mathias was howing won leafully that day.

"At one place, a road came out of the woods to the right and merged into ours. A German mechanized column was moving down the road, slanting across our front porch, you might say. I told the No. 2 tank to get the realmost vehicle and I took the lead vehicle. Then we had the road blocked fore and att, and I brought my platoon up abreast and we kept pumping until we had every vehicle in the column burning.

'There was a lot of stuff behind the rear vehicle that had backed off into the woods 1 adjoed to ask if I should go after it 'heep some they said General Bradley was sitting on Gener il Patton's back, I guess, hollering 'Keep going,' and Patton was sitting on corps' back, hollering 'Keep go ıng and corps was sitting on divi sion division on combat command, combat command on battalion, bat talion on company, and compliny was prodding the point — which was us — all hollering Keep going!' So I kept going

"Some French resistance men jumped on my tank and led us to where the Germans had been mining the road. It looked so obvious that I suspected the thing was a plant. I got out and dug with my penknife into the refille! holes in the road but

there were no mines. We found that the mines were all on the shoulders of the road. The Germans had expected us to come batting along see the refilled holes, swerve off to the shoulders, and blow up. I radioed the news back, left the brenchmen there to warn those coming up to stick to the road, and lept one.

"About four o clock a metorcycle tore down the road toward us and threw itself into a ditch about 50 yards away I told Mathias to Icep the Jerry from slapping a bechive on a awe pased. Our 7, bo med and we saw page of the Cerman and his

equipment fly over a tree

A motorevele u willy h s some thing behind it and we lept on ilert 2000 WC 513 1 mile www.ciltacher hove cor all murdereus stud, bein onto the road. There were also upply. and an munition venicles. I spie id my platoon of tails across the field n (chelon formation and we opered from 500 yards shooting from all carefully. We couldn't afford to miss, so we didn't miss

'We of a lot of passoners there We rounded them up in a field and I thought I diget myself a souvent which I had always wanted—a I uger partol. Our colonele une rouning up. Why the hell are you sitting here' he I outed. It is been quite a battle here' I explained 'and we've got all these passoners and don't know what to do with them'. The hell with the passoners, he said 'You leep going!

'Du came on Then there was a sign on the road Clateau Iherry, 112 Kilometres 'We re winning the whole damned war,' I said over the radio

*Keep on moving?" yelled the Colonel

A half mile outside the city was a column of Gern in supply trucks—
immunition, clothing, food. It was eight a clock then, and deep twillight. We came up shooting and the Cerm ins jumped out of their vehicle and a in crying. Kam rad or Lis still or held their hands up to us imploranch. We bringled on past the side of the column running over whatever was there debris or men, and shoot in around to the sid.

Aheid was a brid cover what a thou ht we the Mune but there was no time to look it a map 70 mm in it inligun was shooting down the roll it us from a corner of the line of Wewnerman allow the condition hell were some but and forth ldc bowln g balls but Math $x \in \mathcal{O}$ t the gun before it got us We got across that bad condon to noth ren 1b dewhen 120 nm emmoro, ened up on us. There vis in dethet was life a lick in the nd a spart of flame that tool iny cyclishes off the snell had knocked the driver's periscope off and he had veered and we hung on the bridge by one track. When the driver Serge int Brodic Butler, got he rin ms out of his he d he pulled the whole sight down, put a new plastic head on it, backed onto the bridge and got us going a ain— all this very calmly and chicaently while tre shells were whipping fround us like spuks off a grindstone

'I mally we came to a big bridee. There was an ammunition truck of it and we started it burning and edged past it. On the other side I shifted the tanks fround the roads leading to the landge and

can back to find the Colonel Keep ang? he welled 'And get that damn truck off there before she burns a hole through the bridge. I held my arm in front of my face and main iged to throw a cable over the truck's bumper and one of our tanks towed it off the bridge.

Now we were over the Marne at list But we were cut off in the town the rest of that night We had rushed past a whole chole of Ceaman traffic, and the rest of the command behind us couldn't get through it. All we hid in the town was a battalian of tanks, a company of infantiv headquarters. The Germans started pounding us with artillers, and the French resistance people and local gendarmes led infantity squads to the buildings where the Germans were hiding The town was a madhouse all night with guns scienning everywhere and big shells wh imming down But by eight in the morning the rest of the outfit had punched through and we took off for Rheims

The war went alto, ther crazy after that Fyery day was like the havide from Provins to Chateau Thierry, with retreating Cermans blundering into us and advancing Germans and cut off Cermans and wandering Germans and Cestaro guys and SS fellows in black uniforms driving cars, trucks horses and on motorcycles and bicycles. We poked the chaos up and made it burn

'At I out Brimont near Rheims, the Cermans in a factory making ampline parts kept on working until our infantry walked in on them.

'In one town, Jerry insertion pottid at us from the hours I told gunner De d McI arland to work over the second story windows and the reals with his machine can while Mike O C i sio pounded the ground floors with our 75. Suddenly there was a terrific explosion a few feet in front of us and smoke and flame vomited over us A Nizi was rolling teller mines at us from around the corner of a building. We got him just before the second mine went off ahead of us.

'We got out of that nightmare of a town and into an apple orchard and waited for somebody to eatch up with us. Then I heard the Colonel aslang what road we had taken

'You ll see some C im in trucks burning. I told him 'You go strucht past them and a motorcycle burning and after that an armored car burning and you ll see an apple orchard. We re in the orchard.

' I de off, he sud. Well follow you. I told my platoon. Let's go boys. They want us to win the war tought.

We went through the Argonne it a miles in hour We came to a place called Ni eville. Suddenly our tank lifted up. If It as if I had been taken by the scruff of the neck and shak in so hard that my legs nearly broke off at the hip. Butler said he couldn't back up, we were stulk. Then some 88 seat loose at as from somewhere close by We started hitting back but our treedness and that first wallop had done something to our shooting — we couldn't drive one home.

'I kept looking at the muzzle flishes. One shell hit our right side and another went through the tink and through a gunner and the leader and blew up in the turret. The next thing I knew I was in the middle of

the road I dragged myself to a ditch I could see big flames coming out of our turret A man was lying beside the tank 'Lieutenant' he kept calling Lieutenant'

"I ran over to him It was Mike O Cassio I told him to roll over on his stom ich and put his hands around my neck. The Germans were still trying to kill us, but we were low down to the road and not very good targets. I crawled on my hands and knees to the ditch, Mike holding onto my neck, and to a hut 50 yards away. The other tanks were nearby, waiting for our priests to come up with their 105 howitzers which could shoot over the curve and drop down on the 88 s.

"When the daze wore off I found there was nothing wrong with me except that my ankle was chipped and I was flecked all over with bits of fragment I went to sleep under a tank and the next morning we fought into Verdun and seized the bridges there. Then we writed for supplies to eatch up with us

"No inatter how fast we had come on our wild ride, or how far, every morning the familiar five gallon cans of gasoline and new ammunition and rations had been writing for us. How those fellows in the rear managed to move their dumps forward so fast, and fight the stuff up to us through the Germans that we left behind everywhere, was a mystery to me. But finally there came a point when they couldn't do it any more. We were just too far ahead lor our outfit that point was reached just outside Verdun.

'In the five days nest there we all got brand-new 76 mm tanks, a shave and fresh meat to eat. Then we headed for Metz, going fast until we got to St Privat The Germans had built up a strong new line there, but we didn t know it. We went breezing right into it in the manner to which we had become accustomed The Jerries let us have it with ever thing in the book. There was so much noise that I didn't hear the shells falling. I just he ard tank commanders holler ing I looked around and there were some fellows crawling toward me from Screeant Wickham's tank I yelled, 'Find cover,' and put my head over the turret to see if I could spot the guns in the woods That was my list act as a platoon leader of Company A

"I never felt anything when that shell hit our turret and broke my neck. There was no noise or firsh or ferr or burn I had my head out looking at the woods, and suddenly I was lying on the bottom of the turret looking up I couldn't move my arms or legs 'Lieutenant Hook is dead, I heard the man in the turret say over the radio I made a desperate effort and nudged him. He looked down startled I forced my eyes open, made a fin il desperate effort and winked at him. Then I passed out " *

The wild havinde was over Hook had ridden it out for 37 days, a life time as far as points go It was two months before the Third Arn y progressed beyond St Privat, but this spring it went on another such ride—across Germany

^{*} Lt Hook was hospitalize I in England and later sent to the United States with his neck in a cast. He has been told by Army medical authorities that he will be dischauged from the hospital fully recovered probably in early summer. He propes to get back into combat.— in a tail.

What Do You Know About Sleep?

Condensed from Woman's Home Companion

Gretta Palmer

the average person spends 15 years sleeping Lack of skep h is mide generals lose battles, nervous patients lose their minds, wives lose their husbands. Obviously an understanding of skep is important to us all but how many of us know the scientifically established facts about it? What's your score on the following statements, some true, some false?

licalthy sleepers never toss and turn

False Everyone changes his position many times because the muscular arrangement of the body is such that we cannot relax all over at once I hirty five shifts a night is average

The most refreshing sleep comes early

True Studies at Colgate University show that many of the benefits of sleep have been fully obtained by the end of the first few hours

If you skeep six hours instead of eight, you must expend more energy the next day to accomplish the same work

Tru Laboratory tests show that we use up to 25 percent more calories to compensate for lost sleep

To make up lost sleep we must sleep a few hours longer for several nights in succession

I alse One normal night's sleep will give us all the accovery that extra sleeping can bring

Sleeping with someone makes rest ful sleep more difficult

True The slight motions of the other person keep us from sinking into the deepest and most refreshing sleep

Men who are able to get along with very little sleep are among the most energetic

False Nipolcon and I dison went with only a few hours' sleep a night, but they tool cat naps during the day. In any 24-hour period they apparently slept a normal length of time

Lack of sleep alone may lead to really serious illness

frue Animals die more quickly from lack of sleep than from lack of food

We fall completely asleep and also wake up in one split second

False When we are half asleep, either at the beginning of the end of

the night, we pass through a period when we cannot speak but can clearly he a sounds. Our power to move is then askep, but our hearing faculties are awake.

Sleeping on the left side strains the heart

Taise It makes no difference whether the average person sleeps on his back or on either side

Drinking hot liquids before going to bed is one of the best ways of in suring good sleep

False Pressure of liquids on the bladder causes restlessness Only small amounts of liquids should be drunk during the evening if you want to pass a restful night

It is unhealthy to sleep in summer with an electric fan in the room.

I also If the fin is turned to the will to word drifts and placed on heavy felt to absorb sound, it will improve your chances of a restulinght

Physical fatigue can make it difficult to get to sleep

Fine A warm both is probably the best way of reducing the tension that comes from too much unaccustomed exercise before going to bed

The worst thing about insomnia is worrying about its effects on the next days work

True Dr Donald A I and, who studied sleep habits at Cole ate University, suggests that when sleep is difficult you decide to jet up later the next day. Knowing that you have plenty of time in which to rest, you will doze off casily.

Mattress and springs should be off medium softness to insure the most restful sleep

True A soft bed is the weist enemy of sound sleep, a hard bed almost as bad

A map after lunch is sheer self indulgance and cuts down a person of efficiency

Ials Studies it Stephens College Missouri show that when students slept for in hom after lunch their scholastic records were higher than when they used the time for studying

Ment il effort is the worst possible preparation for getting to sleep

71111 A dull evening ending with a wilk to the voir muscles, is the best preparation for sleeping

The Young in Heart

CITYLIAND ratho columnist Sidney Andoin shared a cabone in hi with sweet little old lidy who told him that she was 83. The taxaste pped at her house first, and Andorn and I in joing to see you safely to your door?

be ide the driver sat the guard, called a hotgun messenger fined by the espas couping Bret Hart who once falled the

por celebrated liminating. Over his laces is told his double britised how in fivo ed for the mit derois ore if of it buckshor load he was also handy with a rade of his accolver.

Express to mill ind by age were to ded not the forward of real bore the carbo holds of the Corond A passen ersculped than breath to to ed off a lat smorter the our all vers bayled out the names of stops they work has kell in town angels Carbo rottle Spanes, Rough and Kad Shut Lul Canyon Poker Hat Picty Hill Whips cracked and the staces whirled tway

On runs back from the mines, express boxes a mined with gold dust, the Concords were attractive prey for mill wismen. In a lonely spot jut short of the brow of a hill the road alone waited.

Halt! ' and the driver pulled up Into the road stepped a masked figure, gun leveled It might be Rattlesnake Dick Burter and his gang It might be Tom Bell, Mexic in Wir veter in surgeon, who deftly dressed the wounds of victims he winged. Or it might be some young fellow whose luck hid been bid it the inines

Throw down that box! 'the road agent commanded Eather the driver haused the express chest from the boot, heaved it to the ground and was inotioned to drive on, or the shotgun messenger blazed away, and the bat the was on

If the bandits bothered to rob the passengers, they did so with a courtesy that permitted the plundered to retain keeps ikes and spared injune with a plausible hard luck story

I or the first few years after the discovery of gold in California in 1848 streams of the isure got through scot free. No stagecoach robbers of consequence occurred until 18,2, when road agents garnered in express botyleiding \$7500. In 18,5 Rattlesnake Dick Buter's gaing attacked a Wells I argo mule train and made off with \$80,000 in gold dust.

After the Civil Wir, the ranks of lawless characters from the camps were reinforced by near do well of diers mustered out of the armies Holdups took place with such frequency on certain roads that stagecoach teams were said to stop autoin itically at the customary spot. One discouraced gold-dust buyer is said to have kept live rattlesnakes in his dust box A much-robbed shipper of silver insured himself by sheer weight He can his bullion in cannonballs weighing 750 pounds each, whereupon paffled bandits sent him word they conside ed his method unsportsmanlike

Stage robbery came to a pass

where even women took a hand One hard character called Dute Kate held up a California stage recoup a gambling loss of \$2000. The driver threw down the bosher command, but it held little in she passed up a passenger with \$1,000 in a satchel In Arizonia a female ro divent was acquitted by a gallant jury of the charge of highwardborry though caught in the ac However she was sent to prison to having disarmed the driver, which was going too far for a lady

I cw bindits listed long Tom B he—the sur congone wrong — dir well until that day in 1856 when one or his scouts reported that the Mars ville Calil, stage was carrying \$100 000 in gold Abourd were John Gear the driver, Bill Dobson, the express messenger, and nine passengers, in cluding a Negro woman and four Chinese

Bell and six of his henclinear swung into saddle. They planned to swoop down on the coach, one to the team's head and three to each flank But it chanced that a gold dust buyer, who oward a lare part of the express shipment was preceding the coach on horsebalk because its swaying made him seasiek. Three of the gang stopped to distum hun, and were delayed in their part of the attack when Bell and the others thundered down on the stage.

The odds looked hepeks, but Dobson blized away with his two shotguns and a biace of revolvers. His tist shot knocked Ton Bell off his horse.

I he gang s wild fusiliade thudded into the coich A door posped open the four Chinese and whe of the white men erupted and vanished Now Bell, only slightly wounded, was mounted and firing again. The firm inning passengers opened fir, wounding another banelit. As the sing recled back out of the road, Dolson bowled another off his horse and shouted to Great, Drive on!

Although wounded in one irm the driver or cked his whip. The Concord rolled into Mirvsville with one presencer shot through both legs, mother storchead furrowed, and the Newto woman dead.

Aroused citizens tracked down and wiped our most of the ging a few weeks liter. Then a posse chight Bell, give him time to write a few letters, and swung him from a tree.

Without effective help from local authorities of the Government the express companies took measures to make the cask of the highwayman harder Boxes were strengthened and bolted in Cash ievaids of \$2,0 a head were offered for the capture of bandus. A tenacious skuth, J. B. Hane, finally tracked down the redoubtable Black Bart.

In eight years Black Bast committed more than 2, successful hold ups, always singlehanded Not once did he fire a shot — he subsequently claimed his shotgun var never loaded — and only on one occasion did anyone get a shot at him After a holdup he would vanish completely. Nobody s iw anything banditlike in the gentle in in of kindly in inners who dropped in at faimhouses for a me al Nobody suspected that his bag held a hool, a shotgun broken down, and a store of stolen gold. In intervals between holdups he lived quietly in San I rancisco as a mining man

Painstakingly Detective Hume precededucs together a laundry mark on a handkeichief a description by an observant waters, a glimpse caught by a hunter of the bandit unmasked, breaking open an express box. Hume arrested Black But in San Iraneisco and identified hum as Charles F. Boks. He served a prison term and after his release disappeared A flurry of holdups on his old stamping grounds was attributed to him but never proved.

Increasingly tich bullion shipments, tunning as high as \$200,000 forced express companies to hire messengers who would take on any odds. An eight man guard was ore inized for the coach which made the tun from Deadwood to Sidney in the Black Hills of South Dakota, with treasure from the fabulous Homestake Mine. Two horsemen rode in advance two as a rear guard and four manned the coach. The coach atself, a veritable rolling fortiess with armor plating and loopholes, was dubbed Old Iron sides.

A determined gang of desperados tackled Old Ironsides one September day in 1878. I hey lay in ambush at the Canyon Springs relay station, having locked up the station's tenders.

Somehow without its outriders that div, though it was earlying \$45,000 in gold bullion, the coach was protected by only three messengers young Gail Hill on top and Scott Davis and Bill Smith inside. Gene Barnett was driving

He drivers 'Yip-yip," signal for the station tender, echood is the Concord rolled to a stop As Gail Hill lowered hunselt from the box seat, a shotgun muzzle was thrust through a loophole in the building s wall and buckshot plowed into Hill's bick, inflicting wounds from which he liter died. But there was still fight in the plucky young fellow. He had whitled and was raising his own gun when a second charge of shot sent him recling to collapse in a heap by the roadsid.

Smith, who had been struck by a splinter from the woodwork believed he had been striously injured and lay on the floor of the coach taking no part in the fight. The remaining messenger, Scott Davis escaped from the fir door and took cover behind a tree Lie wived to burnett to drive on As the nervy driver was gathering his term for a dark a banditrushed from the house to the heads of the lead pair. Davis drilled him through the middle

Planty Dayis had to be disposed of or the holdup was a fizzle. A robber cheld around to talk had from

the flank Young Gail Hill, sorely wounded and semiconscious saw him In the best tradition of the shotgun messenger, he mustered his last strength and shot the man dead

But now the bandit leader had or dered Bunett down from the box and was approaching Davis's tree using the driver as a shield Davis unable to fire ran off through the woods to get help Before it could at the the gang had made a clean getal way with the treasure

Sundry tokens of those times remain. Stolen gold, buried by bandit who did not live to retrieve it, he hidden in the hills. Liourds range from \$40,000 reputed to be burild on Ir nity. Mount ain. California. to \$1,0000 behaved to be eached in the Jackson Hole are coff Wyoming. You may still see a Concord on a hibition in the railroad station of at home town, and in the Stathsonian Institution in Wishington.

Lest We Forget vi JAP SLAVE CAMP

A documented example of Jap ancse savagery — the treatment of American prisoners during 29 months at Nichols Field work camp near Manila

Condensed from Kansus City Stra

Clart Lec

Author and war correspondent one of the last Americans to leave I a trin and among the first to return with Ceneral Mac Arthur

I I Mt Introduce you to the White An el di is Moto S in to The Wolf whose real name v is Lanks S in to Pistol Pete S iki S in and Cherry Blossom

Ill sum inter you're not soins to ike them

They are all centlemen of Jap in — products of a cultured civilization 2000 years old. They're also one of the cruclest collections of sadistic murderers the world has ever known. They were the commandants or the sentrics at Nichols Field work project outside Manila where for two and one half years 600 American prisoners were held.

The work of rebuilding Nichols Iteld started in June 1942, with prisoners taken at Cavite, Mainla and some harbor farts I iter, survivors of the Bata in Death March were sent there. The first command int was Moto—a fleutenant in the Imperial

Nav young well built, with short chipped black hair. He was called White Angel by the Americans because he always dressed in an inimaculate white uniform.

One day an American private whom we'll call Mutin collapsed on the runway

Cet up and work, ' Moto-San ordered Martin, or you'll be shot

Matin suffering from dys entery couldn't stand up White Angel barked orders to

the sentries. They jubbed four near by Americ ins with rifle butts and made them pick up Mattin and carry him to the Pasay school barricks. There the White Angel told the as embled prisoners that Martin was to be shot as an example to those who wouldn't work for the Japanese I impire Holding a pistol to Martins head, he marched him behind the barracks taking an American captain as witness.

The men heard ishot, a pause, and then mother shot. The captain came back and told them what had happened. White Angel's first bullet hadn't falled. Marun. As he went down, he called out.

Captain, tell them Martin went down smiling"

I hen White Angel shot him again, in the head

Ici his second murder, Moto used a sword. An American Marine, who

had endured drily beatings for months, one dry mide a break to escape. Five hours later the Japs found him. He was forced to kneel outside the prisoners' barricks. Unwaveringly he looked at White Angel as the Jap officer drew his sword and stepped forward.

It wasn't quick, or neat, it was a

brutal hacking to death

After Moto had changed to a cle in uniform he placed a cross and flowers on the Mirine's grive. A photographer took pictures of him standing in military pose beside the cross. That was to show the world how well the Japanese treated. Americans who 'died of illness' in prison camps.

The prisoners were divided into groups of ten and told that if one escaped and was not recaptured, the nine others would be shot. I our men who tried to run away were retaken and beaten until nearly dead. One in in did get away. The remaining nine of his group were executed. Among them was the escaped man's brother. There after the Americans agreed among themselves to try no more escapes.

One of Moto's fivorite tricks was to force prisoners to double time for three quarters of an hour running barefooted on the gravel until their feet were sashed and bleeding

Rounne drunk after a revel in Manila's red light district. Moto would force the prisoners to line up. Then he would sit and drink from a bottle while they did calisthenics for a half hour or longer.

Moto left lite in 1943 for active duty liter news came of his death in action. The prisoners were sorry. They had hoped some day to kill him with their own hands.

I he prisoners' day started at 6 1, 2 m, when a Japanese sentry shouted Bango'

That meant get up from the floor where each man slept in a space 36 inches wide. Then all, including the sick, did calisthenics for 15 minutes. After that they were forced to count off in Japanese. Mispronunciation brought a blow.

The food was fish eyes and guts a soup made from the entire fish, or watery gruel, along with about ar inch of boiled rice in a canteen cup

After breakfast came sick call. Only 50 men daily were allowed off. I hose too sick to walk had to be carried or drigged by their comrades when a 7—the daily torture march started to Nichols Tield. Throughte main street of Pasay paraded the ragged skeleton. They had lost up to 70 pounds per man. At first the Lilipinos lined the route and tried to give the Americans food and shoe and cigarettes. But the Japs shot several Lilipinos and broke it up.

In route Jip sentices would sud dealy attack the prisoners without provocation. They would hit men in the small of the back with rifle butts. Some sentric carried from clubs with which they brutally broke arms and less. Those I lied had to be preked up and aided along by their comrades.

A sentry called Pistol Fete broke the times of it least five men with ar iron but Siki Sim, a Jup marine who was always drunk, used a simil it we ipon to beat those who whistled At list the Japanese relieved him because is the result of his brutanty the work on the airfield was falling behind

Under a starvation diet, with beat

ings and without medicines, more and more Americans collap ed. An American doctor went to the camp commandant. I he Wolf, who had relieved White Angel—and said. Unless the men get more food they will die."

In a rage, The Wolf ordered a sentry to club the doctor Another doctor, a major, intervened As a result he was slugged with a pistol lour teeth were knocked out and his jaw was broken. The Wolf then addressed the bleeding men. 'I don't care if you all die. I here's a hundred million more like you in America Soon they'll all be our slaves."

Many American prisoners tried to escape by taking their own lives Some succeeded. At least five men went insane there from June 1945 to September 1944, and one of their tried to commit suicide by repeatedly butting his head against a will

Can you imagine deliberately crushing your arm or leg under a two-ton railway car? Americans did that Their goal was to be sent to the Bilibid Hospital, where treatment was relatively decent although the food was bad

Like his predecessor, The Wolf personally murdered Americans in front of other prisoners. A boy from New Mexico collapsed from malaita. The Wolf saw the still unconscious soldier that evening. He banged the boy's

he id on the concrete floor and kicked him. Then he carried him into the shower and held the boy's head under water with his foot until he drowned. At least 50 Americans saw that And the prisoners also saw one of their starving matesstrung up by his thumbs outside the doorway while a bottle of beer and a meat sandwich were placed in front of him. By evening he was dead. The Japs forced an American doctor to sign a certificate saying death was due to heart disease. It was so reported through Geneva.

When a man was almost certain to die they sent him to Bilibid Hospital

— because on international records it looks better to have prisoners die their

After our I evte I indings the attrude of the Japs changed amazingly. The guards now tipped their hats, granned and said please, and thank you. They become more polite with the landings on Mandoro and I uzon. If you dibeen there in the final three weeks you would have thought the camps were excellently run and the conditions ideal.

I hat s what we can expect from Tokyo shortly A group of surve Harvard educated businessmen dip lomats who have many old friends in America will come forward with hats in hand, bowing with that unexcelled Japanese politeness and saying "So sorry, please All very bad mistake"

GARE NOT If God 19 on my side. My constant hope and prayer is that I may be found upon God's side.

The Five Fitzgeralds and the Five-Cent Ride

A traction empire buil on friendly service

Condensed from I orbes + William I McDermott

Chicago began hauling passengers with a bobsled and a term of horses back in 1912. This year they will carry some two billion passengers. The greatest traction magnates of this generation, they operate the transportation systems of St. Louis, Baltimore, Los Angeles and 31 smaller cities in 14 states—7500 buses and streetears in all

The brothers' specialty is to take over dilapidated, binkrupt transportation systems and turn them into profitable enterprises by fast service, good-looking, comfortable buses, courteous and careful drivers — and, wherever possible, nickel fares. Then litest acquisition is the traction system of Los Angeles, where 41 streeteric companies have gone broke in the past 70 years. The Litzgeralds were confident enough to put \$1...500 000 into the deal

The five brothers learned teamwork at home Life was hard in the Nebraska ranch house, but their puents knew how to season work with play Dad was a fiddler, and they danced in the kitchen He was also a ball player, they rooted for him, and played themselves W is there a picnic, a circular a church social — all seven fitzgeralds were sure to show up

Mom Fitzgerald was the spark

plug "You're going places, my boys,' she kept telling them, 'but while you're doing it, give the other fellow i bit more than in even break You will find it pays"

The boys struck out early for themselves, working as ranchers, mechanics salesmen, cooks In 1912 three of the boys found jobs in a rail 101d construction camp at Fort 111nces, Ontario — Ld 18 cook, Ralph as waiter, and Roy running a bobsled for earrying mail, supplies and woilers. He also shopped for the housewives, delivered messages and did all kinds of errands — 'the most obliging kid anywhere," it was said

Roy next worked as a garage mechanic in the iron-range town of Lycleth, Minn He bought a cumber some old 'gas buggy' and hauled miners to and from work II anybody needed to go anywhere, day or night, Roy would accommodate him When Roy needed help, Ralph came They bought another dilapidated crite fixed it up and were the proud owners of a two bus 'fleet'

Business skyrocketed, and an ungent call went out for Ed and Kent and John The Fitzgerald boys were together again. Soon they launched what they considered a daring venture a bus line to Virginia, Minn five miles away. It succeeded.

rond to Duluth was paved, they started another line

Their network of bus lines spread through Minnesota, Wisconsin and Illinois Once they sold their entire business to Greyhound, and the five boys moved to Chicago, all taking jobs with the company But the urge to 'roll their own' was too strong In 1928 they set up a new corporation to organize and operate crosscountry b is lines

One of their field men suggested that the traction business within cities, although notoriously a losing proposition, could be mide to pay In Galesburg, Ill, they bought a run down, profitless traction system They put in new buses, introduced speed, courtesy and good service Still the business didn't pay. The fare was ten cents. The Integeralds cut the fare to a nickel, and went after new business by advertising that it was cheaper to ride than to drive They sent smartly uniformed guls out to get suggestions for improving service Traffic trebled, and in three months the business began to show 1 profit

Next came the purchase and rehabilitation of the street rulway and bus system in Johet, Ill Two companies were operating the transit system at the time the Fitzgerald brothers took over, starting with 24 coaches Today the company operites 50 buses, and the business has grown from 2,500,000 to 10,000,000 passengers a year A large part of the increase is attributed to the introduction of the five-cent fare In 1936 the brothers took over two bankrupt transit systems in Tulsa, Okla They improved the service and slashed the fare from a dime to a nickel — now the "oil capital" of America is proud of its service and the bus company is in iking money

The I itzgerilds have cut the fire to five cents in 25 of their cities and hope eventually to have it every where they operate. They have found that in cities where the average bus line is not more than eight miles long they can pay good wages, run speedy and comfortable buses it frequent intervals, and still make a profit on a five cent fare

In 1936 the brothers formed the National City lines, and within two years they had bought 16 transport i tion systems in cities scattered from Michig in to Alabama and Texas. They limited their operations to similler cities until 1941, when they moved into St. Louis Last year they acquired the lines in Baltimore and Los Angeles. At the war's end they plan to banish most of the street ears in these metropolitan centers. They rate one bus as worth three streets in because of the bus's speed and maneuverability.

The National City Lines took over in I incoln, Neb, in 1942. The city council was planning to slap in added the on the traction system. The I itzgeralds made an offer. If the city would drop the added tax, they would provide a city wide nickel fare. By the end of the first year, the passengers had been saved \$300,000 in faces while the city was deprived of only \$50,000 in the revenue. Yet the traction system shifted from the red in 1943 to the black in 1944.

The Fitzgeralds insist root only on safety but neitness and courte y Their drivers are not forbidden to

talk to passengers, they are expected to avoid splashing pedestrians on rainy days, to hold a bus for a running passenger, and to do little 'extras" that passengers won't forget Sometimes these favors are amusing In Tulsa recently, a driver saw a druggist putting up a sign 'Cigarettes Today" He pulled up at the door and told the passengers he would wait while they bought their smokes In Danville, Ill, a woman getting on a bus dropped her wrist watch through a grating in the pavement The driver jumped out, enlisted the aid of a male passenger, took up the grating and recovered the witch

Practically every executive of the corporation has risen from the driv-

ers' ranks Eight former drivers ar now superintendents, one is manage of operations for 12 cities'

Of the five Fitzgeralds, Roy, 51 president of National City Lines, 12 the high-pressure go-getter, the develope of new business When run-down system has been bought, 11 is dumped into the lap of Ralph 49 the persistent got-the-thing done man superintendent of operations and maintenance John, 54, and Kent, 41 both vigorous, exuberant men, are bus line administrators. In the home office, Ld, 60, cool and conservative sits on the lid as treasurer

Puriphrasing Fom Marshall's fimous remark, the Fitzgeralds' slog in is 'Whit this country really needs is a good five-cent ride'

Files on Parade

A CASET manufacturer, in Washington on business with the WPB division chief in charge of caskets, asked a receptionist for name and foom number of the man he should see. Thumbing through book after book, the receptionist found nothing to indicate who handled caskets. Suddenly she brightened and exclaimed. Why, of course, that would be in the Container Division!"

- Ann I ranc Wilson in I hiladelphia Record

AFTER 2 WAC major complained of the nondelivery of 15 000 brassieres, the Quartermaster Corps found them stored among crockery supplies in its Camp Lee, V2, warehouse The warehouse staff had taken literally the size labels on the boxes. 'Cup One, Cup Iwo, Cup Ihree' — New week

From the inner recesses of a large filing cabinet, the colonel's indignant voice to cd. Sergeant, where did you file that new list of discharges? They are not under \mathbf{D}^{12}

Oh, no, exclumed the colonel's assistant "I filed them under C' — for congratulations!

— Tom Goott in Coro set

PSYCHO-SCREENING The AAF's Trump in Air Warfare

Psychologists working with the Air Forces have found ways to do termine the kind of work each in dividual can do best

ACK of the amazing performance of American airmen against the enemy is an important technique called psycho screening a wonderfully accurate procedure for selecting an crew members and fitting them to their exacting jobs. Ih inks to a series of electrically scored tests, developed by a group of the country's out inding psychologists, the AAI It uning Command knows before a cidet dons a flying helmet whether or not he will stand up under the strun of combat flying, whether he should be truned is fighter pilot, bomber pilot, bomb udier, navigator, flight engineer, radar operator or icrial gunner

Even more significant, psychoscreening is now working in reverse, is a scientific guide for returning discharged airmen to civilian life. Soon after war ends, the psychological know how accumulated from the AAI's test of three quarters of a million young men will be available to schools and colleges to pin point the training of students, and to industry for fitting the right jobs to the right people

M^ojor General David N W Grant, Air Surgeon of the AAF, has made Condensed from Air News

Frank 7 Taylor

aviation psychology his baby since July 1941, when the President coiled upon the aircraft industry to build 50,000 planes within a year. To the Air Surgeon's stiff, that meant hand picking the men to fly those plane.

In the preceding decade the Air Force had picked 5765 cadets for flying training, selecting young men with college background through agorous physical examination and personal interview. Now the flight surgeons had to select ten times that many in a single year.

'We didn't have the flight surceons to do the job," explained Ceneral Crant Calling in Dr. John C. Il inagin then issociate director of a New York psychological service for colleges he asked if applied psychology could sort out the young Americans who would make fliers.

Dr Flangan was sure of it But because the idea was so revolution irv, he and a number of other prominent psychologists spent several months studying the qualities most essential to pilot, navigator, bombardier

The AAF School of Aviation Medicine at Randolph Field, Texas, had already made a start on "psychomotor testing," with machines designed to measure equilibrium and coordination General Grant's psy chologists designed other machines and added new pencil and paper tests. Soon they could record electricilly almost everything the AAF Iraining Command wanted to know about a cadet before spending \$30,000 and ten months training him.

For several months, the psychoscreeners merely tested cidets and rated them for their aptitudes. Many of the flight surgeons could not understand why a promising man should be climinated because a couple of silly-looking gradgets resembling pinball games gave him a bad score.

Candidates who rated low in the psycho-sciening tests were sent to the flying schools along with those who rated high, neither cadets nor instructors knew which were which When these classes were graduated the results satisfied even the most skeptical critics. Nine out of ten cidets rited tops by the psychoscicening scores pissed with flying colors, in the group given lowest ratings, six out of ten washed out The accidents per 100 graduates among the top group were one third those in the lowest classification Among fighter pilots in the gunnery schools, the top group scored one third more hits

Came Pearl Harbor, and General H H Arnold called for 90,000 finished flying officers a year. There was no longer time to train a hundred cadets to get 50 finished pilots. The AAI had to screen 400,000 youngters a year. Psychological units were established at Nashville, Ft. Worth, San Antonio, and Santa Ana, Calif. Dr. Flanagan, now Colonel, raided university faculties for 90 psychology professors. Soon they had 300 assist.

ants who had majored in psychology At the huge Santa Ana classifica

tion center I watched Aviation Stu dent Johnny Brown go through his te is First, with 200 other cadets, he sweited through a dozen written tests, a grea many questions to be answered in a hurry by check marks On a picture of pulleys and weights, Johnny had to indicate which weight was going up and which down He guessed which of two waterfalls was greater in volume. He matched a small photograph with a correspondingsite on a large icrial map Problems checked his aptitude for calculation, reasoning, accuracy By the end of the day Johnny's head whilled He felt that he had made a terrible showing

But these tests were a cinch compared to the psycho-motor testing next day Johnny and three other boys entered a small room and con fronted a battery of four identical machines, weird apparatus carefully designed to test men's nervous reac tions under strain. At his machine Johnny sit with his feet on pedals and his right hand on a stick, while he faced a board sprinkled with a pattern of sed and green lights. The sergeant in charge explained carefully how to bring the red and green lights into straight lines by coordinating the movements of his feet and his hand After a few practice tries, he said, "Let's go — everything you do now is being scored. In a somewhat sundar test, the sergeant flashed red and green lights on, while Johnny tried to cut them off by flicking the right one of four switches Meters recorded the speed of Johnny's reactions, measuring his coordination of mind and muscle

Another psycho motor test known is the "rotary pursuit with divided attention," utilized a revolving disk resembling a phonograph record. On the disk was a biass target. To one side were two distracting lights. The trick which taxed Johnny's powers of coordination was to hold a pointer on the revolving target and simultaneously switch off the inegularly flishing lights.

The psycho screening test scores every potential flight officer in three categories pilot, bombardier and navigator. Johnny had intended to be a bombardier, but his rating showed that he was prime pilot in iteraal, that he was in the fifth group from the top as a potential bombardier, third from the top as a possible navigator. There are nine groups, of which the five lowest are claimented as potential flying of ficers, and reclassified for duties such as flight engineers, rad ir operators or gunners, or for ground service jobs.

'On the basis of what we have learned," says Colonel Hanagan, "we could devise tests to serve nout almost anything we wanted future doctors, on meers, plant foremen salesmen"

The AAI kept records of 162,000 cadets as they advanced through canning to the wall buttlefields of the globe. As the first squadrons of tested fliers reached the combat zones, the records added up to some challenging data. Under the old system of selection, the AAI started three cadets for every flier who finally got his wings. Among the cadets processed by psycho creening 36 out of every 100 in the top classification were commissioned.

Checking the psycho screening rat ings of flicis with their combat perform ince abroad has been even more of an eye opener There have been fewer 'missing in action' returns from those who rated highest in the tests Photographs reveal that bonibaidiers making high test scores hit their target on the nose oftener. Area commanders reported that the quil ity of officer leadership improved with each new class, whereas in foreign air forces quality deterior ited as the war drained human resources In 1944 the RAL and the Royal Nivy both adopted the AAI's psycho screening technique

Since the training command tectords revealed that aptitude for flying bears little relation to formal education college requirements were abandoned early in 1942, thus tapping a reservoir of thousands of boys who had never gone to college, but who had the ability to learn quickly and the emotional stability for air fighting

The AAI's psychologist staff now has eight units assigned to special combat problems. I we other units concentrate on redistribution of personnel, screening out leaders for new combat groups, spotting potential instructors technicians executive of ficers. Still others specialize in tests at convalescent hospitals to direct rehabilitated airmen into new jobs, either in the Army or civilian life.

The cost of the AAI's testing was less than \$5 per candidate 'It is impossible," says Ceneral Grant, 'to estimate the time, money and lives in ition psychology has saved"

When the Comet Struck America

Thousands of years ago, many scientists believe a giant fireball but this continent, changing the face of some 40 000 square miles It could happen again

Condensed from The Saturday Evening Post

Herbert Ravenel Sass

comet altogether They try to ev plain in other ways the strange icurs on the earth's surface along the Atlantic coastal plain But many cologists, astronomers and astrophysicists believe that a comet came

It came, they say, from the northwest, thousands of years ago. A fireoill with a flaming tail, it swept over Alberta, and Saskatchewan. Over North Dakota and Minnesota it was uger than the moon, and over Illinois it had become a blizing norror in the sky, while already the not compressed air ahead of it was littening forests like matchsticks.

On over Kentucky it sped, shrivelng the high-griss prairies, over
Fennessee and the Great Smokies,
nelting the rocks of the mountains
As it shot onward at 144,000 miles an
nour, the increasing gravitational lure
of the earth pulled it lower and lower
intil finally it struck in the region
between Virginia and mid-Georgia
and buried itself, perhaps miles deep,
n the shocked earth

The thing was not a solid mass of netal and rock, but rather a swarm of meteors, some of them three or our times the size of a city block, the whole swarm loughly spherical in hape and covering an area at least 100 miles wide. If all the bombings

and bomb irdinents ever achieved by man could be combined into one, the result would not be comparable with the inferno it created. The comet destroyed all life within a wide are a In what are now the Carolinas, Georgia, eastern Tennessee and Kentucky, and southern Virginia few living things survived. Throughout a much larger region extending as far north as Quebec and as far west as Kansas, the effects of the cataclysm must have been severe.

To a man withessing those tit inc collisions it would have seemed, in the infinitesimal fraction of a second while he remained alive, that the universe was ending Only in imagination can we see and hear that de iscning, blinding chaos the silvos of shattering sound, the incredible explosions, the towering spouts and fountains of flame, the curtains of smoke and debris hurled upward, then, as the monstrous cannon iding ceased and the dust pull lifted slowly, the scarred, seared face of the shuddering earth, where nothing lived and nothing moved except coils of smoke and steam using from the thousand-foot pits where the huge fragments of the dying star lay smoldering

If the signs have been read correctly, this was the most spectacular

cathstrophe to which the surface of the earth bears witness What are those signs?

The evidence is the existence of thousands of earth scars — strangely regular, oval depressions — in a belt about 80 miles wide extending from Virginia into Georgia and roughly paralleling the constline 20 to 40 miles inland These shillow depressions, called bays, remained little known until one day an official of an aenal survey company showed two scientists some photographs which had been taken from the air. The pictures had been taken primarily to show the distribution of timber But they revealed the fact that the craterlike depressions were so arranged that the long axes of the ovals were parallel with one another, all of them being oriented northwest-southeast, And they were bordered by sand tims around their southeastern ends The pictures looked exactly like photographs of a district which had been subjected to a rain of bombs striking the ground at an angle in a northwestsouthe 1st direction, with ejected sand binked up around the faither ends

The thing was so striking that the two scientists, Dr. F. A. Melton and Dr. William Schriever, of the University of Oklahoma, explored the region at the earliest possible moment. After careful study they proposed the comet theory in 1933. Their dignified paper, published in the Journal of Geology, started one of the liveliest scientific scrimmages of the century. The anticoinet people argued that the bays might have been caused by the action of wind or water, or were really dried-up lakes.

Some things are too big for the

mind, and for that reason the average reader is likely to disiniss as in credible the idea that a comet roace in from the outer void and blasted out the bays. But consider the case Farmer Semenow and Herdsman Luchetkan.

At seven o'clock in the morning of June 30, 1908 Farmer Semenov was sitting on the porch of his house in north-central Siberia Suddenl he saw in the north a fiery bluish body, larger than the sun, rolling across the sky It fell in the wild country between the Yenisci and Leng rivers and where it fell column of light lose skyward Ac tuilly this light was 50 miles from Semenow's house, yet the heat was so intense that he thought his clother would catch fire. After an inter il there came a gigantic explosion, and an air wave hurled Semenow from his porch, knocking him senscless, and leveled his house

In the direction of the mysterious light, Heidsman Luchetkan's drove of 1,00 icindeer had been grazing A fraction of a second before the air wave struck Semerow, it struck Luch etkan's reindeer and they ceased to exist, vanishing so completely that of them all only 1 few charred car casses were found

Fully 400 miles away on the Trans Siberia railway the crew of a train saw a sudden blaze in the northeast and then felt the train rock so violently that they stopped it, fearing it would be derailed. In the city of Irkutsk, more than 500 miles dist nt, a seismograph recorded the concussion of heavy bodies striking the earth, and a barograph recorded an air wave. At the Kew Observatory in

I ngland, 4000 miles away the micro b rograph recorded pressure waves

Years passed and the incident was nearly forgotten Then, in 1927, Prolessor L A Kulik headed an expedition to the remote spot where the column of light had shot upward He found a shallow depression about two miles wide where the ground showed signs of having been pushed violently sidewiys, as when a stone is dropped into thick in id, so that concentric udees were still visible. Inside this lige depression were 200 craters virying in diameter from one to 50 yar ls. Within the depression every tice had been destroyed, and for 1, or 20 miles around, the ground was covered with thous inds of fallen trees spread out in finlike fishion from the center Plainly 11 that center some vit terrific thing hid struck

What had struck there, Kulik discovered, was a swirm of meteors the id of the swarm, compressed by it is by a gigantic piston, a hot air wive had blasted out the larger elepression and spreading outward, had leveled the forests as though a lint hand had slapped the ii down It was this air wave which had annihilated Luchetkan's reindeer drove, together with all other life in the area

Hunly luck was on the side of humanity that day in 1908. If, instead of an almost uninhabited recion, the comet's target had been New York or Paris, one of the major disasters of history would have occurred. That it was the work of a comet admits of little doubt. On June 30, 1908, the earth was very close to the orbit of Pons-Winnecke's comet. Apparently the great Siberian meteor was a detached fragment.

The Hopi Indians have a legend that once upon a tank the Great Spirit came down from his high seat with fire and thunder and entered the earth. They can show you the hole. It is a tremendous criter in the Arizona desert, nearly a mile wide and 1300 feet deep (if one disregards the detritus fallen in from the sid's) with a rim rising 125 to 160 lect above the surrounding plan There, something less than 5000 years a o, mother cometeven bisect than the Siberran meteor struck the curth This comet was a mass of nickel iron probably weighing more than a million tons. Ir iveleig perhaps 40 mil s a second, it slinted down icro's Utih and struck Arizona near where the town of Winslow now stands. The noise and the shock of its impact cannot be described, but so terrific was its power that it bored through 2400 feet of solid rock, grinding it to rock flour

Many other falls of smaller bodies might be mentioned such as the 36 ton Cape York meteorite which Admiral Peary brought backfront Greenland and which millions have seen in the American Museum of Natural History in New York One can under stand and accept these events, and even the falls in Sports and Arizona But the mind again starts wobbling when it tries to comprehend the catalysm which shook America if the Carolina bays are what they seem to be—craticis dug by the huge fragments of a broken star

The Arizona counct dug a crater nearly a mile wide, the Siberian comet swarm dug 200 craters, some 50 yards wide But the bays of the Atlantic coastal plain, some of them two and a half mile swide and three

or four miles long are numbered not in hundreds but in thousands. And they are sprinkled throughout a region of probably 40,000 square miles. If they were caused by a comet's collision with the earth, that was a catastrophe compared with which the Siberian and Arizonan episodes were as pufls of a peashooter.

One day I was studying certain by sin a region which bombers of the Myrtle Beach Army Air Lield were

using as a hombing range. The 40 foot craters made by the large-caliber bombs were mere dimples in the 10,000-foot craters which already scarred the earth. In that almost absurd disparity a grim suggestion lurked. Out there beyond the stars whence the comet came there may be Powers which even now grow impatient at man's latest effort to destroy himself. Some day perhaps They'll say, "Here, little fellow, let us show you how"

K IN MEMORIAM **K** Frederick C Painton **K**

FRI DERICK C PAINTON WILL COLLESPONDENT for The Reader's Digest, was standing on an air strip at Guain at 3 30 am last March 31. He had spent the day with the crew of a B-29 taking off to bomb the Japs, the pilot was waving good-bye. As Painton raised his aim to wave back, he fell dead of a sudden heart attack.

Ited Printon was a war casualty, his heart the victim of the strain of what he had been through and what he had seen. He was working to the last. Two of his stories appeared in the May Reader's Digest, which was on the presses at the time of his death. He had just returned from a grueling trip to the Philippines. Nearing 50, and himself a veteral of World War I, he had a deep affection for the fighting men whose rough life he chose to share. It drove him through dangers and hardships which would have stopped many a younger man. At the beginning of the North African campaign, his ship was torpedoed. As he was flying to Casablanca, his plane was fixed on, his scatmate killed. Narrow escapes never deterred him. He went always where the fighting was hottest—at Kasserine Pass, in Sicily, It ily and France, and finally into the hell of Iwo (where another correspondent was shot standing beside I im)

In a message tragically timed Ermic Pyle cabled 'I red Painton and I have traveled through lots of war together He was one of my dear friends and I m glad he didn't have to go through the unnatural terror of dying on the battlefield "The next day Ermie himself was killed

Inducts to I red Painton's honest and courageous reporting of the war have some from General Eisenhower, General MacArthur, Admiral Nii itz, General Omar Bradley, General Mark Clark Typical was the message from Admiral Niinitz 'Fred Painton was one of the most thoroughly liked war correspondents accredited to us. He died in the service of his country just as surely as those who have given their lives on the field of battle.'

SAILOR, SOLDIER, Beware!

The wartime plague of gyps with knockout drops, preying on service men in our crowded ports

Condensed from The Biltimore Sunday Sun + + + Helen Worden
For many years a feature writer for Scripps Howard Newspapers

Service men Old rackets with new come-ons and new rackets with old setups are boldly separating the unwary from their bank iolls

Port cities are the main targets Every month more than one million service men and civilian travelers pass through New York Scattle San Francisco, New Orleans, Norfolk and Boston — each has its hundreds of thousands of transients, all jurcy prey for racketeers. As more millions are brought back from Europe, and many of them shifted to the Pacific, the tackets will take even heaver tolls.

To see this gyp underworld in action, I have been riding in prowl cars with police chiefs, and stalking crooks with detectives. And I aim convinced that the best way to remedy the situation is to tell precisely what the traps are Our service men aren't on the watch for such sharpers. Many of them come from small towns where a hearty greeting from a stranger means only friendliness.

Let's start with the goof-ball operators, who take the heaviest rakeoff Goof-balls, small white knockout pills, are bought through bootleg drug connections or from shady pharmacies. Slipped into a drink, they dope the prospect within an hour, and he usually stays doped from six to 36 hours. This technique is particularly favored by women, since it is easy to lift the bank roll of an unconscious man. They work in waterfront dives, cabarets, cheap restaurants and juke-box bars.

These purites not only have a brazen indifference to the men who are lighting for us but are subotems of the war effort as well Because of their operations, sailors miss their boits, soldicis overstry their leaves, and civilian war workers are incapacitated for duty. An Army Ici y Command major told me that most of his men had been doped and rolled at one time of another Thousands of men hit the poits with \$100 to \$200 in their pockets and lose every mekel of it A familiar water-front chant I end me cutare — I ve been rolkd!'

How do goof-ball operators work? On New York's South Street I watched runners from water-front dives stalk the docks when liberty parties came ashore They are plausible, friendly fellows "Hev, sailor, what about a drink in the best joint in town?" The prospects are first piloted to legitim ite bass But after

these bars close they are led to sidestreet speakeasies either by the sharpers who have plucked them off the docks or by the runners' girl partners

I went to three of these cell in hideaways, all operating at full blast. In such dumps the victim is almost sure to meet up with a harpy who either administers the knockout drops herself or has doped drinks served by prior arrangement. Sometimes she short-cuts the speakeasy by luring the victim to her dingy room, where she dopes and robs him "Don't worry about the curfew," she says "Come up to my room and have a drink."

There are more than 100 dink-1dance emporiums in New York's limes Square section. Some nie a constant concern to police and service patrols In these spots there are several different ways of separating the victim from his money A detective wilked me to a vacant lot in New York's West Forties where a man had been rolled the night before A dance-hall girl, suggesting a stroll, had led him into a dark street Opposite the vacant lot she gave some waiting hold-up boys the high sign Police found the man at dawn — unconscious

Another method is for the gill to propose going to the victim's hotel 10011, where she may more easily escape detection. Once she gets the man's address she slips it to the hold-up boys, who show up after the man has succumbed to dope she slips into his liquor. Two girls recently confessed to 12 such crimes.

Harlem is ablaze with black-andtan bars, one-room cafes and cellar dance dives Gangs lurk outside, waiting for a "lush" or "square — their language for a newcomer with money, looking for adventure A girl signals them when the victim leaves the bar, and he is trailed, mugged robbed The girl shares the loot with her confederates

Mugging is common A man passes a darl hallway Two figures dart out One throws an arm around the victim's throat from behind and keeps him throatled while the other loots his pockets Street noises, the roar of an elevated train, muffle his cries By the time the police arrive the muggers have vanished

Strip" bindits haunt various New York districts. Women decoys lure the "lush" from cheap cafes and penny arcades to apartments or dimly lit hallways, where his roll is extracted to the accompaniment of a drawn gun. To stall pursuit, the victim is then forced to strip. So prevalent is this method in one district that emergency suits and blankets are kept handy in the police station, and as many as ten victims, stripped to the skin, have been brought in on a single Saturday night.

Crooked taxicab drivers have also joined the gold rush by collecting commissions as barkers for gyp joints. In New York, for instance, a war worker was found in a hall apparently sleeping off a drunk. He told the police that he had landed in town the day before and had asked a taxi driver to take him to a shoe store. The driver suggested a drink, and at a nearby bar turned him over to accomplices. They had one drink in a back room. That was all the war worker remembered. He was minus his wallet and \$160.

In Norfolk taxi drivers sell bootleg aquor at \$5 a pint and cruise the treets with girl partners who suggest a joy ride to a tourist camp or roadnouse. When the victim is ready to cturn to town, the driver blackmarks aim for an evolutant fare. If the man protests, he may be knocked unconscious and his roll stoken. I paid \$9 in fare for a four-mile ride to one of these roadhouses and there were two other passengers in the cab, ach of whom also paid the same fare.

The Forty-second Street mea of New York is a magnet for kid gang-sters. They stalk barroom exits, pleading, 'Say, mister, I haven t got anywheres to stay tonight. Please let me sleep on the floor of your room.' The answer usually is, "Okay kid Come along." When the kind host iw thes, he finds he his been robbed.

Check cashing also takes its toll 5 ulors are paid partly by check and partly in cash (In Norfolk alone an average of more than \$4,000,000 in pay checks is eashed monthly.) Chiseling saloon teapers charge to cents for cashing these checks, but this is only a small part of the gyp. So the of the bank roll is a come on for the familiar short-changing, overcharging, doping and rolling. To break up this racket the USO and YMCA have opened service banks.

Merchandising frinds he so thick that Better Business Bureaus have issued warnings and opened drives against racketeers. On Boston Common, for example, a petty grastopped a sailor and asked him if he wanted a free photograph of himself

to send his folks. After posing, he gave his mother's address. The picture and ed with an exorbitant bill and a letter stating that the last thing the boy had done before sailing was to have this photograph talen.

I isked the police and the service patiols how unsuspecting service men and civilians could protect themselves from these rackets. Here are

some of their answers

'Rely only on the local police military authoraties and established canteens for information about lodgings, restau int and place of entertainment — I ewis J. Valentine, Police Commissioner of New York City.

'Noid pick-ups Confine your feminine comp mionship to girls introduced by friends or those you meet at service clubs and canteens—Lt Col James Bain, USMC Ret, Commanding Officer, Shore Patrol, Noifolk, Va

"Shop at established stores if you are buying witches, photopi iphs, cameras and similar things. Don't purchase uticles offered by strangers at barg in piaces. — Kenneth Bickman, Manager, Boston Better Business Bureau

'Don't carry more money than you need or di play the money you have '— Lt Col J A McNulty, Provost Mushil, New York City

"I ook for entertainment in legitin ate spots. If you must look for
adventure, take along a buddy for a
witness." — Lt Commander Martin
Dillon, Senior Shore Patrol Officer,
New York's Manhattan Area

Be Your Own Boss!

Vacation 1dvisers
Two former university teachers
Gentrude Bilhulan

and Idibelle Post, who spent their vacations in visiting places of interest all over this country, found that their friends valued their advice on vacation spots. Resigning their positions, they devoted months to building up a personal acquaint nice with owners of resorts, and in 1935 opened an office in New York City as "Vacation Advisors." They plan trips and make reservations. An unusual advantage of their service is that they can give specific advice because they have visited every place they recommend

Hotels, dude ranches, and so on pay Vicition Advisers a commission on the room and board bills of patrons thus sent to them. Clients pay only the regular rates for accommodations, and pay no fee to Vacation Advisers. The business served about 3000 vacationists last year.

Hotel for Children A graduate nurse, Miss M E Wheel i of El Paso, Texis

provides home care for children whose parents are suddenly called out o town, stricken by illness, or need a vacation. At the Wheeler Children a Cottage, which is licensed under the State Department of Public Welfare, the guests vary in age

from infancy to high school age. They stay for a few hours at 25 cents an hour or days or months at \$2 a day which includes laundry and other services. The children sleep in dornitories. Meals, naps and play a supervised.

When registering, parents file complet information on the child's health, and payment is made in advince Patronage a criges 25 regular auests and cento 20 transients cared for by a stiff which includes a

critisher for every ten children, i

cook two to four laundresses, four

On the Floor Rug Cleaning In the Bethesda Chevy Chase area (sub

urbs of Washington, D () Robert M Burklin started a buriness in clean ing rugs on the floor, by the ether-base foam shampoo method Rugs diy iii six to 12 hours. Customers are pleased at being saved the bother of moving their furniture, folling up rugs to be sent out, and writing days or weeks, with bire floors for the rugs to be re turned Burklin and a helper have all the work they can handle Burklin charges five and six cents per square foot for cleansing domestic rugs, seven and eight cents per square foot for oriental rugs, and contracts large jobs at lower prices. He clears about \$125 per week

Two weeks of canvassing furniture stores, clubs, churches, offices, boarding houses would prove whether there is an opportunity for a service of this kind in a community

An electric machine with extra fine cleaning brush, minor equipment, soap concentrates and supplies can be purchased for \$300 to \$400 Such an enterprise might ultimately be expanded to include mending rugs, mothproofing upholstered furniture, rugs, blankets, clothing, and various other similar services, based on knowledge of fabrics and cleaning techniques

Casserole Autchen Many cities might support a food service similar to the

Casscrole Kitchen on Madison Avenue, New York In premises formerly used as a retail shop are prepared dinners to be delivered to customers' homes. The food is cooked in casscroles in which it is to be reheated before serving, hence keeping the food hot is not a problem.

A menu consists of a choice of a ment or fowl dish (Fridays, fowl or fish), one green and one starchy vegetable, homemade rolls, a salad, a dessert Salads are wrapped in chee ecloth, with the dressing in a small bottle Desserts are on paper plates I initation to two main dishes permits quantity buying, efficiency in cooking, and speed in handling

Orders, taken as late as 5 p m, are delivered between four and eight o'clock by boys and by ho-se and buggy Deliveries are confined to a radius of a half mile from the kitchen Dianers are \$1.65 Dessert

is extra Deposit of \$1 per dinner is required for the equipment, which the customer must return

The business was started in 1944 by Ann Honeycutt with an investment of \$3000 Original equipment consisted of a stove, an icebox, cooking utensils, 12 dozen casserole dishes, and baskets The Katchen now grosses between \$800 and \$1000 a week It gives employment to a chef and two assistants, several delivery boys, a part-time bookkeeper, and a girl who takes the orders

Miss Honeycutt limits the business to 125 dinners 1 day. In this kind of business, don't be afraid to say you re sold out," she says 'Never cut portions to make them stretch, or whip up something in a hurry to make a few extra sales. The quality of our cooking, generous portions and attractive packaging of dinners have put our shop over

Fix It Shop A P Chamberlain, a former New York stock broker work-

ing in the bisement of his home in Greenwich, Conn, stated in 1936 a complete maintenance service for homes. He had \$100 in cash about \$200 worth of tools, what he had learned by making and fixing things as a hobby — plas an idea of for example you have a brolen window, a door that sticks, a roof that leaks, and a drain from the latchen sink that's stopped up you can get them all taken care of by in a ling one telephone call, and pay only one ball

By the end of his first we is he had to buy a truck and seek larges cuarters. Foday the "Fix-It Shop' em-

ploys five mechanics, and the owner is clearing \$50 to \$60 a week. If Chamberlain or his employes can't fix a thing, he searches until he finds a specialist who can I he shop has received emergency calls to exterminate wasps and ants, to retrieve jewelry and false teeth out of drains, to free a child locked in his nuiscry, to pump out a flooded cell if It has rebuilt baby carriages, repaired luggage fixed a leaky roof, thawed frozen plumbing The In-It Shop is one of many similar and successful services of its kind throughout the country

OutdoorPlavEquipment Starting in 1939 on an after hours basis,

M L Hill and his wife built a profit is ble business in sturdy outdoor play equipment for youngsters — wooden swings, slides, sees iws, sandboxes, jumple-gyms' etc

At first Hill, then a Chicagoan employed at a job with a salary insufficient for his needs, worked all day at the office and then spent many hours each night in his makeshift home workshop. He had no power equipment and no capital, materials

for the first models were bought on credit, to be paid for when sold Gradually tools were purchased out of earnings, and the business was moved to a building with a drive-in lot where an outdoor display devel oped many orders

In 1941 Hill resigned his position and took the plunge on a full-time basis Deciding that the Chicago area was too expensive, he moved in 1942 to Grand Prairie, Texas, where Hill's Playround Equipment Co started all over again Today it employs 15 people and does business locally and through department stores as far away as Boston

The sils appeal of his products lies in the fact that they are larger, stuidier and safer than most equipment of this kind. Every piece is guiranteed. One time Hill had to make good on \$3000 worth that proved unsatisfactory because the lumber had not been fully seasoned, but he saved the company's reputation. His plant now has 24 pieces of power equipment.

A list of prize winners in the Reader's Digest \$25000 New Interprise Contest could not be completed as this issue poes to press but it will be available next month

Broken Record

In a small New England secondary school, the dynamic young head mister faced with the task of selecting a department head agnored eniority. After the announcement of the appointment, a disgruntled member of the department came to him, demanding to know wily his 20 years' experience had been overlooked.

M. friend," said the headmaster, "in reality you haven't had 20 years' experience" Before the teacher could expostulate, he added, 'You have had one year's experience 20 times" — Contributed by David N. Beach III

The Moral Conquest of Germany

→>>> <<<<-

Condensed from the book by EMIL LUDWIG

I RHAPS the thorniest of all postwar problems — how to handle the Cerm in people — is here discussed by a German author of international reputation I mil I udwig was born in Breslau, and educated at Heidelber. He studied law but early took up writing. In the spring of 1914, he went to London is correspondent for a daily paper. After World War I broke out he continued his journ distic activities in countries allied to Cermany. Since 1918 he has published a steady stream of books on world figures and political and historical subjects. Showing a deep understanding of the German character, he has written biographies of Goethe, Beethoven, Bismarck, Kaiser Wilhelm, Hindenburg, and a book on the German people. In this new work he carries the latter study a step further, presenting fresh and thought provoking proposals for each citien (crman militarism and bringin, the people of his native land back into civilized society. He is at present residing in the United States.

than a geographical territory—
it means a philosophy a way of life A knowledge of this philosophy and its influence on German character is necessary in deciding how Germany should be treated after defeat

Prussia's will to conquest began about 300 years ago, when the Elector of the province of Brande iburg built up with an iron fist the first exemplary German army Already at that time Prussia had a warrior caste which through robbery and inherit

ance hid come into possession of wide stretches of eastern land whose people talked Polish and Sliv dia lects Those "200 families" promised their sovereign to protect him from foreign aggression, if he would secure their own estates and privileges. Thus Elector Trederick William formed an officers' corps out of his landed Junkers, while the Junkers pressed their peasants into military service. The peasants lived as arined slaves all their lives. For three or four months each year they were sent

home to till their soil and sire new soldiers. Schoolteachers and pastors were mere servants of the Junkers, who also held the local judicial offices and thus were maters over all civic life.

This is how Germany bred her army When kings and Junkers used that army to subdue foreign regions, they spoke of carrying German culture to the barbarians Sword and whip were the paraphernalia of that hultur

To increase the size of their armies, the Prussi in kings used slive methods. Foreign subjects were kidnaped or bought like cattle, sometimes they were hired out again as mercenaites for foreign wars. Such methods were unique among civilized nations, by way of contrast, the United States and France had long since adopted, the Rights of Man. At the time of Washington's Presidency, Prussia had a "imilitary budget" instead of a constitution. All members of the cabinet were called "war ministers," all tax collectors "war commissais."

In 1871, when Bismarck imposed the domination of Prussia over the other German principalities, and the Prussian king became German emperor, the Junkers took over in the whole of Germany Up to 1918, Junker families filled all the ministries and governorships—even though these professional warriors had not the slightest training for such jobs Most of the scions of Junker families limited their education to the general st ff academy (**Ariegsschule**) and an occasional university term, usually spent in beer drinking and dueling

Only in Germany was a man of action who was also a scholar looked

at askance The first President of the United States left 37 volumes of his writings Jefferson, Franklin, Wilson and others were scholars. But Prussia and later Germany, was for 300 years ruled largely by ignorant noblemen. Through the years the men whom Prussia regarded as spiritual leaders voiced such thoughts as these

The chemist Ostwold, Nobel prize (1894) "I cannot acknowledge unsource of Right except Force"

The historian Treitschke (1896) "Whoever preaches the nonsense about perennial peace has not the slightest concept of national life. Our army is a glorious form of German idealism."

General Beinhardi, classical inilitarist "War calls forth the highest powers of human nature Individu l attocities fade before the idealism of the whole enterprise"

Adolf Hitler 'Humaneness is but a mixture of stupidity and cowardice

AT IFAST once in every generation the Piussian General Staff has issued that fateful piece of paper, the Order of Mobilization, and each time the nation has accepted with enthusiasin For centuries public life to the Genmans has meant giving and taking orders, no more. This attitude—which is not necessarily unalterable—niust be changed if there is to be peace in Europe and the world.

The American looks upon society as a plane on which all live on more or less the same social and political level, although the ablest may surpass others in prestige, money of artistic accomplishments. To the German, society looks like a pyramid. He himself is but one of its bricks,

supporting another one and in turn pressing down upon the brick below He is quite happy in his cringing and clicking of heels before those in a relatively higher stratum, he is equilly happy when bellowing commands to those below him

In America the State is a union of people who have entrusted some of their fellow citizens with the administration of government. In Germany the State is a deity, enthroned above the clouds. Every civil sevent is the superior of any ordinary citizen, and as a token of superiority we are a uniform. The American never tires of criticizing his President his Senator, his imilitary commander to Cermins such criticism is instinctively repellent.

THE German people have had exactly the kind of leadership they have wanted. When Hitler rose to power nothing buffled the outside world so much as the jubilation of German university professors over this dawn of a new epoch of force and la viessness. In 1914, 93 outstanding German intellectuals had in a pronunciamento approved the invasion of Belgium, in 9,4 no less than 1.00 German professors halled the advent of Hitlerian bulbarism.

Thus the German people in great crises were left will out the support of their potential spiritual leaders. They believed in the wisdem of their rules because they saw their rulers' decisions backed by German intellectual leader hip. If in the decisive moments of 1914, 1933 and 1939 German professors had usen to protest, surely at least a part of the population would have felt embar-

rassed to join in the outrages of their rulers. But the professors did exactly the opposite

GERMANY is the only country which lacks both a hero to liberty and a monument to liberty. Men who have risen actions their tyr innical princes, the kind who live both in the littory and the hearts of other countries exist neither in German history nor in German letter. Order has always been preferable to revolution in Cermany, and obedience better than liberts.

Furthermore Hitler is the only modern dictator who cancel pover by legal means. The other all used armed force to take over the govern ment The Germans, in 19,2, in their list free elections, having choice among eight principal parties cast 12,000,000 votes for the Nazis, against 7 000 000 for the Socialists. Hitler had openly displayed his political program and these 1,,000,000 clearly expressed their wish to see him in power Indeed, no American Presi dent ever rode to Capitol Hill with more legal right than Hitler on his way to the Wilhelmstrisse on Janu ary 30, 19,3 Hindenburg had ap pointed him chancellor on the ground of the nun encal strength of his party m padament

L pon the heads of the German people and not just the fan itsed Nazis lies the ago uzing blame for this was for Hitler was more than the legal chief of the Germans, he was also then mo all head. They never had a more suitable leader

The Fuhrer gave them what they had so sorely missed in the coloiless days of the republic — uniforms, pi

rades and military music. And above all he re established authority—which they prefer to responsibility. Here was a man after the people's heart he did all thinking—and voting—for them, as kings and Junkers had done from time immenorial

On May 1, 1933, I listened on the radio to Hitler's speech before an audience of many thousands As he yelled "Obedience!" and repeated that word twice, the masses were audibly swept by a frenzy of enthusiasin As other nations hail freedom, the Germans hailed obedience, the new leader had found the key to their hearts But nothing impressed them more than the wholesale killings of June 30, 1934, in which he did away with 1100 of his own followers, now at last the Germans beheld the great man of action who I new how to carrya thing through with an iron hand

All Germans knew of, and sanctioned, secret rearmament. Even before Hitler, classrooms all over the country displayed maps which contrasted the German 1918 frontiers to what they would be again. Of all appropriations asked for in the Reichstag only the army appropriation escaped interference by the opposition during 14 years.

In the 12 years of the Hitler regime not a single political party, club or university faculty protested against what was going on No groups raised their voices against the obvious preparations for war, against the Nazis' brutal treatment of the Jews, or again, the regime's complete domination of economic and social life Catholic bishops and the Protestant church protested against State interference with ecclesiastical matters,

not against the criminal regime as

Again the German war crimes have been committed not by 1,000,000 SS men but by 15,000,000 (serm in soldiers Who are the soldiers who had their picture taken, eigarctics between their grinning lips, some where in Poland riding a car drawn by ten bearded old Jews? Who are the pilots who strafed refugee women and children on 1 rench roads in 1940, Who burned Lidice to ashes, killing the whole population? Who suffo cated tens of thousands of Jews in scaled freight cars, and massacred tens of thousands in front of graves they had to dig for themselves? Who, indeed, if not the German people in arms⁷ They are the same people who 20 odd years e irlier destroyed French citics on their final retreat and burned I rench forests only to enjoy the last moments of power They are the same men, or their sons

In perpetrating such crinics the German individual feels himself as an organ of the State. To be an efficient State organ means much more to the German than to be an upright, humane individual. For the glory of the fatherland, the German kills any neighbor he feels superior to He has done so not only since. Hitler but since the days of his medieval emperors

The German has come to believe that life consists of his rulers' enthusiasm for world domination, and his own passion to obey Defeat temporarily upsets the God-given order of things, but defeat, after all, mcrely means an armistice, a truce His son, so he comforts himself, will try it again in some 20 years

Any change for the better in Cermany depends on the hope that the nation may at list give up this faith in its own invincibility

Most plans advanced by American writers on the treatment of post war Germany take one of two extreme directions, and both, to my mind, are erroneous

One advocates complete destruction of the German nation — forced labor of the makes in other countries, razing of all industrial plants, partition into a dozen or so small states. The other advocates reconstruction of Germany through its 'best elements," support of the 'decent ininority," democratic elections, and self government.

A third plan, which in my opinion is the only possible solution, lies be tween these two extremes. Its min is not only to make the Germans real ize that they have lost the war they must also realize that they deserved to lose it.

To begin with, those guilty of fomenting this war, and of committing atrocities during it, must really be punished this time — and it should be rem mbered that the war criminals include banking magnates, industrialists and intellectual leaders, as well as the Nazi chieft iins and the military. The trials should be held publicly, and brought by radio and newsreels to as large a Gorman audience as possible Listering to the whining of their one-t me leaders, reading truth and lie from their faces in a newsreel, ill lead the Germans to reconsider their opinion of the iduls of yesterdas

The wretched spectacle of Ger-

many s mock disarmament after the first World War must not be repeated Total disarmament is the oaly possible solution to the problem of the German military spirit, for the ultimate to k is to break the Cerman of the habit of we uing a uniform physically and mentally. On the other hand, Cermans must be taught to accept foreign uniforms in their midst Since a uniform is still the only formal expression of authority in Germany, nothing short of foreign uniforms will hammer home to the Cermans the fact of their defeat. Then perhaps Kul will say to his friend 'Iritz' This time it seems we lost the war

All this cills, of course, for in army of occupation. Besides the Bi₂. I hree all formerly Nizi occupied countries should be represented in this army. The Germans must be mide to see with their own eyes what kind of people their nation has tortured, and what kind of mene of the better of them in the end. I his is I submit, the only way of commanding the respect of the German populate—and then respect will be the decisi e factor.

One point is of par imount importance the death penalty must be imposed on anyone secretly possessing arms. Only if it is thus driven home to the Germans that armair cut is the one thing the world denies chem can they be expected to turn their talents in the direction of peace.

I do not believe that the length of military occupation should be specified in advance. The world situation as a whole and the attitude of the Germans themselves will decide the matter. Not until the world is convinced of a thorough change in German attitude, whether after 20

years or 30 can the army of occupa-

Germans should not be permitted to travel outside of Germany for about ten years. Let us remember

what happened last time

The German republic sent to America some 600 university professors — few of them of any distinction except as propagandists for a greater Germany Six hundred propagandists climbed out of a giant Irojan hoise and began to disseminate the myths of Germany's innocence in starting the war, and to plead for amelion ition of the peace terms. Duplication of this sad spectacle must be picvented, lest German scholars and manufacturers again make use of trips to Paris or New York to spicad propaganda for the poor, suffering German people

If Germans feel this restriction to be an offense, ill the better Not until they realize that the world esteems them less than other nations will they begin to search their hearts and try to change. That is part of the moral

conquest

THE partition of Germany into many smill states will not guarantee a stable peace, indeed, world peace can without question be more easily achieved without such a partition Suppose the United States were divided into a half-dozen different countries by a victorious Jap in Present sectional antagonisms would vanish overnight, and the whole country would feel a renewed national consciousness, the common history, the common language and customs would suddenly seem of enormous

importance And from that momer on people would never cease to strug

gle for political reunion

There is, however, widespread ha tred of Prussia among the rest of the Germans, caused by the Prussian subjugation of all the other provinces during the last century. This points to a simple and effective solution of the problem a partition of Germany into a 'German Federation' (with the Ilbe River as eastern frontier) and a 'Prussian Republic" Everything which has made the Germans so violently disliked has its origin in Prussia By isoliting Prussia from the rest of the country, the brains and limbs of the German lust for war would be pualyzed

The Prussian Junkers still own those large estates which have formed the basis of their power By dissolving these holdings and parceling them out to persiants (some hundred thousand of whom live like oattle) two birds would be killed with one stone

A separation of Piussia from the rest of the country would serve the same purpose as a breakup into a number of independent countries, without at the same time causing nationalistic repercussions. There can be no doubt that, given a plebiscite the overwhelming majority of non-Prussi in Germans will choose to belong to the "German Federation" rather than to Prussia.

My plan foresecs three Germanspeaking countries living side by side (as a number of different Frenchspeaking or Spanish speaking countries live side by side) Prussia, the "German Federation" and Austria The advantages of this solution are (1) the improbability of a nationalistic movement, (2) the elimination of Junker influence, and (3) the impossibility of a future Prussian king or I uhrer again raising an aimy from the whole of Germany

This time no reparation payments (which were never collected list time) hould be imposed upon Germany. The essential thing is to educate the Germans by doing away with their megalomania. Success here is of greater value than any amount of reparations.

Moreover, to enforce reparations, German plants would have to be left intact or rebuilt. And with their industrial apparatus fully restored, no power on earth could prevent the Germans from rearming again.

The very sight of blast furnaces and running power motors would give the Germans a feeling of new strength. They would again talk ever louder about their indignation that so efficient a nation as theirs should be "enslaved".

It is sheer propaganda to declare that Europ's economy would collapse without German exports I or five years the world has produced what it needed without German industry, why should it not go on doing so? Germany does not grow, mine or produce anything which cannot be grown, mined or produced elsewhere Germany should be allowed to export chough to pay for tertain essential imports, such as cotton and wool, but that is all

If Germany should be left intact as in economic power, it would make her the strongest Luropean nation in industrial potential This strength, together with her longer working hours and well known dumping

methods, would be the direct cause of large-scale unemployment in the United States Germany would thus be in an excellent position, through economic pressure, to prepare for the next bid for world conquest

There is no fear that the Germans will starve. In fact, while decreasing their industrial production they can increase their crops. In the 1930's Germany's 70,000,000 people produced go percent of their own food. Experts maintain that a more intensive agriculture and a breaking up of the Junker estates would enable a population of even 80,000,000 to live off the country.

Another demand is parimount in the economic field the temporary export of German labor to work at rebuilding the damage Germans have done in other countries. Not all German males should be exported, a few million could do the job, leaving the rest to work at home. But it is just and moral to force a nation guilty of a crime that has no equal in history to repair with its own hands at least part of the ruin inflicted on others.

Yet hope must be left to the Germans The Allies should promise them full liberty and self-government once they have restored what they have destroyed Considering modern production methods, 20 years seems a fair estimate for that task After its accomplishment, foreign rule though not foreign supervision, should be relaxed

THE task of re-educating the Germans should begin with the five year-olds No one can save the Hitler youth of today, the boys of 14 But starting with the five year olds an ed-

ucation period of 15 years should be sufficient

Foreigners should not be instilled as teachers, their accent would make youngsters laugh — quite ap not from such subtle knowledge of the German character as is necessary in this job. In my opinion, the needed teachers — given strict control by an Allied commission — can still be found in Germany.

The inilitary tone of the German classicom must be abolished. There must be no uniforms, no martial songs, and nothing in the curricula about German 'might'

Schoolboy sports, which in the past 50 years have grown continually more military in Germany, should be imbued with the Anglo Saxon spirit of fair play. As it is, the Germans have neither an adequate word for fair" nor for 'gentleman'

The spirit of play must be restored to German games. Above all German youths must learn to respect those they have beaten in a game and keep in mind that they may themselves be beaten in their turn.

History should take a major place in Germany's new education, and the dark pages of German history, as well as the light, must be presented. After the first defeat German children were taught to look upon yesterday's king and generals as heroes who fell victims to a treacherous, materially superior world, this time they must be made to realize that their fathers challenged the world, enslayed the Continent, and defamed the German name by unheard-of crimes. Germany's shaene must be huminered nome to their

In schools and universities, on the

stage and screen, German atrocities of both world wars should be shown to the rising generation of Germans, they should see with their own eyes the causes of their national disaster. Thus they may come to wonder whether blind obedience to the powers that be pays in the end

A NATION which for a century or more has been brought up in arrogance and the worship of power can not be subjugated by soft methods. The Germans must not be enslaved, but moral restrictions are indispensable in dealing with them

Only by meeting the Germans as their masters can the Allies hope to influence them and bring about the changes of attitude. The atmosphere of foreign rule with one hard hand and the teaching of tolerance and liberalism with one gentle hand will sooner or later prompt sever il mulion German young people to inquire about their own peculi ir iole in the society of nations. They will begin to wonder how they could find a more comfortable way of life. Then these young nich and women must be in formed that both self-government and moral equality with other na tions will be restored to Germany once they themselves have rebuilt the Continent their fathers wantonly de stroved

The spirit of any community fol lows the spirit of its younger generation. The Germans who are five year old today may live to see, as youngmen and women, their nation's free return to the world — with all the historical virtues and capabilities of the German people.

But — this time — unaimed
